The Navy.—The French navy in 1891 consisted of 432 vessels of all classes. The sea-going armor-clads were 14 barbette ships, 7 central-battery ships, 4 turret ships, 5 barbette cruisers, and 2 broadside frigates. The armor-clad vessels for coast defense comprised 8 barbette ships, 8 turret ships, 2 gun vessels, 3 barbette gunboats, and 2 floating batteries. There were 7 steel deck-protected cruisers, and among the unprotected vessels were 23 cruisers of the first and second classes, 14 of the third class, 36 screw and 16 paddle gunboats, 14 screw dispatch vessels of the first and 11 of the second class, 22 paddle dispatch boats, 16 dispatch transports, and 8 small gunboats. The torpedo flotilla numbered 4 torpedo cruisers, 8 dispatch vessels, 17 sea-going torpedo boats, 51 torpedo boats of the first, 60 of the second, and 7 of the third class, and 1 submarine boat. All are of steel, and have been built since 1885. Of the sea-going armor-clads 14, of the coast-defense armor-clads 7, all the deck-protected cruisers, and 75 of the unprotected vessels have been launched since 1880. The unfinished vessels in the beginning of 1891 were 5 sea-going armor-clads, 4 coast-defense armor-clads, 7 sea-going deck-protected vessels, 1 torpedo cruiser, 3 torpedo dispatch vessels, 14 torpedo boats, and 3 transports. The English navy alone excels the French in numbers and strength; no navy excels it in efficiency. In the naval manoeuvres of 1891 a squadron was headed off by another more powerful but slower, and, being unable to get by to deliver an attack on the French coast of the Mediterranean, shaped its course for Ajaccio, where it was caught and stopped at the beginning of the bombardment. There were 60 vessels mobilized, and both the active sailors and the reserves proved their efficiency.

Finances.—The estimated revenue in 1891 was 3,247,408,825 francs, as compared with 3,085,614,460 in 1890, according to the revised budget estimates. The land tax was expected to produce 110,748,600 francs in 1891, as compared with 128,031,840, in 1890, and the building tax 88,344,000 francs, as compared with 68,526,000 francs. The personal-property tax, which is a graded capitation tax ranging from 1½ to 4½ francs, was estimated at 81,562,500 francs, against 80,187,500 francs in 1890; the door and window tax at 53,234,000, against 52,676,900 francs; trade licenses at 111,548,400, against 110,742,400 francs; carriage and other special taxes at 30,091,200, against 20,154,500 francs; and Algerian direct taxes at 9,114,300, against 8,779,700 francs, making the total from direct taxes 484,643,000 in 1891 and 478,098,840 francs in 1890. The total receipts from indirect taxes were estimated at 1,997,454,200 francs in 1891 and in the corrected estimates for 1890 at 1,874,789,300 francs, the receipts from registration fees being estimated at 505,322,500 francs in 1891, against 509,104,300 francs in 1890; stamp duties at 160,412,500, against 159,797,400 francs; custom receipts at 362,261,900, against 373,985,500 francs; excise and other duties at 723,012,500, against 582,594,500 francs; tax on movables at 49,164,500, against 50,424,000 francs; sugar duties at 178,000,000, against 178,700,000 francs; and indirect taxes in Algeria at 20,183,600, against 19,250,300 francs. The revenue from state mo-

nopolies was estimated at, 609,841,690 francs in 1891, against 600,330,862 francs in 1890; the revenue from domains and forests at 43,390,050, against 42,706,250 francs; and that from other sources at 22,790,160, against 27,414,194 francs. This makes the total ordinary revenue 3,158,119,100 francs in 1891 and 3,023,339,546 francs in 1890, to which is added to make the total budget 27,174,981 francs in 1891 and 766,945 in 1890 from exceptional sources, and 62,114,744 francs in 1891 and 61,507,969 in 1890 of receipts *d'ordre*.

The total ordinary expenditure was estimated at 3,247,169,967 francs in the budget for 1891, as compared with 3,236,742,885 in the rectified estimates for the preceding year. The expenses for the public debt in 1891 were set down as 1,300,569,685 francs, against 1,318,248,408 francs in 1890. For the President, the Senate, and the Chamber the expenditure in 1891 was 13,051,940 francs, against 13,044,048 francs in 1890. The expenses of the various administrations foot up 1,573,639,652 francs in the budget for 1891 and 1,548,567,173 francs in the revised estimates for 1890. Of this, 37,636,301 francs were assigned to the Ministry of Justice in 1891 and 37,468,450 francs in 1890; 45,067,003 francs were appropriated for Public Worship in 1891, against 45,085,503 francs in 1890; 15,228,800 francs for the Ministry of Foreign Affairs in 1891, against 14,163,500 francs; 63,257,212 francs for the expenses of the Ministry of the Interior in France and 7,291,635 francs in Algeria, against 62,473,310 and 7,282,635 francs respectively in 1890; 20,873,370 francs for the Ministry of Finance in 1891, against 19,593,870 francs; 1,928,200 francs for the Ministry of Posts and Telegraphs in 1891, against 1,906,000 francs; 578,470,845 francs for ordinary and 130,000,000 francs for extraordinary expenditures of the Ministry of War, against 556,333,550 and 154,073,006 francs respectively; 218,767,702 francs for the Ministry of Marine, against 199,903,686 francs; 55,748,920 francs for the colonies, against 55,483,255 francs; 173,734,840 francs for Public Instruction, against 170,692,878 francs; 12,083,905 francs for the Department of Fine Arts, against 12,063,905 francs; 20,555,483 francs for the Ministry of Commerce and Industry, against 20,539,483 francs; 21,080,330 francs for the Ministry of Agriculture, against 20,737,830 francs; 113,978,642 francs of ordinary and 57,936,473 francs of extraordinary expenditure for the Ministry of Public Works, against 113,168,384 francs of ordinary and 57,592,934 francs of extraordinary expenditure in 1890. The expenses of collecting taxes was estimated at 337,725,190 francs for 1891 and 334,216,756 francs for 1890, and repayments, etc., at 22,183,500 francs in 1891 and 22,666,500 francs in 1890. The extraordinary expenditures were 449,126,163 francs of special credits, etc., in 1891 and 446,087,668 francs in 1890, and the entries *d'ordre* in 1891 were 102,286,836 francs and in 1890 93,881,833 francs, making the grand total of expenditure 3,798,582,966 francs in 1890, against 3,776,712,386 francs in 1890.

The national debt has been calculated by M. Leroy Beaulieu to amount to 31,718,000,000 francs. M. Camille Pelletan, in a report to the budget committee in November, 1890, made the total nominal capital 30,300,813,594 francs, on

which the average rate of interest is 3.48 per cent.; but this he capitalized at the actual sum of 22,824,043,690 francs, paying the average rate of 4.62 per cent. The expenses of the debt in 1891 were 447,519,532 francs on the 3-per-cent. *rente*, 305,540,303 francs on the 4½-per-cent. *rente*, 325,126,924 francs for annuities, and 222,382,926 francs for pensions and life interests. The capital of the *rentes* or consolidated debt is 21,241,621,710 francs, and the floating debt amounts to 908,724,600 francs bearing interest and 71,476,000 francs bearing no interest.

The Tariff.—The most important action of the French Chambers in 1891 was the framing of a new tariff system in accordance with the proposals submitted by the Government. A general tariff was adopted, in which the duties were made very high on nearly all imports. A special tariff offers much lower rates to nations according reciprocal privileges to French commerce and manufactures. The treaties with Belgium, Spain, Switzerland, Sweden and Norway, Portugal, and the Netherlands, running till Feb. 1, 1892, were denounced before Feb. 1, 1891, in order that the new tariff might be applied not only to those countries, but to those enjoying the same rights under the most-favored-nation clause, among others, Germany, England, Denmark, Russia, and Austria. In expectation of a larger revenue from the new protective duties, the railroad-traffic tax was repealed. The excise duties on sugar were modified. Raw materials are to be imported free, and to compensate the flax growers and breeders of silk-worms, bounties are given for these cultures. The existing conventional duty on cotton yarns was renewed for the treaty or minimum tax and increased by 30 per cent. for the non-treaty or maximum tax. The duty of 20 francs per 100 kilogrammes on pork proposed by the ministry was approved by the Chamber, but the Senate raised it to 25 francs. On petroleum the duty was fixed at 12 francs. Countries enjoying the former conventional tariffs under favored-nation treaties can be admitted to the new treaty tariffs at the discretion of the Government. This is not the case with the United States, and therefore negotiations for a special treaty of reciprocity, which must be ratified by the National Assembly, were opened by the French Government, which demanded merely the application of the reciprocity clause of the American Tariff act to produce of France and her colonies, by which skins, sugar, and molasses of the value of 12,000,000 francs per annum will be admitted into the United States free of duty, and American products of about the same export value will be admitted to the French market on the payment of the minimum duties.

Legislation.—An important change in the mode of punishing criminals was the law relating to first and repeated offenses, which was promulgated on March 27, 1891. On the conviction of a prisoner for a first criminal offense the judge is authorized to postpone the execution of the punishment, and after the lapse of five years it is entirely remitted, unless the person is convicted within that period of a second criminal act, in which case the first penalty will be carried into execution in addition to that attaching to the second offense. In the session that

ended on July 18, 1891, the question of regulating or suppressing betting on horse races occupied the attention of the Chamber repeatedly. The spread of the gambling habit, and the increasing number of thefts and defalcations traceable to horse racing, and of turf scandals, has attracted the attention of reformers for some time. An eminent judicial authority has said that the races, of which 315 took place in and around Paris in 1890, cause a great proportion of the crimes that are committed. In 1874 the pool sellers were driven out of Paris and restricted to the race tracks. The book-makers were driven out of their booths in accordance with an act passed in 1887, but continued to carry on their business. The *pari mutuel*, though forbidden under the general law against gambling, received a partial recognition by the licenses granted for the establishment of booths at race courses. M. Constans submitted a bill to legalize the pools and limit the business by taxing the proceeds 2 per cent., which was estimated to yield 4,000,000 francs for the benefit of the poor. The Chamber rejected his bill by 330 votes to 144 on Feb. 28. The Minister of the Interior thereupon carried out his threat to suppress pool selling and book-making. For the next two months a close police supervision prevented gambling on the tracks, and the result was that the owners lost large sums through lack of patronage. Meanwhile the question was brought up in various forms in the Chamber. M. Develle, the Minister of Agriculture, brought in a bill to place the race tracks under the control of his department, which was passed on May 13, as modified by the committee, and was slightly amended afterward by the Senate. Henceforth no race track can be opened without Government sanction; no races will be permitted except such as are organized solely for the encouragement of efforts to improve the breed of horses, and are conducted by societies whose statutes are approved by the Minister of Agriculture; bookmakers are allowed to take bets only from persons with whom they are acquainted and without money being passed at the time; and the *pari mutuel* can be carried on only by racing societies on their own grounds, and the profits shall be divided in a proportion to be determined by the Government, between charitable objects and race prizes. On May 27 the Chamber agreed to a bill empowering the Ministry of War, as a precaution against siege in time of war, to keep in every fortified town and intrenched camp a supply of wheat or flour sufficient to feed the population for two months, the towns of over 40,000 inhabitants bearing half the expense.

The Labor Question.—Incidents and questions connected with the social problem arrested public opinion and preoccupied the Legislature in an unusual degree in 1891. On Feb. 18 a Council of Labor, composed of masters and workmen appointed to deliberate and advise the Government on labor matters, was opened under the presidency of Jules Roche, Minister of Commerce. Its recommendation of a Labor Bureau, modeled on that of the United States Government, was approved by the Cabinet, and the necessary legislative action was initiated. The police and military authorities took extraordinary precautions to prevent an Anarchistic out-

break on May 1. In Paris cavalry patrolled the streets, and regiments of infantry were kept under arms. About 300 well-known Anarchists and Socialists were arrested the day before and held as dangerous characters. Cunningham Graham, a Socialist member of the British Parliament, attempted to lead a demonstration and was stopped by the police, who charged repeatedly at the crowd assembled in the Place de la Concorde. In Lyons the people resisted the police, who attempted to break up their labor procession, and assailed with stones the cavalry who dispersed them in the street, drove them out of the cemetery, whither they then repaired to hold a demonstration, and charged into them twice more on their return to the city, after they had overcome the police. In Marseilles a squadron of horse broke up the demonstration, and, as in Lyons, many persons were arrested, the chief one being Deputy Antide Boyer. Serious disorder occurred at Fourmies, where a strike was proclaimed, and half the miners left work. Many persons were arrested early in the day for intimidating men who refused to join in the strike. In a collision between the mob and the gendarmes the latter were forced to retreat. Toward evening about 1,200 men armed with sticks gathered in the square and loudly called for the release of their comrades. Although soldiers were drawn up to support the gendarmes, they charged the latter and almost succeeded in capturing the police station. The troops then charged with fixed bayonets, and drove the people out of the square. But, returning with a supply of bricks and paving stones, they attacked the soldiers and overwhelmed a body of police. A whole regiment of infantry was brought up, and, finally, on the demand of the sub-prefect, the troops fired into the mob, which continued to fight hand-to-hand with the soldiers and police, but finally ran away. There were 14 persons killed, some of them women, and 40 were wounded. This affair and the condemnation of labor leaders for inciting riot at Lyons, Bordeaux, Charleville, and other places led to fresh strikes and disturbances. Although the Chamber by an overwhelming majority refused to order an investigation of the Fourmies disaster, on the ground that it would be insulting to the army, and the Minister of the Interior took energetic measures to repress the agitation that grew out of the incident, arresting speakers and expelling Cunningham Graham, the Government changed its attitude on the labor question. Shortly afterward occurred a strike of the omnibus drivers of Paris, who were worked from fourteen to seventeen hours a day, and demanded a uniform working day of twelve hours at the same wages. They first formed a syndicate or union, and appointed a committee to present their grievances to the managers of the omnibus company, which has a monopoly of the service for the whole city. Although the law provides that either employers or employés may form unions and delegate a committee to act for the body, the managers of the company refused to recognize the syndicate or treat with its delegates. Despite the general inconvenience caused by the strike that ensued, the public sympathized with the men. The places of the striking drivers and conductors

were easily filled, but the people unharnessed the horses as soon as an omnibus started out, and drove away the police when they attempted to interfere. At the end of two days the Minister of the Interior threatened to municipalize the omnibus service, a proposition that had often been advocated in Radical circles, if the directors did not at once make terms with the men and furnish to the public the service required by their charter. They were thus compelled to grant the maximum work-day demanded, at the same rate of pay, abolish fines, and recognize the union officially. The success of this "revolutionary strike," as it was called, destroyed the ascendancy of the Possibilists, who had the adhesion of the main body of French working men from the split of the Labor party into Possibilists and Marxists, till the time when the Marxists and a part of the Possibilists accepted Boulanger as their political deliverer, expecting that the general who had encouraged his soldiers to share their rations with the strikers at Decazeville would accomplish more for them at one stroke than the Possibilist policy of constitutional action had in eight years. The Possibilists had become a power in the municipal councils, and had organized labor exchanges supported by public funds, had the expenses of labor delegates to international exhibitions paid out of the public revenue, obtained subsidies for schools established by Socialist societies, and even secured aid for the families of workmen on strike. The success of the omnibus strike, which outweighed all they had done, brought to the front the revolutionary Marxists and the Independents, who eschew politics, and new revolutionary strikes were thought of. The railroad companies were more unpopular than the omnibus and street railroad companies, which were compelled all over the country by strikes to grant the concessions won in Paris. The railroad employés were underpaid, and one reason was that a part of their wages was detained in order to give them a pension at the end of twenty-five years of service; and yet they could be discharged at any time without cause, forfeiting what they had contributed to the fund. To remedy this and other abuses, a strike was begun. The public did not respond, as was expected, to this new demand on their sympathies, and the Government could not afford to allow the railway service to be paralyzed, because it is a part of the military system. The army railroad corps was made to take the places of the striking engineers and trainmen, and even to repair the damaged rolling stock, and the Government threatened to call the strikers back, as reserve men of the army, to work without pay. The popular feeling against the railroads is strong, especially on account of the failings of the third-class passenger service, and a tendency toward the resumption of the Government control of railroads was manifested in two bills presented to the Chamber, one of which proposed that directors of lines enjoying a State guarantee should be appointed by the Government, and the other that no foreigner should hold office in the boards of such railroads. A strike for short hours by barbers, grocers' clerks, druggists' assistants, and other employés in the shops of Paris, who thought that from eight in

the morning till eight at night was a fair day's work, proved likewise a failure. A strike against the *bureaux des placement*, or private intelligence offices, seemed to promise better results, for the abuses connected with these agencies, the excessive charges, the practice of sending applicants to places that they can not fill, in order to get a double fee, have been familiar for generations. Since the time of the empire they have been under police supervision, but this control has never been effectually exerted. The municipal officials have been intrusted with the work of directing workmen to places, but have shirked the task. Labor exchanges have been established, and have proved a failure because they must send the persons whose names head the list, without regard to character or capability, and therefore nine tenths of the business remains in the hands of the private agencies. The strike was begun by the bakers, and was to be taken up by hair-dressers, woman cashiers, seamstresses, domestic servants, and all who were dependent on the *bureaux des placement* for finding them employment, who proposed to organize trade unions to get them places gratis. M. Constans told them that if they did not like the services of the private offices they could withhold their patronage. When the people of Paris began to be deprived of their daily wheaten bread the Government set the army bakers to work to furnish the masters with bread that they could serve to their customers at a better profit than they had made with their own, and thus the strike was crushed by the interposition of the authorities.

The Chambers had under discussion from the beginning of the year a bill to regulate the labor of women and children in factories, in accordance with the recommendations of the Berlin Labor Conference. The proposal of M. de Mun and Bishop Freppel to designate Sunday as the weekly day of rest was rejected by the vote of the entire Republican party. The maximum work day was fixed at ten hours for children and eleven hours for women. In February the Chamber voted in favor of subsidizing working men's provident and old-age benefit societies. An act to distribute and fix responsibility in case of accidents was rendered of little value by amendments. After the Fourmies disaster and the omnibus strike all kinds of socialistic legislation was introduced by private members. M. Lafargue, who was sent to the penitentiary for a year as ringleader of the Fourmies riot, was elected a Deputy, but was pronounced disqualified by the Chamber in November on the ground that he was a foreigner. A law was proposed giving a part of the profits to workmen employed in state industrial establishments, and a project was discussed for fixing not only a uniform length for a day's work, but also a minimum rate of wages. The Chamber almost unanimously agreed to a bill extending the twelve-hour work day of the law of 1848, which was limited to state and municipal establishments, to railroad engineers, firemen, and signal men, and to drivers of omnibuses and all employés of transportation and navigation companies possessing franchises granted by the state or by municipalities. A bill passed by the Chamber, which was rejected by the Senate, would compel every

employer to give an account of his reasons for discharging a man. M. Constans and M. Rouvier worked out a vast project for creating for workmen a fund for retirement and insurance on the lines of the German scheme, but without its compulsory character and the feature of state management. The fund, which is to reach in a certain time the capital sum of 12,000,000,000 francs, is to be built up by a small tax on the salary of the insured, an equal contribution from the employer, and a subsidy of the same amount from the state, which will have to grant an annual sum estimated at 150,000,000 francs. A workman can be insured or not, as he pleases, and has some choice whether the fund will be entrusted to a Government establishment or a private company. The scheme offers the advantage of promising a moderate pension without waiting for extreme age and of leaving a certain provision to the families of participants. M. Constans said that the Government, which had provided *milliards* to make the army strong and France respected, would be able to do its share, and that he and his colleagues would willingly cede their places to younger strengths if they could achieve this work of peace and another for the organization of agricultural credit, for it is inequitable that, whereas a banker can borrow for 3 per cent., the cultivator, who nets only 2½ per cent. from his land, must pay 5 per cent.

International Congress of Miners.—A Congress of Miners met in Paris in April, chiefly for the purpose of deciding on a method for securing the eight-hour working day. There were 99 delegates, representing 909,167 miners in Great Britain, Germany, France, Belgium, and Bohemia. The meetings were held in the completed part of the Paris Labor Exchange, which is to cost 4,000,000 francs. The delegates pledged their constituents to give pecuniary support to the coal-miners' strike in Belgium. The existing international committee was re-elected, and authorized to draw up statutes for an international federation of miners to be submitted to the next Congress. There was much discussion between the advocates of state intervention and a legal work day and the English trade unionists and Belgian proponents of a general international strike on May 1, 1891. The German spokesman suggested a general strike at a later date, allowing more time for preparation. The English miners, though they have had the eight-hour day for twenty years, promised to strike with their Continental brethren in order that English coal might not be used to replace exhausted stocks in other countries. The compromise resolution adopted on April 4, when the congress separated, runs as follow:

The International Congress of Miners, now sitting at the Bourse du Travail, deems that a general and international strike may become necessary to obtain an eight-hour day. The congress, however, before resorting to such an extreme measure, invites the governments and parliaments of the nationalities represented at this congress to agree to an international convention dealing with an eight-hour day in mines, whether belonging to the state or to private enterprise, this international convention to be similar to those which the various governments have applied for the regulation of the postal, telegraphic, railway, and navigation services.

The Melinite Scandal.—On May 19, Gerville Réache, Deputy for Guadeloupe, charged the Ministry of Marine with delivering melinite, or smokeless powder, to the Armstrong firm in England. A few days later M. Turpin, one of the inventors of picric acid, which is the basis of melinite, and M. Triponé, a captain in the territorial army, were arrested on the charge of espionage or treason for having sold to the Armstrongs the secret of the French explosive. In 1884 M. Turpin offered the Government a substance which he called picric acid, and experiments were begun in the state laboratories to compound an explosive, a part of which he witnessed. For the knowledge that he imparted he was paid 251,000 francs, and was warned not to divulge what he had seen, though he was at liberty to do what he liked with his own discoveries. He demanded a higher price for his invention, and, after the Government had perfected the process of making melinite, he made constant demands for compensation, which were refused. He engaged in the manufacture of his picric acid, endeavored to sell it to foreign governments as identical in composition with the melinite of the French arsenals, and in 1888 entered into a contract with the Armstrongs to teach the process of making smokeless powder. Capt. Triponé, accepting an agency from the Armstrongs, negotiated the contract and obtained samples of the real melinite and documents relating to the manufacture of the shells from M. Fasseler, an officer, and M. Feuvrier, an engineer, in the Government arsenal. M. Turpin, who had expressed penitence to M. de Freycinet for his experiments in England, after promising not to continue his unpatriotic conduct, was afterward detected in overtures to the Italian and German governments. He declared that he had refused 750,000 francs for the completion of his experiments from the Armstrongs, and in September, 1889, brought accusation against Capt. Triponé, which he repeated in 1890, but did not sustain with the evidence that he pretended to possess, so that that officer was exonerated by a military commission in the beginning of 1891. After M. Réache's disclosures, which were officially contradicted, M. Turpin published a book inculcating the others and describing the chemistry of his preparation. For this he was arrested, with the persons whom he accused, under the law against spies, on the charge of revealing state military secrets. Although the secrets of the smokeless powder and repeating rifles of different governments are pretty well known to all the rest, the affair created a tremendous sensation in France. M. de Freycinet denied that the explosives described by Turpin were anything resembling those adopted for the army, or that artillery secrets of importance had been revealed, and his explanations were accepted with a vote of confidence by 338 against 137. Mistrust of the devoted and energetic Minister of War helped to make the attack on the Cabinet near the close of the session well-nigh successful, and was the motive of the rejection, on the eve of adjournment, of a credit of 600,000 francs for enlarging the Polytechnic School. M. de Freycinet was only restrained by the persuasions of his colleagues from offering his resignation, instead of proroguing

ing Parliament, on July 18. The accused persons were tried by the Correctional Tribunal, and the principals received the extreme penalty of the law. M. Turpin was condemned to five years' imprisonment, a fine of 2,000 francs, and five years' suspension of civic rights; M. Tripoué, to five years' imprisonment, a fine of 3,000 francs, five years' interdiction of civic rights, and ten years of exile; M. Fasseler, to five years' imprisonment, a fine of 3,000 francs, and five years' interdiction of civic rights; and M. Feuvrier, to two years' imprisonment, a fine, and interdiction of civic rights for two years. The Minister of War proposed extending the period of imprisonment for espionage to ten years, and the army committee of the Chamber recommended the death penalty for some cases and hard labor for life or for limited periods for others.

Monarchists and Clericals.—In January the Parisian mob drove the ministry to suppress Sardou's new drama of "Thermidor," because it reflected on the actors in the revolution of 1792. The downfall of Boulangism prostrated the several movements for the restoration of monarchy, and the anti-Republican parties were only kept alive because their politicians could not obtain admission into the Republican party, and because the Ultramontanes still upheld royalism as their hope of deliverance from the persecutions that they thought the Church was subjected to by the republic. The adherents of Prince Victor Napoleon formally accepted the republic. Cardinal Lavigerie early in 1891 proposed the abandonment of royalty and the formation of a Christian and Conservative party within the republic. A union of Christian France was organized, which did not openly adopt the republic, but remained silent regarding forms of government. Pope Leo had declared that the Holy See has no pretensions to interfere with political systems, and the Cardinal Archbishop of Paris, in March, published a letter in which he said that Catholics could differ legitimately regarding political institutions so long as religion and morality were respected. Sharp controversies between Clericals and Republicans arose in the latter part of the year, especially in reference to the demonstration of the French pilgrims in Rome. A violent scene occurred in the Senate when the President, M. Floquet, repeated the old story that Pius IX was once a Free Mason. Minister Fallières, in a circular, warned the authorities of the Church against encouraging pilgrimages that were likely to degenerate into political demonstrations. Monseigneur Gouthé-Soulard wrote a reply in which he called the letter of the Minister of Justice and Worship an "odious misconception," and said: "Peace is sometimes on your lips; hatred and persecution are always discernible in your acts." For insulting the minister he was prosecuted in November, and condemned by the Court of Appeal to pay a fine of 3,000 francs. The question of repealing the concordat was more seriously discussed than before. By the concordat concluded by Bonaparte as First Consul in 1801 the Catholic Church in France, which numbers 36,743 prelates and priests, receives a grant from the state amounting to 44,000,000 francs a year, has the use of the episcopal palaces, churches, and other ecclesiastical buildings belonging to

the state, and costs the Government and the communes about 296,000,000 francs a year, while its independent income is 565,000,000 francs. Few of the clergy, who are not now required to take the oath of allegiance to the republic contained in the original concordat, would be willing to sacrifice the subventions of the Government in order to obtain immunity from the obnoxious police regulations. The ministers declared in the Chambers that they would insist on the full submission of the recalcitrant clergy to the terms of the concordat, when the monarchists and Clericals began a vigorous parliamentary attack on the ministerial decrees.

Foreign Relations.—When the Empress-dowager Friedrich visited Paris early in 1891 to look after a legacy, she privately made overtures to French artists to induce them to take part in an international art exhibition at Berlin. Some accepted, others publicly announced their refusal on patriotic grounds, and then the former withdrew their acceptance. As she traveled incognito, the President refrained from calling, and when she visited St. Cloud and Versailles the League of Patriots began demonstrations that caused her to leave for England. These incidents gave umbrage to the German Emperor, who retorted by rescinding certain relaxations of the passport system in Alsace and Lorraine, and causing the laws to be enforced in all their rigor. Taking as a pretext the stoppage of communication with Switzerland by the Moenchenstein disaster, the German Government retrieved this mistake by granting liberty to through passengers to travel on the railroads of Alsace-Lorraine without passports, and on July 8 made the order permanent. The renewal of the Triple Alliance (see GERMANY) stimulated the revenge agitation in France. On July 16 M. Laur, Boulangist Deputy, put a baseless question regarding passports to the ministry, and when M. Ribot moved the indefinite postponement of the interpellation he was defeated by a coalition of Royalists, Boulangists, and Radicals, who gave 286 votes to 203. On the day following M. de Freycinet, making it a question of confidence, was sustained by a majority of 319 to 103. The visit of the French fleet to Cronstadt on July 23 and the reception of the French officers by the Emperor Alexander was regarded through Europe as a sign that an informal understanding, if not a formal defensive alliance, had been arrived at between Russia and France. That no combined action against England could be contemplated was evidenced by the acceptance of Queen Victoria's invitation for the squadron of Admiral Gervais to visit Portsmouth immediately on returning from the Russian visit. The reception of the French fleet scarcely dispelled the impression that Lord Salisbury had promised to give naval support to the allied central powers by guarding the coast of Italy in certain contingencies, which had been strengthened by the visit of the Kaiser to England. Admiral Gervais was said to have taken to Russia documents relating, among other things, to combined action in China, which was borne out by the refusal of both powers to take part in the proposed naval demonstration, leaving England to maintain in China an attitude of isolation that would permit her to safeguard

her interests by independent action, giving rise to rumors of an Anglo-Chinese alliance against Russia and France in Asia. As a result of the fraternal drawing together of the French and the Russians, the Russian loan that Baron Rothschild had refused to negotiate was easily raised on good terms in France by a popular subscription. A speech that the German Emperor made at a gathering of German officers, in which he referred to the first Napoleon as a "Corsican parvenu," was the signal for an outbreak of Chauvinism in France. The presentation of Wagner's "Lohengrin" by the musicians of the opera afforded occasion for an anti-German demonstration, which the Government checked by vigorous measures. Soon afterward the inconvenience of the passport regulations, which have done much to keep alive the French sympathies of the people of the lost provinces, was in a large measure removed by a decree of the German Government. This act abated private suffering and annoyance, and tended to remove a source of danger to the peace of Europe, which seemed to be confirmed by the new grouping of the powers. M. Ribot said: "It is not at a moment when we are in a position to cultivate peace with the greatest dignity that we shall expose ourselves to the danger of compromising it."

Algeria.—Each of the three departments into which Algeria is divided sends a Senator and two Deputies to the French National Assembly. These are Algiers, Oran, and Constantine, having collectively the area of 477,913 square miles, including the districts administered by the military authorities, and a population of 3,324,316, according to the enumeration of 1886, in the territory under the Governor-General and 492,996 in the military territory. The Governor-General is responsible directly to the President of the republic. The post has been filled by Louis Tirman since Nov. 26, 1881. He retired in 1891. The general commerce in 1889 consisted of 191,885,000 francs of imports from France and 68,050,000 francs from other countries, and 201,917,000 francs of exports to France and 38,168,000 francs to other countries. The special imposts amounted to 237,417,000 francs of imports and 229,789,000 francs of exports. Of the special imports, 178,663,000 francs came from France, 10,778,000 francs from Great Britain, 8,225,000 francs from Spain, 8,108,000 from Morocco, 7,018,000 francs from Tunis, under 2,000,000 francs from Russia, Austria, Turkey, and Italy, and from the United States 981,000 francs. Of the special exports, France received 200,500,000 francs, Great Britain 12,118,000 francs, and Spain the next largest amount, which was 3,715,000 francs, while the share of the United States was 1,219,000 francs. The chief exports to France are wine, sheep, cereals, and wool; and the exports to Great Britain consist mainly of esparto and other fibers for paper stock and iron ore. In 1889 there were 3,650 vessels, of 2,117,658 tons, entered from French and foreign ports, and 3,727, of 2,196,583 tons, cleared. The length of railroads open in 1890 was 1,910 miles, including 140 miles on Tunisian territory. The receipts in 1888 were 21,908,225 francs. The telegraphs in 1889 had a length of 7,000 miles, with 12,000 miles of wire, including extensions into Tunis.

The Trans-Sahara Railroad, starting from El Guerrah, in the northern part of the Algerian Atlas, 23 miles south of Constantine, has been carried across the mountains and up to the edge of the Tuareg country, proceeding in a south-westerly direction from oasis to oasis to Biscara, a total distance of 239 kilometres. The total length of the projected line across the desert to the shore of Lake Chad is 3,000 kilometres. Since the first section was opened in 1888 the inhabitants of the northern oases have been protected from Tuareg inroads, and trade has increased wonderfully. The next extension will be to Tuggart and across the Tisili plateau, where places for stations can be prepared by planting eucalyptus trees and sinking artesian wells. A further continuation southward can only be accomplished after the Tuaregs have been effectually beaten in war, and Ghadames and Ain Salah occupied. The oasis of Touat, which contains with the neighboring oases a population of 200,000, has been a place of refuge for enemies of France, and after the massacre of a number of Frenchmen, the natives, fearing reprisals, appealed for the protection of the Sultan of Morocco, offering to accept his sovereignty. The Sultan, against the protests of France, prepared formally to annex the district; but the French advanced to El Golea, and the Sultan, who had begun to collect tribute, was told, through the envoys that he sent to consummate the annexation in the autumn of 1891, that the Touatans had changed their minds and preferred a connection with Algeria.

The revenues of the Government are obtained from a direct tax imposed on the natives and from customs, licenses, etc. The cost of the army and a part of the expenses of the public works is borne by the French Government, which spends 21,000,000 francs a year on Algeria, exclusive of military expenditure. The budget for 1891 makes the revenue 43,943,833 francs and the expenditure 43,450,155 francs. The native Jews, who numbered 43,182 in 1886, were admitted to French citizenship in 1870. The policy of conferring the franchise on the Arabs was never seriously considered till 1891, when a project for the gradual naturalization of the Mussulman population was discussed in the Chamber. After encouraging the settlement of French colonists, who have made the soil productive and added greatly to the resources of Algeria, the Government can not afford to enfranchise the mass of the indigenous population rapidly. In 1888 there was 219,627 French people and 205,212 foreigners residing in the country. The Government spends 2,750,000 francs a year to extend French colonization, and has distributed 1,500,000 acres gratis since 1871. The policy of educating and conciliating the natives, and of taxing the consumption of alcoholic beverages and the growth and sale of tobacco, as in France, is recommended in M. Boulanger's report to the budget committee as a means of relieving the French budget. The net cost of Algeria since the conquest in 1830 has been at least 4,000,000,000 francs, and during the whole period the revenue collected has been no more than 1,250,000,000 francs, nor do the deficits decrease, for in 1891, counting guarantees to railroads, and military, civil, and other expenditure, the French tax pay-

ers had to contribute 86,000,000 francs. In 1891 locusts destroyed pastures in the Sahara and damaged crops in various parts of Algeria.

Tunis.—The principality of Tunis, although nominally a part of the Turkish Empire, has been a protectorate of France since 1881, and is governed by the French Ministry of Foreign Affairs through the minister resident. In 1884 a French judicial administration superseded the consular tribunals operating under the capitulations. The reigning Bey is Sidi Ali, born Oct. 5, 1817. The French representative is M. Massicault. The area is about 45,000 square miles, and the population is about 1,500,000 persons, including 49,000 Europeans, of whom 40,000 live in the city of Tunis, which has a Jewish population of 40,000 and 135,000 inhabitants altogether. The receipts from direct taxes in 1888 were 7,208,000 francs, and from indirect taxes 8,853,619 francs, while the total expenditures were 27,896,139 francs. The debt was consolidated in 1884 into a perpetual 4-per-cent. *rente* of 6,307,520 francs a year, and this was converted again in 1888 into a loan paying $3\frac{1}{2}$ per cent. of the nominal amount of 174,427,500 francs, to be extinguished in ninety-nine years. The imports in 1889 had a total value of 31,153,936 francs, and the exports were 18,104,903 francs in value. Of the imports, more than half came from France, which received directly a fifth of the exports, while something more than a third went to Algeria, about a fifth to Italy, and an eighth to Great Britain. The chief exportable products are wheat and barley, olive oil, alfa, tan, woolen manufactures, and sponges. There were entered at Tunisian ports during 1889 6,770 vessels, of 1,809,627 tons, and 6,503, of 1,807,697 tons, were cleared. Three fifths of the shipping was French, the Italian and the English coming next.

Indo-China.—The colonies of Cochin-China and Tonquin and the protectorates of Cambodia and Annam were united in a customs union in 1887, and the Superior Council of Indo-China fixes the budget for Cochin-China and advises as to the others. The imports in 1888 amounted to 68,069,305 francs, and the exports to 71,274,063 francs.

The area of Cochin-China is 13,692 square miles, and the population 1,916,429, of whom 2,537 are French. There are 51 miles of railroad and 1,840 miles of telegraph. The revenue in 1890 was estimated at 30,327,033 francs. The mother country contributed 3,548,793 francs in 1891. Rice is the principal product, constituting 70 per cent. of the exports, which were valued at 60,913,433 francs in 1888.

Cambodia, ruled by King Norodom, who accepted a French protectorate in 1863, has an area of 46,000 square miles, and from 1,500,000 to 1,800,000 inhabitants. The revenue in 1888 was 3,275,000 francs, and the expenditure 3,059,236 francs. Sugar, rice, betel, cotton, tobacco, indigo, and cardamom seeds are produced.

Annam became a French protectorate by the treaty of June 6, 1884. Bun Can was proclaimed King on Jan. 31, 1889. The area is 106,250 square miles, and the population about 5,000,000. The exports are cinnamon bark, seeds, tea, tobacco, cotton, and sugar.

Tonquin, a province of Annam that was formerly tributary to China, has 34,700 square

miles of territory, and from 9,000,000 to 12,000,000 inhabitants. The revenue of Tonquin and Annam in 1888 was 17,321,000 francs, and the expenditure 17,034,620 francs. In the French budget for 1891 an appropriation of 10,450,000 francs is made for the two countries. The imports in 1888 were 23,881,012 francs, and the exports were 6,988,249 francs, consisting of rice, sugar, cotton, tobacco, pepper, and oils. Rich mines of copper and iron are worked, and extensive deposits of good coal have recently been discovered. In 1890 there were 596 officers and 24,000 soldiers in Annam and Tonquin, and in Cochin-China 130 officers and 3,830 men. Fighting with the Chinese and Tonquinese pirates or rebels still continued in 1891, and in the early part of the year the roads were nowhere safe. The rebels carried on their depredations within sight of Hanoi and Sontay. A regular siege was conducted by a force of 1,200 French troops against a strongly built fort defended by 3,000 pirates, who were finally driven out after inflicting a loss of 300 killed and wounded. In February the French resident of a province was murdered. When M. Lanessan was appointed Governor-General of Indo-China on April 21, 1891, he was clothed with fuller powers than his predecessors. The commander of the land and naval forces was placed under his orders, and forbidden to undertake any operation, even of a defensive character, without his consent. The first section of the railroad from Phulang Thuong to Langson was opened in June. It passes through a region that had been abandoned by the inhabitants on account of pirates, but was becoming settled and prosperous again. In the course of the summer the Hang-Son pirates were driven out of the province of Cao Bang by flying columns, their stronghold being captured and their leader killed by Capt. Lassalle's detachment. Rear-Admiral Fournier pursued the pirates on the sea with energy, and stations were established in northern Tonquin for systematic and unremitting operations on land. The French administrators have been encouraged by the growth of the coasting traffic and the transit trade by the Red river route and by the development of new resources, and in France the opinion is taking root that Tonquin will prove in the end to be worth the sacrifices that it has cost.

Madagascar.—By the treaty signed at Tamatave on Dec. 12, 1885, the Malagasy Government acknowledged the protectorate of France, and agreed to submit to the regulation of its external relations by the French Government through a resident general, who is allowed to maintain a military guard. The French protectorate was admitted by England in the Anglo-French agreement of Aug. 5, 1890. The native Government of the Hovas, which remains independent in domestic affairs and has control over the other Malagasy tribes, has for its head Queen Ranavalona III, born in 1861, who married the Prime Minister Rainilaiarivony shortly after her accession in 1883. Madagascar has an estimated area of 228,500 square miles and over 3,500,000 inhabitants, of whom 1,000,000 belong to the dominant Hova race, which is of Malayan origin. There are about 1,000,000 Sakalavas, 600,000 Betsileos, 400,000 Betsimisarakas, 200,000 Bavas, 200,000 Antatiavas, great numbers of negro slaves, and

many Arab traders on the coast. Antananarivo, the capital, has a population of 100,000. The land around the Bay of Diego Suarez has been annexed to France for a colony, military post, and coaling station, and improvements have been begun that are expected to make the harbor one of the finest in the world. The Hova army of 20,000 men, armed mostly with breech-loading rifles, has been trained by English officers. The French have a garrison of 32 officers and 1,141 men at Diego Suarez, and 21 officers and 428 men on the neighboring island of Réunion. Madagascar is supposed to be very rich in minerals. The production of gold and of copper is increasing. Forests of great extent abound in valuable timber, which is being exported by European *concessionnaires*, who have obtained grants on the northeast coast, and who plant the cleared ground with tropical and subtropical products. The natives breed cattle and raise rice, sugar, yams, coffee, and cotton. They are skillful weavers of cotton and silk and of the fiber of the rofia palm, and their metal work is noted. The exports are cattle, hides and horns, rofia, India-rubber, coffee, sugar, vanilla, wax, copal, rice, and oil seeds. Commercial relations with the United States are of long standing, and in recent years the trade has increased. The imports in 1888 were valued at 4,050,779 francs, and the exports at 4,119,234 francs. The lack of means of communication prevents the commercial development of the resources of the interior and even of domestic production, for a large proportion of the people are employed as bearers in conveying goods between the seaports and the populous central districts.

The Hovas rule as conquerors over such of the tribes as they have reduced to subjection. The inhabitants of Belanona, which is three days' march from the capital, exasperated by the cruelty and extortion of Ramiasatra, the Governor, sent a delegation of 100 of their principal men to the Prime Minister to petition for his removal. The petitioners waited eight months for an audience, and when they were at last received the Prime Minister, who is practically the ruler of the country, warned them against making rash charges, and would promise to make an inquiry only in case they returned with their complaint after going home to reflect well on the matter. Before they reached their homes they were stopped by the Governor's Hova soldiers and were butchered, with their families and friends, 278 in all. Fugitives arrived at Antananarivo on Jan. 12, 1891, and the Prime Minister, urged by the foreign residents, had a judicial investigation made, and at its conclusion ordered the execution of Ramiasatra and his brother. In the beginning of March the Hova Governor of Tulear and 53 of his escort, while on the route to the capital of the Sakalava King of Tompomana, in the west of Madagascar, were set upon and killed by a large body of Sakalavas at Marrombo, on the coast. The Hova officials in the custom house at Soondrano were murdered, and all the representatives of the Government in Tulear fled to the island of Nossi Bé. Troops were sent by the Hova Government to reduce the Sakalavas to subjection.

The French protectorate, though recognized by the foreign powers, is repudiated by the Mal-

agasy Government. The treaty of 1885 requires that *exequaturs* should be demanded by foreign consuls through the medium of the French residency. Prime Minister Rainilaiarivony, encouraged by Protestant missionaries, has persistently refused to accept this channel of diplomatic intercourse, and when the question was raised in the case of the United States consul in 1887, the then French resident, Le Myre de Vilers, waived his rights. Mr. Campbell, the United States consul, has upheld the French protectorate, and after its formal recognition by Great Britain, M. Bompard, the French resident general, determined to render it effective in the matter of *exequaturs*, especially since the English opponents of French influence contended that the Anglo-French agreement was invalid, because the English Government was not made cognizant of the concession of M. Le Myre de Vilers to Rainilaiarivony. Herr von Tappenbeck, who arrived as German consul in June, 1891, was not recognized by the Hova authorities because he applied for his *exequatur* through the French representative. Mr. Walter, who succeeded John P. Campbell as American consul at Tamatave, obtained his *exequatur* by applying directly to the Malagasy Government. M. Bompard, on receiving orders from Paris to recede from his position in regard to the German consul, who was unable to discharge his office on account of the dispute, offered his resignation. The French Chamber, on March 12, approved a bill to establish French tribunals in Madagascar with jurisdiction in all cases affecting Europeans. The English residents have not ceased to resist French influence, and have acquired a larger power for obstruction by becoming admitted to a preponderant position in the Hova Council.

The French possessions in the neighborhood of Madagascar are the productive island of Réunion to the east, Ste. Marie off the north coast, Nossi Bé close to the west coast, Mayotte and the Comoro Islands half-way between the northern end of the island and the African shore.

Réunion, or the Isle of Bourbon, 970 square miles in extent, has been French since 1649. The population in 1887 was 163,881. Sugar and rum, coffee, vanilla, and spices are exported, and various kinds of grain and vegetables are grown. The exports in 1888 were 15,600,000 francs in value. The expenditure of the home Government provided for in the budget for 1891 was 4,576,836 francs. The Hindu coolies in 1888 numbered 23,883, and the negroes 14,731. The small island of Ste. Marie, 64 square miles in extent, with 7,667 inhabitants, is also an old French settlement. It produces only cloves for export.

Nossi Bé was placed in 1888 under the authority of the Governor of Diego Suarez. The population of 8,281 Malagasies and Africans cultivate the sugar-cane, coffee, and rice. The expenditure of France in 1890 was 121,482 francs. Mayotte, which has an area of 143 square miles and 10,551 inhabitants, of whom 38 are French, was occupied in 1843. The exports of sugar, rum, and vanilla beans in 1888 were valued at 1,040,000 francs. The expenditure of France in 1890 was 150,662 francs.

Except these islands, the nearest French colony is the naval station of Obock, on the Gulf of Aden. The territory, including the Bay of

Tajurah, is 2,300 square miles, containing 22,370 inhabitants. There is some trade with Shoa and the Somali country. The sum appropriated for Obock in 1891 was 672,191 francs.

The Comoro group, consisting of four larger and numerous small islands, inhabited by about 47,000 people who are mostly Mohammedans, were taken under French protection in 1886. The French did not occupy the islands in force, the Arab princes having acknowledged the protectorate. When the Sultan Abdullah of the island of Anjuan or Johanna died, on Feb. 1, 1891, the negro slaves, who were armed by the contestants for the throne, Salim, the late Sultan's son, and Othman, his brother, revolted on Feb. 28 and plundered the island, threatening to kill their masters if they were not enfranchised in accordance with a promise that had been made some years before to the English consul. Before the trouble began the French flag had been hauled down by the natives. The French resident, Dr. Ormières, and most of the Europeans left the island at the beginning of the disturbances, and when the gunboat "Boursaint" arrived, on March 18, Salim, who had established his authority after a sanguinary struggle, said he would not receive the resident, and wanted no Frenchmen on the island. On the Grand Comoro, the most important island, the people rebelled and deposed the Sultan Said Ali, the ruler protected by France. At Mohilla Island the regent usurped the place of the young Queen, who was being educated in Réunion at the expense of the French Government. The commander of the naval division in the Indian Ocean, Capt. Prouhet, brought on a force sufficient to re-establish French authority, and the three rebellious princes were banished to Obock. A force of 340 marines was landed at Anjouan on April 23, after a bombardment. The town of Montsamoudou was occupied without difficulty, and the rebels were pursued into the interior and brought to submission. The operations were repeated on the other revolted islands.

West African Possessions.—On the western side of the African continent France possesses the old colony of Senegal or Senegambia, the Rivières du Sud, which was detached from Senegal in the beginning of 1890, the French Soudan, the settlements on the Guinea coast, and the Gabun and French Congo territories. The regions over which the authority of France has in some degree been established are about 450,000 square miles.

The French claim the whole coast from Cape Blanco to the boundary of Liberia, with the exception of the English and Portuguese establishments, and the interior as far as the upper Niger. By the Anglo-French agreement of Aug. 5, 1890, Great Britain recognizes a French sphere of influence embracing the region south of Algeria and Tunis as far as a line drawn from Say, on the Niger, to Barruva on Lake Chad. There are 164 miles of railroad in the coast districts of Senegal, and the projected railroad from Medina, at the head of navigation on the Senegal river, to the upper Niger has been built as far as Bafoulabe, 94 miles. The exports of Senegal are ground-nuts, gum, India-rubber, woods, and skins. There were 1,600,000 acres under cultivation in 1886. The value of the imports

in 1888 was 27,995,835 francs, of which 12,515,155 francs were from France, and the value of the exports was 16,548,040 francs, of which 11,742,856 francs went to France. The French Soudan was placed on Jan. 1, 1891, under the administration of a superior commandant with headquarters at Kayes, who acts under the political direction of the Governor of Senegal in St. Louis. The Lieutenant-Governor of the Rivières du Sud, who resides at Konakry, on the Dubreka river, has authority over the territories on the Gold Coast, which were separated into two distinct administrative divisions, the Gold Coast group and the Bight of Benin group, on Jan. 1, 1890. The population of the colony of Senegal proper is 135,223, and that of the Rivières du Sud 47,541, the total white population being 1,470. The total area is about 140,000. The places under French administration on the Gold Coast are Grand Bassam and Assinie, Grand Popo and Agoué, Porto Novo, and Kotonou. Including protectorates, the French claim 25,000 square miles of territory in this region. A treaty of delimitation concluded with Great Britain on Aug. 10, 1889, defines the boundary between Senegal and the British colonies of Gambia and Sierra Leone and between French territory on the Gold Coast and the British colony of Lagos. The latter boundary is a line intersecting Porto Novo at Agarra creek. The French budget for 1890 provided for an expenditure of 9,353,193 francs in Senegal. The French Government has made great efforts to anticipate Great Britain in establishing its influence on Lake Chad, around which are clustered the rich and well-organized Mohammedan states of Bornu, Wadai, Kanem, and Baghirmi. A claim to Bornu, based on the possession of Sokoto, advanced on behalf of the English Royal Niger Company, is condemned by France as without foundation and as contrary to the African agreement, which is held to have limited the English sphere to the part of Bornu that is bounded by Sokoto and Adamawa. The approach to Bornu from the French territory on the Niger is defended by the Mohammedan despot Ahmadou, and the route through the desert farther north is blocked by a population of the vigorous and valiant Tuaregs. Col. Achinard, the commandant of the French Soudan, marched 700 miles in April, 1890, through the territory of the pagan Bambaras, and by a brilliant stroke captured Segou, Ahmadou's capital, which was defended by his son. The operations have been continued with interruptions only during the rainy season. On Jan. 1, 1891, Col. Achinard's column, after a brief encounter with the Toucouleurs at Koriga on Dec. 29, completely defeated Ahmadou's army of 8,000 men and drove them out of Niouro with a loss of 400 killed, the French losing 53 native soldiers. Ahmadou was pursued, and his army was again defeated at Touri, where 1,500 prisoners were taken. He was compelled to retire to the more remote part of his empire. The fetich worshippers of the coast and those of the southern part of the French sphere who formerly owned Ahmadou's despotic sway were confirmed in their allegiance to France by these brilliant victories. Niouro and Kaarta were restored to their old Bambara chiefs. The French force numbered but 700 rifles, but the artillery detachment, using

melinite shells, rendered it irresistible. The chain of posts between Senegal and the Niger is nearly complete. Later operations against Ahmadou's vassal Samory cost greater sacrifices, several French officers and more than 100 soldiers being wounded at the taking of Dieina. If French dominion is to be established on the shore of Lake Chad it can not wait for the building of the Trans-Sahara Railroad, which will run through 1,500 miles of desert country and traverse the land of the hostile Tuaregs, who are fanatical and irreconcilable foes of Christianity. In the winter of 1890-'91 nine expeditions set out from various points on the west coast for Lake Chad. The most important was that of Paul Crampel, who left Gabun with the object of exploring the unknown regions of upper Ubangi and Baghirmi, and establishing by right of prior discovery and by treaty the desired link between the French Congo and the Central Soudan to the east of Adamawa, which is acknowledged to be outside the French sphere and is left to be contended for or divided between England and Germany. The interior, behind the French, English, and German possessions, from the Congo to Lake Chad, is believed to be one of the most desirable parts of Africa, and its situation is such that the first of the three countries participating in the race for Lake Chad that succeeds in concluding treaties with the native chiefs can round off its dominions by annexing contiguous districts, and thus cut off the others from the central part of the continent. The aim of the French was to annex the whole basin of the Shari, including Bornu and Baghirmi, and extend the Trans-Sahara railroad to Brazzaville by way of the Mobangi river. Besides the Crampel expedition, one under M. Povel, chief of the French station at Bangui, explored the right bank of the Mobangi, and M. Cholet's explorations in the basin of the Sanga as far as the fourth degree of north latitude were continued by one of the agents of the Governor of the French Congo. Lieut. Mizon, who set out by way of the Binue for the purpose of concluding treaties with chiefs to the east of the recognized British sphere in Sokoto, was prevented from accomplishing his mission by the officers of the British Niger Company, whose attitude encouraged the natives to attempt to assassinate the members of the expedition, and who first detained it until the river was too low for the French steamer to navigate, and then gave permission for it to proceed only on condition that it should not go by land. Two other expeditions set out from Senegal for the upper Niger country. Lieut. Crampel's expedition consisted of 6 white men and 253 blacks. It followed the Mobangi route, reaching Bangui on Sept. 25, 1890. The people were much disturbed, and in pushing on into the country of the cannibals he had many desperate battles with the natives. He explored the tributaries of the Mobangi and made treaties with the chiefs. On April 9, while an expedition under M. Dybowski was on the way to support Crampel, the Crampel party was attacked in the Matonga country, and only one European, M. Nébout, and 11 Senegalese escaped massacre. M. Fourneau, who led the expedition to explore the Sanga valley, advanced up the Likelle tributary and the Sodi, where he was attacked, and

to punish the savages burned a village. Farther on he encountered large bands of hostile savages, and on May 10 the expedition was surprised in the night, many were killed, all fled except the Senegalese soldiers, and the leader, painfully wounded, retreated with the remnant, constantly fighting, until he reached the friendly tribe of the Mokelos. His farthest point was in 6° 30' of north latitude. The Lieutenant-Governor at Konakry in 1891 took formal possession of the coast from St. Andreas to Cavally, nearly 200 miles, asserting that it has been French territory for many years by virtue of long-existing treaties, though a part of it has long been claimed by the Liberians. The murder of two Frenchmen by the blacks of Lahou, on the Gold Coast, was avenged in May by a small expedition, which defeated 1,200 warriors armed with modern rifles. The French authorities deposed Dinah Salifu, King of the Nalus, who visited the Paris Exposition, on account of the tyranny and extortion that he practiced to enable him to imitate European sovereigns.

The Spanish Government has laid claim for several years to a coast line of about 100 miles from the Rio Campos to Cape Santa Clara, and, on the *Hinterland* principle, to an area of about 50,000 square miles on the River Muni. Spanish slave traders formerly used Corisco Island and stations on the opposite coast as depots for slaves to be shipped across the Atlantic, and in 1843 the local chiefs are said to have formerly recognized Spanish sovereignty. The French Government conceded the right of Spain to a small patch of the coast around Cape St. John and to Corisco Island, which is of little value, and in 1891 a joint commission met in Paris for the purpose of determining the extent of territory that the chiefs had the right to transfer to Spain. The Spanish Government had rejected an offer of the French to submit the decision to the Pope or some other arbitrator. There was little expectation of an agreement of the joint commission, for the French delegates, while willing to concede the Elobey Islands, where Spain had an agent, and the posts actually occupied, would not admit even a colorable claim to the territories on the Muni and Benito rivers, or to a *Hinterland* that would deprive France of a great part of her Congo territory. In the extreme north Spain disputed the French claim to the desert region south of Morocco, claiming the coast and 240,000 square miles, including the route of the proposed Trans-Sahara Railroad.

The Gabun and Congo territories, which are administratively distinct, although continuous, have a total area of 267,900 square miles, and a population estimated at 186,500 for Gabun and 500,000 for the French Congo. A chain of 27 stations extends along the coast and up the Igowe into the Congo region. Besides the military there are 300 Europeans. The exports are ivory, palm oil, caoutchouc, and ebony. The planting of sugar-cane, vanilla, coffee, cotton, and tobacco has been tried experimentally. For the development of production and trade in this region and in other parts of West Africa, as at Grand Bassam and the French Soudan, the Superior Council for the Colonies, organized in January, 1891, recommended the system of chartered companies.

American Colonies.—Besides the islands of Martinique and Guadalupe (see *WEST INDIES*), France possesses in America the small islands of St. Pierre and Miquelon, stations reserved for the Newfoundland fisheries when the French Canadian possessions were ceded to England, and French Guiana in South America. The population of St. Pierre and Miquelon in 1887 was 5,992. The value of the catch of cod in 1887 was 13,439,532 francs, and the number of vessels that visited the islands was 2,362. The local revenue in 1890 was 439,586 francs; the expenditure of the French Government in 1891 was 348,332 francs.

The population of the colony of Guiana or Cayenne in 1888 was 25,796; the area is 46,850 square miles. There are about 4,400 convicts in confinement or at large. The cost of the colony to France in 1889 was 1,428,169 francs. Since 1817 France and Holland have had a dispute about the limits of their establishments in Guiana. The matter remained in abeyance till the discovery of gold placers in the contested territory, and on Nov. 29, 1888, the two governments agreed to submit it to the arbitration of the Czar. By the Treaty of Utrecht in 1713 the Maroni river was declared the boundary up to its source. The French asserted that the Tapanahony was the upper course of the Maroni, while the Dutch held that the Aoua was. This part of Guiana passed into the possession of Portugal, and in 1815 was ceded back to France. The Dutch had military posts on the Aoua in the latter part of the last century, the French authorities have often recognized the responsibility of the Dutch for the behavior of the negroes settled on the disputed territory, and in 1861 the evidence presented to a mixed commission was on favor of the claim that the Aoua forms the upper course of the Maroni. On these grounds the Emperor Alexander, in delivering his decision on May 25, 1891, awarded the whole territory between the two rivers to the Nether-

lands. There is a dispute with Brazil concerning an area much greater and more essential to the development of the French colony.

Possessions in Oceanica.—In the Pacific Ocean France has the penal colony of New Caledonia, with the Loyalty Islands and the Society Islands, the Marquesas, Tuamotu, Gambier, and Tubuai groups, and to the west of Samoa the Wallis and Howe islands. New Caledonia, having an area of 7,700 square miles, with a population of 62,752, including 3,476 soldiers and civil officials and 9,992 convicts, is under the administration of a governor with large powers. The expenditure of France in 1891 was 3,066,669 francs. The imports in 1888 were 9,200,000 francs, and the exports 3,000,000 francs. Coffee, cocoa-nuts, cotton, vanilla, and manioc are cultivated. Nickel, chromate of iron, and cobalt are largely exported. The most important product is nickel, which is found in over two fifths of the area of the island. The most valuable mines can not now be worked for want of means of transport to the sea. About one tenth of the nickel-producing land has been granted to companies or applied for, and of this about one fourth is actually worked. The ore is hydrated silicate of nickel and magnesia, containing from 8 to 16 per cent. of the metal. There were 5,000 tons of this ore exported in 1890, besides 1,500 tons of chrome and 700 tons of cobalt. The export of the nickel ore is rapidly increasing. The supply is believed to be inexhaustible. Next to New Caledonia, the most important islands subject to France are Tahiti, area 412 square miles, and Moorea, area 50 square miles, in the Society Archipelago. Their population is 12,800. The exports consist of copra, cotton, sugar, coffee, and pearl shells. The exports to the United States in 1889 were \$200,000 in value, about two fifths of the total imports, and the imports from the United States were valued at more \$330,000, constituting two thirds of the total.

G

GEORGIA, a Southern State, one of the original thirteen, ratified the Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 82,548 in 1790; 162,686 in 1800; 252,433 in 1810; 340,985 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,057,286 in 1860; 1,184,109 in 1870; 1,542,180 in 1880; 1,837,353 in 1890. Capital, Atlanta.

Government.—The following were the State officers during the year: Governor, William J. Northen, Democrat; Secretary of State, Philip Cook; Comptroller-General, William A. Wright; Treasurer, Robert U. Hardeman; Attorney-General, George N. Lester; Commissioner of Agriculture, Robert T. Nesbitt; State School Commissioner, S. D. Bradwell; Railroad Commissioners, Allen Fort, L. N. Trammell, and James W. Robertson; Chief Justice of the Supreme Court, Logan E. Bleckley; Associate Justices, Thomas J. Simmons and Samuel Lumpkin.

Finances.—The bonded State debt, which amounted to \$8,261,340 on Jan. 1, remained

substantially unchanged during the year. In consequence of the large appropriations made by the Legislature, the rate of State taxation for the year was raised to \$5.08 on each \$1,000, the highest rate levied since the civil war. Of this total, \$3.50 on each \$1,000 was levied for general purposes, \$1.33½ for schools, and 24½ cents for the sinking fund. The total rate for 1890 was \$3.96 on each \$1,000. The assessed valuation of property in the State for 1891 exceeds \$400,000,000.

Education.—The latest report of the State School Commissioner contains the following public-school statistics for the school year ending in July, 1890: Number of white schools, 4,529; number of colored schools, 2,286; schools under local laws, 232; white pupils enrolled, 230,595; colored pupils enrolled, 150,702; total enrollment, white and colored, 381,297; average daily attendance, white and colored, 240,790; total expenditures for school purposes, \$1,190,353.91; teachers' wages, \$998,575.04; average length of school year, four months; the total population

of school age, 560,281. The State School fund for 1890 amounted to \$643,420.14, derived from the following sources: From tax on excess of taxable property over \$360,000,000, \$50,575.90; amount received from school-tax levy, \$330,000; half rental of State railroad, \$150,000; dividend Georgia railroad stock, \$2,046; tax on liquor dealers, \$71,861.80; net fees from inspectors of fertilizers, \$17,451.15; hire of State convicts, \$17,417.29; tax on shows, \$5,248. Of the total fund, the sum of \$638,656.05 was apportioned to the various counties for the support of schools. There was collected in the several counties from poll taxes \$193,757.64, which is also applied for the support of schools, and \$419,038.86 was raised by the local authorities for the same purpose, making the total sum raised in the State for schools during the year \$1,251,452.55. Recent State legislation has been favorable to public-school interests.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, as reported by the Federal census:

There were also 110 Chinese, 1 Japanese, and 64 Indians in the State in 1890.

Legislative Session.—The adjourned session of the State Legislature began early in July and continued through Oct. 15. Although heralded as a reform Legislature and controlled by the Farmer's Alliance in both Houses, it exceeded all of its predecessors in the amount of its appropriations. The total sum appropriated was \$2,448,100, distributed as follows: Soldiers' pensions, \$185,000; widows' pensions, \$400,000; Common-school fund, \$585,000; settlement of Western and Atlantic Railroad betterments, \$120,000; expenses of government, \$920,000; Girls' Industrial School, \$32,500; Technological School, \$18,000; miscellaneous, \$187,500. It became necessary, in consequence of these appropriations, to add 1½ mill to the State tax levy for general purposes for 1891.

A noteworthy result of the session was the passage of an act requiring steam railroad companies to provide separate compartments for the white and colored races in all passenger cars. Efforts were made without success to impose the same requirements upon electric street-railway companies. But conductors on street cars were given police powers and authorized to assign all passengers to their seats.

Three important amendments to the State Constitution were proposed for submission to the people at the election of 1892. One of these repeals the section requiring charters of railroads, banks, insurance companies, etc., to be granted by the Legislature, and provides that they shall be issued by the Secretary of State, pursuant to general fixed laws to be enacted. This reform will reduce by one half the number of bills to be considered at each legislative session. In the same line of reform an act was passed requiring all towns of fewer than 2,000 inhabitants to obtain their charters and amendments thereto from the courts instead of from the Legislature. The two other constitutional amendments provide for annual sessions of the Legislature, limited to fifty days each. By another act the Supreme Court was required to hear all cases brought to that tribunal upon their substantial merits, and was forbidden to dismiss cases upon mere technical defects. Telegraph and express companies were placed under control of the Railroad Commission.

A radical change was made in the rules of evidence. Under the old law, if a party did not choose voluntarily to testify in his case, he could not be compelled by the other party unless the latter made him his (the latter's) own witness. The new law allows either party to call the other to the stand and cross-examine him and impeach him if necessary, as if he had testified in his own behalf. Primary elections were brought under the protection of the law by punishing fraud and false swearing therein. The liquor traffic was practically driven within city walls by an act prohibiting the sale of intoxicating liquor within three miles of a church or a school outside of cities. Two bills were passed for the benefit of labor, one to prevent "blacklisting" of employés, the other to prevent railroads from requiring engineers and trainmen to work more than thirteen consecutive hours without rest.

An act designed to destroy the Southwestern Tariff Association, so called, which was regarded as a combination to control insurance rates, pro-

vides that it shall be unlawful for insurance companies doing business in the State to form pools or combinations for the purpose of lessening or defeating competition, and that if any insurance company or its agents enter into such a combination or pool, when it shall be made to so appear to the insurance commissioners, the license of such company shall be revoked.

The law further provides that if any company shall refuse to take a risk, or increase the rate of any risk, or charge an apparently exorbitant rate, the person owning such risk may make complaint to the insurance commissioner. If it is found on investigation that the increased rate or the refusal of a risk or the exorbitant charge is due to any combination to lessen or defeat competition in which the company complained of is a party, then such company's license is to be revoked.

Provision was made for distributing the sum received by the State from the Federal Government as a refund of the direct-tax levy to the persons who originally paid the tax, or to their heirs. An offer to transfer Rock College, near Athens, to the State, to be used as a normal college, was accepted, and the college was established as a branch of the State University. It occupies 10 acres of land and has a yearly income of \$1,000 from funds left by the founder, ex-Gov. Gilmer.

As a result of long discussion and a persistent effort to secure a declaration by the Legislature in favor of the Ocala platform of the National Farmers' Alliance, the following resolution was passed:

That our Senators and Representatives in Congress be, and they are hereby, requested to use their influence and votes to secure legislation which will correct the evils complained of by the National Farmers' Alliance and Industrial Union in convention at Ocala, Fla., and the evils complained of by the Democratic party, especially those that relate to the present financial condition and taxation of the government.

Other acts of the session were as follow:

To require common carriers to receive live stock for transportation.

To provide for honorable retirement of commissioned officers.

To regulate the business of building and loan associations.

To prescribe conditions under which long-range fire-arms shall be carried.

To prescribe how payment of pensions shall be made.

To require railroad, street railroad, and telegraph companies and other corporations to give their employés reasons in writing for their discharge.

To make appropriations for State expenses for the fiscal year 1891-'92, and to provide that the revenue derived from the excess of taxable property over \$415,000,000 up to \$445,000,000 shall be appropriated to the School fund.

To create a game law for the State.

To set Labor Day as a legal holiday.

Coal.—In the northwestern counties of Georgia an area of about 200 square miles is underlaid by the eastern edge of the Appalachian coal field near its southern extremity, embracing portions of Dade and Walker Counties. The coal is semi-bituminous, and yields a fair quality of coke. The only important mining operations are at Coal City, in Dade County. In North

Carolina coal deposits exist in Stokes and Rockingham Counties along Dan river, and in Chatham and Moore Counties in the valley of Deep river. Only one company is mining coal on a commercial basis in that State. For 1889 the coal product of Dade County, Georgia, and Chatham, and Stokes Counties, North Carolina, was 226,156 tons, worth on an average \$1.50 a ton at the mines. The total number of employes in 1889 in these counties, including office force, was 740, to whom was paid in wages \$265,464. The number of acres owned in these counties was 20,733, and the value of mines and improvements \$724,500.

GERMANY, an empire in central Europe, constituted at the close of the Franco-German War, when the states of the North German Confederation, the Kingdoms of Bavaria and Württemberg, and the Grand Duchies of Hesse and Baden invited the King of Prussia to assume the dignity of German Emperor. The Empire was proclaimed at Versailles on Jan. 18, 1871, and the Constitution, by the terms of which the states of Germany entered into a "perpetual union for the protection of the *Reich* and the welfare of the German people," was promulgated on April 16, 1871. The *Deutscher Kaiser* or German Emperor is the *Kriegsherr* or lord of military forces, and has power to make alliances and treaties, to declare war, and conclude peace, except in an aggressive war he must have the consent of the Federal Council. In all international relations he can act without consulting the other German princes, and all diplomatic representatives are accredited by him. The chief imperial functionary is the Chancellor. The legislative power in matters concerning the military and naval forces, finances, commerce, domicile, communications, and justice is exercised by the Federal Council jointly with the Reichstag. The Federal Council or Bundesrath is composed of 58 members, of whom 17 are plenipotentiaries of Prussia, 6 of Bavaria, 4 of Saxony, 4 of Württemberg, 3 of Baden, 3 of Hesse, 2 of Mecklenburg-Schwerin, 2 of Brunswick, and 1 one of the other states and free cities forming the empire, nominated by the chiefs of the Government in each state. The Reichstag or German Parliament contains 397 deputies, elected for five years by the direct suffrage of all citizens twenty-five years of age. The Constitution was modified by the law of March 19, 1888, which made the legislative period from 1890 five years instead of three. The members of the Bundesrath are appointed for each session. Prussia elects 236 members to the Reichstag, Bavaria 48, Saxony 23, Württemberg 17, Alsace-Lorraine 15, Baden 14, Hesse 9, Mecklenburg-Schwerin 6, Oldenburg 3, Saxe-Weimar 3, Brunswick 3, Hamburg 3, Saxe-Meiningen 2, Anhalt 2, Saxe-Coburg-Gotha 2, Mecklenburg-Strelitz 1, Saxe-Altenburg 1, Waldeck 1, Lippe 1, Schwarzburg-Rudolstadt 1, Schwarzburg-Sondershausen 1, Reuss-Schleiz 1, Schaumburg-Lippe 1, Reuss-Greiz 1, Lübeck 1, and Bremen 1. The Deputies receive no pay. The Emperor can not veto measures passed by the Reichstag and Bundesrath. Alsace-Lorraine is represented in the Bundesrath by four commissioners appointed by the Statthalter, who have no votes. At the general election of 1890 the number of registered voters

was 10,145,877, or 21.7 per cent. of the total population, and the number of ballots cast was 7,261,650, or 71.6 per cent. of the total number of qualified electors. The Bundesrath and Reichstag are convoked annually by the Emperor, who has the right to prorogue Parliament, and may dissolve the Reichstag with the consent of the Bundesrath. Without its consent he may not adjourn the Reichstag for more than thirty days, and in the event of a dissolution new elections must be held within sixty days, and the new Reichstag be convoked within ninety days. All legislative measures must receive an absolute majority vote in the Bundesrath and the Reichstag, and received the Emperor's assent and be countersigned by the Chancellor of the Empire.

The Emperor is Wilhelm II, born Jan. 27, 1859, eldest son of Friedreich, whom he succeeded as King of Prussia and German Kaiser on June 15, 1888. The Chancellor of the Empire is Gen. Georg von Caprivi, born in 1831, who succeeded Prince Otto von Bismarck on March 20, 1890. The Secretaries of State, who act independently of each other under the supervision of the Chancellor, were in the beginning of 1891 as follow: Ministry of Foreign Affairs, *Freiherr* Marschall Bieberstein; Imperial Home Office and Representative of the Chancellor, Dr. von Bötticher; Imperial Admiralty, *Herr* Hollman; Secretary and Admiral, *Freiherr* von der Goltz, Commander-in-Chief; Ministry of Justice, *Herr* von Oehlschläger; Imperial Treasury, *Freiherr* von Maltzahn; Post-office, Dr. von Stephen; Railroads, *Herr* von Maybach; Imperial Exchequer, *Herr* von Stünzner; Invalid Fund, Dr. Michaelis; Imperial Bank, Dr. Koch; Debt Commission, *Herr* Meinicke.

Area and Population.—The area of the Empire is 211,168 square miles. The population on Dec. 1, 1885, was 46,855,704. The preliminary returns of the census of the empire, taken on Dec. 1, 1890, make the total population 49,420,842 persons, of whom 29,957,302 are Prussians.

The number of marriages in 1888 was 376,654; the number of births was 1,828,379, of which 169,645 were illegitimate; the number of deaths was 1,209,798. Of the children born, 940,917 were boys and 887,461 girls. The emigration in 1889 was 96,032 persons, of whom 90,197 were bound for the United States, 2,412 for Brazil, 2,243 for other American countries, 496 for Australia, 422 for Africa, and 262 for Africa. The number of persons who emigrated in 1890 by way of German ports—Antwerp, Rotterdam, and Amsterdam—was 91,925, of whom 59,702 were from Prussia, 9,725 from Bavaria, 5,987 from Württemberg, 3,546 from Baden, 2,577 from Saxony, 2,123 from Hesse, and the rest from the minor states. Including those who shipped at French ports, the emigration in 1890 was about 97,700. The population of Berlin in 1890 was 1,579,244; of Hamburg, 570,534; of Leipsic, 293,525; of Munich, 348,317; of Breslau, 335,174; of Cologne, 289,537; of Dresden, 276,085; of Magdeburg, 201,913; of Frankfort-on-the-Main, 179,660; of Hanover, 163,100; of Königsberg, 151,151. Including the suburbs, Hamburg, with 570,534 inhabitants, is the second city in the empire, and Leipsic, with 355,485, takes the third place. There were in 1871 only 8 cities of more than 100,000 inhabitants, and in 1890 there were

26. During six years the population of Berlin had increased 3·65 per cent. and that of the other 25 cities 2·83 per cent. The urban population in 1885 constituted 36·1 per cent., of the total in 1871; in 1885 the proportion had risen to 43·7 per cent.; and in 1891 it was 47·8 per cent.

Finances.—The imperial revenue is derived from customs, certain excise duties, stamps, and the post-office, telegraphs, and state railroads. For the year ending March 31, 1891, the ordinary military and naval expenditures were 482,691,000 marks (1 mark = 24 cents), the extraordinary expenditures were 279,246,000 marks, the debt charges were 46,623,000 marks, and the general expenses of the Government were 451,777,000 marks. The total revenue for the year ending March 31, 1892, was estimated at 1,130,645,888 marks, of which 588,996,140 marks are derived from customs and excise, 34,506,000 marks from stamp duties, 23,790,807 marks from posts and telegraphs, 20,298,500 marks from railroads, 2,691,700 marks from the Imperial Bank, 1,185,300 marks from the Government printing office, 8,739,719 marks from receipts of the various departments, 3,128,955 marks from various other sources, 441,600 marks from interest on imperial funds, 24,453,293 marks from interest on the Invalid fund, 98,790,369 marks from extraordinary sources, and 322,623,505 marks from matricular contributions or assessments on the states of the empire for the difference between the estimated receipts and expenditure. Of the total expenditure, 390,025 marks are appropriated for the Reichstag, 148,260 marks for the Chancellery, 9,161,415 marks for foreign affairs, 16,221,098 for the Ministry of the Interior, 412,550,954 marks for the army, 42,818,633 marks for the navy, 1,956,156 marks for the Ministry of Justice, 336,216,420 marks for the Treasury Department, 304,090 for the Ministry of Railways, 53,861,500 marks for the service of the debt, 607,583 marks for the Audit Office, 40,905,640 marks for pensions, 25,453,293 marks for the Invalid fund, 540,000 marks for increase of salaries, and 189,510,821 marks for extraordinary purposes. The extraordinary expenditure includes 71,303,510 marks for the army, 51,062,150 marks for the navy, 30,700,000 marks for the Interior Department, and 10,242,500 marks for the debt.

The funded debt in the beginning of 1890 amounted to 976,502,000 marks. To meet extraordinary expenditures a further loan of 257,007,000 marks was authorized. The unfunded debt represented by treasury bills was 126,552,405 marks on March 31, 1889. The Invalid fund at that date amounted to 476,649,024 marks, 3,459,450 Frankfort florins, and 5,563,462 silver marks. Of the Fortification fund, 138,548 marks were unexpended, and the fund for the erection of the Reichstag building amounted to 16,520,453 marks. The war treasure saved from the French indemnity and hoarded in the fortress of Spandau is 120,000,000 marks in gold coin. On Feb. 20, 1891, the books were opened for a new imperial loan of 200,000,000 marks, and for Prussian consols to the amount of 250,000,000 marks.

The budgets of the several German states, with their debts, incurred mainly for railroad construction, are given, in marks, in the following table, the figures relating in most cases to 1891 and in others to the year before :

STATES.	Revenue.	Expenditure.	Debt.
Alsace-Lorraine . . .	45,475,486	44,369,546	25,801,500
Anhalt	10,610,090	10,610,000	2,208,806
Baden	50,145,456	49,150,612	890,047,901
Bavaria	280,291,642	280,291,642	1,838,514,776
Bremen	16,216,500	29,580,700	63,625,200
Brunswick	12,106,000	12,106,000	26,129,671
Hamburg	51,528,200	52,885,800	236,167,784
Hesse	21,884,025	21,701,060	35,095,308
Lippe	1,085,809	1,083,299	810,399
Lübeck	3,469,816	3,459,516	18,947,667
Mecklenburg- Schwerin	10,489,450	10,489,450	40,828,042
Mecklenburg- Strelitz	7,660,810	8,177,850	6,000,000
Oldenburg	1,591,673,942	1,591,673,942	37,616,587
Prussia	1,051,775	1,051,775	5,204,724,261
Reuss-Greiz	1,771,226	1,754,341	218,750
Reuss-Schleiz	3,322,554	3,322,589	1,040,550
Saxe-Altenburg	1,647,800	2,074,408	911,678
Saxe-Coburg and Gotha	6,398,780	5,716,250	3,408,768
Saxe-Meiningen	7,696,040	7,696,040	12,768,661
Saxe-Weimar	46,810,207	46,810,207	5,544,565
Saxony	765,062	765,062	647,886,900
Schaumburg-Lippe	734,400	734,400	510,000
Schwarzburg-Rudol- stadt	820,816	820,816	4,271,200
Schwarzburg-Son- dershausen	1,187,810	1,187,810	2,462,449
Waldeck	60,781,640	61,040,980	2,229,900
Württemberg			480,731,605

The Army.—Every German capable of bearing arms may be called upon to do service in the standing army for seven years. He may be summoned at the age of eighteen, but as a rule his service begins after he has passed his twentieth year. He serves three years in the active army, and for the remaining four he belongs to the reserve of the active army. For the next five years he may be called upon to serve in the first ban of the Landwehr, and for seven more in the second ban. The Landsturm embraces all physically competent men between the ages of seventeen and forty-five who are inscribed in the standing army, the Ersatz troops, or the Landwehr; and it is divided into two bans, the first of which consists of those under, and the second of those over, the age of thirty-nine. The Landsturm can not be called upon to serve beyond the frontiers. The conscripts are chosen by lot from the 300,000 or more able-bodied men who arrive annually at the age for entering the army. All who are not drawn for the active army are enrolled in the Ersatz troops for twelve years, and then pass into the Landsturm. A part of the Ersatz men receive twenty weeks of military training. About 8,000 young men are admitted to the army every year as volunteers, who are released from further active service on serving for one year, if they conform to the required intellectual requirements and pay their own expenses. On passing examinations, one-year volunteers may become commissioned officers. The non-commissioned officers are taken by preference from among the soldiers who have shown capability, and for adequate pay are willing to adopt the military life as a profession. Intelligence and good conduct earn for men of the regular army an indefinite leave of absence after two years of active service.

The standing army is organized territorially in 19 army corps: First, East Prussia; Second, Pomerania; Third, Brandenburg; Fourth, Saxony; Fifth, Posen; Sixth, Silesia; Seventh, Westphalia; Eighth, Rhineland; Ninth, Schles-

wig-Holstein; Tenth, Hanover; Eleventh, Hesse-Nassau; Twelfth, Saxony; Thirteenth, Württemberg; Fourteenth, Baden; Fifteenth, Alsace; Sixteenth, Lorraine; Seventeenth, West Prussia; and the First and Second Bavarian corps. In addition, there are the Prussian corps of the Guards and the Hessian division, which is to be strengthened to form the Twenty-first Corps in case of war. The Bavarian troops, and in a less degree those of Württemberg and Saxony, have an independent administration, which is more formal than real, for the Kaiser appoints all superior officers and exercises a sufficient degree of supervision to secure cohesion and efficiency.

The strength of the standing army in 1890 was as follows: 171 regiments of infantry, with 10,412 officers and 310,069 men; 21 battalions of rifles, with 446 officers and 11,785 men; 277 Landwehr district commands, with 462 officers and 4,862 men, and 2,174 surgeons, instructors, etc.; making the total infantry force 11,320 officers and 328,890 men; 93 regiments of cavalry, with 2,351 officers and 64,162 men, besides 848 officers and men detailed for special cavalry service; 42 regiments of field artillery, with 2,014 officers and 40,928 men, besides 613 officers and men in special services; 14 regiments and 3 battalions of foot artillery, with 728 officers and 17,287, besides 97 men, including officers, on special service; 19 battalions of pioneers and 2 regiments of railroad troops, including 1 balloon detachment, 1 railroad battalion, and 2 railroad companies, numbering in all 564 officers and 12,233 men, besides 98 engaged in special services; 18 battalions and 1 company of train, numbering 257 officers and 6,056 men, besides 63 on special service; special formations having 382 officers and 1,006 men; and 2,121 non-regimental officers, with whom 228 men were detailed. This makes a total of 19,737 officers and 472,509 men. The number of field guns was 1,538. The number of horses was 62,469 for the cavalry, 22,443 for the field artillery, 3,360 for the train, and 30 for the fortress artillery, or 88,302 altogether. Under the law creating two new army corps the peace effective was during the same year increased to 20,285 officers and 486,983 men, including 58,369 non-commissioned officers, and the number of horses to 93,650. Each army corps consists of 2 divisions of infantry, to each of which are attached 1 regiment of cavalry, 1 section or 3 batteries, each of 6 pieces, of mounted artillery, and 1 or 2 companies of pioneers; 1 cavalry division of 4 regiments, with 2 batteries of horse artillery; the corps artillery consisting usually of 12 mounted batteries; and 1 or 2 battalions of pioneers and 1 battalion of train. The line battalion, which consists ordinarily in peace of 544 men, is raised to 1,002 men in war. The war strength of the German army is roughly estimated at 36,000 officers, and 2,357,500 soldiers who have received military instruction, exclusive of the Landsturm. This sum is arrived at by deducting 10 per cent. from the recruiting lists of the active army and its reserve, 20 per cent. from those of the first ban of the Landwehr, and 30 per cent. from those of the second ban, making the active army and reserves 1,062,000 men and the Landwehr 605,500 in the first and 690,000 in the second ban. A report to

the intelligence department of the British army in 1888 gives the following estimate of the strength and distribution of the entire army when mobilized for war, exclusive of surgeons and other non-combatants: Active field army, 22,377 officers and 942,408 rank and file, with 2,028 field guns and 280,472 horses; reserves, 9,536 officers and 354,915 rank and file, with 648 guns and 72,963 horses; garrison troops, 16,209 officers and 868,627 rank and file, with 882 field guns and 86,324 horses. The grand total is 48,122 officers, 2,165,950 trained soldiers, 7,602 surgeons, 12,957 other officials, 439,759 horses, 3,558 field guns, and 58,716 other carriages. This does not include the railroad troops and other special services nor the Landsturm. The latter, which is available in case of invasion only, is estimated at 700,000 effective troops.

The German service rifle is a multiple-loader rather than a magazine weapon, and can not be used as a single loader. The charge of five cartridges is contained in a metal case, and the breech block must be worked to bring each cartridge into place. The arrangement of the Prussian cartridge pouch enables the soldier to fire a greater number of rounds to the minute with the new Mauser rifle than with any of the magazine rifles proper, and without the disadvantages of the latter, such as an empty magazine at a critical moment. The soldier carries 150 rounds in his three pouches, and can stow more in his haversack and pockets. Count Waldersee, on resigning his post as chief of the general staff in the beginning of February, 1891, was succeeded by Lieut.-Gen. Count Alfred Schlieffen, who had been since 1889 quartermaster-general of the army.

The Navy.—The effective war navy in 1890 comprised 12 ironclad battle ships, with 145 guns; 15 coast-defense ironclads, carrying 20 guns, inclusive of the "Bremse" and "Brummer," which have deck armor only; 8 frigate cruisers, carrying 116 guns; 10 corvette cruisers, carrying 116 guns; 4 smaller cruisers, carrying 26 guns; 3 gunboats, carrying 12 guns; 7 avisos, carrying 18 guns; 10 school ships, with 72 guns; and 9 vessels for various purposes, carrying 8 guns. The "Kaiser" and "Deutschland," with 10 inches of side armor, armed with eight 23-ton guns; the "König Wilhelm," with 12 inches of armor at the water line; "Friedrich der Grosse" and "Preussen," sister ships with 9 inches of armor; "Sachsen," "Bayern," "Württemberg," and "Baden," having 10-inch plates and eight 19-ton guns each; and the lighter "Oldenburg," carrying 2 more guns, are the principal sea-going armor-clads. The coast-defense gun vessels are all of one type, having 8 inches of armor, a displacement of 1,109 tons, and one 36-ton gun, except one old ironclad relegated to this service, and the "Siegfried," launched in 1889, which has 3,600 tons' displacement and powerful engines, and the deck-protected cruisers mentioned above, both armed with a single 124-ton gun. The deck-armored "Irene" and "Prinzessin Wilhelm," launched in 1887, are fast commerce destroyers of 4,400 tons displacement, having engines of 8,000 horse-power, and armed with fourteen 6-ton guns. Nearly all the vessels of the fleet are provided with torpedo-launching apparatus. The torpedo flotilla

numbers 134 vessels, viz., 1 ship of 2,310 tons, 1 tender, 6 dispatch vessels capable of making from 16 to 21 knots an hour, 5 torpedo gunboats with a speed of 21 or 22 knots, 63 torpedo boats of from 75 to 85 tons that can run from 20 to 22 knots an hour, 49 torpedo boats of 50 tons capable of making 18½ or 19 knots, and 9 small ones.

Agriculture and Industry.—Only 6 per cent. of the soil of Germany is called unproductive. The area devoted to rye in 1890 was 5,801,889 hectares (1 hectare = 2.47 acres); to wheat, 1,956,441; to oats, 3,886,627; to barley, 1,685,000; to potatoes, 2,917,720; to hay, 5,909,337; to vines, 120,935; to hops, 45,797. The produce of beet sugar in 1889 was 944,505 tons. Of wine, 2,021,569 hectolitres were produced in 1890 (1 hectolitre = 22 gallons). The forests cover 34,347,000 acres, about one quarter of the area of the empire. Iron and coal are produced in Westphalia, Rhenish Prussia, Silesia, and Saxony, coal in Alsace-Lorraine, silver in Saxony and the Harz mountains, zinc in Silesia, and copper in the Harz. The quantity of coal raised in 1889 was 67,341,307 tons; of iron ore, 11,001,000 tons; of zinc ore, 709,000 tons; of copper ore, 573,200 tons. The value of the minerals taken out in 1889 was 552,000,000 marks. About 2 per cent. of the population are employed in textile manufactures, and 1½ per cent. in the iron and steel industries. The production of iron in the calendar year 1890 was 4,563,025 tons. The chief seats of the textile industry are Saxony and some of the Prussian provinces for woollens, Alsace-Lorraine, Baden, and Württemberg for cottons, Westphalia and Silesia for linens, and Rhenish Prussia, Alsace, and Baden for silks. Beer is brewed chiefly in Bavaria, Saxony, and Prussia, the product in 1889 being 46,603,000 hectolitres. The quantity of alcoholic spirits distilled was 2,727,000 hectolitres. The growth of national wealth is illustrated by the classified income-tax lists, which show that the number of persons in Prussia paying taxes on incomes of from 48,000 to 5,000,000 marks increased from 67 to 2,348 between 1869 and 1890, and that those possessing incomes ranging from 32,400 to 48,000 marks increased from 241 to 2,152. These figures indicate that the accumulated wealth is becoming massed in few hands, and this conclusion is confirmed by the fact that 23,221,983 persons paid no income tax in 1890, showing a progressive impoverishment of the middle classes, especially the artisans and small manufacturers.

Commerce.—The general commerce in 1889 had a total value of 5,671,240 marks for imports and 4,811,600 marks for exports. The value of the special imports was 4,087,060 marks, and that of the special exports was 3,256,421 marks. The direct transit trade amounted to 1,280,955,000 marks. The values, in marks, of the special imports and exports of the various classes of merchandise in 1889 are given in the accompanying table.

The values of the chief imports were: Wool, 279,744,000 marks; cotton, 270,744,000 marks; coffee, 199,282,000 marks; raw silk, 129,231,000 marks; rye, 113,444,000 marks; woollen yarn, 112,629,000 marks; barley, 91,454,000 marks; raw hides, 89,486,000 marks; petroleum, 81,337,000 marks; horses, 78,616,000 marks; wheat, 75,389,000 marks. The exports of greatest value

Total.....	4,087,060,000	3,256,421,000

were: Sugar, 162,842,000 marks; mixed silk and cotton goods, 157,926,000 marks; woollen goods, 152,854,000 marks; ribbons and trimmings, 121,930,000 marks; leather goods, 117,379,000 marks; coal, 110,410,000 marks; hosiery, 108,518,000 marks; cotton cloth, 53,971,000 marks; paper, 53,358,000 marks; wood manufactures, 52,144,000 marks; aniline dyes, 33,144,000 marks; hops, 23,022,000 marks. The imports of the precious metals were 71,988,000 marks in 1889 and the exports were 89,766,000 marks.

The receipts from customs in the year ending March 31, 1888, were 270,368,000 marks, equal to 7.7 per cent. of the total value of the imports. Since the adoption of the protective tariff in 1879 the external commerce of Germany has grown from 5,806,108,000 marks in 1880 to 7,343,481,000 marks in 1889, an increase of 26.4 per cent. The imports have increased from 2,859,928,000 to 4,087,060,000 marks, an increase of 42.9 per cent., and the exports from 2,946,180,000 to 3,256,421,000 marks, an increase of 10.5 per cent. In 1880 Austria-Hungary furnished 14.3 per cent. of the imports, Great Britain and her colonies 12.3 per cent., Russia 11.8 per cent., France 8.7 per cent., Belgium and Holland each 6.8 per cent., the United States 6.2 per cent., and Switzerland 5 per cent. In 1889 the imports from Great Britain and British colonies constituted 16.5 per cent. of the total, 13.4 per cent. came from Russia, 13.1 per cent. from Austria-Hungary, 8.2 per cent. from Belgium, 7.7 per cent. from the United States, 7 per cent. from the Netherlands, 6.9 per cent. from France, and 4.4 per cent. from Switzerland. Of the total exports, 15 per cent. in 1880 and 20 per cent. in 1889 went to Great Britain, 10 per cent. in the former and 10.5 per cent. in the latter year to Austria-Hungary, 6.1 per cent. in 1880 and 12.1 per cent. in 1889 to the United States, 7.7 per cent. in 1880 and 7.9 per cent. in 1889 to the Netherlands, 9.9 per cent. in 1880 and 6.4 per cent. in 1889 to France, 7.7 per cent. in 1880 and 6 per cent. in 1889 to Russia, 6 per cent. in 1880 and 5.4 per cent. in 1889 to Switzerland, and 5.6 per cent. in 1880 and 4.2 per cent. in 1889 to Belgium. During the protectionist era the manufactures of Germany have developed wonderfully, and the population has rapidly increased, notwithstanding the large emigration; while the domestic production of food and raw

materials has not been materially augmented, the fields, the mines, and the forests having nearly reached their full productive capacity in 1879. For this reason and because of the increase of wealth and spread of luxury the exports have not kept pace with the imports, and since 1888 the export movement has been checked, especially in the iron and steel branches, because the increased prices of bread, meat, and liquors, owing to new protective measures for the benefit of agriculture, were enhanced, driving workmen into strikes; and the iron industry could no longer compete in important branches with that of Great Britain because the coal-miners' strike and the increased consumption of coal for domestic heating had raised the price of fuel. In 1890 the exports to the United States were about 8 per cent. greater in value than in the preceding year. Of the German exports of hosiery in that year 60 per cent. went to the United States; of linen manufactures, 39 per cent.; of silk manufactures, 42 per cent.; of cotton manufactures, 22 per cent.; of wool manufactures, 14 per cent.; of porcelain, 40 per cent.; of glass, 18 per cent.; of chemicals and colors, 10 per cent.; of fancy articles, 33 per cent.; of wines, 34 per cent.; of gloves, 57 per cent. Of the imports of raw cotton, 50 per cent. came from the United States; of grain, 11 per cent.; of Indian corn, 65 per cent.; of beef, 23 per cent.; of leaf tobacco, 23 per cent.; of lard, 83 per cent.; of petroleum, 85 per cent. The effect of the new American tariff law was seen in 1891 in diminished exports from Germany to the United States of sugar and of woollens, cutlery, and many other manufactures.

Navigation.—The number of vessels entered inward in 1889 was 67,457, of 12,905,445 tons, of which 57,161, of 11,822,040 tons, were with cargoes, and 10,296, of 1,083,405 tons, in ballast. The number cleared outward was 67,391, of 12,963,502 tons, of which 48,740, of 8,843,750 tons, were with cargoes and 18,651, of 4,119,752 tons, in ballast. Of the total number entered with cargoes, 38,223, of 5,747,460 tons, were German ships; 5,356, of 3,657,590 tons, were British; 4,966, of 607,842 tons, were Danish; 2,954, of 579,952 tons, were Swedish; 1,177, of 389,271 tons, were Norwegian; and the remaining 2,150 belonged to other countries.

The merchant marine in the beginning of 1890 consisted of 815 steamers, of 617,911 tons, and 2,779 sailing vessels, of 702,810 tons, a total of 3,594 vessels, of 1,320,724 tons, of which 1,245, of 329,722 tons, belonged to Baltic ports, and 2,349, of 990,999 tons, to the North Sea ports. The number of sailors was 37,857. Of the sailing vessels 1,564 and of the steamers 165 were under 100 tons; 788 sailing vessels and 211 steamers were between 100 and 500 tons; 236 sailing vessels and 196 steamers were between 500 and 1,000 tons; and 191 sailing vessels and 243 steamers were over 1,000 tons. These figures do not include the vessels engaged in the coasting trade and inland navigation, which numbered 20,390 in 1888, and measured about 2,150,000 tons.

Railroads.—The length of state railroads and private railroads under state management in 1890 was 36,787 kilometres, and the length of private railroads under separate management was 4,389 kilometres, making in all 41,176 kilo-

metres, of which 12,539 kilometres had two or more tracks. The cost of construction was 9,775,901,446 marks, equal to an average of about \$96,000 a mile. The capital cost to the present owners was 10,259,014,576 marks. The number of passengers carried during the fiscal year 1889-'90 was 343,804,927, and the amount of freight transported was 212,093,339 tons. The receipts from passengers were 333,894,172 marks, and from freight 873,241,311 marks. Including other receipts, exclusive of interest on mortgages, the total was 1,264,656,117 marks. The total expenses, exclusive of those for extensions and interest, were 683,117,000 marks, which was 54.02 per cent. of the gross receipts. The net receipts, after deducting all expenses, represent 5.88 per cent. of the original cost and 5.6 per cent. of the invested capital. The number of persons employed was 315,729, whose salaries and wages averaged \$270, and consumed 28½ per cent. of the gross receipts. The above statistics do not include the narrow-gauge railroads, which had a length of 872 kilometres, and returned a profit of 3.28 per cent. on the invested capital.

The Post-Office and Telegraphs.—The number of letters carried by the imperial and the Bavarian and Württemberg post-offices in 1889 was 1,014,659,330; of post cards, 323,083,840; of printed inclosures, 365,130,680; of samples, 23,880,490; of newspapers, 760,973,438; the amount of money sent, 22,241,469,704 marks. The number of employés was 120,629 in the postal and telegraph services, of which the receipts were 241,527,621 marks and expenses 209,855,998 marks. The length of telegraph lines was 98,391 kilometres, with 334,083 kilometres of wire. The number of private messages was 16,705,959, and of official 1,277,291 in the internal service, and in the international 3,255,344 were sent, 3,638,736 received, and 970,506 forwarded in transit.

The Reichstag.—In the session that ended on May 9 the measure that was most discussed was the act for the protection of workmen, framed in accordance with the recommendations of the Berlin Conference of 1890. The act to amend the trade laws, as it was called, was under the consideration of the Reichstag for a full year, and was passed on the closing day of the session, when the Parliament was not prorogued, but was simply adjourned, after the precedent established in 1890, in order that certain committees might continue their unfinished work. The act goes into force on April 1, 1892. Masters are bound by its provisions to grant their workmen absolute rest for twenty-four hours on Sundays, and for forty-eight hours on Church festivals like Christmas, Easter, and Whitsuntide, though in certain occupations work may be permitted for five hours on Sundays and the second day of the religious feasts. Communes may limit or forbid labor on certain days. Exceptions to the prohibition of Sunday work are made in favor of persons employed in public places of amusement, in hotels, and on railroads. The Federal Council is empowered to fix a maximum working day in such trades and occupations as seem harmful to persons employed by reason of overwork, and other safeguards are created for the protection of the lives and health of workers. The laws treating of journeymen and apprentices are

amended to admit of an action on their part for wrongful dismissal, as well as an action against them for breach of contract. The section dealing with juvenile labor provides that no child under thirteen years of age may be employed in any workshop or factory, nor any child above that age if his parents have failed to keep him in school for the period required by the law of obligatory education. Employers are obliged to grant juvenile laborers intervals of rest, and make other special provisions for their health and welfare. The part relating to women employed in factories makes eleven hours a maximum day's work for them, interdicts night work for women, and extends the period of compulsory rest for mothers after confinement from three to six weeks, or four weeks if they bring a medical certificate. The penalties for violations of the trade laws have been heightened, and the powers of the factory inspectors enlarged.

The next most important measure was the sugar-tax bill, which was passed on the closing day, after long debates and many changes of votes, by a majority of 150 to 126. It provides for the gradual diminution of the export bounties from Aug. 1, 1892, until they cease entirely in 1897, and also abolishes the existing duty of 80 pfennigs per double centner on raw beets, while increasing the excise duty on sugar from 12 to 18 marks per double centner. One of the chief legislative acts of the session was the bill ratifying the new railroad conventions that had been concluded with much labor with Austria and Hungary. The revision of the commercial treaties with the neighboring countries could not be proceeded with until the freight tariffs and other traffic arrangements were settled.

Liquor Legislation.—The Emperor became sponsor for a project of law intended to check the spread of intemperance, that was similar in its provisions to one that was proposed ten years before, but which failed to survive the criticism to which it was subjected before passing the committee stage. The proposed new law was published in the "Reichsanzeiger," on Aug. 27, 1891, and evoked a flood of adverse criticism from the Progressists, Socialists, and other upholders of personal liberty, and the silent resistance of classes whose interests were menaced. When the bill was laid before the Bundesrath, the governments of one or two of the great south German states offered objections. Under the existing trade law the governments of the Federal states retain the full right to grant or withhold licenses. The new measure declares that licenses shall be granted only where need is shown for a retail liquor shop. The bill does not deal with the sale of beer or wine, but only of strong spirits. No person can have a license, unless he is of approved respectability, and can not be suspected of allowing his place to be used for immorality or gambling. Retailers of liquors to be carried away are forbidden to sell a less quantity than half a litre, and in towns of over 5,000 inhabitants persons licensed as retailers of liquor are not permitted to carry on any other business or to store liquor with other merchandise. Keepers of saloons must serve his customers with eatables, or with non-spirituous liquors, if they are called for; they must keep strict order in their places, and prevent anything that

may lead to the abuse of alcohol; they are forbidden to serve liquor to minors under sixteen years of age, or to any person who is intoxicated, or to one who has within three years been punished as a confirmed drunkard; they must see that drunken persons who enter their premises are conducted to their homes, or are handed over to the charge of the police; they are forbidden to sell liquor on credit, except with meals, and no debt incurred in contravention of this provision can be collected with the aid of the law. The matter of employing female waiters is left to be dealt with by the governments of the individual states. The selling of liquor before eight o'clock in the morning may be prohibited by police regulations.

Habitual drunkards, and all persons who through addiction to drink are unable to manage their affairs with prudence, or are likely to endanger the safety of others, or threaten to bring their families to want, may be placed under guardians, and the guardian may, with consent of the court, place his ward in an asylum for inebriates, or in default of such action the court may intervene and order the drunkard's committal to an asylum. For violations of the provisions of the law fines of from 30 to 60 marks may be imposed, as well as imprisonment up to fourteen days. Persons who become intoxicated while engaged in work connected with saving life, preventing fires, and the like, or who undertake such work while intoxicated, may be fined 100 marks and imprisoned for four weeks. The same paragraph applies to persons employed in caring for the health of others, such as physicians and nurses. It was stated, to prove the need of the measure, that 4.64 litres of distilled liquor *per capita* were consumed in Germany in 1889-'90, in addition to 6.44 litres of wine and 90 litres of beer; that cases of chronic alcoholism and delirium tremens increased between 1877 and 1885 from 4,272 to 10,300; that cases of alcoholism had so increased as to form 20 per cent. of the cases treated in public hospitals, and caused a rapidly increasing percentage of insanity; that 19 per cent. of the prisoners in the penitentiaries were habitual drunkards; that 63 per cent. of the homicides were committed by drinkers, and from 40 to 68 per cent. of other crimes.

The Prussian Landtag.—The new Prussian ministry presented a comprehensive scheme of legislation to the Diet, which began its session on Nov. 21, 1890, and was closed on June 20, 1891. A new income-tax law, passed in 1890 and going into operation in 1892, forms part of a scheme of tax reform elaborated by Dr. Miguel, which aims, in the words of the royal message, to achieve "a just distribution of public burdens according to the ability to bear them." The proposed reforms were too sweeping to secure the adhesion of a majority of the Deputies, who refused to pass the bill placing a tax on inheritances and modified the income-tax measure materially, voting only the correlative tax on trades and industries with slight alterations. Under the new provisions relating to the income tax, the communal magistrate first makes a list of all persons having taxable incomes, and states the amounts as nearly as he can; then a board of assessors, of which he is chairman, consisting of persons elected by the townspeople and a minor-

ity appointed by the Minister of Finance, revises the list, which goes next to a district board constituted in the same way, the majority being elected for six years and the others nominated by the Government, which compares the provisional assessment with the declarations of the individual tax payers, and makes the final assessment. The declarations are given on official blanks, which the tax payer must fill out, stating the amount of his income from invested capital, real estate (including the rental value of his residence when owned by him), commerce or industry, or his profession or other occupation, with his debts or other offsets. The assessed person may appeal to a tax court containing a majority chosen by a committee of the provincial legislature and a nominated minority, and from the decision of this court an appeal lies to the Superior Administrative Court. For untruthful declarations of income, heavy legal penalties are exacted. All persons concerned in the assessment are sworn to secrecy. Under the old law, declarations were not required from tax payers. On incomes below 30,000 marks the Landtag agreed to the rates proposed by the minister. On incomes of 50,000 marks, instead of the old rate of 3 per cent., it made the tax $3\frac{1}{2}$ per cent., and the maximum tax, payable on all incomes of 100,000 marks and over, was raised to 4 per cent. Under the old law under-assessment was the rule, tax payers usually escaping with a tax of about 2 per cent. Local taxes are partly based on the national income tax, the tax payer being required to pay usually an equal tax, but often double, and in the industrial cities of Westphalia and the Rhine province three times the amount, into the town treasury. The measure therefore goes far to readjust the incidence of taxation to the relief of the poorer classes. The changes in the tax system thus introduced are intended to pave the way to the eventual abandonment of the national land tax to the local governments. Another Government bill was intended to prepare the way, by administrative measures, for the abolition of pocket boroughs in the seven old provinces, where the land is mainly owned by the aristocracy. This bill for the regulation of communes makes an inroad on feudal privileges, and was passed in spite of the obstructive opposition of the Conservative factions. It releases the agricultural communes of the eastern parts of Prussia from the absolute control which the nobles, as communal magistrates, have hitherto exercised over the peasantry on their estates. A bill for the reform of primary education was opposed by Liberals and Conservatives for opposite reasons, and had no chance of passing.

One of the chief grievances growing out of the old *Kulturkampf* was cleared away by the bill restoring to the Roman Catholic dioceses, with interest, the revenues that were sequestered for coercive purposes during the long conflict over the May laws. The Government was opposed by the Free Conservatives, headed by Herr Stöcker, and the National Liberals, the parties that have been its staunchest adherents, while the Radicals and the Clericals and Poles, who have often combined to attack the Government in former times, supported the measure. A year before Herr von Gossler had attempted to compromise the matter by offering to the bishops

the interest only, and in granting the full amount Chancellor von Caprivi was able to show some equivalent in the withdrawal of certain Clerical demands regarding the primary schools. The bill was presented by Herr von Gossler, Dr. Falk's successor in the Ministry of Public Worship, who had carried through all Prince Bismarck's measures of reconciliation, and was willing to make this last stage of the journey to Canossa in order to put an end to a dispute of which all parties were tired. The question of revoking the proscription of the Redemptorists was broached, and was referred to a committee, but no prospects were held out of the return of the banished Jesuits. The derision with which the bill was at first received convinced the veteran minister that he had lost the prestige that would overcome the opposition, and therefore he resigned on March 11, and was succeeded by Count Zedlitz-Trütschler. The retirement of Herr von Maybach from the Ministry of Public Works, which he gave up on June 22 to Herr Thielen, left Herr von Boetticher the sole remaining representative of the ministry of the Bismarck régime that served the old Emperor. Among the minor enactments of the Diet was a game-preservation act that leaves the sufferers from noxious animals protected to provide aristocratic sport the poor consolation of dividing the damage among themselves. The disaffected Junkers were solaced further by a reactionary law on land rents that bears the mark of feudal tenure in reviving inconvertible estates.

Prince Bismarck.—The ex-Chancellor, whose opinions were echoed by two powerful newspapers that were reputed to be his personal organs, the "*Hamburger Nachrichten*" and the "*Münchener Allgemeine Zeitung*," expressed freely his disapproval of the policy of his successor in many things, condemning the assault on the influential position of the landed aristocracy, criticising the concessions to England in East Africa, objecting to the proposed commercial arrangements with Austria, and denouncing the hostility to Russia that the Emperor was supposed to entertain. Kaiser Wilhelm, in unmistakable language, threatened the founder of the German Empire with the consequences of his displeasure if he persisted in his hostile attitude. When a vacancy occurred in the Hanoverian constituency of Geestemünde, the National Liberals persuaded Prince Bismarck to accept the nomination in order to declare his opinions in the Reichstag, as he had declared his intention of doing if the course of political events seemed to require his return to public life. The election, which took place on April 15, was a disappointment to Bismarck's admirers, for he failed to secure an absolute majority. He received 7,557 votes, while his Socialist rival, a cigar-maker named Schalfeld, received 3,928, the Guelph candidate 3,343, and the Radical candidate 2,619. Not many more than half the registered voters went to the polls, a much smaller than in 1890, when the National Liberal candidate was elected at the first ballot. A more decisive victory was expected for the chief personality in German politics, although he took no steps to win voters by appearing among them, or even writing an address. In the test ballot a fortnight later he obtained the absolute majority required, be-

cause the Guelphs would not unite with the Socialists and Freisinnige, to defeat him, but even then his vote fell 2,000 short of that cast for his National Liberal predecessor.

Kaiser Wilhelm.—The dread of military aggression and martial ambition that the young Emperor aroused by dismissing Prince Bismarck and directly intervening in politics was in a great measure dispelled by his subsequent pacific utterances, and by his turning his attention mainly to domestic matters. The "new era" that was signalized by his choosing such counselors as Dr. Miquel, and engaging the co-operation of parties and classes that Bismarck had excluded from participation in the direction of affairs, reassured and satisfied the country. The official manifestations in acts and proclamations of his ideas of personal government gave little offense, even to those who condemned the objects that he inaugurated or sought to further, for the royal initiative is approved by the greater part of the Prussian people, and they like a king who gives his whole attention to matters of state. His Labor Conference, his active furtherance of colonial enterprises, his intervention in the miners' strike, his initiation of temperance legislation, and edicts against vice and luxury were in conformity with Hohenzollern traditions and the Prussian Constitution. His unofficial utterances at mess dinners and in private intercourse revealed autocratic conceptions that were strange and disquieting, and though they were toned down when reported in the Government organs, the actual words were the subject of free comments in the German press. When he was reported to have said, "It is the nature of the monarchy that there is only one master in the country, and it is I," the words were declared to be not authenticated, but it was not denied that they were spoken. A reputed statement that the peace of Europe lay in his hand was officially declared to have been simply an expression of the wish that it did. "*Hoc volo, sic jubeo*," he is said to have inscribed on a photograph of himself when presenting it to Minister von Gossler, and on visiting Munich he is alleged to have written in the visitors' book of the municipality, "*Suprema lex regis voluntas*," a principle foreign to the present constitutions both of Bavaria and of Prussia. His description of Napoleon I as a "Corsican *parvenu*," in addressing a convivial assembly of officers in a province once devastated by the armies of the great Corsican, gave such apparent offense in France that it was altered in the official version. The interpretation that he gave to the soldier's oath in addressing a regiment, to the effect that the soldier should feel that he belonged "body and soul" to the Kaiser, awakened among the German people a more genuine indignation. When a workman who refused at a public dinner to rise and drink the Kaiser's health was tried for lese-majesty, his acquittal by a Prussian court delighted the liberty-loving section of the people.

Besides his advocacy of the bill for the suppression of drunkenness, the most significant public act was a rescript published in the "*Reichsanzeiger*" on Oct. 27. The murder by a couple named Heinze of a night watchman, following a succession of startling crimes com-

mitted by the vicious class in Berlin, caused him to telegraph an imperative order to the Minister of Justice to purge the city of such ruffians and to issue this proclamation, which was not countersigned by any minister. In it he said that he felt the responsibility for the decision that would be taken in the existing state of affairs because it would be given in his name, and he was the sovereign defender of law and order. Degraded men who profit by female prostitution were a menace to Berlin and other cities, and he called on the police and the courts to punish every offense with the utmost rigor of the law, and suggested that the penalties should be made more severe, that lawyers who hinder the course of justice by frivolous and technical devices should be disciplined, and that in trials for immorality the public should be excluded from the court room.

International Relations.—The triple alliance, originally a secret treaty between Germany and Austria, made in 1879, in which Italy joined, was renewed in 1885 for six years more, and in the summer of 1891 the league was continued for six years more. The accession of England for certain purposes, that is—of the present Tory Government in England—was revealed in a speech of the Italian Premier on June 29, when he said that Italy and Great Britain had agreed some years before to co-operate for the maintenance of the *status quo* in the Mediterranean. The visit of the Emperor Wilhelm in England in July, 1891, was regarded as a confirmation of this understanding. The relations with France were disturbed by the more stringent execution of the passport regulations in the earlier part of the year, but the relaxation of the regulations on account of the railroad disaster stopping communications between France and Switzerland repaired the mistake, and this source of constant friction between the two countries was in a great measure removed by the new regulations by which passports viséed by the German minister in Paris would only be required after Oct. 1, 1891, from persons under forty-five years of age who have opted for French nationality and from military officers, though foreigners sojourning in Alsace-Lorraine are required to report themselves to the local police.

A commercial alliance that was a result of the tariff war between France and Italy and a response to the new protective duties of France was concluded at Munich in October between Germany, Austria-Hungary, and Italy, and was joined by Switzerland. The new treaty with Austria, which goes into effect in February, 1892, provides for a reduction in the duties on rye and wheat. The short crop of grain in Germany, as well as in other parts of Europe, excited fears that the dearth of bread already felt by the poorer classes in Germany would reach the point of actual famine. The Radicals and the Socialists in the Reichstag, by picturing this danger, sought to compel Chancellor von Caprivi to consent to a relaxation or suspension of the grain duties. He was pledged to the agricultural class, and declared that they would be maintained till the following February. The scarcity of grain was so great that the Government decided to mix Indian meal with rye in the bread prepared for the army. After the ukase forbidding the exportation of rye from Russia, the

opinion of Gen. von Caprivi prevailed over that of Dr. Miquel in a Cabinet council at which it was decided to retain the duty on wheat. On Sept. 8 the German Government raised the embargo on American pork that had been maintained since 1881, ostensibly as a veterinary precaution, but in reality as a protectionist measure. It was declared that the new law of inspection passed by the American Congress was sufficient to remove the danger to the German people from the consumption of diseased American pork. An agreement to abolish the restriction and also to admit American agricultural produce on the same terms as Russian farm produce was signed by the German Representative at Washington in August.

Socialist Congress.—The assembling of a party convention of the Social Democrats was preceded by a serious contest between the section headed by Wildberger and Werner and the Parliamentary leaders, Bebel, Liebknecht, and Vollmar, who maintained their influence over the bulk of the party, from which the extremist faction seceded. The Congress met at Erfurt and separated on Oct. 21, after adopting a new party programme, of which the following are the principle features:

1. Universal suffrage, without distinction of sex, for all subjects of the Empire over twenty years of age; direct election by the people by secret ballot, the principle of "one man one vote," and biennial parliaments.
2. The direct participation of the people in legislation, with the right to initiate or reject laws, and the annual revision of the scale of taxation.
3. A wide extension of the principle of local government, and the election of all public officials by the people, to whom such officials are to be held responsible.
4. The training of the people in arms, so as to form a national defence to take the place of a standing army.
5. The decision of peace or war to rest with the elected representatives of the people; international disputes to be decided by arbitration.
6. The repeal of all laws prohibiting or restricting free expression of opinion, or the right of association or of public meeting.
7. Religion to be a matter of private opinion, and all payment of public funds for confessional or religious objects to cease; ecclesiastical or religious communities to be considered private associations, which manage their own affairs.
8. The secularization of the national schools, attendance at which is to be compulsory for every one; free education, free books, and free dinners for children attending the public schools, as well as for those pupils of either sex who, by their general capacity, are considered fit to pursue their studies at the higher educational establishments.
9. Free administration of justice and free legal advice; judges to be elected by the people.
10. The abolition of capital punishment, the establishment of criminal courts of appeal, and the payment of compensation to persons unjustly accused, arrested, or condemned.
11. Free medical assistance, including attendance at childbirth, free medicine, and free disposal of the dead.
12. A graduated income and property tax to defray the public expenditure, so far as it is to be met by taxation; the obligation of self-assessment; the succession duty to be fixed on a sliding scale, according to the amount of the inheritance and the degree of relationship between the legatee and the testator.
13. The abolition of indirect taxation and duties, and of such politico-economic measures as subordi-

nate the general weal to the interests of a privileged minority.

14. An efficient national and international legislation for the protection of the working classes, the taking over by the state of all workmen's insurance agencies, the workmen to be given an adequate share in their administration.

15. An unbroken period of rest of at least thirty-six hours in each week for every working man.

Colonies.—The colonial empire, acquired since 1884, has a total area of 933,150 square miles, with a population estimated at 5,500,000. The German possessions in Africa are Togoland, Cameroons, Damaraland, and Namaqualand, and German East Africa, having an aggregate area of 833,000 square miles and 5,110,000 inhabitants. In the Pacific Ocean were occupied in 1885 and the following year Kaiser Wilhelm's Land, the Bismarck Archipelago, and the Solomon and Marshall groups, having a combined area of 100,150 square miles and about 390,000 inhabitants.

Togoland, with Little Popo and Porto Seguro, covers about 16,000 square miles on the Slave Coast of Guinea, and contains 500,000 inhabitants. The forest products of caoutchouc and dye woods are not utilized, and the only commerce yet developed is in ivory and palm oil. The Imperial Commissioner maintains order by means of a small native police force. The receipts from customs in 1890 were 91,270 marks. Cameroons has an extent of about 130,000 square miles and a population of 2,600,000. The number of white residents in 1890 was 105, of whom 65 were Germans. Numerous factories trade in ivory and palm oil, and the Deutsche Plantagen-Gesellschaft raises tobacco and cacao. The customs receipts in 1890 were 200,526 marks. The Governor is assisted by a chancellor and two secretaries. The post was filled in 1890 by Baron von Soden. Count Pfeil acted as judicial officer. (For details of Southwest Africa see under CAPE COLONY). The German estimate of the territories in East Africa is 370,000 square miles. For six months ending in February, 1890 the imports amounted to 1,996,221 marks, which was nearly three times as much as for the corresponding period of the preceding year, and the exports were valued at 2,050,552 marks, an increase of about one third. Gen. von Soden's staff of officers were actively engaged in 1891 in extending German authority in the interior toward the northeast, while Lieut. Morgen undertook an expedition to the sources of the Binue and Dr. Zintgraff attempted to establish a base of operations in the Bali country in the direction of Adamawa. Dr. Zintgraff's expedition established friendly relations with the Balis, with whom he made an alliance to punish the Bafutis, who had murdered his messengers. With 5,000 Bali warriors and his own force of 500 natives he captured and burned the chief town of the Bafutis on Jan. 31, 1891. On the next day he was attacked by 10,000 men, and after a desperate fight his army was defeated, the Balis losing 500 men and the German expedition 500, including Lieut. von Spangenburg, the military commander, and two other Germans who represented the trading company. An expedition was sent out to avenge this repulse, which met with disaster likewise, all the white leaders being killed and the remnant of their followers scattered. The

tribes on the banks of the river Abo tendered their allegiance early in 1891. Later they renewed hostilities, attacking Herr Leist, who was sent to arrange the terms of peace. To punish them it was necessary to fit out a strong expedition, which was placed under the command of Capt. Baron von Gravenreuth. In October he led a landing party from the "Habicht" and "Hyaene," which captured Miang. Advancing three days' march from the coast, the expedition laid siege to the village of Buka, which was stormed on the third day. In the assault Capt. von Gravenreuth and three black soldiers were killed.

The New Guinea Company was wound up in the autumn of 1891, the reason being that Herr Kindt, the director, had chosen a bad situation for the Kaiser Wilhelm plantation, and had provoked the ill will of the natives by harsh treatment. A new association called the Astrolabe Bay Company was organized to carry on the cultivation of tobacco. A colonial council to consider how to promote cotton growing in East Africa and New Guinea, what regulations to apply to the granting of concessions to new companies, how best to employ 1,500,000 marks voted by the Reichstag for the development of Cameroons, and other questions connected with colonial enterprise met in Berlin on June 1, under the presidency of Dr. Kayser, chief of the Colonial Department of the Foreign Office. The council approved the Emperor's project of organizing a lottery for the purpose of raising 2,500,000 or 3,000,000 marks to carry out Capt. Wissmann's plans for establishing German influence on the African lakes, and thus combating slavery. This scheme the Prussian Diet refused to sanction.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe. The legislative power is vested exclusively in Parliament, and, according to constitutional precedent, matters of political importance are decided by the vote of the elective branch. The number of hereditary peers in 1890 was 551, including 12 minors. The House of Commons consists of 670 members, who are elected by secret ballot. Unless dissolved by royal writ, a Parliament lasts seven years. The average duration since the accession of Victoria has been four and a half years. The executive power is exercised to all practical intents by the committee of ministers called the Cabinet, and these are selected by the leader of the party having the majority in the House of Commons, who is summoned on the advice of a retiring premier who is no longer able to command the majority necessary to carry on the Queen's government, and requested by the sovereign to form a Cabinet, in which he usually takes the office of First Lord of the Treasury, though the present Prime Minister is Foreign Secretary.

The reigning sovereign is Victoria, Queen of Great Britain and Ireland and Empress of India, daughter of Edward, Duke of Kent, the fourth son of George III. She was born on May 24, 1819, and succeeded her uncle, William IV, on June 20, 1837. The heir-apparent is Albert-Edward, Prince of Wales, born Nov. 9, 1840, who married Alexandra, the eldest daughter of King Christian IX of Denmark, who has borne

him five children: Albert Victor,* Duke of Clarence, born Jan. 8, 1864; George, born June 3, 1865; Louise, born Feb. 20, 1867, married to the Duke of Fife in July, 1889; Alexandra, born in 1868; and Maud, born in 1869.

The Cabinet in the beginning of 1891 was made up of the following members: Prime Minister and Secretary of State for Foreign Affairs, the Marquis of Salisbury, born in 1830, who became Prime Minister on Aug. 3, 1886, and on Jan. 14, 1887, exchanged the post of First Lord of the Treasury for that of Foreign Secretary; Lord High Chancellor, Lord Halsbury, formerly Sir Hardinge S. Giffard; Lord President of the Council, Viscount Cranbrook, formerly Gathorne Hardy; Chancellor of the Exchequer, George Joachim Goschen, appointed Jan. 14, 1887; Secretary of State for the Home Department, Henry Matthews; Secretary of State for War, Edward Stanhope, appointed Jan. 14, 1887; First Lord of the Treasury, W. H. Smith, who was Secretary for War when the Cabinet was first constituted, transferred when the Cabinet was reconstructed on Jan. 14, 1887; Secretary of State for the Colonies, Lord Knutsford, who received his present appointment on Jan. 14, 1887, having before the change been Vice-President of the Council; Secretary of State for India, Viscount Cross, formerly Sir Richard Cross; First Lord of the Admiralty, Lord George Hamilton; Lord Chancellor of Ireland, Lord Ashbourne, formerly Edward Gibson; Chief Secretary to the Lord Lieutenant of Ireland, Arthur J. Balfour, who entered the Cabinet when Secretary of State for Scotland on Nov. 19, 1886, and succeeded Sir Michael Hicks-Beach in the present post on March 5, 1887; Chancellor of the Duchy of Lancaster, the Duke of Rutland, formerly Lord John Manners; President of the Board of Trade, Sir Michael Hicks-Beach, who resigned the Irish Secretaryship on March 5, 1887, retaining a seat in the Cabinet without a portfolio, and retired in January, 1888, and was subsequently appointed to his present office as successor to Lord Stanley of Preston; Lord Privy Seal, Earl Cadogan, admitted to the Cabinet on April 19, 1887; President of the Local Government Board, Charles Thomas Ritchie, admitted to a seat in the Cabinet on April 19, 1887; President of the Board of Agriculture, Henry Chaplin, appointed on the creation of the office, Sept. 5, 1889.

Area and Population.—The area of the United Kingdom is 121,481 square miles, England having 50,823 square miles, Wales 7,363, Scotland 30,417, Ireland 32,583, the Isle of Man 220, and the Channel Islands 75. The population of England and Wales, as determined by the census taken on April 5, 1891, is 29,001,018, showing an increase of 3,026,572, or 11.65 per cent. since the last decennial census. The population was 703,357 less than the estimate of the Registrar-General, the rate of increase having been less than in any previous decennial. The number of males is 14,050,340 and of females 14,950,542, giving an excess of 900,202 females, or 106.4 to every 100 males, the proportion having steadily increased since 1851. The inhabited

* The death of Prince Albert Victor in January, 1892, makes his younger brother, who holds a commission in the navy, the next heir to the throne after his father.

houses increased in the last ten years 621,283, or 12.9 per cent., the total number being 5,452,802, giving an average of 5.32 occupants to each house, against 5.38 in 1881. The uninhabited houses declined from 46,414 to 38,407. The number of families is 6,146,900, showing an increase of 513,708, or 9.1 per cent., which is considerably below the rate of increase of population, making the average number of individuals in a family 4.7, against 4.6 in 1881. The population increased at the highest rate in the counties surrounding London and the mining counties, and at the next highest in manufacturing districts and counties, while in the rural counties the increase was much smaller or there was an actual decrease.

There are 62 towns in England and Wales with more than 50,000 inhabitants. London is returned at 4,211,056, against 3,815,544 ten years ago, showing an increase of 10.4 per cent. Liverpool comes next with the only decrease, from 552,508 to 517,116. Manchester is returned at 505,343; Birmingham, 429,171; Leeds, 367,506; Sheffield, 324,243; Bristol, 221,665; Bradford, 216,361; Nottingham, 211,984; West Ham, 204,902; Kingston-upon-Hull, 199,998; Salford, 198,136; Newcastle-on-Tyne, 186,345; Portsmouth, 159,255; Leicester, 142,051; Oldham, 131,463; Sunderland, 130,921; Cardiff, 128,849; Blackburn, 120,064; Brighton, 115,402; Preston, 107,573; Croydon, 102,697; Norwich, 100,964; Birkenhead, 99,184; Huddersfield, 95,422; Derby, 94,146; Swansea, 90,423; Ystradyfodwg, 88,350; Burnley, 87,058; Gateshead, 85,709; Plymouth, 84,179; Halifax, 82,864; Wolverhampton, 82,620; South Shields, 78,431; Middlesbrough, 75,516; Walsall, 71,791; Rochdale, 71,458; Tottenham, 71,336; St. Helen's, 71,288; Stockport, 70,253; Aston Manor, 68,639; York, 66,984; Southampton, 65,325; Leyton, 63,106; Willesden, 61,266; Northampton, 61,016; Reading, 60,054; West Bromwich, 59,489; Merthyr Tydvil, 58,080; Ipswich, 57,260; Bury, 57,206; Wigan, 55,013; Hailey, 54,846; Devonport, 54,736; Newport (Mon.), 54,695; Warrington, 52,742; Coventry, 52,720; Hastings, 52,340; Grimsby, 51,876; Bath, 51,843; and Barrow-in-Furness, 51,712. The growth of London was much less than in the preceding decade, the improved traveling facilities having encouraged people to go beyond the registration district to reside. The population of the outer ring, which embraces 370,924 acres, while the inner London or registration district, covers 77,410 acres, increased from 950,178 to 1,435,457, or nearly 50 per cent., making the population of greater London 5,656,909, against 4,766,661 in 1881. The day census of the city of London made the number of employers and employed 301,381, against 261,061 in 1881, while 1,121,708 persons entered the city during twenty-four hours, against 797,563 in 1881. The most remarkable growth was seen in Tottenham, 95 per cent. in ten years, in Willesden 121.9 per cent., and Leyton, 133.5. The increase in the population of Manchester in the ten years was 164,995; the growth of Nottingham was 13,328, or only 14 per cent., as compared with 115 per cent. in the previous decade; that of Cardiff was 47,522, or 57 per cent.; that of Birmingham was 29,162; Leeds, 59,980; Sheffield, 40,796; Newcastle, 42,143; Hull, 30,027; Bradford, 27,906; Portsmouth, 32,139; Leicester, 20,205; Salford,

22,482; Oldham, 20,667; Blackburn, 16,482; Huddersfield, 13,815; Derby, 13,328; Birkenhead, 15,591; Bristol, 15,175; Norwich, 13,474. The decrease in Liverpool is only apparent, people having abandoned the restricted municipal area to seek cheaper residence sites outside the registration district.

The census returns for Scotland make the total population 4,033,103. The increase was 297,530, which was at a lower rate than in any previous decade, only 7.96 per cent., with the exception of 1861-'71, since 1801. In the ten years before it was 375,000. There was an increase of 12.63 per cent. in the principal cities, 20.51 per cent. in the large towns, and 6.26 per cent. in the small towns, while in the rural districts of the mainland the population decreased 0.55 per cent. and on the islands 3.41 per cent. Glasgow within the municipal limits has a population of 565,714, showing an increase of 10.62 per cent.; but with inclusion of the suburbs the city has over 700,000 inhabitants, the increase having been at the rate of 30 per cent. Edinburgh's growth was at the rate of 11.46 per cent., the population numbering 261,261. Dundee had 155,640 inhabitants, an increase of 9.26 per cent.; Aberdeen, 121,905, an increase of 16.02 per cent.; Greenock, 63,498, a decrease of 4.97 per cent.; Leith, 69,696, an increase of 14.55 per cent.; Paisley, 66,427, an increase of 19.39 per cent. The population of Scotland is divided into 1,951,461 males and 2,081,642 females, the former having increased in the decade at the rate of 8.45 per cent. and the latter at the rate of 7.52 per cent. There were 814,444 inhabited and 51,714 vacant houses, against 739,005 and 59,697 in 1881.

The total population of Ireland, according to the preliminary returns, was 4,706,162 persons, of whom 2,317,076 were males and 2,389,086 females. This shows a decrease of 9.10 per cent., the highest rate since the famine period, when there was a falling off between 1841 and 1851 of nearly 30 per cent., the population having previously grown steadily from 5,395,456 in 1801 to 8,175,124 in 1841. In the decade 1851-'61 the decline was 8.10 per cent.; in 1861-'71, 6.83; in 1871-'81, 4.40. In the female population the decline during the last decade was 9.6, and in the male population 8.5 per cent. In Munster the decrease was 12.2 per cent.; in Connaught, 11.9 per cent.; in Leinster, 6.5 per cent.; and in Ulster, 7.2 per cent. The only counties showing an increase are Dublin, 2.4 per cent., and Antrim, 1.4 per cent. During the decade the natural increase of the population of Ireland, or surplus of births over deaths, has been 267,653, while the total emigration has been 768,105. Unlike Great Britain, Ireland has no objection to a religious census. The returns show that 3,549,745 persons, or 75.4 per cent. of the population, are Roman Catholics; 600,830, or 12.8 per cent., Protestant Episcopalians; 446,687, or 9.5 per cent., Presbyterians; 55,235, or 1.2 per cent., Methodists; and 53,665, or 1.1 per cent., belong to other persuasions, including 1,798 Jews and 1,702 who refused to give information. During the ten years the Roman Catholics have decreased 10.4 per cent., the Episcopalians 6.4 per cent., and the Presbyterians 5.1 per cent., while the Methodists have increased 13.1 per cent., and the Jews 280.9 per cent. In Ulster the Protestants

outnumber the Catholics by 100,000, the majority being found mainly in the counties of Antrim and Down. The number of uninhabited houses was 45,717, showing an increase of 12·8 per cent. The population of Dublin city increased from 249,602 in 1881 to 254,709 in 1891, or 2 per cent.; including the suburbs the increase was from 339,161 to 352,090. Belfast increased in population from 208,122 to 255,896, or 23 per cent.; Cork decreased 6·3 per cent., or from 80,124 to 75,070; Limerick decreased from 38,562 to 37,072, or 3·9 per cent.; Londonderry increased from 29,162 to 32,893, or 12·8 per cent.; and Waterford decreased from 22,457 to 21,693, or 3·4 per cent.

The total population of the United Kingdom as enumerated on April 5, 1891, was 37,740,283. The English population constitutes now 72·8 per cent. of the whole, the Welsh 4 per cent., the Scotch 10·7 per cent., and the Irish 12·5. The relative growth of the English element is seen by comparing the census of 1821 when 54 per cent. of the population lived in England, 3·4 per cent. in Wales, 10 per cent. in Scotland, and 32·6 per cent. in Ireland. The population of the Isle of Man, which was recently on the decline, is advancing again in numbers, and the same is true of the Channel Islands, their population being 147,870, compared with 141,260 in 1881.

The number of marriages in England and Wales in 1889 was 213,696; of births, 885,179; of deaths, 517,968. Though 3·8 per cent. more male infants are born annually, there are no more males than females among children of the age of ten, and in the adult population there are only 949 men to every 1,000 women. The number of marriages in Scotland for 1889 was 26,318; of births, 122,770; of deaths, 73,203. In Ireland the number of marriages was 21,478; of births, 107,782; of deaths, 82,986. The proportion of illegitimate births was 4·6 per cent. of the total births in England and Wales, 7·9 per cent. in Scotland, and 2·8 per cent. in Ireland.

The number of emigrants, natives and foreigners, who left the United Kingdom in 1890 was 316,145, of whom 233,571 were bound for the United States, 31,930 for British America, 21,604 for Australasia, and 29,040 for other destinations. In 1889 the total number of emigrants was 342,641, of whom 163,518 were natives of England and Wales, 25,354 of Scotland, and 64,923 of Ireland. There were 147,398 immigrants in 1889, making the net emigration 195,243. Of the immigrants, 103,070 were of British and Irish origin, which deducted from the total emigration of 253,795 British subjects leaves an excess of 150,725 emigrants of British nationality.

During the ten years, ending with 1890, 3,552,952 persons have emigrated from the United Kingdom, of whom 1,571,856 were English, 278,671 Scotch, 735,555 Irish, and 966,870 foreigners. In 1891 the emigration was much less than in the preceding year, the net emigration of persons of British and Irish origin being almost stationary, although there was a larger movement of foreign emigrants passing through England on the way to America.

The Army.—The number of troops and the cost of maintaining each branch of the service must be exhibited in the army estimates, submitted for the sanction of Parliament each year.

The estimates voted in 1890 provide for an army composed of 7,475 commissioned officers, 999 warrant officers, 15,958 sergeants, 3,670 musicians, and 125,381 private soldiers, with 14,432 horses. This does not include the British army in England and includes only the staff of the militia and other auxiliary forces. The regular troops maintained in the United Kingdom in 1890 consisted of 12,470 cavalry, 17,584 artillery, 5,370 engineers, and 68,682 infantry and special bodies, having altogether 13,101 horses and 282 field guns. Inclusive of the troops in India, the total strength of the regular army in the beginning of 1890 was 210,218 officers and men, of which number 73,387 were in England, 3,752 in Scotland, 26,977 in Ireland, 4,135 in Egypt, 27,147 in the colonies, 72,999 in India, and 1,821 on passage. Of the rank and file as returned in January, 1890, there were 151,311 born in England and Wales, 16,538 in Scotland, 28,720 in Ireland, 4,924 in the colonies and India, and 355 of foreign or unknown nativity. The number of men of all ranks enrolled in the various forces in 1890 was 696,048, and the number reported as effective was 618,967, classified as follows: Regular troops at home and in the colonies, 137,054; first class of the army reserve, 54,239; second class of the army reserve, 1,926; militia, 117,309; yeomanry cavalry, 10,789; volunteers, 224,029; Indian establishments, 73,629. Great Britain and Ireland are divided into 14 military districts, which are subdivided into 102 regimental districts for infantry, each under a colonel, who commands in addition the militia forces, as do the colonels placed over the 12 artillery and 2 cavalry districts. Each line regiment consists of 2 battalions, of which one usually is serving abroad while the other is stationed at home. The army in India is recruited from the pick of the troops, who are commonly enlisted at an immature age, eighteen or under, whereas the 10,000 or more men drafted to India every year must be of good physique and not under twenty years old. The lack of discipline which was exhibited by one of the battalions of the Grenadier Guards in acts of insubordination that caused the temporary of the battalion to Bermuda in 1890 came to the surface again when another battalion of the same regiment, on April 20, 1891, refused to turn out for parade, alleging that their officers subjected them to excessive drills in order to gain leisure for travel and luxurious amusements. The same spirit of discontent was manifested at the time of the visit of the German Emperor in July by the young soldiers of another crack regiment, the Foot or Coldstream Guards, who attempted to mutiny on account of the severe work that was required of them. The critics of the army published many complaints in 1891 of the failures in discipline and efficiency of the short-service soldiers, and of the weapons with which the troops were provided, alleging that the artillery were trained with old 12-pounders, and that the modern field guns that had been adopted had not yet been furnished, and that the infantry had been armed with a hastily accepted magazine rifle that was constantly failing and was inferior to the types adopted by other nations. The magazine rifle was made the subject of a debate in Parliament on Feb. 3, when the Cabinet was sustained by a majority of 34.

The principal objection to the service rifle is that it has the weak bolt action that has been discarded by the German and other governments, instead of locking with a breech block that offers a solid resistance to the recoil. The Lee-Speed rifle is said to shoot no faster than the Martini, while its cost is twice as great and is more than that of the German, the Austrian, or the French rifle, and it is also said that, unlike these, it has a main spring and striker that are very liable to be broken and certain to become fouled, because the soldier can not get at them to clean them. Another objection is that no suitable ammunition has yet been devised.

The Navy.—There were 38 armored vessels and 177 unarmored steam vessels in commission on Nov. 1, 1890, and in addition to these the navy had 27 sailing vessels and 32 stationary vessels. During the preceding twelve months 7 new first-class ironclads had gone into commission, while 3 of the second class had been laid off. The programme of construction approved by Parliament is to be carried out by 1894, when there will be 30 first-class battle ships instead of 17, as at present, and the 15 of the second class will be increased by 2; 11 new protected cruisers, of 7,650 tons each, will be built; the 10 cruisers of the second class will be increased to 51; and to the existing 18 of the third class 6 will be added. The programme includes also a torpedo ship of 6,620 tons, 2 new sloop gunboats, 31 torpedo gunboats, of which 4 are now completed, 9 more unarmored gunboats, of which there are now 63, and an addition of 6 to the 80 first-class, and of 10 to the 51 second-class torpedo boats that the Government has at present. The 7 vessels that are being built for the Australian squadron do not form a part of the scheme. There were in progress at the close of 1890 5 first-class battle ships, 2 first-class, 3 second-class, and 6 third-class protected cruisers, 1 torpedo depot-ship, 7 torpedo gunboats, 2 sloops, and 9 first-class gunboats. Of the vessels now on the effective list 29, will be removed as obsolete before April, 1894. The naval estimates for 1890-'91 provide for 43,449 officers and seamen, 6,244 boys, 13,882 marines, 4,200 men of the coast guard, and 1,025 officers for various services. There were 14 flag officers and 2,687 commissioned officers in active service. Provision was made also for 21,159 navy reserves, 2,510 pensioner reserves, and 2,000 artillery volunteers.

The last of the vessels embraced in the old programme, the first-class cruiser "Blenheim," was delivered by the builders before the end of 1891. Of the 17 second-class cruisers contracted for, 8 had been launched before the beginning of 1891, the "Lafona," built at Portsmouth, had been delivered, and all were expected to be completed before April, 1892; the 5 first-class cruisers were expected to be launched within a year; 3 of the 4 first-class battle ships were in an advanced stage; and the 6 torpedo gun-vessels, completing the ship-building allotted to private builders under the Naval Defense act, had not yet been contracted for. The 5 cruisers and 2 torpedo gunboats for the Australian flotilla were then nearly completed. Of 38 ships to be built in the royal dockyards, 4 first-class battle ships were nearly ready to be launched, the 2 second-

class ships were begun, 1 first-class cruiser had been launched and 2 others were nearly ready, 5 second-class cruisers had been launched, and 2 torpedo gunboats were nearly ready for service. Of the 540 guns required for the 70 new ships, 240 had been completed, but of these only 27 were heavy guns, of which 2 were the 16½-inch 30-caliber 110-ton guns that have been condemned as useless by naval experts, because the 67-ton 13½-inch gun can pierce the heaviest armor yet made and because the great guns on the "Benbow" and "Victoria" had proved unmanageable. The "Royal Sovereign," begun in 1889 and launched at Portsmouth on Feb. 26, 1891, is the largest man-of-war ever built in England, having a displacement of 14,150 tons a length of 380 feet and 75 feet breadth of beam. The 7 barbette ships of this class and the turret ship which will complete the list of the first-class battle ships ordered under the Naval Defense act will all be armed with 67-ton guns, four in number, distributed in pairs in two protected stations, and all capable of being fired on each broadside. The auxiliary armament is mounted on two decks. The belt of 18-inch armor, 8½ feet broad, extends over two thirds the length of the ship, and is completed by armored bulkheads, a steel deck and protective under-water deck, and 18 inches of armor on the barbette. The disposition of the armament is generally the same as in the "Trafalgar" and the "Nile." There will be 10 6-inch quick-firing guns, 16 6-pounder, and 9 3-pounder quick-firers, 8 machine guns, and 2 field guns. The "Royal Sovereign" is designed for a speed of 16 knots at natural draught and a coal endurance of 5,000 miles. The "Royal Arthur," launched from the Portsmouth dockyard in the same month as the "Royal Sovereign," is one of the 9 first-class protected cruisers of the improved "Mersey" type, measuring 360 feet in length and 60 feet 8 inches in beam, with a displacement of 7,700 tons. She will be able to steam 19½ knots under forced draught and 18½ knots with natural draught, and can carry coal for a cruise of 10,000 knots at a speed of 10 knots. The steel turtle-back deck is 5 inches thick in the most exposed parts, and the guns are protected by 6-inch screens and casemates. She will carry 1 9½-inch gun, 12 6-inch quick-firing guns, 12 quick-firing 6-pounders, 5 3-pounders, 6 machine guns, and 2 9-pounders, besides 4 torpedo tubes and a complement of 18 torpedoes. The "Endymion," of the same class, built by contract at Hull, was launched on July 22. She will be armed with 2 9½-inch breech-loaders and with nearly the same equipment of smaller guns and the same torpedo apparatus as the "Royal Arthur"; and is designed for a speed of 20 knots when running at full power. The naval manoeuvres of 1891 showed little besides the efficacy of the system of mobilization and the efficiency and vigilance of the officers and discipline and smartness of the crews. A vigorous offensive as a means of frustrating torpedo attacks was adjudged to have been entirely successful. Another feature of the manoeuvres was the successful test of the 110-ton guns with which the "Sans Pareil" had been provided after years of delay.

Finances.—For the year ending March 31, 1890, the total revenue of the Government was

£89,304,316, exceeding the budget estimate by £3,154,316, and the actual expenditure was £86,083,314, which was £116,487 more than was estimated in the budget. For the year ending March 31, 1891, the revenue was estimated at £90,406,000 and the expenditure at £86,627,000. Nearly five sixths of the revenue in 1889-'90 was derived from taxation, customs producing the net sum of £20,455,563, excise £24,133,252, stamps £13,041,692, the land tax £1,046,359, the house duty £1,977,644, and the income and property tax £12,783,900, making in all £73,483,390. The net revenue from the post-office was £9,467,165, from telegraphs £2,307,444, from Crown lands £507,319, interest on Suez Canal shares held by the Government £279,155, and departmental and other receipts £3,416,663. Of the receipts from customs, £9,214,629 were raised from tobacco imports, £4,490,694 from tea, £2,217,172 from rum, £1,331,539 from brandy, £1,133,301 from other spirits, £1,303,695 from wine, and the remainder from currants, coffee, raisins, and other articles. Of the excise receipts, £14,800,687 came from spirits, £9,598,955 from beer, and the rest from railways, license fees, and other minor sources. Of the receipts from stamps the probate duty yielded £4,603,490, the legacy duty £2,738,334, deeds £2,794,539, receipts £1,084,826, the succession duty £1,099,406, and the estate duty, bills of exchange, patent medicines, license fees, marine insurance, and other sources smaller sums. Of the total expenditure the charges on the consolidated fund, mainly for the public debt, consumed £28,289,524, the army and navy £31,203,152, and the civil service £26,590,638, which includes the cost of collecting the revenue. The interest and sinking fund of the debt amounted to £25,000,000; the cost of the army was £17,345,811, and of the navy £13,842,241; the grants for civil services were £15,589,990; the cost of collecting the customs and inland revenue was £2,654,891; the appropriations for the post-office were £5,463,205, for the telegraph service £2,176,000, for the packet service £664,000. Comparing the revenue returns of 1890 with those of 1857, we find the income from customs 15 per cent. less, the excise revenue $37\frac{1}{2}$ per cent. greater, the proceeds of stamp taxes nearly double, the produce of the land and house taxes about the same, the income tax receipts a little more, and the total revenue greater by $16\frac{3}{4}$ per cent. The income tax was 5*d.* in the pound in 1884; a penny was added in 1885 and 2*d.* more in 1886; it was 8*d.* for two years, then a penny was taken off in 1888, and another penny in 1889, and in 1890 the 6*d.* rate was retained, or $2\frac{1}{2}$ per cent. of land and house rents, profits, interest, and dividends assessed, the amount of which in 1889 was £645,158,689, having increased to that figure from £465,478,688 in 1871. A comparison of the expenditures of 1890 with those of 1857 shows that over 50 per cent. more is now spent on the army and navy, the expenses of the debt are $13\frac{1}{2}$ per cent. less, the net expenses of the civil services nearly 30 per cent. greater, and special expenses much less.

The revenue for 1890-'91 exceeded the estimates by over £1,800,000, and though relief of distress in Ireland, the increase of the wages of post-office employees, and supplementary votes to the amount of £500,000 threatened to reduce the surplus to little more than £500,000, savings in

departmental expenses enabled Mr. Goschen to show a balance of about £1,250,000 at the end of the year. The increased receipts for tobacco, the unabated "rush to alcohol," which yielded £900,000 of the surplus, besides the new duties that do not go into the imperial treasury, and the increased consumption of tea, which reduced the loss to the treasury from taking off 2*d.* a pound from the duty from the expected £1,500,000 to little more than £1,000,000, were among the signs of industrial prosperity. The debt was reduced by £7,616,000, notwithstanding an increase in the unfunded debt of £4,138,000, including the defense loans and £800,000 for the Australian squadron. Since Mr. Goschen came into office the capital of the debt has been reduced by £31,000,000 and £2,000,000 a year have been saved to the tax payer by the reductions in the annual debt charge. For the year 1891-'92 Mr. Goschen calculated on a total expenditure of £88,444,000. The new requirements were not for the army and navy, as in the previous year, but for the relief of distress and development of the material resources of Ireland, higher wages in the post-office and other departments, new buildings, educational improvements, and the census. The sixpenny income tax is retained, and a more rigorous assessment and collection enables the Chancellor of the Exchequer to reckon on obtaining £2,300,000 for every penny in the pound, or £300,000 more than when he came into office. The £2,000,000 that a penny of income tax then represented was four times what it produced when the tax was first imposed by Sir Robert Peel, and every increase in the amount collected tends to keep it at the present rate, in spite of the clamor of the property-owning and capitalist classes for a reduction. The estimate of revenue for 1891-'92 was £90,430,000, leaving an estimated surplus of £1,986,000. The Government project for freeing education was expected to cost £2,000,000, but not more than one half as much for the first year, as the act would not go into force before September, 1891. Of the remainder of the surplus £500,000 were to be expended in constructing barracks and the rest in carrying out the promised withdrawal of the light gold coinage.

The national debt on March 31, 1890, amounted to £689,944,026. Deducting assets and balances, the net total was £679,733,889. During the war of the American Revolution the debt was nearly doubled, amounting when peace was declared to £243,063,145. The French war of 1792 and the war with Napoleon increased the capital to £861,039,049. During the next forty years £91,956,500 were paid off, and then £39,026,173 were added on account of the Crimean War, making the capital £808,108,722 in 1857, which has since been decreased by £118,164,696. Since 1880 it has been reduced from £774,044,235 to £689,944,026, which is not much more than the annual value of property and profits assessed to the income tax, and is less than half of the national income. Divided by the number of the present population, it represents a debt of \$88.50 *per capita*, the annual interest and reduction charges being about \$3.40 *per capita*.

Production and Industry.—The area devoted to grain crops in Great Britain in 1890 was 8,033,133 acres; to green crops, 3,297,528 acres; to clover and grass, 4,808,819 acres; to perma-

ment pasture, 16,017,492 acres; to hops, 54,555 acres; to flax, 2,455 acres; fallow, 508,119 acres. In Ireland the area of grain crops was 1,514,607 acres; green crops, 1,214,396 acres; flax, 96,871 acres; clover, grass, and pasture, 12,304,265 acres; fallow, 15,538 acres. The area under wheat in Great Britain was 2,386,336 acres, and in Ireland 188,711 acres. The number of horses in Great Britain was 1,432,620; of cattle, 6,508,632; of sheep, 27,272,459; of pigs, 2,773,609. In Ireland the number of horses was 523,384; of cattle, 4,240,753; of sheep, 4,323,805; of pigs, 1,570,279. The sea fisheries gave employment to about 125,000 men, of whom 52,000 are Scotch, 47,000 English, and 26,000 Irish. The value of the fish and shell fish caught in 1889 was £5,993,881, exclusive of salmon, of which the catch in Ireland was estimated at £334,000, and in Scotland at £240,000.

The quantity of coal raised in the United Kingdom in 1889 was 176,916,724 tons, valued at £56,175,426. The quantity of iron ore was 14,546,105 tons, valued at £3,848,268, containing 5,181,733 tons of iron, of the value of £12,695,246. The tin, lead, zinc, silver, copper, and other metals brings the total product from British ores up to £14,346,846, and counting, besides coal, the product of the quarries, salt mines, gypsum, arsenic, etc., and of metallic ores, the value of the mineral produce was £73,476,000. The number of persons employed in the coal mines was 563,735. Coal was exported in 1889 to France, Italy, Germany, Russia, Sweden, Denmark, Spain, and Egypt of the total value of £14,781,990, the quantity being 28,956,445 tons. The consumption of pig iron in 1889 was 7,692,230 tons. The imports of raw cotton in 1889 were 1,937,462,240 pounds, of which 277,602,304 pounds were re-exported. The imports of wool were 700,903,057 pounds, of which 363,647,360 pounds were re-exported; the imports from Australia amounted to 431,303,391 pounds. There were 2,538 factories in 1890 manufacturing cotton, 1,793 making woolen goods, 125 for shoddy, 753 for worsted, 375 for flax, 105 for hemp, 116 for jute, 42 for hair, 24 for cocoa-nut fiber, 623 for silk, 403 for lace, 257 for hosiery, and 54 for elastic, making in all 7,190 factories, with 53,641,062 spindles and 822,489 power looms, employing 428,082 males and 656,549 females, including 40,558 male and 45,941 female children working half time, being under thirteen years of age. The capital employed in the textile industries is about £200,000,000, and the number of persons dependent on them is at least 5,000,000. Textile products constitute more than half of the total exports.

Commerce.—The value of the foreign commerce of the United Kingdom in 1890 was £748,776,286, against £743,230,274 in 1889 and £686,213,284 in 1888. The merchandise imports amounted to £420,885,695, against £427,637,595 in 1888 and £387,635,743 in 1887; the exports of British products were £263,542,500, having risen in steady progression from £212,725,200 in 1886; the exports of foreign and colonial produce were £64,348,091 in value. The average share of every man, woman, and child in the total trade was £19 11s. 9d., and in the exports of British produce, £6 17s. 10d. The share of England and Wales in the total trade was 90½ per cent.,

that of Scotland 8 per cent., and Ireland 1½ per cent. The imports of gold in 1890 amounted to £23,568,049, and the exports to £14,306,688; the imports of silver to £10,890,384, and the exports to £10,385,659. Among the merchandise imports in 1890, articles of food and drink free of duty figure for £136,422,110, and those paying duty for £26,216,864; textile materials for £85,239,289; metals for £23,710,901; and other raw materials for £41,626,155; chemicals and colors for £8,190,389; oils for £6,991,653; tobacco for £3,542,949; live animals for £11,216,333; manufactured products for £63,218,167; and miscellaneous articles for £14,510,885.

The imports of grain and flour were valued at £53,044,507: raw cotton, £42,756,575; wool, £26,945,057; dead meat, £20,622,824; sugar, £18,260,884; timber and wood, £17,126,983; butter and margarine, £13,682,579; silk manufactures, £11,318,991; animals, £11,216,333; wool manufactures, £11,178,183; flax, hemp, and jute, £10,723,912; tea, £9,098,353. The quantity of wheat imported in 1890 was 96,758,688 bushels, of which 31,022,440 bushels came from Russia, 27,521,696 bushels from the United States, 21,276,200 bushels from British possessions, and the rest from Roumania, Germany, and other countries. This does not include the flour imports, equal to 25,237,336 bushels, of which the share of the United States was 19,241,280 bushels. The exports of cotton goods in 1890 were £62,079,355, and of cotton yarn £12,351,960; those of woolen manufactures, £20,421,847, and of woolen yarn, £4,088,654; linen goods, £5,715,984; jute manufactures, £2,665,653; apparel, £5,035,679; iron and steel manufactures, £31,582,172; hardware and cutlery, £2,765,340; copper, £4,555,514; machinery, £16,413,424; coal and coke, £19,019,989; chemicals, £8,948,391.

Navigation.—The steamers engaged in the foreign trade in 1889 numbered 3,484, of 4,257,156 tons, employing 117,391 men. There were 260 steamers, of 118,407 tons, employing 4,092 men, engaged partly in the foreign and partly in the home trade, and 1,841, of 289,245 tons, employing 21,015 men, that were engaged in the home trade alone, which extends to the neighboring coasts from the mouth of the Elbe to Brest. The number of sailing vessels in the foreign trade was 2,484, of 2,338,289 tons, employing 46,595 men; the number engaged both in the home and the foreign trade was 500, of 66,619 tons, employing 2,856 men; and the number engaged in the home trade alone was 8,985, of 571,438 tons, employing 38,314 men. The total number of vessels registered was 21,779, of 7,759,008 tons, comprising 14,640 sailing vessels, of 3,041,278 tons, and 7,139 steamers, of 4,717,730 tons. There were built and first registered during the year 277 sailing vessels, of 117,481 tons, and 582 steamers, of 554,024 tons. The number of vessels that were entered at British ports in 1889 was 62,052, of 35,524,000 tons, of which all were British except 23,375, of 9,578,000 tons. The total number cleared was 62,920, of 36,365,000 tons, of which 23,875, of 9,841,000 tons were foreign. The foreign tonnage entered and cleared was 19,420,241 tons, of which 4,737,211 tons were Norwegian vessels, 3,956,315 were German, 1,920,296 Dutch, 1,867,569 French, 1,760,130 Danish, 1,491,681 Swedish, 1,208,198 Spanish, 792,394 Bel-

gian, 513,119 Russian, 456,180 Italian, and 325,610 American. The tonnage of vessels that were entered with cargoes in 1889 was 28,517,000, and the tonnage cleared with cargoes was 33,048,000. The number of vessels entered coastwise was 319,031, of 47,524,354 tons, and the number cleared was 286,407, of 42,031,729 tons.

Railroads.—The length of the British railroads in the beginning of 1890 was 19,943 miles, of which 14,034 miles were in England and Wales, 3,118 miles in Scotland, and 2,791 miles in Ireland. The capital in paid-up shares and loans was £876,595,166. The number of passengers carried in 1889 was 775,183,073. The receipts from passengers were £32,630,724; from freight, £41,086,333; the total receipts, including miscellaneous, £77,025,017; and the working expenses were £40,094,116, which was 52 per cent. of the gross receipts and 4·21 per cent. on the paid-up capital, which was £43,955 per mile.

The Post-office and Telegraphs.—The number of letters delivered in the fiscal year 1890 was 1,650,000,000, the proportion in the several divisions of the United Kingdom being 48 per head of the population in England and Wales, 34 in Scotland, and 21 in Ireland, and the average for the whole kingdom 43 to each individual. The number of post cards delivered was 217,000,000, an increase of 7·8 per cent.; the number of book packets was 441,900,000, an increase of 7·3 per cent.; the number of parcels was 42,800,000, an increase of 8·2 per cent.; the number of newspapers was 159,300,000, an increase of 4·9 per cent. There were 10,374,144 money orders issued, including foreign and colonial, transmitting £27,165,905; of postal orders, the number was 44,712,548, of the aggregate amount of £17,737,802. Of the inland money orders, 9,027,750 in number, having a total value of £23,333,417, the share of England was 7,395,352, of the value of £19,548,374; that of Scotland was £1,068,457, issued for £2,501,572; and that of Ireland was 563,941, representing £1,283,471. The gross revenue of the post-office for the year ending March 31, 1890, was £9,847,778, and the working expenses £6,603,217, exclusive of the telegraph service, which yielded a gross revenue of £2,363,836 and a net revenue, after deducting working expenses, of £101,526. The number of messages in 1890 was 52,436,779 in England and Wales, 6,545,654 in Scotland, and 3,420,966 in Ireland, or 63,403,399 for the whole United Kingdom. On March 31, 1890, the telegraph lines had a total length of 31,440 miles, with 190,027 miles of wires, excluding the wires of railroad companies, but including 17,211 miles of private wires. The post-office has 28 telephone exchanges in various towns, and 46 miles of pneumatic tubes in London.

The Parliamentary Session.—The sixth session of the twelfth Parliament of Queen Victoria and the twenty-fourth of the United Kingdom was opened on Nov. 25, 1890. In the speech from the throne the failure of the potato crop in the western counties of Ireland was mentioned as requiring Government measures to mitigate the immediate evil and diminish the probability of its return. It was ascribed to the economic and industrial conditions under which the people live; and to increase contentment and diminish political disturbance in Ireland, a bill for

augmenting the number of owners engaged in the actual cultivation of the land was placed at the head of the measures to be laid before Parliament. The next was a proposal to remedy the difficulties arising from the indirect incidence of the tithe rent-charge in Wales and England. A measure to facilitate the transaction in Scotland and Ireland of the more important stages of private legislation was placed next, and after that the attention of Parliament would be called to the expediency of alleviating the burden which the law of compulsory education imposes on the poorer classes. If time remained for the consideration of other measures, bills would be introduced to reform the system of county government in Ireland, assimilating it to the recent acts for Great Britain; to establish district councils; to extend the facilities for purchasing small parcels of land in Great Britain; to amend the law with respect to the compensation payable by employers for injuries to persons in their employment; to amend the laws relating to public health; for the appointment of a public trustee; and for increasing the security of friendly societies and savings banks.

Parliament was called together in November, nearly three months before the usual time, on an understanding that the session should not be prolonged beyond the end of July. Irish obstruction, which has hitherto borne the blame for the barrenness of Parliament and the protraction of its sessions till late autumn, had nothing to do with the shortcomings of the session of 1891. The rupture of the Irish party enabled the ministers to carry the address in a single evening and to have the tithe bill and the Irish land-purchase bill read a second time and their discussion in committee begun, as well as to pass two minor measures for Irish relief, before the House adjourned for the Christmas holidays. The Irish party was so engrossed with its internal feuds that it took little part in the business of Parliament. The section that adhered to Mr. Gladstone did not oppose the land-purchase bill, because it offered real benefits to the peasantry, and its affiliations with the Catholic priesthood deterred it from joining the English Radicals in their opposition to the temporizing free-education bill. After reassembling on Jan. 22 and making a good start by passing the tithe bill at the third reading, and sending it up to the House of Lords, the House dallied over the supplementary estimates and over the factories bill and one or two minor measures. The speech from the throne had given precedence to the tithe bill, the land purchase bill, the Scotch private bill, procedure bill, and the free-education bill. Of these, the tithes bill was disposed of, the land-purchase bill was in committee from Dec. 5, and the Scotch private bills act was referred to a select committee before the adjournment for the Easter holidays on March 26. This committee was not appointed till after the House reassembled, and no details of the education bill were made known till the introduction of the budget on April 23. Several secondary measures mentioned in the Queen's speech, dealing with Irish local government, district councils, small holdings, the appointment of a public trustee, and the liability of employers were dropped, and nothing was heard of them, while others were introduced, and

some of them were passed, legislating for factories and workshops, the public health of London, elections to county councils, the gold coinage, and other matters.

The tithe bill was very different from what the Welsh people desired; but, since it made the owners, instead of the tenant farmers, responsible for the rent-charge and deprived the tithe owner of the remedy of distraint, leaving him to recover by process in the county court, the absurdities of the original bill proposed by the Government two years before were corrected, and it was passed on Feb. 12 by a majority of 250 against 161. The claim of the Welsh people to decide on the uses of the tithes paid by them was not considered, nor was the proposition to commute the tax, so as to bring it into harmony with the altered conditions of agriculture. In the interest of the land owners, who would henceforth have to pay the tithes, C. Gray, a Conservative county member, offered an amendment to remit the tithe rent-charge when in excess of half the annual value, instead of two thirds, as in the bill; but many of the country gentlemen stood by the Government, and the amendment was rejected by a majority of 54. More opposition was manifested in the House of Lords, but the bill passed in almost the original form, and received the royal assent on March 25.

The land-purchase bill, though in point of magnitude and complexity the most important measure of the session, was not as long nor did it present so many points of difficulty as the one presented by Mr. Balfour in 1890, which was in fact divided into two bills, the section relating to the Land Department being embodied in a separate measure, and this was advanced to the committee stage before Christmas. Afterward some of the provisions were incorporated in the land-purchase bill, and the rest were dropped until the working of the act should show whether they should be necessary. A fertile source of discussion and difficulty was avoided by omitting the proposals for new machinery of transfer and adopting that which had worked, on the whole, well under the Ashbourne acts. In other respects the plan was substantially that of 1890. It was based on voluntary agreement between the selling landlord and the purchasing tenant, subject to the approval of the commissioners; the whole sum was to be advanced, the limit of twenty years' purchase being removed; the landlord was to be paid off in $2\frac{1}{2}$ per cent. stock, charged upon the holding as an annuity for forty-nine years at 4 per cent., and thus covering principal and interest. The guarantees for repayment, besides the power of selling the holding, were elaborate, including primarily the exchequer contribution of £40,000 a year to be capitalized as a reserve, the Irish proportion of the probate duty granted when the English local government scheme was adopted, and $\frac{1}{2}$ per cent. set aside out of the purchase annuities by way of insurance. In case of the failure of these guarantees, the state had for further security one fifth of the landlord's purchase money kept back for five years, the difference between the tenant's normal annuity and that of 80 per cent. of the net rental, which he was to pay for a limited time, and, ultimately, the grants for various public purposes in Ireland out of the imperial exchequer. The total ad-

vances were limited, in the first instance, to the capitalized value of the guarantees, immediate and contingent, which may be computed at some £30,000,000, but there were provisions for readvancing a portion of this, under the same limitations, in case no default was made. The portion of the bill dealing with the congested districts supplemented these guarantees in the case of counties requiring special relief by an appropriation of £1,500,000 charged on the capital of the Church fund, while a board was constituted with power to buy and sell lands, to develop local industries, to amalgamate small farms, and to assist emigration. Mr. Morley's amendment proposing to delegate the powers under the act of the county councils yet to be created was rejected by a majority of 77. Mr. Sexton's proposal to reinstate the evicted tenants, the means being supplied from the Irish Church surplus, ousting the tenants now occupying evicted farms, was supported by the pleadings of Sir George Trevelyan and the full Gladstonian vote. The Land Commission was made permanent. The most important change resulting from the discussion was a concession made by Mr. Balfour to Mr. Parnell, by which in the case of holding of less than £50 annual value the Government advance in each county should be in proportion to the number, not the valuation, of such farms. Another amendment granted a right of appeal from the Purchase Commissioners. The bill was read a third time on June 15. The House of Lords added an amendment restricting the limitation of advances in the case of the larger tenants to the first year, assuming that the smaller tenants did not take up their allotted portion; and in respect to a provision giving special privileges to tenants furnishing a part of the purchase money, the rate of annuity was fixed at $3\frac{1}{2}$ instead of $3\frac{3}{4}$ per cent.

The length of the session depended on whether the Government would bring in a free education bill, and this they were unwilling to declare until they were sure of the passage of the land-purchase bill, and could count on a surplus sufficient to meet the extra charges on the treasury. No outline of the proposed measure was forthcoming till after the introduction of the budget on April 23. The bill was explained in detail by Sir William Hart Dyke, Vice-President of the Council, on June 8, when he moved a resolution authorizing a grant of public money to elementary schools in lieu of fees paid by parents. The Radicals have always coupled the demand for free education with the system of popular schools and secular education that prevails in the United States and in nearly all civilized countries. If the Government proposed to abolish fees in the board schools alone, that would have been a long stride in this direction. When the same aid was to be given to the voluntary schools, the advanced section of the Liberal party demanded that it should be made conditional on some form of popular control over those schools. The party, as a whole, was not opposed to the Government scheme, because all religious bodies—the nonconformists and Roman Catholics, as well as the Church of England people—were concerned in defending the equal participation in Government grants that was a vital necessity for the preservation of their de-

nominal schools. Even the Radicals objected merely as a declaration of principle, and were careful not to obstruct a measure that offered such relief to poor parents and was a step toward state education. The measure was not complicated. It dealt with the question of fees only, and leaving the existing system otherwise intact. The management of voluntary schools, the conscience clause, compulsory attendance, and the educational standards were left as they were. The bill simply offered to such schools as chose to accept it a fee grant of ten shillings a head annually, calculated on the average attendance. When the average fees received did not exceed ten shillings a head, every school taking the grant would become free, while those where the fees amounted to more were allowed to charge the excess up to a certain limit. The bill as introduced gave the grant only in the case of children over five and under fourteen, who are compelled by law to attend, under the education act of 1876. At the request of representatives of voluntary schools, the Government consented to extend the limit of age so as to include all children between the ages of three and fifteen. The question of popular control was raised by Mr. Fowler, and after his introduction had been rejected by a majority of 267 against 166, the Gladstonians being deserted by the anti-Parnellites, no serious opposition to the bill was offered. An amendment of Lord Cranborne allows voluntary schools to join in groups, so as to divide the fee-grant among themselves, with provision for grading. The bill was sent to the upper house on July 8, and minor changes made there were afterward attacked by the Opposition when they were submitted for the concurrence of the House of Commons, one of them because it was an inadvertent invasion of the power over the public purse. The grant is equivalent to 3*d.* a week for every child in attendance. If in any district the Education Department is satisfied that sufficient free schooling is provided, the managers of a particular school may impose or retain school pence not to exceed 6*d.* a week for any child of legal school age, 2*d.* for any child under five, nor 3*d.* for one over fourteen years of age.

The Newfoundland bill, which was carried through the upper house in May in spite of the protests of the Opposition, was a coercive measure to empower the officers of the Imperial Government to carry out the *modus vivendi* with France in regard to the Newfoundland fisheries pending the arbitration of the question. The colonial courts had refused to allow the validity of the diplomatic arrangement, and Sir William Whiteway, Prime Minister of Newfoundland, presented arguments for this view before the bar of the House of Lords, but at the same time he promised that the colonial Legislature would pass the measure necessary for the enforcement of the *modus vivendi*. As this pledge was not immediately fulfilled, the Government proceeded with the bill, on which the colonial Legislature yielded, and the bill was withdrawn on May 28, the date set for the second reading. The Bering Sea bill, placing restrictions on the seal fishery pending the arbitration of the matters in dispute between England and the United States, was carried without opposition.

The factory bill was referred to the standing Committee on Trade, and was brought before the House on June 18, when the debate took place on Mr. Buzton's amendment to prohibit the employment of children under the age of eleven, which was one of the recommendations of the Berlin Congress on Labor. The motion was carried against the Government by a majority of 16, and was afterward accepted and made a part of the bill. A proposition to raise the age for full time to fourteen was rejected by a majority of 25, and the bill passed rapidly through the remaining stages. The Home Secretary brought in a bill to empower courts of summary jurisdiction to deal with offenders below the age of sixteen, and to adjudge that the offenders shall be whipped instead of imprisoned, and also to impose fines on the parents or order them to pay compensation to persons injured by the child's offense.

The bill relating to procedure in Scotch private legislation contained provisions to which local objections were raised, and though the Government met these with concessions the bill had to be sacrificed in fulfillment of the promise to talk up no contentious business after the education bill. Sir William Harcourt came near preventing the passing of the bill for the recoinage of light gold pieces by raising a debate on the general monetary system and the gold reserves. A bill for the discipline of the English clergy, worked out by the bench of Bishops in the House of Lords, was dropped, because the Radicals found in it contentious features. One to establish training colleges in Ireland succumbed to the objections of the Ulster Orangemen. The bill for the local registration of land titles in Ireland, an experimental step in the direction of the modern registration systems of Australia and the United States, was carried through by the Attorney-General for Ireland. Other minor measures that survived the "massacre of the innocents" were the London public health bill, the penal-servitude bill, and the bill to facilitate the registration of voters for the election of county councils. The last was urgent because the triennial elections were to come off in November. Sir Joseph Pease's resolution calling on the Government of India to resign the profits of the opium trade and to prohibit the manufacture of the drug, except for medicinal purposes, was carried against the Government by the considerable, if somewhat accidental, majority of 160 votes to 130. Sir William Fowler, in supporting the resolution, even proposed that the British tax-payers should reimburse the deficiency caused by the abolition of the opium receipts, which constitute one tenth of the Indian revenue, and amount to about £6,000,000 a year. John Morley was the only politician of note and responsibility who gave his support to the resolution. Mr. Gladstone's bill for the removal of religious disqualifications, the object of which was to allow a Roman Catholic to be appointed Chancellor in England or Lord Lieutenant of Ireland, and which was sarcastically described as the "Ripon and Russell relief bill," was rejected by 256 against 224. While Charles Bradlaugh lay on his deathbed, the House expunged the resolution passed in 1880 by which he was precluded from either making an affirmation or taking the oath.

Mr. Pritchard-Morgan's resolution in favor of disestablishing the Church in Wales was defeated by the comparatively small majority of 235 against 203. Mr. Stansfeld's resolution in favor of the principle of "one man, one vote" was voted down, while Mr. Howorth's counter-proposal in favor of redistricting the United Kingdom so as to give England equal representation with Ireland in proportion to the population likewise failed to pass. On a proposition introduced by John Ellis approving the reduction of public houses Mr. Fulton's amendment in favor of compensating publicans was adopted by a majority of 71. Earlier in the year the House of Lords had rendered a judicial decision, confirming that of the court below, which was in harmony with the position taken by the Liberals in the debates on the license bill in 1890. The Lord Chancellor and his colleagues decided unanimously that a license is given for one year only, and at the end of the year licensing justices may refuse to renew it in their discretion, as the publican has no vested interest in his license, except from year to year, and no claim can lie for compensation under the provisions of the licensing acts, notwithstanding the practice that the justices have followed of treating a license once granted as a privilege only to be revoked for bad conduct, and the fact that immense sums have been paid for public houses and loaned on mortgage in the belief that the right was permanent.

Foreign Relations.—A partial confirmation of the conditional promise alleged to have been made of British naval support to the Triple Alliance and revealed in a statement of the Italian Premier was given by Sir James Ferguson in the House of Commons, and in the vague and guarded words of the Marquis of Salisbury, in his speech, on July 29, at the Lord Mayor's banquet, when, while disclaiming all knowledge of the terms of the alliance between Germany, Austria, and Italy, and depreciating the importance of written treaties, saying that nations will act together in a great crisis not because they are bound by protocols, but because they are "in unison and cordiality with one another," he defined England's position in these words: "Our allies are all those who wish to maintain territorial distribution as it is without risking the fearful dangers or the terrible arbitrament of war." The most important acts of the year were the treaty for the delimitation of the respective territories and spheres of influence of Great Britain and Portugal in South Africa (see CAPE COLONY AND SOUTH AFRICA) and the agreements to refer to arbitration the lobster and seal fishery disputes with France and the United States. A diplomatic controversy growing out of the permission of the Turkish Government to the transports of the Russian steam volunteer auxiliary fleet to pass through the Dardanelles, led to a singular naval demonstration that the English was unwilling to avow officially. On Sept. 13 a detachment of sailors and marines, with a battery of field pieces and Gatling guns, landed at Sigri, on the island of Mitylene, from one of the ironclads of Admiral Lord Kerr's squadron, and torpedo mines were laid in the harbor. The operation was accompanied by a semblance of torpedo drill and sham manœu-

vers of torpedo boats, and before explanations were demanded by the Turkish Government and given by the Foreign Office the force was withdrawn.

Party Politics.—The seats in the city of London left vacant by the deaths of Sir Robert Fowler and Mr. Baring, and Lord Edward Cavendish's seat for West Derbyshire, were retained by the Unionists, who increased their majorities in the bye-elections in Aston Manor, Mid-Oxfordshire, and Whitehaven, and held their own in South Dorset. Mr. Bradlaugh's seat for Northampton was retained with an increased majority by the Gladstonians, who made gains also in Paisley and, under unfavorable circumstances, in North Buckinghamshire. In Hartlepool, in the Stowmarket division of Suffolk, in Harborough, and in the Wisbech division of Cambridgeshire they caused consternation to their adversaries by electing candidates to succeed Unionists.

The most important changes in the *personnel* of the Government were those necessitated by the death of Henry Cecil Raikes, the Postmaster-General, and by William Henry Smith, First Lord of the Treasury and leader of the House of Commons. Mr. Raikes was succeeded, on Sept. 21, by Sir James Ferguson, political Under-Secretary of the Foreign Office, and this post was filled by the appointment of James William Lowther. In November W. H. Smith's place as leader of the House was filled by transferring Mr. Balfour from the Irish Secretaryship to the post of First Lord of the Treasury.

In their party declarations the Gladstonian Liberals still promised home rule to Ireland, while they sought some issue to make more prominent before their English constituencies. Neither party settled on a leading issue with which to go before the country in the next general election. Both made vague promises to the labor element, and the Conservative conference at Birmingham, held on Nov. 24, proposed the creation of a labor minister. The disendowment of the Church in Wales was adopted as a part of the Gladstonian programme, and the Conservatives decided to oppose it because it would injure religion in Wales and weaken the position of the Church in England.

Local government in Ireland, on the plan adopted in England and Scotland, had been the alternative offered by the Conservatives and Unionists for Mr. Gladstone's home-rule scheme. The paralysis of the Irish party and the success of the land-purchase measure caused them to renounce this part of their programme, and meet the Gladstonians, who were committed to a home-rule project that would consume the best part of one session at least, with the argument that they had pacified and satisfied the reasonable desires of the Irish people, and would not longer allow the Irish question to interfere with English and Scottish legislation. The Birmingham conference made woman suffrage a definite plank in the Conservative platform.

Irish Parties.—When Mr. Parnell, after the scandal of the O'Shea divorce, expressed his determination to remain at the head of the Irish party, he was at first sustained in a caucus of Irish members by a majority of 40 or 50. Afterward, when it became known that Mr. Gladstone

had definitely declined to act with him longer, the majority of the party demanded his resignation, and after the belief that facts were kept in reserve that would yet clear his reputation was abandoned, the Catholic priesthood denounced him, and scarcely more than a score of the Parliamentary party adhered to him. Mr. Parnell declared that he was willing to retire from the leadership if he received adequate assurances that Mr. Gladstone would offer to Ireland a satisfactory scheme of home rule, one, above all, that would give to the Irish people entire control of the police and of the settlement of the land. Parnell and his friends met John Dillon and William O'Brien, who undertook to negotiate a truce, in Boulogne. The meetings were as fruitless as the previous ones in the committee room in Westminster Palace. O'Brien and Dillon had evaded a sentence of imprisonment by escaping on a sail boat, to France, and afterward visited the United States, as they had intended to do before they were suddenly brought to trial on the charge of having long before incited the tenants on the Smith-Barry estate to refuse to pay rent. A few weeks after the conference at Boulogne they returned to England and gave themselves up to the authorities, and on Feb. 12 were taken to Clonmel jail to serve out their term of six months. Mr. Gladstone wrote out his views, to the effect that the land question should be settled concurrently within home rule or within a short time after its establishment; otherwise it should be left to the action of the Irish Parliament, which should also have control of the constabulary when, after five years, the military police should have given place to a purely civil force. These pledges were rejected by Mr. Parnell as altogether unsatisfactory.

The truce being at an end, Parnell began a campaign in Ireland against the Gladstonian leaders, the anti-Parnellite members of Parliament, and the priests, which was carried on with such vindictive and savage bitterness on both sides as to remove all hope of reconciliation. The rupture had caused the stoppage of money supplies from America. The large invested fund remaining in Paris it was proposed to use for the sustenance of the evicted tenants; but this could not be done because Charles S. Parnell and Justin McCarthy were joint trustees, and Parnell rejected McCarthy's proposal to confide the disbursement to the Tenants' Defense Association, in accordance with a resolution passed by the anti-Parnellites. Assistance from the National League having ceased, most of the tenants on Lord Clanricarde's Portumna estate, and those on the Glensharrold and other estates, abandoned the "plan of campaign" and made what terms they could with landlords. Since the National League remained under Mr. Parnell's direction, his antagonists inaugurated on March 10, in Dublin, a new society that they called the National Federation, of which Mr. McCarthy was elected president, and in which nearly the whole of the Irish hierarchy took an active interest. In the first parliamentary election that took place after the disruption of the party at Kilkenney the Parnellites had been badly beaten: In sending a delegation to solicit financial aid, Mr. Parnell, on March 13, issued a manifesto to Irish-Americans, in which he ascribed the troubles

that had come upon the party at the instant when victory seemed near to "meddlesome interferences of English politicians," aided by a "panic among some young and raw recruits," and "eagerly seconded by a few malcontents, office-seekers, and envious persons who had crept into our ranks," and which he concluded with an appeal to the friends of the Irish cause in America to assist him in "quelling this mutiny and disloyalty to Ireland." In Ireland Parnell appealed to the revolutionary elements, and also to the sentiment of industrial discontent. In the election held on April 2 at North Sligo, where Fenianism is strong, his candidate was defeated by only 768 votes, polling 2,493 to 3,261 cast for Alderman Colliery, the anti-Parnellite and clerical candidate. The marriage of Mr. Parnell to Mrs. O'Shea on June 25 was denounced by the priests as a graver breach of the moral law than his past conduct had been. In the House of Commons the aim of the small band of Parnellites was to thwart and nullify the influence of the main Irish party, of which Justin McCarthy was nominally the leader. The Ministerial party was willing in every way to magnify the followers of Parnell at the expense of the rest, and the old leader gave a new proof of his political sagacity by accepting the land-purchase bill, while the anti-Parnellites, constrained by party tactics to harass the Government, still offered a capacious opposition. In Ireland the priests entered actively into the campaign, and, inflaming party passions by their scathing denunciations of the deposed leader, did their share to convert every parish into a battle-ground. In the riotous affrays that took place at Thurles and many other places the priests bore a part as inciters or actual leaders of the anti-Parnellite combatants. The Parnellites, while losing ground daily, were vigorous and active, and the conflict against four fifths of the Irish party and the united Catholic Church was not given up, even when O'Brien and Dillon, who had kept up the character of neutrals and mediators by not declaring for either side when they went to prison, joined the anti-Parnellites on their release in July, and were followed by E. Dwyer Gray, editor of the "Freeman's Journal," which was converted into an anti-Parnellite organ in the beginning of September. Even before these defections, the inferiority in numerical strength of the Parnell faction was shown in the Carlow election early in July. This was considered a doubtful district, and both sides put forth all their strength and made it a test election. The result was the defeat of the Parnellite candidate, who received 1,539 votes to his opponent's 3,755. Mr. Parnell still continued the controversy with his unrivaled powers of invective, taunting Mr. Dillon with subordinating the aspirations of Ireland to radical tactics at the bidding of English newspapers and with accepting ecclesiastical dictation, when he had fought the whole Church and climbed to power with the aid of the extreme Nationalists, the "young men of Ireland," whom he now sacrificed in order to join the clericals in "crushing and destroying the national sentiment of Ireland." He denied his responsibility for Mr. O'Brien's "plan of campaign," saying that he and Mr. Gladstone had condemned it in the beginning, and he refused to

release any part of the invested fund in the hands of the Paris bankers, amounting to about £40,000, for the benefit of the evicted tenants, except on the few test estates where he had himself ordered them, as a political manoeuvre, to refuse to pay rent. Owing to the continued disagreement with Mr. McCarthy, the fund remained untouched, and very little money was collected in Ireland and America by either faction, whether for the tenants or for political purposes.

The breach between the two factions was too wide to be healed, even after Mr. Parnell's death in the early part of October. (See PARNELL, CHARLES STEWART, in this volume. Recriminations had been exchanged and such enmity engendered that his adherents continued the fight against the followers of Dillon and McCarthy, who themselves were so disorganized and divided that they could not fix upon an authoritative leader. John E. Redmond, as chief of the Parnellites, contested the dead leader's seat, and after a hot contest marked by tumultuous disturbances, in which John Dillon and a great many others received severe injuries, Mr. Flavin was elected by the McCarthyites with 1,512 majority. The extreme Nationalists were still strong enough when the seat for Waterford became vacant by the death of Richard Power, aided by the labor vote, to elect Mr. Redmond over Michael Davitt on Dec. 23 by a majority of 1,775 to 1,229. When the machinery and the party organs of the league were in the hands of Mr. Parnell, the anti-Parnellites had much difficulty in establishing a newspaper to represent their views. At last, when the National Federation was organized, they issued the "National Press," which remained their official organ. At the time of the Cork riots an attempt was made to blow up the office in Dublin with dynamite.

The Labor Question.—When the Berlin Labor Congress concluded its labors the English boasted that it had done no more than to pledge the Continental governments to introduce the system of factory legislation that had been in operation in Great Britain for a quarter of a century. Yet in the factory and workshop bill the Government did not venture to insert a provision raising the limit of child labor in factories from ten to twelve years, as the congress had recommended, and Mr. Matthews, the Home Secretary, argued that the Government had not given an international pledge in subscribing to the Berlin resolution. The reason was that the people engaged in the textile industry in Lancashire and Yorkshire had brought pressure to bear against the change, although France had gone beyond the recommendation of the congress in adopting thirteen years as the limit, and other governments had redeemed their promise by introducing similar measures in their legislatures. Mr. Matthews's view was not the sense of Parliament, which gave a majority of 202 to 186 against the Government on Mr. Buxton's compromise proposition to make the limit eleven years, although his amendment to raise the limit of age for full-time work from thirteen to fourteen was rejected by a majority of 189 to 164, as it involved no consideration of international good faith. There was no stoppage of business like that caused by the London dock strike, nor of the attendant social disturbances in 1891.

The London omnibus employes struck work to demand a twelve-hour working day, imitating their Paris brethren. The organization of trade unions spread, as in France, to classes of workers that have hitherto lived remote from the influences of the labor movement, such as domestic servants, laundresses, clerks, and shop assistants. The Socialistic new unionism that demands Government interference in labor matters, supported by the recently organized bodies of unskilled laborers, but opposed by the old and wealthy trade unions, gained the upper hand in the councils of the working men, and its exponents had an opportunity to define their views in their testimony before the Royal Commission on Labor that pursued its investigations and heard a vast amount of evidence on the sweating system, Jewish immigration, and all phases of the labor problem.

May 3, being Sunday, was chosen for the labor demonstration, and at a mass meeting in Hyde Park the working men declared for the establishment of the eight-hour day by international agreement and legislative enactment. The politicians of the great parties watched with interest the proceedings of the Trades-union Congress that was opened at Newcastle on Sept. 7. Thomas Burt, who has been secretary of the huge Northumberland Miners' Mutual Association since 1865, and has sat in Parliament for Morpeth as a labor representative since 1874, was elected chairman. More than 500 delegates were present, representing more than 1,500,000 working men. The New Unionists proved their strength at the outset by rescinding the system of voting adopted at the last congress, by which each delegate casts as many votes as there are thousands of men in the union that he represents, provided the union contributes £1 to the funds of the congress for every thousand. Returning to the old procedure of voting by a simple show of hands, the New Unionists followed up their first victory by adopting a motion by 302 votes to 136, asserting that the time had arrived for the Government of the country to endeavor to introduce a universal eight-hour day by negotiation with foreign powers. Thomas Burt, Charles Fenwick, who is another workingman member of Parliament from the colliery districts of Northumberland, and the rest of the Old Unionists carried first a permissive amendment declaring that a bill reducing or fixing the hours of labor should have an optional character, and not be enforced without the consent of two thirds of the organized members of any trade, which was nullified by a further amendment declaring that the eight-hour law should be enforced in all trades and occupations, except where a majority of the organized members protest by a ballot vote against the proposal. A resolution to raise the limit of age at which children should be allowed to work in factories to thirteen years was passed by a vote of 265 to 163. The congress upheld the claim of working men to be more largely represented in Parliament and in county councils, school boards, and all local bodies. Factory inspectors and magistrates ought to be taken from among their ranks. To enable them to serve on juries without hardship, jurors should be paid at the rate of 10s. a day, and a salary should be attached to every

public office to which they aspire. It was understood that the labor vote would not be given to candidates of either party in the next general election unless they pledged themselves to support a measure giving pay to members of Parliament and local legislative bodies. The custom of subletting Government contracts was condemned, and it was held that public bodies ought not to give contracts to firms refusing to conform to the regulations, the hours of work, and the wages decreed by the trade unions.

Congress on Hygiene and Demography.—The Seventh International Congress on Hygiene and Demography met in London on Aug. 10, 1891, under the presidency of the Prince of Wales. In the division of hygiene Sir Joseph Fayrer presided over the section of preventive medicine, Sir Joseph Lister over that of bacteriology, Sir Nigel Kingscote over the one dealing with the connection between animal and human diseases, J. R. Diggle over the section that considered infant and school life, Sir H. E. Roscoe, Sir Arthur W. Bloomfield, and Sir John Goode over those that discussed chemistry and physics, architecture and engineering, in their relations to hygiene, and Lord Wantage and Lord Basing over the sections of naval and military and of state hygiene. The division of demography, embracing industrial hygiene and statistics, assembled under the presidency of Francis Galton. In most of the papers state interference, rather than individual effort, was relied on as the means to effect hygienic reform. Dr. Newsholme proposed that hygiene should be made a department of instruction in normal colleges and elementary schools. In regard to the housing of the working classes, John Hamer condemned the block system as a failure, and suggested cottage communities on the outskirts of cities, to which the railroad companies should be compelled by law to run cheap trains, a proposition that Parliament had recently refused to sanction. Mr. Burroughs went further in demanding that the railroads should be owned by the state and workmen conveyed to their homes gratis. J. R. Diggle, who is President of the London School Board, thought that the development of the physical, intellectual, and spiritual capacities of children is a matter of such transcendent importance that thoughts of possessive wealth should be left behind as the outlived conditions of barbarous society rather than that they should hinder the highest education of the whole community. The section over which he presided applauded his view, and agreed with Mrs. Besant and Dr. Parkhurst that school children ought to be fed at public expense.

Colonies.—The expenditure of the Imperial Government in connection with the colonies, exclusive of India, amounts to about £2,000,000 a year, the chief part of it for military and naval purposes. The colonies contributed £213,400 toward military expenses in 1890-'91, the Straits Settlements giving £100,000, Hong-Kong £40,000, Mauritius £30,000, Ceylon £34,400, and Malta and Natal the rest. The British troops maintained in the colonies in 1890-'91 numbered 31,680 men, not including officers, 8,796 being stationed in Malta, 5,196 in Gibraltar, 3,324 in South Africa, 2,989 in Hong-Kong, 1,493 in Halifax, 1,569 in Jamaica, 1,331 in the Wind-

ward and Leeward Islands, 1,391 in Bermuda, 1,416 in Ceylon, 533 in Mauritius, 953 in West Africa, 881 in Cyprus, 151 in St. Helena, and 111 in the Bahamas. Besides these there were 3,389 men in Egypt and 72,429 in India. In accordance with a general plan of defense for the colonies adopted in 1889, the British troops have been withdrawn from British Guiana and other colonies and concentrated at the coaling stations of Jamaica and St. Lucia, which are being strongly fortified. The military forces are to be restricted to the number necessary to defend those posts from an enemy's ships, the defense of the West India colonies being made to depend on the operations of the navy alone.

Gibraltar, with a population of 23,991, mostly descendants of Genoese settlers, is under the civil and military administration of the commander of the forces. The present Governor is Gen. Sir Leicester Smyth. The local revenue in 1890 was £63,674; the expenditure, £57,594; the military expenditure of the Imperial Government, £243,237.

Malta, with an area of 95 miles and a population in 1889 of 163,850 persons, of whom 2,201 were English, produces cotton, honey, oranges, figs, grain, and potatoes. The Governor is assisted by a Legislative Council of 6 nominated and 14 elected members. Lieut.-Gen. Sir Henry Augustus Smyth was Governor in 1891. The revenue for 1890 was estimated at £242,972 and expenditure at £232,751.

Cyprus is administered by a High Commissioner, a post held by Sir Henry Ernest Bulwer since 1886. The Legislative Council has 18 members, of whom 6 are official, 3 are elected by Mohammedans, and 9 by other inhabitants, who have resided five years on the island and pay certain taxes. In 1881 there were 45,458 Mohammedans, 137,631 Greek Christians, and 3,084 others. Under the convention with the Porte by which Great Britain occupied the island in 1878 the annual sum of £92,799 is paid to the Turkish Government. The revenue, amounting in 1889-'90 to £174,499, is derived from taxes on real estate and trade profits, tithes on the chief products, military exemption, taxes on sheep, goats, and hogs, customs and excise duties, stamps and fees, and the salt monopoly. The expenditure in 1889-'90 was £106,338. The chief exports are raisins, cocoons, wine, wheat, barley, flour, wool, and carobs. In 1889-'90 the value of the imports was £244,324, and that of the exports £314,628.

Aden, an important coaling station on the Suez Canal route to the East, with the island of Perim at the entrance of the Red Sea, the Somali Coast protectorate, the island of Socotra, off the African Coast, and the Kuria Muria Islands, on the Arabian side, is administered by a political resident who is commander of the troops and is subject to the authority of the Government of Bombay. The exports from Aden in 1890, consisting of gums, coffee, skins, cloth, and tobacco, the produce of the interior of Arabia, were valued at 25,274,678 rupees for the sea trade alone. The whole population of Aden and Perim is 34,711. From Berbera, which has 30,000 inhabitants, and the other Somali ports were exported gums, sheep and cattle, hides, ostrich feathers, coffee, and other

goods of the value of 7,839,740 rupees in 1889, and a revenue of 209,890 rupees was collected. Socotra produces aloes and a large number of cattle, sheep, and goats. The five islands of the Kuria Muria group, which were obtained from the Sultan of Muscat to give a landing place for the cable, are valuable for their guano. Bahrein and other islands in the Persian Gulf, ruled over by the Sheikh Esau, having a population of about 8,000 persons, who carry on the pearl fishery and plant a little coffee, were definitely taken under British protection in 1875.

Ceylon has an area of 25,364 square miles and a population estimated in the beginning of 1889 at 2,887,091, of whom two thirds are Singalese and one fourth are Tamils, and the rest are Moormen, or descendants of Arabs, Dutch burghers, Malays, Eurasians, English, Veddahs, and others. The Governor is assisted by an Executive Council, composed of the military commander and the 4 principal civil functionaries, and by a Legislative Council of which the same persons form part, with 4 other officials and 8 appointed members representing various races and classes. Sir Arthur Elibank Havelock was appointed Governor on March 12, 1890. The revenue in 1889 was 15,299,877 rupees, and the expenditure was 14,906,284 rupees. For the Government railway, 181 miles long, and for the breakwater and water works at Colombo a debt of £2,246,227 has been incurred. The colony will build fortifications at Colombo, and the Imperial Government has built a fortress at Frincomalee, which is the headquarters of the naval forces in East India. Of the total area of the island something less than an eighth is under cultivation. There are 715,647 acres on which rice and grain are grown, 71,554 acres planted to coffee, 207,413 to tea, 656,766 to cocoa-nut palms, 39,486 to Palmyra palms, 30,083 to cinchona, 17,433 to tobacco, and 37,331 to cinnamon. There were 753 plumbago mines worked in 1889. The value of imports in 1889 was 60,695,135 rupees, and of exports 45,924,505 rupees. The export of coffee was 5,972,011 rupees; of cinchona, 1,687,559 rupees; tea, 17,860,144 rupees; plumbago, 4,861,387 rupees; cocoanut products, 6,402,360 rupees; areca nuts, 1,057,463 rupees. The exportation of tea increased tenfold between 1884 and 1888, and in 1889 showed a further advance of nearly 50 per cent., amounting to 34,346,432 pounds. The coffee exports have been reduced by disease to a fraction of the former quantity.

No British colony has made more extraordinary progress in commerce than the Straits Settlements, the trade of which has grown from £26,030,000 in 1880 to £47,350,000 in 1890, nearly 90 per cent. Singapore, on the highway of steam navigation, has acquired the position once held by Batavia, and latterly has grown at the expense of Penang, and is now the commercial center for all Farther India. The trading houses there represent all commercial countries. The distributing trade is in the hands of the Chinese, who have become more numerous than the Malays, and are not content to act merely as intermediaries between the native races and European merchants, but are extending their mercantile connections and successfully competing with the Europeans. The population of the Straits Settlements, comprising Singapore, Pe-

nanang, and Malacca, was estimated in 1889 at 508,000. Sir Cecil Clemente Smith has been Governor since 1887. He is assisted by an Executive Council and by a Legislative Council composed of 10 official members 5 appointed members, and 2 who are elected by the Chambers of Commerce in Singapore and Penang. The Cocos Islands were placed under the administration of the Governor of the Straits Settlements in 1886, and Christmas Island in January, 1889. The native states of Perak, Selangor, Sungei-Ujong, Jelebu, the Negri Sembilan, Johor, and Pahang, covering a large part of the Malay Peninsula, are under British protection, and are governed by the advice of British residents. The revenue of these states is derived mainly from an export duty on tin. Some of them are rich in gold, and their soil is adapted for the cultivation of coffee and cinchona on the high land and rice in the valleys. Perak is supposed to have a population of 194,800; Selangor, 120,000; Pahang, 35,000; Negri Sembilan, 34,000; Sungei-Ujong, 20,000. Chinese immigration into the Straits Settlements in 1889 was 150,809, and Indian immigration 18,136.

The revenue of the colony in 1889 was \$4,410,620, and the expenditure \$3,816,194. The debt has been reduced to \$650,237. Of the native states, Perak had in 1889 a revenue of \$2,776,583; Selangor, \$1,828,427; Sungei-Ujong, \$329,963; and Pahang, \$100,898. In the limited area of the Straits Settlements gambier and pepper are produced to a considerable extent in Singapore, which has a total area of 206 square miles; tapioca, pepper, rice, and sugar in Province Wellesley, a strip on the mainland, 270 square miles in extent, attached to the Penang settlement; and tapioca and rice in Malacca. The exports of Singapore comprise not merely the produce of the peninsula, but of the Sunda Islands and the countries of Indo-China. Even the tobacco grown by the Dutch on Sumatra is shipped from Singapore to Europe. The list of exports includes tin, pepper, rice, sugar, nutmegs, corn, sago, tapioca, buffalo hides and horns, rattans, gutta-percha, gambier, coffee, rubber, gum, dye stuffs, and many other articles. The number of vessels entered at the ports of the colony in 1889, exclusive of native craft, was 8,084, of 4,855,491 tons, and the number cleared was 8,048, of 4,830,309 tons. There are several short railroads in the native states.

Labuan, a small island off the northwest coast of Borneo, and a depot for its trade, having a population of about 6,000 Malays and Chinese traders and some 20 Europeans, is a British Crown colony. The imports in 1891 amounted to £62,363, and the exports to £66,689. The sago, gutta-percha, India-rubber, wax, and other products of Borneo and neighboring islands are collected at Labuan for shipment to Singapore. The colony is administered under the direction of Charles Vandeleur Creagh, the Governor appointed over British Borneo, with the approval of the secretary of the colonies, by the British North Borneo Company. The territory in the northern part of Borneo ceded by the Sultans of Brunei and Sulu to this company which obtained a royal charter in 1881 was proclaimed a British protectorate on May 12, 1888. The governing body is the Board of Di-

rectors in London, of which Sir Rutherford Alcock is chairman. The area, which was 31,106 square miles in 1890, with a population of 175,000, is being extended by fresh annexations. About a million acres have been granted by the Government to the planters of tobacco, which is grown of a quality equal to the best Sumatra leaf, and for the cultivation of coffee, pepper, and other tropical products. The revenue from opium and spirits, customs, and other ordinary sources was \$251,602 in 1889, and from land sales \$256,183. The expenditure was \$290,189, about \$100,000 being for salaries of local officials. The land sales amounted to nearly the same in 1890, while the ordinary revenue was \$358,461, and the expenses were \$82,950 greater. This was due in part to the inclusion for the first time of the receipts and expenses of Labuan, which were £4,272 and £3,828 respectively in 1889. The statutes having been modified so as to allow the proceeds of land sales to be treated as ordinary receipts, the company showed a surplus of £19,238 for 1890. The total revenue was \$599,239, and the expenditure \$464,143. The imports in 1890 were \$2,018,089 in value, and the exports \$902,290. The exports are chiefly jungle products, such as beeswax, birds'-nests, camphor, gutta-percha, India-rubber, rattan, sago, pepper, coffee, and tobacco. The estimated value of the exportable tobacco from the crop of 1890 is \$1,125,000. A company has undertaken to build a railroad from the east to the west coast, and the rivers already afford steam communication with districts remote from the coasts. Experiments have been made with Liberian coffee on the low lands, and with Arabian coffee in the hills. Chinamen cultivate pepper and gambier. The population of Sandakan, the chief town, is half composed of Chinese traders, and the best laborers on the tobacco plantations are Chinese. An arrangement has been made with the Indian Government for the importation of Indian coolies.

Brunei and Sarawak, territories on the north-west coast bordering on British Borneo, were placed under a British protectorate in 1888. Brunei, ruled over by a native Sultan, has an area of about 3,000 square miles. Sarawak, with an area of 45,000 square miles and a population of 300,000 souls, was governed as an independent native state by Sir James Brooke, who became Rajah of the country in 1840, and since 1868 by his nephew, the Rajah Sir Charles Johnson Brooke. Coal is found in large quantities, as in North Borneo, where a company has opened some of the mines, and gold, silver, and other metals exist in large quantities both in North Borneo and Sarawak. The revenue in 1889 amounted to \$400,900, the expenditure to \$353,260, the imports to \$2,289,475, the exports to \$2,430,540. The district of Limbang in Brunei was annexed in 1889 by Rajah Brooke against the protests of the Sultan, who appealed to the British Government to secure him justice under the terms of the treaty of protection, and who rejected a money indemnity, saying that he might be robbed of his country and people, but would not sell them. The products of the soil are the same in Sarawak as in North Borneo, except that tobacco has hitherto proved a failure. The sago palm is cut and rafted down the rivers and the pith is extracted and stamped into flour

which is sent to Kuching, the capital, or to Singapore to be cleaned, and thence to all parts of the world. Antimony is mined extensively at Busoh, in Upper Sarawak, and at Paku the Chinese blast out gold quartz from the limestone rock, crush it into powder without machinery, and wash out the gold. The Chinese carry on a considerable timber trade, and exchange European goods with the Dyaks for jungle produce. Experimental plantations of pepper, tea, and coffee promise well.

The Crown colony of Hong-Kong is an island having an area of 29 square miles, at the mouth of the Canton river, which was taken from China in 1841, and has been made the center for British commerce with China and Japan, and a naval and military station of the first class. The Governor in the beginning of 1891 was Sir William Des Vœux, appointed in 1887, who succeeded Sir William Robinson. The population in 1881 was 152,412 natives and 7,990 whites, including the military. The shipping entered and cleared in 1890 amounted to 13,500,000 tons in the harbor of Victoria, making it the most important commercial port in the world after London, Liverpool, and New York. The population has increased to 220,000. Fortifications have been built at King George's Sound and Thursday Island, and in the middle of 1891 were ready for the guns. The Legislative Council is composed of six official and five non-official members, of whom three, including one Chinaman, are nominated by the Crown, and the other two are chosen by the Chamber of Commerce and by the local magistrates. The Council in 1891 agreed to an appropriation of £20,000 for the maintenance of an extra regiment, but demurred when they learned that it was to be a regiment of native Indian, not of British troops, and the non-official members declined to accede to the appropriation demanded for increasing the salaries of the public servants. The revenue in 1889 from ordinary sources was \$1,823,549, and from premiums from land \$154,725, while the expenditure for ordinary purposes was \$1,459,167, and for extraordinary purposes, principally the new fortifications, \$374,551. The imports and exports are not known from custom-house reports, as Hong-Kong is a free port. They are estimated to have averaged \$20,000,000 and \$10,000,000 respectively in recent years. The trade in opium, sugar, flour, salt, chinaware, oil, cotton, cotton cloths, amber, sandal-wood and ivory carvings, betel, cattle, and vegetables is centered in Hong-Kong, and the business houses there are largely interested in the Chinese tea and silk trades, though the goods are shipped direct from Chinese ports.

The Andaman Islands, in the Bay of Bengal, inhabited by a curious race of small, degenerate savages, are used as a penal colony by the Indian Government, and in 1889 had a convict population of 12,549. The Nicobar Islands, south of the Andamans, were inhabited by 6,915 aborigines in 1881. The exportable products are cocoanuts, tortoise shell, birds' nests, ambergris, and trepang. The Laccadive Islands, off the Malabar coast, had a population in 1881 of 14,473. The chief article of export is coir or cocoa-nut fiber.

Mauritius, an island in the Indian Ocean, 500 miles east of Madagascar, having an area of 705-

square miles, is administered with its dependencies, Rodrigues, Diego Garcia, and the Seychelles, by a Governor, who is assisted by an Executive Council, consisting of the military commander, the Colonial Secretary, the Procureur-General, the Receiver-General, the Auditor-General, and two elected members of the Council of Government. This Council is vested with legislative powers on the representative system. It is composed of the Governor and 27 members, of whom 8 are official, 9 are nominated by the Governor, and 10 are elected. The Governor is Sir Charles Cameron Lees, appointed in 1889. The population of Mauritius on Jan. 1, 1890, was 372,664, of whom 254,465 were Hindus. The rest includes the white planters, who are French Creoles, Africans and mixed races, and 3,765 Chinese. The revenue in 1889 was 8,744,802 rupees, and the expenditure 8,558,332 rupees. The imports were valued at 15,612,056 rupees. The staple product is sugar, which was exported to the value of 28,994,791 rupees. The total exports were 32,806,315, consisting, in addition to raw sugar, of rum, vanilla, aloe fiber, and cocoa-nut oil. The Seychelles Islands, which support a population of 16,162, export cocoa-nut oil, soap, and tortoise shell, and Rodrigues, the Chagos, and other islands produce the cocoa-nut palm.

St. Helena, in the south Atlantic, having an area of 47 square miles, was once an important port of call on the Cape route to the East. There is a population of 4,315 natives and 126 English. It is used as a naval station, and is the headquarters of a fleet of American whalers. Ascension, with an area of 35 square miles, is a sanitarium for English sailors who contract fevers on the coast of Africa. The English colonies on the west coast of Africa are the Gold Coast, Lagos, Gambia, and Sierra Leone. The Gold Coast Colony proper has an area of 15,000 square miles. Including the protectorate, the area is said to be 46,600 square miles, with 1,905,000 inhabitants. Lagos is an island on the Slave Coast. The area, including protected territory on the mainland, is 1,071 square miles, and the population is estimated at 100,000. The territory at the mouth of the river Gambia, constituted an independent colony in December, 1888, has an area of 2,700 square miles, and a population of 50,000 persons. Sierra Leone, including the island of Sherbro and the territory on the coast extending from the Scarceis river to the boundary of Liberia, has a total extent of 15,000 square miles and a population of 180,000, of whom 75,000 inhabit Sierra Leone, which has an area of 300 square miles. The revenue of Lagos in 1889 was £57,633, and expenditure £57,488. The revenue of the Gold Coast was £111,388, while the expenditure was £125,003. Sierra Leone collected £70,830 of revenue and had £66,771 of expenses. In Gambia £26,281 were collected and the expenditures were £21,566. The imports of Lagos were £464,260 in value, and the exports £457,649; imports of the Gold Coast colony £440,868, exports £415,926; imports of Sierra Leone £277,781, exports £319,719; imports of Gambia £140,818, exports £167,599. Palm kernels and oil are largely exported from all the colonies except Gambia, which produces ground-nuts for export. Other articles of export are rubber, cola nuts, ivory, gum copal, wax,

cotton, and hides. Gold mining has been begun on the Gold Coast. Cotton and indigo grow wild, and coffee and cacao plantations have been started by native and French capitalists and by American missionaries in Sierra Leone. Ginger is also grown for export. The trade of this colony has suffered from the competition of the neighboring French settlements. Major Peacocke in Sierra Leone and Capt. Kenney in Gambia were engaged in 1891 in delimiting the frontiers in conjunction with French commissioners, in accordance with the Anglo-French West African agreement of Aug. 10, 1889. Gunboats were sent up the Gambia river in April, 1891, by Gilbert Thomas Carter, the Administrator at Bathurst, for the purpose of punishing the native king, who had mutilated an envoy sent to warn him to desist from plundering British colonists.

A vast region not subject to the direct dominion of the British Government is the Niger district and the adjacent Oil Rivers protectorate. The Niger territories, which under the Anglo-French agreement of Aug. 5, 1890, include all that belongs to the Kingdom of Sokoto, with the Oil Rivers district, have a total area of about 500,000 square miles and a population estimated at 17,000,000. The Niger district is governed by the Royal Niger Company, chartered on July 10, 1886, with a paid-up capital of £1,000,000. The capital is Asaba, and the military headquarters are at Lokoga. The kingdom of Sokoto was founded by Fulah conquerors on the wreck of the Haussa empire, and covers an area of unknown extent on the Niger river and eastward to the confines of Bornu and southward in the direction of Adamawa. The King of Gando and other Fulah chiefs are tributary to the Emperor of Sokoto, who is descended from the Sheikh Dam-Fodíé Othman, the founder of the kingdom. The area of Sokoto and Gando is taken to be 219,500 square miles, with a population of 15,000,000. The people cultivate rice and other grains, dates, and cotton, which they weave and dye, and also make leather goods for export. The Niger Company, as a commercial adventure, it is said, has not been much more successful than the British East Africa Company. The race for Lake Chad called for a more vigorous effort than the dispute about the Benue river with the Germans of Cameroons, which was settled diplomatically, for the French Government developed great activity in the Niger region, and German expeditions were being organized, as well as French expeditions from both north and south of the British Niger territory, to establish relations first with the Mohammedan rulers of the Western Soudan. The Niger Company was nearer Lake Chad than either the French or the Germans, and made the first bid for a protectorate over Bornu. An expedition under Charles Mackintosh left Ribago, on the Benue, in October, 1890. Kuka, the capital of Bornu, a town with a population of 120,000, was reached after three weeks' travel. The Sultan assigned quarters to the embassy and took the treaty under consideration. At the end of two months he returned the presents that had been offered, and said that he would make no treaty, as every Mohammedan state that had allowed European intrusion had suffered, and therefore

he would put forth all his military strength to prevent the access of Christians, even in the guise of traders, to his dominions. The people changed their attitude as soon as the envoys were dismissed, and the expedition took a circuitous route back and narrowly escaped injury. The six powerful Mohammedan states in the Western and Central Soudan, with a population of 28,000,000 of the most civilized and warlike races of Africa, are not likely to part with any portion of their independence without a struggle. The Sultan of Bornu maintains an army of 100,000 men. The Oil Rivers territory stands in a peculiar relation to other British possessions. For a hundred years or more British merchants have been settled there, and have governed themselves without interference from the Government, which disclaimed authority over the territory until the Niger Company began its operations. A separate protectorate was declared over the Oil Rivers, because the merchants there were unwilling to accept the domination of the company. It became necessary for the Imperial Government to impose its authority upon them, because the principal article that they dealt in was gin, which the British Government, by signing the enactments of the Brussels Conference, had engaged to exclude from this part of Africa. Major Claude M. Macdonald was appointed commissioner and consul-general for the protectorate and consul for Fernando Po. When he arrived with a large staff the merchants put various obstacles in the way of his mission. At first they refused to place houses at the disposal of the consul-general and vice-consuls, who were left ignominiously without shelter in the most unhealthful part of Africa. Major Macdonald was instructed to introduce a standard currency in the place of Hamburg spirits, which serve as the medium of exchange; to establish courts for the administration of justice to Europeans; to induce the natives to abandon inhuman practices and abolish slavery; to suppress *comey* or the transit duties collected for the native chiefs, replacing them with a tariff similar to that imposed on the colony of Lagos and the German colony of Cameroons, the chiefs being indemnified by a regular subsidy from the revenue. Major Macdonald established his headquarters at Old Calabar. He enlisted a police force of Haussas, but proceeded very cautiously in inaugurating the new *régime*, which was objectionable alike to the merchants and the native chiefs. After his arrival a disturbance broke out near Opobo, at Aqueta, where the acting consul and some of the police were wounded. An arrangement was made for defining the frontier between Oil Rivers and the Niger protectorate.

The Falkland Islands, near the southern extremity of South America, have an area of 6,500 square miles and about 2,000 inhabitants, who form a prosperous pastoral community, exporting wool and other sheep products of a total value of £116,102 in 1889, representing £60 *per capita*. The exports of frozen mutton to England collapsed in 1888 after two years of trial. Live sheep have been shipped to Chili, and in March, 1889, the first cargo was sent to England. The imports in 1889 were £55,716 in value. The revenue collected was £8,628, and the expenditure was £9,720.

The Bermudas are a group of 360 small islands, of which 18 or 20 are inhabited, 580 miles east of North Carolina. The total area is 24 square miles. The population in 1890 was estimated at 15,743 persons, of whom 6,243 are white. The revenue in 1889 was £29,938, and the expenditure £30,089. The imports amounted to £272,603, and the exports to £64,976. The large excess of imports is owing to the number of invalids and winter visitors who come to the islands from the United States, and to the necessity of importing nearly all food supplies. In 1890 the exports rose to £137,526. They consist entirely of onions, arrowroot, potatoes, tomatoes, beets, and lily bulbs. The little pockets of earth scattered among the rocks that form the islands and cover about one third of the surface are planted mainly with onions of a variety first grown in Teneriffe. The quantity exported in 1889 was 227,000 bushels; in 1890, 252,000 bushels; in 1891, 261,000 bushels. The price fell in 1891, partly as a result of the new tariff law of the United States, which is the market for all Bermudian agricultural produce. The only manufactures for export are palmetto and straw hats. In July, 1890, a cable was laid connecting the Bermudas with Halifax, Nova Scotia, (JAMAICA, BARBADOES, BAHAMAS, LEEWARD and WINDWARD ISLANDS, and TRINIDAD see under WEST INDIES).

On the American Continent, in addition to the Dominion of Canada and Newfoundland, Great Britain possesses the Crown colony of British Honduras and British Guiana, which is governed on the representative system established by the Dutch. British Honduras is 7,562 square miles in extent, and has 27,452 inhabitants, mostly negroes, who are employed in cutting mahogany and logwood, and latterly in growing bananas and cocoa-nuts for the American market. Coffee is planted in some parts and cattle are raised on the hills. There is a transit trade in sarsaparilla, coffee, and India-rubber with the Indians of Yucatan. The revenue in 1889 was £50,523; expenditure, £45,487; debt, £16,032. The value of the imports was £260,089, and of the exports £300,879. Sir Alfred Moloney succeeded R. T. Goldsworthy as Governor in the autumn of 1891. The colonists are agitating for a return to the representative system of government that existed prior to 1870. In April, 1890, the five non-official members of the Legislative Council voted against paying an indemnity to C. T. Hunter, awarded by a court of arbitration in London for breach of contract in connection with harbor and sanitary improvements that had been suspended at Belize. The Governor declared the resolution to pay the award carried, claiming the right to cast two votes, one as a member of the Council and a casting vote as president, upon which the non-official members resigned. No colonists could be found to take their places, and their resignations were not accepted till the lapse of twelve months, when the Governor made up what was called a "bogus Legislative Council" by appointing the colonial surgeon, the colonial engineer, and two district magistrates. The colonists contended that, being salaried officials, these men could not act as unofficial members, and the Supreme Court decided that the council thus composed

BELIZE, BRITISH HONDURAS, FROM THE HARBOR.

was unconstitutional and that an ordinance that it had passed to raise the duty on tobacco was of no effect.

British Guiana includes the settlements of Demerara, Essequibo, and Berbice. The area is said to be 109,000 square miles; the population in 1890 was 282,066. The East Indian coolies have increased from 65,161 in 1881 to 107,424 at the end of 1890. The number of immigrants during the year was 4,575. The present Governor is Viscount Gormanston. The number of registered voters is 1,596. The question of changing the Constitution so as to conform to the English model is under discussion. The boundary dispute with Venezuela, which has lasted half a century, has recently become acute, and actual collisions have occurred on the frontier. The Venezuelan Government offered to make compensation to the widow of an Englishman who was shot by the Venezuelan police on the border, a holder of a British mining grant named William Campbell. Campbell had crossed the Amacuro to prospect for gold and open the land for British colonists. He refused to take out a mining permit from the Peruvian authorities, and was shot in resisting arrest. A force of British soldiers was then sent to take possession of the whole district. The northwest district, claimed by Venezuela, but held by England, contains rich placer mines. Early in 1891 diamonds were discovered in the same district. The output of the gold mines has been doubling year by year. In 1889 the exports of the metal were valued at £109,234. The line claimed by the British is the one drawn by Sir Robert Schomburg in 1842, which was based partly on the supposed extent of the ancient Dutch possessions and partly on the idea of establishing a natural frontier following ranges of mountains and rivers. The Venezuelans protested that Spanish dominion actually extended far to the north of the Amacuro river, fixed on as the boundary by Schomburg, reaching to Essequibo river, and that it embraced the undeveloped northern part of the British colony and included the recently discovered mineral districts in the west and the entrance to Orinoco river.

Guzman Blanco, when President of Venezuela, as a retaliatory measure, imposed a differential duty of 30 per cent. on imports from the British West Indies, injuring the trade of Trinidad especially; and this has not yet been taken off. Venezuela's offer to arbitrate the boundary dispute was rejected by Lord Salisbury. When British military posts were established in the disputed territory, Venezuela appealed to the United States and to the other powers to use their good offices to prevent British encroachments. Mr. Lincoln, the United States minister in London, in June, 1890, secured the renewal of diplomatic relations between Great Britain and Venezuela. The revenue of British Guiana in 1889-90 was £522,862, and the expenditure £500,962. The public debt in 1890 was £737,399. The total value of the imports in 1889 was £1,803,776, the chief items being flour, rice, machinery, fertilizers, and pork. The value of the exports was £2,310,141. The chief articles were sugar, of the value of £1,914,143, and rum, of the value of £165,854, after which came gold, molasses, and timber.

GREECE, a constitutional monarchy in south-eastern Europe. The legislative power is exercised by a single chamber called the Boulé, having 150 members, who are elected by universal suffrage for four years. It meets on Nov. 1 of the Greek calendar, and remains in session for not less than three and not more than six months. The executive authority is exercised by the King through his ministers, who are responsible to the Assembly. The reigning King is Georgios I, son of King Christian of Denmark, elected by the National Assembly at Athens on March 30, 1863. He married Olga, daughter of the Grand Duke Constantine of Russia, and has seven children, the oldest of whom, Prince Konstantinos, born Aug. 2, 1868, is the heir-apparent. The ministry at the beginning of 1891 was composed as follows: President of the Council, Minister of the Interior, and Minister of War, P. T. Delyannis, appointed Nov. 5, 1890; Minister of Foreign Affairs, L. Deligeorgis; Minister of Justice, A. T. Zaimis; Minister of Finance, C. Karapanos; Minister of Worship and Instruction, C. Gerokostopoulos; Minister of Marine, C. A. Koumoundouros.

Area and Population.—Greece has an area of 25,041 square miles, and a population, as ascertained by the census of 1889, of 2,187,208 persons, of whom 1,133,625 are males and 1,053,583 females. In European Turkey there are supposed to be about 3,500,000 people of the Greek race, language, and religion; in Crete and the other Ottoman Islands, 400,000; in Asiatic Turkey, 2,000,000. In Greece there is an infusion of Albanian blood, though not more than 100,000 Albanians have retained their nationality.

Finance.—The estimate of revenue for 1891 is 96,971,000 drachmai or francs, while the expenditure is estimated at 99,253,000 drachmai. The mobilization of the army and the deficits of 1885 and 1886 added 120,000,000 drachmai to the public debt, and compelled the Government to abandon the recently restored metallic currency and reissue paper. To balance the budgets of 1887 and 1888 a loan of 135,000,000 drachmai was raised at 4 per cent., guaranteed on the salt, petroleum, and match monopolies. By means of a loan of 30,000,000 drachmai obtained in 1889 and a part of the former loan, debts bearing 7 and 9 per cent. interest were paid off. For the construction of the Athens and Larissa Railroad to bring Greece into communication with the Continental network a new loan of about 90,000,000 drachmai was contracted in June, 1890. The burdens imposed by the reorganization of the finances effected by Tricoupis so improved the credit of Greece that, whereas in 1886 she could not borrow at a lower rate than 7½ per cent., the last loan was raised at the net rate of 5½ per cent. The fall in the rate of exchange to 17 per cent. below par increases the expenses of the debt more than half the amount of the interest saved by the conversions, and the cost of maintaining the three new ironclads adds as much more to the budget. The total debt on Jan. 1, 1890, was 737,885,415 drachmai, comprising 448,887,647 drachmai of terminable loans, 202,469,298 drachmai of consolidated *rentes*, 12,662,513 drachmai of floating debt, and 73,865,957 drachmai of forced paper currency. Minister Karapanos, failing to obtain a further loan in 1891, or

to get the consent of his colleagues to a tobacco monopoly, resigned in September.

The Army and Navy.—Under the law of universal liability to service, the war strength of the Greek army is stated to be 104,500 men, exclusive of the territorial army of 146,000 men. The nominal strength of the active army, according to the military budget for 1890, is 1,961 officers, including civilians employed in the Ministry of War, 5,869 non-commissioned officers, and 18,304 soldiers, making in all 26,134 of all ranks, with 3,714 horses and 120 guns.

The Greek fleet, which in 1889 had only two small ironclads, one of 1,770 tons armed with two 10-ton Krupp guns and four 20-pounders and the other of 2,060 tons carrying four 6-ton and two 5-ton guns, is now believed to be equal to the Turkish, and some patriotic Greeks assert that it is superior. The "Spetzæ," a steel armor-clad of 6,000 tons, launched in 1889, was completed in the following year, and two more of the same class have subsequently been built in France, the last one leaving Cherbourg for the Piræus in August, 1891. The new war ships are supplemented by 30 torpedo boats, including 2 Nordenfeldt submarine boats. There are 2 small corvettes, 2 cruisers, and 16 gunboats of various dates, besides 22 minor unprotected vessels. The navy was manned in 1890 by 3,361 officers and men, recruited partly by enlistment and partly by conscription among the maritime population, the term of service having been lengthened by the law of 1887 to two years.

Commerce.—The imports in 1889 were valued at 132,653,248 drachmai, and the exports at 107,777,808 drachmai. Three eighths of the imports are manufactures, and cereals form an equal proportion, and nearly half the remainder consists of pastoral and fishery products. Yet Greece is an agricultural country, and raises large quantities of wheat and barley. There are about 3,500,000 sheep in the country, and large flocks of goats, which cause more damage than benefit by browsing on vegetation. Agriculture is in a very backward state, but much attention is given to the cultivation of the currant or Zante raisin, the chief staple of the export trade. Olives, grapes, tobacco, and cotton are valuable crops, and the mineral exports are important. The chief imports in 1889 were: grain and rice, of the value of 45,283,000 drachmai; textile manufactures, 26,579,000 drachmai; animals and animal products, 14,523,000 drachmai; minerals and metals, 8,714,000 drachmai; metal manufactures, 7,679,000 drachmai; timber, 6,896,000 drachmai. The chief exports were: dried currants, of the value of 55,568,000 drachmai; lead, 7,640,000 drachmai; zinc, 7,044,000 drachmai; olive oil, 6,208,000 drachmai; animals and animal products, 6,043,000 drachmai; wine, 4,608,000 drachmai; figs, 2,425,000 drachmai; timber, 1,800,000 drachmai; iron, 1,789,000 drachmai. The currant crop has not increased with the extension of the cultivation, because the old vineyards have become less productive and require to be renewed. The crop of 1890 is estimated at 145,000 tons, against 143,000 tons in 1889 and 160,000 tons in 1888. The exports to England have been increased, by the reduction of the import duty to 2s. per hundred-weight, to two or three times the quantity formerly consumed in

that country. In 1890 they amounted to 57,000 tons. A similar result is looked for in the United States as a consequence of the abolition of the duty. In France the importation has been checked by the imposition of an excise duty of 4 francs on every hectolitre of wine made from currants, designed for the protection of French wine-growers.

Navigation.—The Greek merchant marine in 1890 consisted of 81 steam vessels, of 40,484 tons, and 5,809 sailing vessels, of 223,158 tons. The shipping entered at Greek ports in 1889 numbered 4,861 vessels, of 2,249,109 tons, while 3,945 were cleared, of 2,124,269 tons. Of the total number entered, 1,851, of 281,235 tons, were Greek, while 408, of 417,316 tons, were British. The carrying trade of the Levant and the Black Sea ports is largely in the hands of the Greeks.

Communications.—The length of railroads open for traffic at the end of 1890 was 452 miles. There were building 127 miles more, and 517 miles were projected. The ship canal across the Isthmus of Corinth has been completed for three quarters of the distance, which is about 4 miles. The telegraph lines, including cables, had a total length in 1889 of 4,382 miles, with 5,082 miles of wire. During that year 684,650 internal and 271,189 international messages were sent over the wires. The receipts for 1888 were 1,130,160 drachmai, and the expenses 992,320 drachmai. The number of letters sent through the post-office in 1888 was 6,344,000; of postal cards, 180,000; of newspapers, samples, and circulars, 7,706,000. The receipts were 1,193,930 drachmai, and the expenses 1,198,473 drachmai.

Anti-Semitic Outbreak.—Anti-Jewish riots of the kind that have occurred in Russia in recent years broke out in the city of Corfu and other places in the Ionian Islands in April and May. The body of a girl child having been found in the Ghetto at Corfu, a report was circulated that it was a Christian child that the Jews had murdered for the feast of the Passover. The Jews believed Christians had murdered the child to furnish a pretext for plunder and violence. It was afterward identified as the daughter of a well known Hebrew. On April 27 a mob broke into the Jewish quarter threatening to burn the Hebrews alive, and after several had been beaten and stoned, the troops dispersed the rioters. The shops in the Jewish quarter were closed by order of the authorities, and a cordon of soldiers was placed around the quarter. On April 30 an attack on the Jewish population at Zante was attempted, and the military, in order to put a stop to the disorder, fired on the mob, killing three Christians and wounding a large number. The garrisons on both islands were largely increased. In Corfu the Jews were confined in their houses for weeks, and could only obtain food with great risk and at famine prices. Several died of starvation. The whole trade of the place was paralyzed. The military cordon was kept up, but the soldiers sympathized with the mob. On May 12 another attack was made on the Ghetto, and two Jews were killed and many injured. The Ottoman Government made arrangements to succor Turkish Jews, and gunboats were sent by the French and English Governments to protect their subjects. Two attempts were made to set fire to

the Ghetto. After the second outbreak at Corfu a state of siege was declared, and a sufficient force was sent to make an end of the disturbance. The monarch of Corfu and the prefect of the town were removed for neglect of their duty.

GRÉVY, FRANÇOIS JULES PAUL, ex-President of the French Republic, born in Mont-sous-Vaudrey, Department of the Jura, Aug. 15, 1807; died there, Sept. 9, 1891. He was the son of a forester who volunteered in 1792 to fight in the army of the republic and who brought up his children as republicans. Jules, a robust and athletic young mountaineer, began his school life at the age of ten in the College of Poligny, went thence to Besançon, and prepared himself for the bar in the University at Paris, where he led a sober, decorous, and studious life. At the outbreak of the revolution of 1830 he joined the insurgents, taking part in the capture of the Babylone barracks. He was admitted to the bar in 1837, and began practice in Paris. By his defense of Armand Barbes and his fellow-conspirators against the Government of Louis Philippe, in 1839, he established his reputation as an advocate deeply versed in the code and skilled in the technicalities of procedure, and, moreover, as a legal champion of republicanism, whose forensic services were wanted and prized when revolutionists were tried in the courts. In 1848 he was sent to Jura by the Provisional Government as prefect or commissary of the republic, as the office was then called. The diplomatic tact with which he arrested disturbances and appeased political and religious passions gave him a reputation for political ability. He headed the list of eight Deputies elected to represent his native department in the Constituent Assembly. He was chosen Vice-President of the Assembly, and placed on the Committee of Justice. Taking his seat with the Advanced Republicans, he presented the famous *proposition Grévy*, which, although it was overwhelmingly defeated, placed its author ever afterward on a pedestal as a conspicuous representative of republicanism. Perceiving that if the executive head of the Government were elected by universal suffrage it would open the door to Cæsarism (for, having as many popular votes as all the members of the Assembly together, the President of the Republic, in case of a conflict of opinion between himself and the Assembly, could assert that he had the mandate of the nation to suppress the legislative branch or nullify its decisions), he proposed that the executive power should be exercised by a council of ministers, with a president of the council at its head, just as it is in Switzerland. The chief of the state would then be appointed and subject to removal by the vote of the Chamber. This plan was too radical for the Assembly, and the project of an independent executive deriving its authority from a *plébiscite* carried the day. Napoleon was elected President, and in the Legislative Assembly of 1849 Grévy combated the beginnings of Bonapartism by opposing each measure proposed by the President and his accomplices. After the *coup d'état*, which every one said would have been prevented if Grévy's amendment had been carried, he was arrested and kept in prison for several months. After

his release, he pleaded cases in the courts and held a leading place at the bar. He advocated Liberal principles, but not as an active politician; he would not take the oath of allegiance to Napoleon, and therefore refused to enter the Chamber. In 1868, when it began to be dangerous to assert hostility to the Emperor, his friends overcame his scruples, representing that many Liberals were deterred by his illustrious example from accepting a nomination to the Chamber. Elected to the Corps Legislatif in that year from his old department, he took his seat among the Republicans. Although he seldom spoke, he was re-elected without opposition in 1869. When asked after the downfall of Napoleon to join the self-appointed Government of Sept. 4, he refused, retiring with Thiers. As an upholder of legality, he declared that the fall of the empire ought to be decreed by the Chambers. When the Legislative Assembly was invaded by the mob, regular proceedings were rendered impossible. He declined to associate himself with the irregularly constituted Government of National Defense, and likewise declined to join M. Thiers in his irregular diplomatic campaign. When the latter asked him to declare what part he would take in the national emergency, he said that his part was to carry a musket, and while the war lasted he served in the National Guard. He was returned to the National Assembly by his compatriots of the Jura on the simple platform of "a permanent republic and any acceptable peace without revenge." On Feb. 17, 1871, a week after the session opened, he was elected by an almost unanimous vote to the presidency of the Chamber. In the first sitting he proposed that M. Thiers should be made chief of the Executive, and should hold his power during the pleasure of the Assembly, realizing the proposition that had been the foundation of his political fame. He remained in the chair over two years, being seven times re-elected. The conciliatory tact, the impartial judgment, the calm decision with which he presided over this turbulent body during the most critical period of its history, made Jules Grévy one of the conspicuous figures in European politics. In February, 1873, the Conservatives being in the majority, the Duc de Broglie resigned his place as minister to London, to lead the attack that was designed to overthrow Thiers. It was first necessary to get Grévy out of the way and place in the chair a man pliant to their purposes. They disputed his decisions, questioned his authority, harassed and insulted him, and when he found himself unable to maintain the dignity of the chair, after an offensive personal remark of the Duc de Grammont which the majority applauded, he resigned in spite of the pleadings of his friends, who begged him to stay at his post in all circumstances. M. Buffet, his successor, became an instrument in the hands of the conspirators. There were those even then who said that Grévy was a wily and calculating politician who willingly contributed to the fall of Thiers, to whom he had shrewdly volunteered to advance to the first place in the Republican party, thus making sure of the succession, upon which he was eager now to enter. In the following October he published a pamphlet on "The Necessary Government," in which he took the position that

the time had gone by when the elements of a constitutional monarchy existed in France, which had become a pure democracy and could only exist and develop under the republic. In 1876 the Republicans won the general election. M. Grévy reascended the chair of the Chamber as by right. After the death of Thiers he became the undisputed Republican candidate for the presidency of the republic. When Marshal MacMahon dissolved the Chamber without reason, in order to carry out the Duc de Broglie's monarchical conspiracy, M. Grévy uttered these few simple words that had a magical effect on the bewildered country: "In dismissing this Chamber, I wish to say that it has never, during its too brief career, ceased for one moment to merit the esteem and confidence of the country." The conspiracy against the republic failed. Grévy was re-elected to the presidency of the Chamber on May 16, 1877. Marshal MacMahon, after losing the decisive battle, could not be induced to continue a campaign of underground plots. He sent for M. Grévy and announced his readiness to resign the presidency under certain guarantees, and when he could obtain no promises or conditions he handed him his resignation to take to the Chamber, saying: "You're an honest man; I have full trust in you."

Grévy was elected President of the republic. The military guards and equipages and monarchical trappings of his predecessor were cast aside. He introduced into the *Élysée* the simple informality and quiet ways of ordinary *bourgeois* life, and the people found this dignified and admirable, except that it began to be said that he was too saving. The grave, quiet, modest, and dignified citizen at the head of the state, who cultivated agreeable social relations with men of all parties and kept himself ostensibly free from political schemes and entanglements, was esteemed an ideal Republican President, though afterward it was said that, in helping to crush M. Gambetta, in keeping M. de Freycinet in the background, and in all his quiet combinations, he was guided by motives of scheming personal politics. He was re-elected to the presidency on Dec. 28, 1885, for lack of another pre-eminent Republican candidate, and soon it was found that this was a mistake of the Republican party; for, whether he was more egotist than patriot or the contrary, he had grown too old, and too fond of ease and the society of his grandchildren. He let his son-in-law, M. Wilson, receive ministers and officials, was guided by that person's advice in political affairs, humored his prejudice against capital punishment by pardoning murderers, and allowed him to change the ways and manners of the presidential palace. M. Wilson's political and commercial speculations compromised the reputation that M. Grévy had given to the presidential establishment. Then came the decoration scandal, the Limousin revelations of some culpable connection between Wilson and the traffic in the ribbons of the Legion of Honor, an order that M. Grévy had proposed to abolish when he first became President. Grévy could have dismissed Wilson from his household and served out his second term with better satisfaction to the public than before, or he might have resigned at once on account of the family stain, and preserved his great reputation

as a pure and upright public man. He endeavored to shield Wilson's good name with his influence as President, and clung both to the office and to his grandchildren until he was compelled to resign, on Dec. 2, 1887, dishonored by the ignoble contest. He retired to his birthplace, and is supposed to have been working since on a book of "Memoirs." A steel-plate portrait of President Grévy appeared in the "Annual Cyclopædia" for 1879.

GUATEMALA, a republic in Central America, independent since 1847. The Constitution, adopted in December, 1879, and amended in October, 1889, vests the legislative power in the National Assembly, half of the members of which are replaced at each biennial election. One member is elected for every 20,000 inhabitants. The presidential term is six years. Gen. Manuel Barillas was elected President on March 15, 1886.

Area and Population.—The estimated area of Guatemala is 46,800 square miles. The population was estimated in 1889 at 1,460,017. About three fifths are civilized Indians, and among the white population there is a large intermixture of Indian blood. The capital city, Guatemala la Nueva, had 65,796 inhabitants in 1889, of whom about 10 per cent. were of European birth or descent. The number of births registered in 1889 was 61,222, and the number of deaths 28,321, which is much below the actual number. The number of marriages was 5,475. Among the births 50 per cent. of the white and 25 per cent. of the Indian children are illegitimate. The State spent \$525,625 in 1888 for education, which is compulsory, free, and undenominational. The Catholic religion prevails, but is no longer the state religion.

Finance.—The revenue in 1888 was \$4,580,264, and the expenditure \$4,577,404. The extraordinary receipts were \$1,802,403. About half of the revenue was derived from customs and one third from the internal revenue duties on alcohol and tobacco. The import duty on tobacco was reduced on Nov. 20, 1890, from 55 to 20 cents a pound. The estimated receipts for 1890 were \$5,060,000, and the expenditure \$4,610,675. The appropriations for public credit and finance in 1890 were \$1,343,074; for education, \$710,364; for the army, \$1,154,189. The nominal strength of the standing army is 3,500 men, and that of the militia is 67,300 men. In 1889 the net revenue was \$5,585,912. The gross revenue was \$6,102,172, of which \$2,700,119 were derived from import duties, \$552,045 from export duties, \$1,811,773 from the liquor monopoly, and the rest from a considerable variety of minor taxes. In the postal and telegraph service there was a deficit of \$84,959. The total debt was \$13,569,190, including the consolidated home debt of \$6,495,062; paper money, \$1,129,968; foreign debt, \$922,700 or \$4,613,500 in currency; unfunded and floating debt, \$1,330,660.

Commerce and Production.—The total value of imports in 1889 was \$7,079,373. The values imported from the chief importing countries were as follow: England, \$1,598,762; United States, \$1,332,398; South American countries, \$1,207,624; France, \$929,580; Germany, \$715,239; Central American countries, \$691,857. The imports of cotton goods were \$910,469 in value; woolen goods, \$309,059; flour, \$163,487; silk

goods, \$159,592; wine, \$134,159; liquors, \$132,629; iron goods, \$94,845. The value of the exports was \$13,247,689. The coffee of Guatemala, represented in this total by \$12,704,948, brings double the price in the market of that of other countries, being of so fine a quality that it is

work more than is necessary to supply their simple needs. To this same apathy and to the former political disturbances in the country is due the neglect of the mines of gold, silver, lead, copper, iron, tin, and cinnabar that were once worked under the direction of Jesuit missionaries, and

ALCALDES OF UPPER GUATEMALA.

used to flavor other sorts. The crop of 1891 is estimated at 80,000,000 pounds. The cultivation is capable of large extension, and plantations have been enlarged considerably in recent years, yet without a corresponding increase in the product, for the Indian laborers can not be induced to

were a source of great revenue to the Church and the state. Besides coffee, the chief exports at present are hides, rubber, sugar, bananas, aguardiente, and cacao. The cacao of Guatemala ranks among the best sorts. Mahogany and other cabinet woods are abundant.

Communications.—The settled part of the country is at a distance from the sea, and most of the travel and transportation must be done with mules. A railroad connecting the capital with San José has a length of 72 miles, and another, 27 miles in length, runs from Champerico to Retalhuleu. The former, which was built by an American company at a cost of \$4,000,000, has been rebuilt in the section between Escuintla and Palín. The net receipts have more than doubled in the past four years. In 1890 the gross receipts were \$658,042, and the net earnings \$355,361. There were 185 miles of new railroads under construction in 1889.

The number of letters delivered in 1888 was 1,888,676; of papers, circulars, etc., 2,576,345. There were 1,992 miles of telegraph in 1891. The number of messages in 1888 was 457,009.

Civil Disturbances.—Although peace was kept by the Central American republics throughout 1891, there were rumors of war and revolution, military preparations, and menaces both from Salvador and Guatemala, and an attempted revolt against Barillas. Early in the year Guatemala began to strengthen her army. Gen. Cayetano Sanchez was shot in February for insubordination. In the spring Salvadorian forces were massed at Santa Ana on the frontier. The President appointed a new ministry in June, taking charge of the War Department, and

making Francisco Vilela Minister of the Interior, Emilio Leon Minister of Foreign Affairs and Public Works, and Feliciano Aguilar Minister of Finance. The people of Quezaltenango, an important place in upper Guatemala, rose against the Government, and defeated the garrison. The mountains were full of malcontents, who distributed revolutionary proclamations. On Sept. 15, the anniversary of independence, when Manuel Montufar, son of a leading partisan of Barillas, who was one of the candidates for the succession, began a political speech in the plaza of Guatemala city, the mob drove him and the other official speakers from the platform, and elected orators by acclamation. A battalion of infantry attempted to clear the plaza with fixed bayonets, and was driven back by revolver shots, leaving several dead. Barillas then ordered out the artillery, and when guns were planted in the plaza the populace dispersed, but took possession of the side streets, where for the next two days they fought the infantry. Bringing up reinforcements from outside districts and proclaiming martial law, Barillas finally put down the insurrection after some hundreds of people were slain. On opening Congress, on Oct. 23, Gen. Barillas gave assurances of peace at home and abroad and of the improving financial position of the Government. In November revolutionary bands were reported on the Mexican frontier.

H

HAWAII, a kingdom occupying the Hawaiian Islands in the Pacific Ocean, 2,100 miles from San Francisco. The reigning sovereign is Queen Liliuokalani, the eldest sister of King Kalakaua, whom she succeeded on Jan. 20, 1891. She was born on Sept. 2, 1838, and married in 1862 John O. Dominis, an American by birth, who was appointed Governor of Oahu. On March 9 Princess Victoria Kaiulani, niece of Queen Liliuokalani, born Oct. 16, 1875, was proclaimed heiress-apparent to the throne. The ministers are appointed by the sovereign, and must retire if the Legislature passes a vote of want of confidence. Every royal decree must be countersigned by a minister. The Legislative Assembly is composed of 24 Representatives, 24 Nobles, and the 4 ministers, who are members of the House of Nobles *ex officio*. An educational and a property qualification are required in voting for Representatives, and a higher limit of income is necessary to qualify a citizen to vote for a Noble. The Legislature meets once in two years. The term of the Representative terminates with the session, and that of the Noble lasts six years; otherwise their powers are the same, and they form a single chamber. The Cabinet in the beginning of 1891 was composed as follows: Minister of Foreign Affairs, J. A. Cummins; Minister of the Interior, C. N. Spencer; Attorney-General, A. P. Petersen; Minister of Finance, G. Brown.

Area and Population.—The area of the islands is as follows: Hawaii, 4,210 square miles; Maui, 760; Oahu, 600; Kauai, 590; Molokai, 270; Lanai, 150; Nihau, 97; Kahoolawe, 63; total, 6,640 square miles. The population is about 90,000, or 10,000 more than when the cen-

sus was taken in 1884. Of the present population about 40,000 are natives and half-castes, 20,000 Japanese, 13,000 Chinese, 9,000 Portuguese, 2,000 born in the United States, 1,200 English, German, and French, and the rest of various races. Among the Japanese immigrants, males outnumber females 5 to 1, and among the Chinese 16 to 1. Among the other immigrants the ratio between the sexes is nearly normal. The Protestants number about 30,000 and the Roman Catholics 20,000; the rest are Asiatics or indifferent to religion. The Portuguese are allowed to vote, while the Chinese and Japanese can not become citizens. The number of electors is about 15,000, of whom 3,000 belong by birth or origin to the leading white races. The native Kanakas are of a Malay-Polynesian race, nearly allied to the Maoris of New Zealand, and, like the latter, they are rapidly dying out, the victims of small-pox and other diseases and of alcohol and other such influences introduced with European civilization. About one third of them live in the capital for the sake of an easy, pleasant life. Many think that at the end of another generation the pure native stock will become extinct, although there is still a class of able-bodied, industrious Hawaiians, and by the sugar planters they are regarded as the best workers, next to the Portuguese, the Chinese being classed usually next, and the Japanese last on account of their sensitive and impracticable disposition. The native Hawaiians have decreased 14 per cent. since 1884, while the half-castes, chiefly of American, European, and Chinese admixture, have increased 50 per cent. Drink causes an undue amount of mortality

among the natives, and its debilitating and pauperizing effects have increased since the late King Kalakaua had certain restrictions on the traffic removed. Though they have been Christian for generations, the ignorant still apply when sick to the arts of the native medicine-man, and are given poisonous mixtures that cause many premature deaths. The capital, Honolulu, on the island of Oahu, had 20,487 inhabitants in 1884. The net immigration in 1885 was 3,605; in 1886, 1,536; in 1887, 1,030; in 1888, 2,642. In 1889 there were 3,671 arrivals and 2,313 departures, an excess of 1,358 immigrants, most of them Chinamen and Japanese.

Education.—A complete system of secular common schools is provided for all, Roman Catholic and Protestant religious teachers having access to the children out of school hours. About half the pupils are Hawaiians, and the rest are chiefly Chinese and Portuguese half-castes, with a few Germans and others. English is generally taught. There are excellent superior and special schools, notably the Oahu College, for the sons of Americans; the Kauai Industrial School, a co-educational institution; and the Kamehameha Industrial School for Hawaiian boys and girls, in separate buildings, to found which the late Mrs. Charles R. Bishop, a Hawaiian princess, left her entire fortune of \$500,000. The number of primary schools in 1890 was 178, in which there were about 10,000 pupils.

Finance.—For the two years ending March 31, 1890, the revenue was \$3,632,197 and the expenditure \$3,250,510. Of the revenue, \$1,082,766 were derived from customs and \$901,803 from internal taxes. The largest item of expenditure was \$1,180,123 for the interior. The revenue for the financial period 1890-92 was estimated at \$2,862,505, and the expenditure at \$2,853,116. The public debt amounted on March 31, 1890, to \$1,934,000, raised in London to pay off prior indebtedness, and paying 6 per cent. interest. The loan was authorized by the act of October, 1886, and the portion not yet issued was offered in September, 1891.

Commerce and Production.—Of the capital invested in plantations and other productive enterprises, about \$30,000,000, half belongs to foreigners—the chief part to citizens of the United States—and of the remainder not more than a fifth is the property of natives. The profits in sugar growing, under the reciprocity treaty with the United States, have been enormous. The soil is exceedingly fertile, and is capable of bringing forth a remarkable variety of products, but sugar planting has been extended to the exclusion of other cultures. The export of raw sugar to the United States in 1889 was 242,000,000 pounds. The admission of sugar free into the United States from the West Indies and Europe reduces the profits to ordinary rates, and those planters who have borrowed at the prevailing high rates of interest or labor under other disadvantages must fail. It is expected that fully one third of the plantations will be ruined, owing to the operation of the McKinley bill, which has also had the effect of reducing wages by one third or one half, while rice and other food staples were unusually dear in 1891. The health and morality of the people have suffered from their being deprived of domestic life

and herded together on the plantations; and, therefore, when the present crisis is surmounted, and other industries besides the cultivation of the sugar-cane have been developed, such as will give small cultivators a chance, the country can still make great progress in wealth and commerce under sounder social conditions. Already coffee is being planted, and there is some trade in fruits, which mature three months earlier than in California. Rice is grown extensively, both for food and for export, and hides and wool are also exported. The soil and climate are adapted for the cultivation of pine-apples, bananas, melons, and many other kinds of fruit. The value of the imports in 1889 was \$5,439,000, against \$4,541,000 in 1888, \$4,944,000 in 1887, and \$4,878,000 in 1886. The exports of domestic products were valued at \$14,040,000 in 1889, against \$11,631,000 in 1888, \$9,435,000 in 1887, and \$10,340,000 in 1886. The exports of sugar in 1889 were \$13,089,302 in value. The principal other articles of export were rice, of the value of \$451,134; bananas, \$135,728; hides, \$72,973. The imports are provisions, clothing, grain, machinery, timber, hardware, and cotton cloth. Nine tenths of the trade is with the United States.

Steamers run between Honolulu and San Francisco, New Zealand, Australia, and China. In the inter-island traffic 18 steamers and a large number of schooners are engaged. The fleet belonging to Hawaii numbered 61 vessels in 1888, having an aggregate burden of 15,406 tons. There are railroads on the three largest islands, having a total length of 56 miles, and 250 miles of telegraph and cable traverse and connect them. The general post-office at Honolulu in 1889 received 882,094 letters and dispatched 534,576. Formerly gold and silver coins of any country were current in Hawaii at their nominal or exchange values, but since Dec. 1, 1884, only gold coins of the United States are legal tender for amounts over \$10, and American or Hawaiian silver coins for smaller payments. Treasury certificates are issued for deposits of coin, and these are the only paper currency.

Liliuokalani's Reign.—The death of Kalakaua and the new tariff of the United States combined to revive some of the political questions that were scarcely settled by the new Constitution of July 6, 1887. The men at the head of the Government represented the principle of a parliamentary monarchy of the British type. Opposed to them was the smaller, but vigorous, American party, advocating a republican form of government, and looking forward to annexation to the United States, which was regarded by this group as a necessity for the prosperity of Hawaii, since the McKinley bill had placed Hawaiian sugar on the same footing as the product of the Spanish and English colonies and Europe. Allied to these, as members of the Opposition, but pursuing an entirely different object, were the people who believed in Hawaii for the Hawaiians, and sought to exclude Europeans and Americans from high offices and place native Kanakas in control of the state. A fourth political force was the Queen herself, who was upheld by an influential *clique* in her purpose to resume the traditional personal rule that Kalakaua in his financial and political difficulties had signed away. After coming to the throne, she announced the inten-

tion of appointing a new Cabinet. The native party called on her to select Hawaiians and persons identified with their interests. Col. Ashford, commander of the Honolulu Rifles, a volunteer corps that is more efficient than the regular military force, and is maintained merely as the sovereign's body guard, was suspected of a plot to carry out this idea by force. This scheme was resisted by the American missionaries and officials, headed by Chief-Justice Judd, who favored the sugar-planting interest, and who presented a list to which the Queen took exception because it was composed of white men who were opposed to placing natives in responsible posts. Various other combinations were suggested, and when a list was at last made up, with Mr. Widemann as Premier, two members of the old Cabinet refused to retire, on the Constitutional ground that they could only be displaced by a vote of censure. Leaving this question to be settled by the Supreme Court, Queen Liliuokalani at last made definite selections, which were announced on Feb. 25. The Chief Justice and other members of the Supreme Court, with one dissenting voice, made a decision that, besides the method set forth in the constitution, a sovereign on ascending the throne can exercise the royal prerogative to dismiss the ministers of his predecessor in order to appoint others possessing his confidence. The new ministry was composed of the following members: Premier and Minister of Foreign Affairs, Samuel Parker; Minister of the Interior, Charles N. Spencer, who had the same portfolio in the preceding Cabinet; Minister of Finance, Hermann Widemann; Attorney-General, William Whiting. Mr. Widemann was unable to cope with the financial crisis created by the new American reciprocity treaties, and gave up his place in the summer to a Minister of Finance capable of commanding more confidence. The death of Mr. Dominis, the Queen's consort, in the early part of September, Liliuokalani's known predilections for the English, and the fact that the heiress-apparent was taken by her father, A. S. Cleghorn, who was born in Scotland, to be educated in England, gave rise to rumors of British intrigues to gain an ascendancy in Hawaii to the detriment of the United States. Responsible statesmen studiously denied the possibility of the Hawaiians accepting a British protectorate, and spoke of the prospect of their sacrificing their independence to become a part of the United States as equally remote and at present unacceptable on either side.

Treaty Negotiations with the United States.—The Hawaiians considered that the reciprocity clause of the McKinley bill deprived them unfairly of the advantages of the reciprocity treaty made with the United States in 1876, and renewed for eight years more in 1887, under which the sugar-growing industry of Hawaii had developed and many thousands of persons had been brought from abroad to work on the plantations and had been added to the permanent population of the islands. To secure the free importation of Hawaiian sugar into the United States, the duties were taken off from American agricultural implements, iron and all manufactures of iron, cotton manufactures, and many other articles. The passage of the McKinley

bill, removing the duty from all foreign sugar, nullified the advantage secured to Hawaii by the reciprocity treaty, and injured her sugar trade to the extent of \$5,000,000 a year, as was estimated. The Hawaiian Government asked to be recompensed for this loss. The Government at Washington proposed a new treaty establishing free trade in all products between the two countries. This was acceptable, but was not regarded as an equivalent for the preferential treatment enjoyed under the old arrangement. The Hawaiian diplomatists suggested that in addition the sugar planters of the Sandwich Islands should receive the bounty of 2 cents a pound given to the planters of Louisiana. H. A. P. Carter, the Hawaiian minister at Washington, urged this view, and after he fell ill Dr. Mott Smith, a native of New York, was sent as a special envoy to Washington in November, 1891, to take up the negotiations for a modification of the treaty, and also to urge the desirability of cable communication between San Francisco and Honolulu. The Hawaiian Legislature has agreed to pay a subsidy of \$25,000 a month to a cable company, and it was desired to have the United States grant one of \$50,000 a month.

HAYTI or HAITI, a republic occupying the western end of the island known by the same name and formerly called Hispaniola, the largest but one of the Antilles. The President, according to the Constitution, which was adopted in 1867, is elected by vote of the people for seven years. The country has been so disturbed by civil wars that the President is not regularly elected, but is proclaimed by the Legislature or the troops, or, if the forms of an election are complied with, the vote is taken only in the section where his party preponderates. The legislative authority is vested by the Constitution in the National Assembly, consisting of the Senate and the House of Representatives. The members of the House of Representatives, 50 in number, are elected for three years by the direct vote of all male citizens who have a regular occupation. The senatorial term is six years. Every two years one third of the Senators, who number 30 in all, go out, and their successors are chosen by the vote of the House of Representatives from two lists of names submitted by the President and by electoral colleges. The present chief of the republic is Gen. Hippolyte, who in a sanguinary war defeated President Légitime, and was proclaimed President in October, 1889. Louis Mondestin Florvil Hippolyte, though black, is the son of one of the ministers of the Emperor Faustin I and his French wife. He was born at Cape Haytien in 1827, was educated in France, followed a military career, and distinguished himself by his defence of the fortress of Belair in the revolution of 1865.

Area and Population.—The area of Hayti is estimated at 10,204 square miles. The population was estimated by Dantès Fortunat, a native statistician, at 960,000 in 1887; others make it as low as 572,000. The people are all of African descent. The mulattoes, about one tenth of the population, constitute a distinct class, which formerly possessed all the wealth, education, and political power. The language of the common people is a corrupt French dialect, known as Creole French. Elementary education is gradu-

itous, and there are 400 state schools. The religion of the people is Roman Catholicism; all other religions are tolerated. In remote districts the people have relapsed into some of the pagan customs of Africa. In Port-au-Prince and other seaboard towns are a few white traders.

Finance.—The revenue for the fiscal year 1885-'86 was stated to be \$6,412,957, of which \$3,178,410 were derived from import duties, \$1,917,002 from export duties, and \$1,317,545 from other sources. The expenditures were equal in amount, the chief items being \$1,096,134 for war and marine, \$981,479 for the interior and police, and \$698,138 for education. The expenditures for 1887-'88 were estimated at \$4,066,236. The receipts from import and export duties in 1889 were in the neighborhood of \$6,000,000. The public debt consists of the foreign loan of 1875, of which the sum outstanding in 1887 was reported to be \$4,320,000, and \$4,450,000 of domestic liabilities, not counting the depreciated paper currency of unknown amount, the nominal issue of \$3,000,000 made after the insurrection of 1883 having been fraudulently exceeded. Other notes issued during Légitime's presidency are not recognized by the Government, which was refused an advance of \$500,000 by the foreign merchants in July, 1891, unless it would accept a part in these notes at a discount.

The Army and Navy.—The nominal strength of the army under the law to reorganize the military forces passed in 1878 is 6,828 men of all arms, including 1,978 gendarmes. The President's body guard of 650 men has for its officers the 10 generals who act as his aides-de-camp. The naval force consists of an ironclad gun vessel of 900 tons, a corvette, and two sloops, each armed with a single gun.

Commerce and Production.—The imports of merchandise in 1888 were valued at \$7,543,294, and the exports at \$13,250,307. Coffee is exported to the United States and Europe. The cotton culture, introduced by negro emigrants from the United States, was a flourishing industry during the American civil war, afterward was allowed to decay, recently has been taken up again, and for the past two or three years the cotton exports to France have been large. Cacao is also cultivated, the export in 1889 amounting to 3,927,089 pounds. Mahogany, logwood, cedar, lignum vite, and other woods are exported, as well as tropical fruits to some extent, orange peel and pickled limes, cotton seed, goat skins, honey and wax, and tortoise-shell. In spite of the civil war of 1887-'88, the export of coffee increased from 112,000,000 pounds in 1886 to 125,000,000 pounds in 1890, and other products have increased in like proportion. The export duties on coffee, cacao, and mahogany have recently been raised. The chief imports have been textile goods from England, flour and provisions from the United States, and fine manufactures from France. The chief articles of export are coffee, cotton, mahogany, cacao, and logwood, taken in the order of their importance. The imports from Hayti into the United States, according to the returns of the Treasury Department at Washington, decreased from \$3,757,443 in 1889 to \$2,421,221 in 1890, while the exports to Hayti from the United States increased from \$3,975,461 to \$5,101,464. The articles of chief importance

imported from the United States in 1890 were salt pork, flour, cotton goods, and dried and smoked fish, constituting 56 per cent. of the total, followed by soap, lumber, lard, iron manufactures, refined sugar, butter, leaf tobacco, and furniture. There were 726 vessels, of 691,150 tons, entered, and 724, of 679,902 tons, cleared at the ports of Hayti in 1887. The post-office forwarded in that year 295,013 letters and cards.

Attempted Revolution.—On the overthrow of Gen. Salomon in 1888 Gen. Manigat and Senator Légitime returned from exile as candidates for the succession. Légitime, having been chosen Provisional Executive Chief, banished Manigat again, but had to contend with a third candidate, Gen. Thélémaque, who came down from Cape Haytien with an army to Port-au-Prince and attempted to overthrow Légitime. In a fight in front of the Palais National Thélémaque was killed, and his soldiers, returning to the north and proclaiming that their general was assassinated, chose Hippolyte for their leader. A National Assembly, hastily convoked, consisting only of Representatives from the Department of the West, in which Port-au-Prince is situated, and from the Department of the South, meanwhile elected Légitime President. The northern provinces of Artibonite and of the north and the northwest were dissatisfied with the election, and the people joined the standard of Hippolyte. After a war lasting ten months, strengthened by resources supplied by American merchants and aided by the decision of the Government at Washington, which refused, unlike the French and English governments, to recognize the paper blockade proclaimed by Légitime, Hippolyte captured Port-au-Prince in August, 1889, and was elected President by the National Assembly. Légitime went into exile, and has since been conducting a plantation near Kingston, Jamaica. Gen. Manigat has also lived as a refugee on that island, and many more of Hippolyte's political enemies have fled to Kingston or to New York or New Orleans, and have kept themselves in correspondence with the discontented in Hayti, who have grown continually more numerous owing to his iron-handed rule and the corruption of his ministers. Hippolyte represented the north of Hayti, as distinguished from the south, and the Liberal party, as opposed to the National party. One of the principles of the Liberal party has been to give a share in the Government to the mulattoes, who in the course of a democratic evolution have not only lost their former dominant position, but have been excluded from the field of politics. The two parties are not divided by differences of policy. The desire for office lies at the bottom of their organization and rivalry. President Hippolyte, when he came into power, endeavored to obliterate party lines and disarm sectional jealousy as far as he could in the selection of his Cabinet. The experiment failed, and with every change he was reduced to a narrower range, thus diminishing his party and strengthening the Opposition. At Port-au-Prince he was in the midst of a hostile community. He kept several of his battalions there, and took measures to guard against revolution that trenched on the liberties of the people of the capital, who did not conceal their dislike. The discontent grew stronger and spread even in the

north, the merchants and other citizens of the capital grew bolder and more bitter in their opposition, and the exiles in Kingston and New York gave signs of fresh activity. The old President removed the battalions that were thought unreliable to distant stations, re-enforced the garrison with troops from his own section, and took more vigorous measures to prevent a rising, publicly warning the people of Port-au-Prince that he knew of their disaffection and would deal stringently with them if their sentiments should culminate in a breach of the peace. Many persons who were overheard denouncing the Government were summarily imprisoned. A plot was discovered in which Gen. Sully Guerrier was a prime mover, and among the persons arrested was that officer's wife. In the early morning of May 28 Gen. Sully Guerrier and an old political enemy of Hippolyte's entered Port-au-Prince, and before the troops could stir led a mob to the prison, secured the keys, and liberated more than 200 political prisoners. They then tried to gain possession of the arms and ammunition in the arsenal, but were frustrated by the soldiers, who put them to flight with their rifles, and cleared the streets with Gatling guns, killing about 40 persons. The rising was attempted at an hour when President Hippolyte and a large number of his subordinates and adherents were attending mass in the cathedral, as it was a high Church festival, Corpus Christi. President Hippolyte went out without hesitation to take command, and acted with such promptitude that the insurgents in less than three quarters of an hour were driven into the woods; and thus he prevented a general insurrection. From that time he did not venture to go abroad except in the middle of a square of troops. Arrests were made by the hundred, and for a month afterward prisoners were led out and shot daily by squads of soldiers. When his officers refused to continue the carnage, Hippolyte ordered the massacres continued. Several attempts were made on his life, one at Jacmel, where two of the officers of his body guard were shot. The revolutionists attempted to make a stand at this post, but could not hold it against the President's troops. A large number fled to join the conspirators in Jamaica. Among the 200 or 300 persons shot by the President's orders was a popular merchant in Port-au-Prince named Rigaud. The French Government demanded an indemnity of \$50,000 for his family, because he had applied for naturalization in France and intended going to France to gain a residence, as is required before one can be made a French citizen. The interference of a foreign government in behalf of a person who was a Haytian, not only by birth but in law, was not relished by the President. Still he gave way in the end, as is usual when foreign governments intervene. Sully Guerrier was captured and shot at the time of the *émeute*. Port-au-Prince was kept under martial law, and filled with soldiers. Business was paralyzed and social intercourse made impossible. "You call me a monster for May 28," said President Hippolyte, speaking in public, "but that was child's play compared with what I will do if another shot is fired against me." At the time of the *émeute* Gen. Souli and three others, one of them M. Cauvin, formerly Gen. Hip-

polyte's Minister of Justice, took refuge in the Mexican consulate. When the military were sent to drag them from their asylum, the diplomatic corps went to Gen. Hippolyte in a body, and the British consul, as spokesman, uttered a vigorous protest, which Hippolyte interrupted by leaving the room, saying that as President of a great country he would not listen to such language. He apologized immediately afterward, and did not remove the refugees until he had received by cable permission from President Diaz of Mexico, when all four were taken out and publicly executed, and the corpses were left for hours in the street, as was the practice of Hippolyte, in order to inspire terror in sympathizers with revolution. An insurrectionary movement in the north, led by Gen. Barnave, one of Gen. Hippolyte's aides, was soon suppressed. A more important rising among the mulattoes of the south was secretly sustained by the President's enemies in Port-au-Prince. The Kingston exiles were divided into two groups. One was headed by Gen. Anselm Prophète, who had for associates Gen. Osman Piquant, ex-President Boissard-Canal, and Gen. Badère. The chief of the rival group was Gen. François Manigat, whose allies were ex-President Légitime and Dr. T. Robert Love. Gen. Manigat is the champion of the black race against the mulattoes. Neither he nor Gen. Prophète could obtain the money to buy arms and ammunition for their threatened descent on the Haytian coast, and in September President Hippolyte felt so secure that he sent to their homes more than 1,000 of the soldiers who had been kept at Port-au-Prince since May 28. Antenor Firmin, the most prominent member of Hippolyte's Cabinet, who first held the portfolio of Foreign Affairs and Education and afterward was Minister of Finance, resigned while the massacres were in progress and left the country. Many young Haytians went abroad with the object of obtaining naturalization in France or some other country, and thus gaining the extraordinary privileges enjoyed by foreign residents in Hayti under the diplomatic protection of foreign governments.

On Aug. 14 a motion of want of confidence gave rise to a stormy debate in the Chamber of Deputies. Serious charges were uttered against the members of the President's Cabinet, and a formal vote of censure for corruption and incapacity was carried, upon which they resigned in a body. On Aug. 16 a new Cabinet was constructed as follows: M. Archin, Minister of Foreign Affairs; M. Joseph, Minister of Public Works; M. Montas, Minister of War; M. Apollon, Minister of Instruction; M. Stewart, Minister of Finance; M. Pierre Louis, Minister of the Interior. On Dec. 10 President Hippolyte proclaimed a general amnesty for all political offenders.

Disagreement with Santo Domingo.—The relations with Santo Domingo became strained when M. Firmin in 1890 denounced the commercial treaty of 1874. The treaty was to run twenty-five years. It provided for the free reciprocal importation of the products of the two countries and for a periodical adjustment of the revenues arising from the interchange of foreign goods. No adjustment was ever made. Santo Domingo's claim for a balance of \$823,477 in her favor that

accrued during the first eight years that the treaty was in force was referred to a commission, with no result. Gen. Hippolyte, in violation of the treaty, levied prohibitive duties on Dominican products and on foreign merchandise imported from Santo Domingo before the treaty was formally abrogated. His acts added to the coolness that has existed owing to the boundary dispute. In connection with the commercial convention, Santo Domingo made a treaty in 1874 binding herself not to sell, cede, or lease any part of her territory to a foreign power, thus precluding the resumption of negotiations for the acquisition by the United States of Samana Bay as a coaling station.

Relations with the United States.—While Gen. Hippolyte was at the head of the rebellion against President Légitime and was surrounded in the north by the troops of Légitime, he sent Charles Frederick Elie as his agent to the United States with a written promise that he would cede the mole of San Nicolas to the United States for a naval and coaling station provided the Government at Washington refused to recognize the blockade of the northern ports proclaimed by Légitime, which had been recognized by France, Germany, and Great Britain. Mr. Whitney, then Secretary of the Navy, sent Admiral Gherardi to Hayti, and, on the strength of his telegram to the effect that there was no blockade, the American Government refused to recognize Légitime's proclamation as establishing an effective blockade, such as is required by international law. This refusal and the action of American war ships on the Haytian coast in protecting American ships from seizure, enabled Hippolyte to land supplies and munitions purchased with money advanced by American and other foreign merchants and brought from New York in American trading vessels. A private pledge made when he was neither *de jure* nor *de facto* President, however binding on him, did not bind the Haytian Government. Frederick Douglass, who was appointed minister to Hayti by President Harrison, opened no negotiations for the cession of the mole, as they could only be conducted through the intermediation of his secretary, Ebenezer Bassett, the minister being unable to speak French. Bassett had been minister at Port-au-Prince under a former Administration, and had failed in the same matter. The firm of William P. Clyde & Co., of New York, having rendered valuable assistance to Hippolyte, was rewarded with a subsidy of \$40,000 for five years for the purpose of establishing a line of steamers between New York and Haytian ports and a ninety-nine years' lease of the mole of San Nicolas, with the understanding that the war ships of the United States, but not those of any other power, might enter the port to be established there. The jealousy of the Haytian people, quickened by French and other foreign influences, was aroused to such a degree that Hippolyte and Firmin repudiated the engagements that they had entered into as representatives of the Provisional Government, the written instructions to Elie having been destroyed, and President Hippolyte did not dare to submit to the Assembly the contract with Clyde & Co., signed in June, 1890, by which American diplomacy had sought to obtain in the guise of a commercial conces-

sion the coveted coaling station in the West Indies. These negotiations, conducted between the Haytian diplomatists and the private parties interested and in a correspondence between Mr. Blaine and J. Haustedt, Haytian consul-general at New York, having led to no result, Rear-Admiral Gherardi, with three war vessels, went to Port-au-Prince in the beginning of 1891, carrying verbal instructions from Mr. Blaine to make a formal request, in conjunction with Minister Douglass, for the use of San Nicolas mole as a naval station. Hippolyte denied ever having made a promise of the mole in return for the material and moral support he had received from the United States. Foreign-Minister Firmin temporized and dragged out the negotiations for some weeks, and on Feb. 20 asked Admiral Gherardi for written credentials, which were not forthcoming till April 18, when Admiral Walker arrived with the white squadron from Key West, bringing from President Harrison a letter of credence, dated March 9, granting Frederick Douglass and Bancroft Gherardi full power to conclude a convention for the cession of the mole of San Nicolas. As soon as it was presented Minister Firmin replied in a note absolutely refusing to enter into any negotiations for the lease of the mole, and objecting to the continued presence in Port-au-Prince of the American men-of-war. In addition to Admiral Gherardi's ships, Admiral Walker had the squadron of evolution in Haytian waters while negotiations were pending. He sailed away after they were broken off, and soon afterward Admiral Gherardi took the Squadron of the North Atlantic to Samana Bay. Minister Douglass made overtures for a treaty of commercial reciprocity, but returned to the United States on leave in July, and on the 30th of that month sent in his resignation to President Harrison. He was succeeded by Mr. Durham, another colored man.

HOLLAND. See NETHERLANDS.

HONDURAS, a republic in Central America. The Constitution, revised on Nov. 1, 1880, vests the legislative powers in a Congress containing one member for every 10,000 of population, elected for four years by direct manhood suffrage, and the executive power in a President, elected likewise for four years. Gen. Luis Bográn became President on Nov. 9, 1883, and was re-elected to serve from September, 1887. Congress meets biennially in a session lasting forty days.

Area and Population.—Honduras is next to Nicaragua the largest of the Central American republics, containing 47,090 square miles, with a population of 431,917. The largest city is Tegucigalpa, the capital, with 12,600 inhabitants. The Government gives much attention to education, providing instruction in 573 schools to 20,518 pupils in average attendance, and superior education in two universities and a number of colleges.

Finance.—The revenues of the Government are derived mainly from customs duties and monopolies. They amounted for the year 1889 to \$2,094,660, and the expenditures to \$2,077,552. The national debt, which was contracted in Europe for the purpose of building an inter-oceanic railroad running through Tegucigalpa, amounts to \$30,218,304, with accumulated interest, which has been in default since 1872. For

the financial period embracing the two years ending July 31, 1888, the expenditure on the army was \$708,783; on the debt, \$617,342; on the monopolies, \$485,500; on public works, \$384,914. The standing army is limited to 500 men. The militia, in which all can be called on to serve twelve months, numbers 26,767 men.

Commerce and Production.—The republic has an abundance of rich soil, and the climate at different elevations is so varied that plants of the tropical and temperate zones thrive equally well. The mineral resources are very great, but want of capital, difficulty in obtaining steady labor, and absence of means of transport have proved obstacles to their development. The exports for the year ending July 31, 1888, were valued at \$3,350,664 in silver, classified as mineral products of the value of \$1,673,449; vegetable products, \$1,221,716; animal products, \$367,379; gold and silver coin, \$78,853; industrial products, \$9,265. The principal articles of export are silver bars, bananas, cocoa-nuts, cattle, indigo, mahogany, gold dust, cedar, India-rubber, sarsaparilla, hides and deer skins, and various woods. The exports to the United States, with which there is communication by steamers, were \$2,790,405 in 1888; to other countries in Central America, \$331,950; to Great Britain, \$105,088; to France, \$81,566; to Belgium, \$30,345; to other countries, \$11,301. The imports are imperfectly reported, the farmers of customs having an interest in concealing their receipts. According to the official returns of the United States, the imports into Honduras of American domestic products for the year ending March 31, 1890, were \$522,621 in value, against \$618,973 in 1889, \$672,796 in 1888, and \$425,741 in 1887. The imports into the United States from Honduras are given as \$857,919 in 1887, \$959,331 in 1888, \$1,215,561 in 1889, and \$984,404 in 1890. The principal articles imported are hardware and silk and cotton goods.

Communications.—Of 69 miles of railroad from Puerto Cortez to San Pedro Sula, only 37 miles are in operation, owing to the destruction of the bridge over the river Chamelicon. Lines are projected to connect Truxillo with Puerto Cortez and with Juticalpa. The projected interoceanic railroad would run from Puerto Cortez to Amapala, on the Pacific coast. The Government owns 1,717 miles of telegraph, sending an average of 93,000 messages annually.

Political Affairs.—Honduras has suffered from the late uprising in Central America, which has left her finances in greater disorder than ever. President Bográn asked Congress, which met in the spring of 1891, to authorize a loan of \$2,000,000 for the betterment of internal affairs. A treaty was discussed with San Salvador providing for the settlement by arbitration of all difficulties between them, the free interchange of each other's products in case of war, and the use of the projected interoceanic railroad of Honduras by Salvadoian troops and of a branch that is to be built to Puerto Union by Honduran troops. This treaty was intended to isolate Guatemala in the event of a new war with Salvador. Later, Gen. Bográn was suspected of engaging in fresh schemes of Barillas for a Central American union under the hegemony of Guatemala. Gen. Ponciano Leiva, the Government candidate, was elected to succeed Bográn. The Liberal party

avored Policarpo Bonilla, who received about a third as many votes as Gen. Leiva. Congress met on Nov. 7 to canvass the returns, which were declared to be regular. The Opposition attempted to prevent the accession of Gen. Leiva by a revolutionary rising, headed by Gen. Lerencio Sierra, who attempted to occupy the department of Choluteca, where Leiva was least popular, with a force of 1,400 men. The revolutionists proclaimed Bonilla President, and the revolt was spreading when Gov. Domingo Vasequez met and defeated Sierra's force, driving the rebels over the border into Nicaragua.

HUDSON RIVER, IMPROVEMENT OF.

By an act of Congress passed in 1890 a commission was appointed to examine the obstructions to navigation in Hudson river between New York city and the State dam at Troy, N. Y., and report a project and estimate the cost of widening and deepening the river between New York and Albany, and also between New York and the State dam at Troy, for the navigation of sea-going vessels drawing 20 feet of water; and also a separate estimate of the expense of improving the river between New Baltimore and the State dam at Troy to such an extent as to secure a navigable channel 12 feet deep at mean low tide. The naturally deep waters of the Hudson begin at Coxsackie. From that point to Troy, 28 miles, navigation always has been maintained with difficulty. The river is crooked and wide, and tides, freshets, and ice-jams produce bars. The first appropriation by the State for the improvement of this portion of the river was made in 1797; but up to 1819 the depth of the channel was only 4-5 feet. Between 1819 and 1863 a depth of 7-5 feet at mean low tide was established. By 1885 this was increased to 10 feet, with a width of 150 feet, between Coxsackie and Albany; and 8 feet, with a width of 125 feet, between Albany and Troy. In 1888 these measurements had been increased to 11 feet and 175 feet up to Albany, and to 10 feet and 140 feet from that point to Troy. At the same time the United States Government has been aiding in the improvement of the river, having built 99,850 lineal feet of dike, against 22,400 built by the State. Although the tonnage of Hudson river is nearly three times that of the Mississippi, the amount expended in its improvement is insignificant compared with the Mississippi appropriations. The plan of deepening the upper Hudson is only one link in the chain of a system of enlarged water ways from Chicago and Duluth to New York city. The western link involves the deepening of the shallow places along the Great Lakes, so as to give a clear channel of 20 feet. The places selected for dredging are these: Sailors' Encampment, St. Clair Flats, Grosse Pointe Flats, mouth of Detroit river, foot of Lake Huron, and the shoals near Round Island. A convention of persons interested in this project met in Detroit in December, 1891. Next to the 20-foot channel, the convention considered a ship canal connecting Lake Erie with the Atlantic Ocean of most importance, and one of the resolutions requested Congress to authorize the Secretary of War to make surveys, examinations, and estimates of the cost of the various practicable routes for such a water-way. The improvement of Hudson river from Coxsackie to Troy, so that

it will be navigable for vessels drawing 20 feet of water, was strongly recommended. Other resolutions were offered, one of which proposed a ship canal to connect Lake Erie with the upper Ohio. The eastern and western links of the chain of improvement are thus agreed upon; and the construction of them only awaits aid from the United States Government; but the middle link, from Lake Erie to Hudson river, is the cause of much difference of opinion. Three plans are offered: 1. The enlargement of the whole 300 miles of the Erie Canal to a 20-foot ship canal. 2. The use of the Welland Canal, in Canada, from Lake Erie to Lake Ontario, Lake Ontario to Oswego, and the enlargement of the Oswego and Erie Canals from Oswego to Albany. 3. The building of a ship canal around Niagara Falls, on American soil, and the use of Lake Ontario and the canals beyond as in the second plan. A bill is now in the United States Senate providing for a canal around Niagara Falls, the estimated cost being \$50,000,000. The advantages of an all-water route from the Great Lakes to the seaboard are many. During the past twenty years the all-rail rate in grain has fallen from 42-6 cents to 14 cents a bushel, while the all-water rate has dropped from 25-3 cents to 4-55 cents a bushel. That is to say, freight rates by rail have been reduced in the period covered by the table until the last price named is only one third that first mentioned, but during the same time the all-water rate has been reduced to less than one fifth of the rate first named. The water rate has always been below the rail rate by a percentage ranging from 25 to 67-5. From careful records kept at the St. Mary's Falls Canal (see "Annual Cyclopædia" for 1889, page 754), it appears that the average price per ton per mile received by vessels engaged in the carrying trade of Lake Superior in 1889 was 0-15 cent; the total amount moved was 7,516,022 tons, and it was carried an average distance of 790-4 miles. The average rate on all the railways in the United States in the same year was 0-976 cent, or more than 6 times as much. In other words, to move the same amount of freight the same distance by rail would have cost in round numbers \$50,000,000 more than it cost to move it by water. Wheat has been carried from Chicago to Buffalo for 1 cent a bushel, or 0-04 cent per ton per mile, and thousands of tons of coal have been carried from Buffalo to Duluth at 25 cents a ton, or 0-025 cent per ton per mile. During the season of navigation in 1891 there was sent east from Buffalo by canal but 33,574,945 bushels of grain, and only 9,922½ barrels of flour, leaving nearly 74 per cent. of the grain and nearly all the flour to be transported by rail. Owing to the grain blockade at Buffalo in the latter part of November, 1891, there was afloat in the harbor at the close of lake and canal navigation at least 5,000,000 bushels of wheat, and at least 5,000,000 bushels more had been stored in the elevators. This left, at the close of navigation, 10,000,000 bushels to be forwarded by rail. The average freight rate on grain from Buffalo to New York by canal during the season of navigation was 4½ cents a bushel, and just before the close it was but 3½ cents. Within a day after the last canal boat had cleared, the rail rate was advanced to 7½ cents a bushel. So the Eastern consumers of flour paid \$400,000 more than would have been

charged them had the grain been sent all the way to New York by water.

HUMAN FREEDOM LEAGUE, THE, an organization effected in Independence Hall, Philadelphia, Oct. 12, 1891, the day after the four hundredth anniversary of the discovery of America. The objects of the league are to bring about united action by all the fraternal societies in the world for the support of liberty and for the development of free institutions. In detail, the objects are these:

1. To bring about, as a permanent factor and influence in the affairs of the world, a pan-republican congress, with its work at this time defined in the report adopted April 10, 1891, at Washington, D. C., on recommendation of the Committee on Plan and Scope. This congress is to meet regularly once in five years, and is to be so organized that it can be called together in extra session on extraordinary occasions.

2. To organize into a force or influence all believers in constitutional government, in liberty regulated by law, in the voice of the people being the voice of God, in government of the people, by the people, and for the people.

3. To take up the work outlined by George Washington in his will, whereby he left a large share of his property for the purpose of endowing a university where youth might be educated in statecraft, and push it to a successful conclusion. Such a university should be national, and yet have its doors always open to youth from every land.

4. To exert what influence it can upon all educational methods and institutions, so that the opportunity of the citizens for better preparation for the duties of citizenship, as they exist in a republic, may be at its best.

5. To secure the establishment of an international court, with the same relationship to nations that the United States Supreme Court bears to the States, with jurisdiction; the acceptance by all nations of judicial principles rather than the doctrine of military force as the method for the settlement of international questions; and to accept a flag of peace, such as may be adopted by the Human Freedom League for its emblem, as representative of these ideas.

6. To do such other work in line with the foregoing declared objects, and in harmony with what is naturally suggested by the name of the organization, as shall be recommended by the committee appointed under these resolutions; provided, however, that nothing shall be undertaken except for the promotion and advancement of the cause of universal liberty and free institutions among the peoples of the earth.

Every fraternal society that believes in these principles will send delegates to the first meeting of the League, to be held at Omaha, Neb., April 10, 1892. This meeting will be preliminary to a much larger congress to be held during the time of the World's Fair, probably at Chicago, and to be known as the Pan-Republic Congress. This congress will consist of a senate and a house. The senators will be appointed by the presidents of all the republics in the world—1 delegate at large and 1 delegate for every 5,000,000 citizens. This will give the United States about 12 senators. The house will be composed of delegates from the great patriotic, civil, commercial, educational, and industrial organizations. Each of these, omitting religious organizations, shall be entitled to 1 delegate-at-large, and 1 delegate for each 100,000 members in good standing. All monarchies may be represented in the house by 1 delegate-at-large each, and 1 delegate for every 5,000,000 citizens. The League makes no distinction

because of sex, race, color, or creed. It is provided that its charter membership shall consist of the following: 1. Members of the Pan-Republic General Committee. 2. Every contributor to the funds who has supported this work up to the present time, and those who shall so contribute prior to April 10, 1892. 3. Contributors to the fund that was given by citizens of the Republic of France to present to citizens of the United States, with fraternal greetings commemorative of the Centennial period, the Statue of Liberty Enlightening the World, and the contributors in the United States to the fund for the erection of the pedestal for this statue. 4. Those persons who have been or may be nominated to membership in the Human Freedom League, by members of the General Committee on Organization of the Pan-Republic Congress previous to April 10, 1892. 5. Members of the Society of Sons of the Revolution, and of the Society of Sons of the American Revolution; Daughters of the American Revolution; Grand

Army of the Republic; Woman's Relief Corps; Sons of Veterans, United States Army; Society of the War of 1812; Confederate Veterans' Association; and all other societies which do, or shall, prior to April 10, 1892, express and declare in their fundamental laws belief in and adhesion to republican institutions, when they shall be approved of by the committee hereafter to be appointed. 6. Citizens of the different republics of the world holding office under a democratic form of government during the centennial periods, and members of all the committees that organized or carried through to success the centennial celebrations, including those of the fall of the Bastille, the French Federation, the adoption of the Polish Constitution, and the six hundredth anniversary of the Swiss Federation, together with the contributors to the supporting funds of these several celebrations. And wherever persons entitled to membership, by reason of this clause, shall have died, their rights shall be recognized in their children.

I

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population, according to the census of 1890, 84,385. Capital, Boise City.

Government.—The following were the State officers during the year: Lieutenant-Governor and acting Governor, Norman B. Willey, Republican; Secretary of State, A. J. Pinkham; Auditor, Silas W. Moody; Treasurer, Frank R. Coffin; Attorney-General, George H. Roberts; Superintendent of Public Instruction, J. E. Harroun; Chief Justice of the Supreme Court, Isaac N. Sullivan; Associate Justices, Joseph W. Huston and John T. Morgan.

Finances.—The bonded State debt on July 1, 1891, was as follows: Capitol-building bonds, \$80,000; Insane Asylum bonds, \$20,000; Wagon-road bonds, \$30,000; refunding bonds, authorized by the funding act of this year, \$50,000. The two last-mentioned classes of bonds are in process of issue, the above figures representing the amount actually sold up to July 1. The total receipts of the State treasury for the half-year, ending July 1 were \$173,083, including the proceeds of \$50,000 refunding bonds sold. On the latter date the balances in the several funds of the State treasury were as follow: General fund, \$1,954.02; Capitol-building fund, \$20,359.87; Wagon-road fund, \$15,897.62; University fund, \$8,741.17; Library fund, \$1,027.09; Common-school fund, \$818.94; Insane fund, \$344.37; General School fund, \$13,530.47; unapportioned cash, \$13,151.14; total balances, \$75,824.69.

Legislative Session.—The first State Legislature, which convened at Boise City on Dec. 8, 1890, completed its sessions on March 14, 1891. On Dec. 18, pursuant to the provisions of the State Constitution and the admission act, it elected the two United States Senators to which the State was then entitled, and a third Senator, ex-Delegate Fred T. Dubois, whose term should begin on March 4, 1891, when the term of one of the other Senators would expire (see "Annual Cyclopædia" for 1890, page 425). The ballot for

Dubois was taken in joint session, although no ballot for the office had been taken in each House separately on the day preceding, as required by law, and as had been done in case of the other two senatorial offices. A few Republican members, who were opponents of Dubois, protested against this proceeding, and later attempted to set aside his election on the ground of illegality. With the aid of the Democratic minority they passed through both Houses a resolution, under which, on Feb. 10, each House separately voted for a Senator in place of Dubois. This resolution declared that great doubt of the validity of the former election existed, because it took place in advance of the time fixed by law and without a separate ballot in each House. On Feb. 11, both Houses, in joint session, finding that no choice had been made on the preceding day on the separate ballot in each House, proceeded by joint ballot to elect William H. Clagett as United States Senator, by a vote of 28 to 4 for all other candidates. Seventeen Republican members were present and refused to vote, and four were absent, but the Republican minority and the Democrats (who voted for Clagett) formed a majority of both Houses. Subsequently Acting-Gov. Willey signed the certificate of Clagett's election, but Secretary of State Pinkham refused to countersign it or to affix the State seal. Dubois had previously obtained a certificate of election signed by the Governor and the Secretary of State and duly sealed. The United States Senate must pass upon the validity of these certificates.

At this session an Australian ballot law was enacted, applying to all elections in the State except school-district elections. Under its provisions candidates may be nominated by the convention or primary meeting of any political party, or by certificates of nomination signed by electors residing within the political division for which the nomination is made to the number of at least 300, if the nomination is for a State office; to the number of at least 150 if it is for a district

office or a subdivision of the State including two or more counties; to the number of at least 50 if for a county office; and to the number of at least 10 if for a township, precinct, or ward office. Each polling place shall be provided with voting shelves or compartments, at which electors may mark their ballots screened from observation, and with a guard rail. Neither the ballot boxes nor the voting shelves shall be hidden from the view of persons outside the rail. The auditor of each county shall prepare the ballots to be used at all elections within the county, and shall print thereon the name of every candidate duly nominated; but in municipal elections the duty of preparing ballots shall devolve upon the municipal clerk. Ballots shall be white paper, printed with black ink. All the candidates of each political party shall be grouped in a column together, under the party name. The election clerk, before delivering a ballot to an elector, shall place upon the back, near the top, the official stamp. The elector shall indicate his choice by marking a cross opposite the name of the candidate voted for, or by writing in the name of a candidate. A system of registration is established by this act, and the following restrictions are placed upon the right of suffrage:

"No person shall be permitted to vote who is not registered as provided by law, or who is under guardianship, idiotic, or insane, or who has at any place been convicted of treason, felony, embezzlement of public funds, bartering or selling or offering to barter or sell his vote, or purchasing or offering to purchase the vote of another, or other infamous crime, and who has not been restored to the right of citizenship, or who at the time of such election is confined in prison on conviction of a criminal offense, or who, after passing the age of eighteen years and since the first day of January, 1888, has been or is a bigamist or polygamist, or is living or has lived in what is known as patriarchal, plural, or celestial marriage, or in violation of any law of this State or of the United States, forbidding any such crime; or who in any manner teaches or has taught, advises or has advised, counsels or has counseled, aids or has aided, encourages or has encouraged, any person to enter into bigamy, polygamy, or such patriarchal, plural, or celestial marriage, or to live in violation of any such law, or to commit any such crime, or who has been a member of, or contributes or has contributed to the support, aid, or encouragement of any order, organization, association, corporation, or society which teaches or has taught, advises or has advised, counsels or has counseled, encouraged, or aided any person to enter into bigamy, polygamy, or such patriarchal or plural marriage, or which teaches or has taught, advises or has advised, that the laws of this State, or of the Territory of Idaho before its admission as a State into the Union, or of the United States applicable to the Territory of Idaho, prescribing rules of civil conduct, are not the supreme law."

In order to fund the bonded and floating debt of the State, an act was passed authorizing the issue of 6-per-cent. State bonds, redeemable on Dec. 1, 1911, or at any time after Dec. 1, 1900, at the option of the State. The bonded debt to be refunded under this act amounts to \$51,715.06 with accrued interest, and the floating debt to

about \$76,000 with accrued interest. The *ad valorem* State tax to be levied annually for general purposes was fixed at 8½ mills on the dollar, and a further annual tax of ¼ mill was levied in aid of the State University Building fund.

A new law changes the school system in conformity with the requirements of the State Constitution, and provides for an annual tax levy in each county for support of schools of not less than 5 nor more than 10 mills on the dollar. The license law enacted at this session fixes the annual license fee for the sale of liquors at \$500 in all places where the total vote for Governor at the last election exceeded 150, and at \$300 in other places; but taverns where liquor is sold 3 miles or more outside of a village shall pay only \$100 annually. The selling or giving of liquors to minors is forbidden.

The sum of \$35,000 was appropriated for restoring the buildings of the Insane Asylum at Blackfoot, destroyed by fire on Nov. 24, 1889. For the World's Columbian Exposition at Chicago the sum of \$20,000 was appropriated, to be expended under the direction of a State commissioner appointed by the Governor and charged with the duty of securing a suitable exhibit for the State.

Aliens are now forbidden to acquire or hold any real estate in the State, except mining lands, unless such real estate shall be acquired by inheritance or by the enforcement of a lien or judgment for debt, and all real estate so acquired must be sold within five years after such acquisition or it shall thereafter escheat to the State. No restrictions are placed on the ownership of mining lands by any class of aliens, except the Chinese and other persons of Mongolian descent.

Resolutions were adopted urging the submission to the States of a constitutional amendment providing for the election of United States Senators by the people, and urging the passage of a bill permitting the free coinage of silver produced in mines of the United States.

Other acts of the session were as follow:

Creating the county of Canyon out of a portion of Ada County.

To regulate the storage of grain, flour, wool, or other produce when received for storing, shipping, grinding, or manufacturing.

To provide for the punishment of crime, for the appointment of peace officers, and to enforce section 6 of Article XIV of the State Constitution.

Establishing the State Penitentiary at Boise City, on the grounds and in the buildings occupied by the Territorial Penitentiary.

To prohibit the killing of moose within six years from the passage of this act (Feb. 6, 1891).

To define and punish crimes against the elective franchise.

Defining the duties of the State Board of Land Commissioners, and providing for the selection, location, protection, sale, rental, and general management of the public lands of the State, and for the investment of funds arising from the sale and leasing of such lands.

Repealing the act of 1889 for the suppression and prevention of contagious diseases among domestic animals.

Allowing three fourths of a jury to render a verdict in a civil action.

To authorize the organization of county mutual fire-insurance companies.

Making eight hours a day's work on all State, county, and municipal works.

Regulating the liability of stockholders in corporations.

Providing for the appointment of a county horticultural commissioner in certain cases, and prescribing his duties in destroying insect pests.

To provide for prosecuting offenses on information, and to dispense with the calling of grand juries except by order of the district judges.

Apportioning to each county the number of members of the Legislature which it shall elect.

Providing for the observance by the public schools of the Friday following the first day of May as Arbor Day.

To establish a uniform standard of weights and measures, and to provide for a State sealer and inspector.

Adopting a great seal for the State.

Providing for the organization and maintenance of a State militia.

Appropriating \$3,000 annually for the education of the deaf, dumb, and blind of the State at some institution in an adjacent State or Territory.

Establishing a State board of equalization.

To enforce section 5 of Article XIII of the Constitution, prohibiting the employment of aliens on State and municipal works.

Charities.—At the State Insane Asylum at Blackfoot, on July 1, 1890, there were 45 male and 19 female patients. During the year following 26 male and 11 female patients were admitted. The number discharged during the year was 25, and there remained on June 30, 1891, 51 male and 25 female patients. The current expenses of the institution for the year amounted to \$32,708.31. New and commodious buildings, in place of those destroyed by fire, are in process of erection.

Under the provisions of an act passed by the Legislature early in the year, arrangements were made for the education of the deaf, dumb, and blind children of the State at the Colorado State school, Colorado Springs. Late in August six children were offered the advantages of this institution.

Penitentiary.—At the State Penitentiary there were 87 convicts on July 1. The State owns a stone quarry near the prison buildings, in which the convicts find occasional employment.

Mining.—The following table, showing the production of Idaho's gold, silver, lead, and copper mines during 1890, is compiled from data collected by the Boise City National Bank:

COUNTIES.	Gold.	Silver, at \$1 an ounce.	Lead, at 4 cts. a pound.
Ada.....	\$16,000	\$500	
Alturas.....	140,000	860,000	\$240,000
Bingham.....	66,000		
Boisé.....	410,000	125,000	
Cassia.....	45,000		
Custer.....	260,000	893,000	145,000
Elmore.....	200,000	18,000	
Idaho.....	485,000	87,000	
Kootenai.....	166,500	825,000	110,000
Lemhi.....	725,500	150,000	
Logan.....	75,000	550,000	125,000
Owyhee.....	651,323	825,667	
Shoshone.....	840,000	2,750,000	8,890,000
Washington.....	15,000	60,000	
Total.....	\$3,595,323	\$5,594,167	\$4,510,000

Custer County produced \$75,000 worth of copper, and Washington County \$50,000 worth, making the grand total \$13,824,500.

Irrigation.—During the year ending May 31, 1890, crops were raised in the State by irrigation on 217,005 acres, or 339.07 square miles, about four tenths of one per cent. of the area of the State. The number of farms on May 31, 1890, was 6,654, of which 4,323, or about two thirds, contained irrigated areas, the remaining third being farms in the northern counties or stock ranches requiring no irrigation. The average size of the irrigated portions of farms on which crops were raised was 50 acres. The average first cost of water right was \$4.74 an acre, and the average cost of preparing the soil for cultivation, including the purchase price of the land but excluding the cost of water right, \$10.56 an acre. The average present value of the irrigated land of the State, including buildings, etc., is reported as \$46.50 an acre, showing an apparent profit, less cost of buildings, of \$31.20 an acre. The average annual cost of water is 80 cents an acre, which, deducted from the average annual value of products, leaves a net annual return of \$12.13 an acre.

Decision.—Late in June the State Supreme Court rendered a decision pronouncing the act of 1891 purporting to create the counties of Alta and Lincoln out of the counties of Alturas and Logan to be unconstitutional, on the ground that the State Constitution forbids the division of a county and the attachment of a part thereof to another county unless the change is approved by vote of the people in the portion to be separated. The court held that the real object of the act was to add to Alturas or Alta County a portion of Logan County, the remainder of the latter being called Lincoln County.

ILLINOIS. a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; and 3,826,351 in 1890. Capital, Springfield.

Government.—The following were the State officers during the year: Governor, Joseph W. Fifer, Republican; Lieutenant-Governor, Lyman B. Ray; Secretary of State, Isaac N. Pearson; Auditor, Charles W. Pavey; Treasurer, Edward S. Wilson; Attorney-General, George Hunt; Superintendent of Public Instruction, Henry Raab; Railroad and Warehouse Commissioners, Isaac M. Phillips, J. R. Wheeler, and John R. Tanner, who resigned early in October and was succeeded by Jonathan C. Willis; Chief Justice of the Supreme Court, John Scholfeld; Associate Justices, Simeon P. Shope, Alfred M. Craig, Benjamin D. Magruder, David J. Baker, J. W. Wilkin, and J. M. Bailey.

Finances.—For the biennial period ending Sept. 30, 1890, the balances, receipts, and disbursements of the several funds in the State treasury, as reported by the State Auditor, were as follow: Revenue fund, balance on Oct. 1, 1888, \$2,919,290.04; receipts for the period, \$5,367,777.30; disbursements, \$4,759,853.90; balance on Sept. 30, 1890, \$3,527,213.44. State School fund, balance on Oct. 1, 1888, \$306,224.43; receipts for the period, \$2,137,883.81; disbursements, \$2,129,852.02; balance on Sept. 30, 1890, \$314,256.22. Delinquent Land Tax fund, balance on Oct. 1, 1888, \$331.06; no receipts

or disbursements for the period. Unknown and Minor Heirs fund, balance on Oct. 1, 1888, \$13,832.60; receipts for the period, \$1,332.52; disbursements, \$409.34; balance on Sept. 30, 1890, \$14,755.78. Local bond funds, balance on Oct. 1, 1888, \$599,539.09; receipts for the period, \$2,914,341.76; disbursements, \$2,924,969.36; balance on Sept. 30, 1890, \$588,911.49. The total balances in all funds on Oct. 1, 1888, amounted to \$3,839,217.22; the total receipts for the period to \$10,421,335.39; the total disbursements to \$9,815,084.62; and the total balances on Sept. 30, 1890, to \$4,445,467.99. The receipts of the revenue fund included \$2,290,499.35 from the State tax levied in 1888, \$1,822,081.95 from the State tax levied in 1889, \$917,080.93 from the Illinois Central Railroad (being 7 per cent. of the gross earnings for two years), \$111,233.87 from the United States in aid of the Soldiers' Home, \$164,876.89 from fees of the State Auditor, and \$43,534.99 from fees of the Secretary of State. The receipts of the State School fund from the taxes of 1888 were \$1,068,898.53, and from the taxes of 1889, \$1,062,881.26. During the biennial period warrants were drawn against the revenue fund for the support of State institutions as follow: Institution for the Blind, \$104,495.20; Institution for the Deaf and Dumb, \$223,929.31; Charitable Eye and Ear Infirmary, \$57,064.08; Asylum for Feeble-minded Children, \$169,130.79; State Reform School, \$98,832.14; Soldiers' Orphans' Home, \$174,210.63; Soldiers' and Sailors' Home, \$297,761.02; Northern Hospital for the Insane, \$211,989.12; Southern Hospital for the Insane, \$269,483.02; Eastern Hospital for the Insane, \$540,002.02; Central Hospital for the Insane, \$347,796.70; Northern Normal University, \$58,987.12; Southern Normal University, \$53,057.50; University of Illinois, \$78,588.67; National Guard, \$190,764.

The bonded State debt on Jan. 1, 1891, was \$19,500, on which interest has long since ceased. Bonds to the amount of \$3,600 were paid and retired in January, 1890.

Valuations.—The total valuation of property in the State for 1890, as equalized and assessed by the State Board, was as follows:

ASSESSED IN COUNTIES.	
Personal.....	\$142,201,091
Lands.....	881,156,217
Lots.....	255,889,169
BY STATE BOARD.	
Railroad property.....	72,974,896
Capital stock.....	6,671,909
Total.....	\$908,892,782

The total equalized value of property assessed for 1889 was \$792,197,542, the increase for 1890 being \$16,695,240. Included in the assessment for 1890 were 1,108,376 horses, valued at \$25,450,732; 2,372,475 cattle, valued at \$15,244,712; 93,901 mules, valued at \$2,200,813; 631,842 sheep, valued at \$646,382; 2,637,268 hogs, valued at \$3,656,028. The total equalized valuation of Cook County was \$240,808,050, of which the value of railroad property was \$12,075,785; of corporation stock, \$4,719,195; and of property assessed by the local assessors, \$223,513,070.

The rate of State taxation for 1890 was 2-25 mills for general purposes and 1-35 mill for school purposes. For 1891 it was 2 mills for general purposes and 1-3 mill for schools.

Legislative Session.—The regular biennial session of the General Assembly began at Springfield on Jan. 7, and adjourned on June 12. A prolonged contest over the choice of a successor to United States Senator Charles B. Farwell marked the early months of the session. In this contest the Democrats controlled the House and cast 101 votes on joint ballot; the Republicans controlled the Senate and had 100 votes on joint ballot, while the balance of power was held by 3 members of the Farmers' Mutual Benefit Association, a local organization similar in purpose to the Farmer's Alliance. The Democrats had but one candidate throughout the struggle, Gen. John M. Palmer, whose candidacy had been approved by the Democratic State Convention of the preceding June. For the Republican nomination there were several candidates, including Senator Farwell. Out of these the Republican caucus on Jan. 15 selected on the first ballot ex-Gov. Richard J. Oglesby, the vote standing: Oglesby, 64; Farwell, 30; Walter Q. Gresham, 4; scattering, 2. Neither Palmer nor Oglesby was acceptable to the Farmers' Mutual Benefit Association members, and they accordingly decided to give their support to Alson J. Streeter, hoping that one of the leading parties would finally be compelled to support him. On the first ballot in the General Assembly, on Jan. 20, the following vote was cast: Senate, Palmer 24, Oglesby 27; House, Palmer 77, Oglesby 73, Streeter 3. For several weeks there was no change in this vote, but toward the middle of February the Republicans became convinced that the three Association members could not be induced to support their candidate, and they therefore abandoned him. Then followed a long series of negotiations with the three Association members and with Streeter, as a result of which the Republican leaders undertook to transfer the party vote to Streeter. But this plan was foiled by a few members who resolutely refused to be supports of Streeter, claiming that they had been elected to vote for a Republican candidate and for none other. They adhered to this purpose through a long series of ballots, and the contest appeared no nearer settlement than at the beginning, when, on the 154th ballot, on March 11, two of the three Association members, Moore and Cockrell, suddenly transferred their support to Palmer, and gave him the 103 votes necessary to elect. On this final ballot, Palmer received 103 votes, Cicero J. Lindly 100, and Streeter 1. Messrs. Moore and Cockrell published a long manifesto giving various reasons for their change of position.

The legislative work of the session includes an act, passed after long discussion, by which the members of the State Board of Agriculture are constituted and appointed *ex-officio* members of the Illinois Board of World's Fair Commissioners, and are authorized to secure a suitable exhibit of the resources and institutions of the State at the Columbian Exposition. The sum of \$800,000 is appropriated to carry out the provisions of the act, one tenth of which is placed at the disposal of the Illinois Woman's Exposition Board, composed of four women appointed by the Governor and the two Illinois women on the national commission.

A ballot-reform act provides for printing and

distributing at public expense all ballots in every election for public officers, except for trustees of schools, school directors, members of boards of education, and officers of road districts in counties not under township organization. In municipal and town elections the expenses of providing ballots shall be borne by the cities, villages, and towns, and in all other elections by the counties. Candidates for office may be nominated by any convention, caucus, or meeting representing a political party which, at the general election next preceding, polled at least 2 per cent. of the entire vote cast in the State or in the division thereof for which the nomination is made. Nominations may also be made by nomination papers signed by a certain number of qualified voters. The names of all candidates to be voted for shall be printed on one ballot, all nominations of any political party or group of petitioners being placed under the party appellation or title. On the back of each ballot, so as to appear when folded, shall be printed the words "Official ballot," followed by the name of the polling place, the date of the election, and the *fac simile* signature of the clerk or other officer preparing the ballots. Plain white paper, through which the printing or writing can not be read, shall be used for ballots. Each polling place shall be provided with voting booths, not less than one for each one hundred voters at the last election, in which voters may prepare their ballots screened from observation. No person other than the election officers and the challengers allowed by law and those admitted for the purpose of voting shall be permitted within the guard rail, except by authority of the election officers to keep order and enforce the law. On receipt of his ballot the voter shall retire alone to one of the voting booths and shall prepare his ballot by making a cross opposite the name of the candidate of his choice, or by writing in the name of the candidate of his choice in a blank space on the ticket, making a cross opposite thereto: Provided, however, if he shall desire to vote for all the candidates of one political party or group of petitioners, he may place such mark before the appellation or title under which the names of the candidates of such party or group of petitioners are printed, and the ballot so marked shall be counted as cast for all of the candidates named under that title: Provided, further, that the voter may place such mark at the appropriate place preceding the appellation or title of one party or group of petitioners, and may also mark, at the appropriate place preceding the name or names of one or more candidates printed under the appellation or title of some other party or group of petitioners, and a ballot so marked shall be counted as cast for all the candidates named under the appellation or title which has been so marked, except as to the officers as to which he has placed such mark preceding the name or names of some other candidate or candidates printed under the title of some other party or group of petitioners, and as to such it shall be counted as cast for the candidate or candidates preceding whose name or names such mark may have been placed. Before leaving the voting booth the voter shall fold his ballot in such manner as to conceal the marks thereon. Employees shall be allowed two hours on election day for

the purpose of voting without loss of pay. Voters who, from physical disability, are unable to mark their ballots, may be assisted therein; but intoxication shall not be regarded as a disability.

By another act numerous changes were made in the law regulating registration in cities. Still another act grants to women the right to vote for school officers at all elections.

The legal rate of interest, where none other is stipulated, was reduced from 6 to 5 per cent., and the highest rate allowable by agreement was reduced from 8 to 7 per cent. All contracts stipulating for more than 7 per cent. interest were declared usurious, and no interest can be collected thereon.

An act was passed requiring every manufacturing, mining, quarrying, lumbering, mercantile, street, electric, and elevated railway, steamboat, telegraph, telephone, and municipal corporation, and every incorporated express company and water company to make weekly payments of wages to its employés. It was declared unlawful for any person or company engaged in mining or manufacturing to keep or be interested in any truck store, or to control any store, shop, or scheme for furnishing supplies, tools, provisions, or groceries to employés. No deductions shall be made by any employer from the wages of his workman, except for money actually advanced, or such sums as the workman may agree upon to aid relief funds for sick or injured workmen.

A stringent act was passed for the suppression of pools, trusts, and combines.

For each of the years 1891 and 1892 the amount to be raised by taxation for general State purposes was fixed at \$1,500,000, and for school purposes at \$1,000,000.

The employment of children under thirteen years of age by any person, firm, or corporation was strictly forbidden, unless it shall appear to the school authorities in any particular case that the labor of the child in question is the means of support of an aged or infirm relative, and that such relative is in whole or in part dependent upon such child.

The sum of \$163,000 was appropriated for a building to accommodate 300 additional patients at the Eastern Hospital for the Insane. The Reformatory School at Pontiac was remodeled and established as a State Reformatory, the sum of \$150,000, being appropriated for additional buildings, etc.

The compulsory school law remained unchanged, after long discussions and repeated attempts to repeal or change it.

Other acts of the session were as follow:

Authorizing the payment of a bounty of two cents a head for English sparrows.

To provide for the examination of mine managers.

Amending the fish law so as to prohibit seining, catching, or killing fish by other device than hook and line.

Amending the act of 1887 forbidding alien ownership of land, by providing that any alien who has by deed acquired or shall acquire title to land contrary to this act shall have power to convey a good title to a citizen of the United States, or to encumber the same in favor of a citizen, and a judgment or decree against such alien shall be a valid lien against such land, if such deed, encumbrance, judgment, or decree shall be made, executed, or entered before any legal

proceedings are taken to seize said land in behalf of the State. Deeds, encumbrances, or decrees heretofore made in favor of any citizen of the United States are legalized.

Limiting the amount of land that may be held by cemetery associations to twenty acres.

Requiring annual reports to the State Auditor of the condition of each building, loan, and homestead association, and providing for investigation into their affairs.

To punish persons unlawfully wearing the badge or emblems of the Grand Army of the Republic.

To punish bailees who fraudulently convert property to their own use.

Repealing the act of 1887 further defining conspiracy.

Providing a penalty for docking the tails of horses.

To punish persons selling, giving, or furnishing intoxicating liquor to minors without the written consent of parent or guardian or to drunkards.

To prevent oppressive garnishment and the transferring of claims for the purpose of depriving debtors of their exemption rights.

To prohibit foreign insurance companies from doing business in the State unless possessed of a cash surplus of \$200,000.

To prohibit discrimination by life-insurance companies between insureds of the same class and equal expectation of life, in rates, premiums, rebates, dividends, and other benefits.

To establish the validity of marriages wherein one or both of the parties were slaves at the time of marriage, and to establish the legitimacy of their offspring as to the right to inherit property.

Making the first Monday in September, to be known as Labor Day, and the twelfth day of February (Abraham Lincoln's birthday) legal holidays.

To authorize the corporate authorities of towns to issue bonds for the completion and improvement of public parks and boulevards, and to provide a tax for the payment of the same.

To give cities, incorporated towns, townships, and districts in which free schools are now managed under special acts authority to elect boards of education having the same powers as boards of education elected under the general free-school laws.

Assenting to the act of Congress appropriating a portion of the proceeds of public-land sales to the endowment and support of colleges of agriculture and the mechanic arts in the several States; and designating the University of Illinois as the Illinois beneficiary under that act.

Fixing the weight of a bushel of sweet potatoes at fifty pounds.

Declaring that United States Senators ought to be elected by a direct vote of the people.

Coal.—The State contains much the larger portion of what is known as the Central Coal Field, covering about 37,000 square miles and underlying 60 counties, in 45 of which operations are conducted on a commercial scale. The Illinois field contains 15 distinct seams. Those which are available for commercial mining generally lie at considerable depth. Coke is manufactured to a limited extent in Gallatin and La Salle Counties, but elsewhere in the State the coal does not yield a marketable coke. The statistics of coal production for the year ending July 1, 1890, are summarized as follow: Number of counties in which coal has been mined, 57; mines and openings of all kinds, 936; tons (2,000 pounds) of lump coal mined, 12,638,365; employes of all kinds, 28,574; value of product, \$12,883,936. The aggregate output for the year is 1,040,401 tons greater than for the year preceding, and the average value per ton at the mines has declined from \$1.07 to \$1.02; the

average price of mining for the State at large has also declined from 73 cents to 68 cents a ton. The number of employes of all kinds is smaller than that reported for the preceding year, but there has been an increase of 31 in the number of machines used, and of half a million tons, or 23 per cent., in the amount cut by machines.

State Banks.—On June 1 of this year there were 68 banks doing business under the State banking law. On that day the aggregate amount of capital stock and surplus fund of these banks was \$17,291,279.68; the aggregate of loans and discounts, \$55,315,470.40; of cash and reserve, \$18,191,842.45; of individual profits, \$2,131,224.39; of deposits, \$61,547,888.93; and of total resources, \$81,286,740.98.

Mortgage Debt.—According to the Federal Census, the real-estate mortgage debt of the State in force Jan. 1, 1890, was \$384,299,260, of which 43.01 per cent. was on acre tracts, and 56.99 per cent. on village and city lots. The debt of Cook County was \$191,518,209, of which \$14,065,305 was on acre tracts and \$177,452,904 on lots. The *per capita* debt of Illinois is \$100.

INDIA, an empire in Asia, subject to Great Britain. Besides British India proper, large territories ruled by native princes have been brought under the suzerainty and control of the Indian Government, which derives its powers from the Parliament of Great Britain. By the act of 1858 for the better government of India the powers and functions of the Board of Control of the East India Company were transferred to the Secretary of State for India. The executive authority in India is exercised by a Governor-General, often called the Viceroy. Laws and regulations are prepared by the Council of the Governor-General, containing five ordinary members, who preside over the Departments of Finance, the Interior, Revenue and Agriculture, Legislation, and Military Administration. The Governor-General has personal charge usually of the Department of Foreign Affairs, and that of Public Works may be represented in the Council at the option of the Government. The commander-in-chief is almost invariably asked to assist as an extraordinary member, and when the Council sits in Madras or Bombay the Governor of the presidency takes part as an extraordinary member. For legislative purposes the Council is augmented, six to twelve additional members being appointed by the Governor-General. The Secretary of State is assisted in conducting business in Great Britain connected with the Government of India by a council of not fewer than ten members. The Governors of Madras and Bombay have each a separate army and civil service and a Legislative Council, and the Lieutenant-Governors of Bengal and the Northwest Provinces have legislative councils.

Area and Population.—The area of the territory under direct British administration is 1,064,720 square miles, containing in 1891 a population of about 220,000,000, an increase of 21,000,000 since the last previous census taken in 1881, which showed an advance of only 7,000,000 in the preceding decade. The difference in the rate of increase is due partly to annexations, the area taken account of in 1881 having been 868,314 square miles. The annexed province of Upper Burmah has a population of over 2,500,-

000, exclusive of 500,000 in the tributary Shan States and 100,000 Chins, Kachyens, and Karens. The population of Lower Burmah has increased from 3,730,000 to 4,430,000, or at the rate of 18½ per cent. The total population of the immediate British possessions in 1891 was 220,584,000, and of the native states 69,148,000. Bengal had 70,909,260; Northwest Provinces, 46,922,690; Punjab, 20,803,000; Madras, 35,588,850; Bombay and Sindh, 18,825,080; Central Provinces, 10,761,630; Rajputana, 12,089,330; Hyderabad, 10,658,930. In Bengal, with 426 inhabitants to the square mile, the birth rate is lower than the death rate, 20·63 and 22·94 per thousand respectively in 1888-'89. The death rate has varied between 20·98 per thousand in 1880 to 25·74 in 1888. In 1889 it ranged from 17·30 in Mysore to 30·08 in the Northwest Provinces. The birth rate was 41·52 in the Central Provinces, 38·57 in Bombay, 38·25 in the Northwest Provinces and Oudh, 37·32 in the Punjab, and 29·90 in Madras. The number of coolie emigrants from India in 1889 was 10,388, against 6,451 in 1888. Anthropometric researches conducted for the Bengal Government by Herbert Risley confirm the conclusion that caste and social distinctions in India are based on differences of race; that, apart from the Mongoloid intermixture in the northeast, there are two races—(1) the aboriginal or Dravidian, with thick lips, broad noses, low facial angle, dark skins, short stature, and squat figure; and (2) the Aryan, tall, slender, with remarkably fine noses and dolicocephalic skulls, and regular features. A regular gradation of these characteristics is observed in the hierarchy of castes from the Brahmans and Sikhs down to the casteless forest tribes. A man's social status varies approximately inversely with the width of his nose. The largest cities of India are Calcutta, the seat of the General Government, with 750,000 inhabitants; Bombay, 804,464; and Madras, 450,000. The population of Bengal increased from 69,500,000 in 1881 to 74,000,000 in 1891, or at the rate of 6¼ per cent.

Finances.—The revised estimates of revenue under the various heads for the year ending March 31, 1890, and the budget estimates for 1890-'91 were, in tens of rupees, as follow:

REVENUE.	1889-'90.	1890-'91.
Land revenue	28,817,300	23,574,400
Opium	8,546,400	8,208,300
Salt	8,192,500	8,288,500
Stamps	4,060,500	4,084,900
Excise	4,837,400	4,541,500
Provincial rates	8,345,500	8,349,400
Customs	1,487,300	1,561,100
Assessed taxes	1,567,100	1,558,700
Forests	1,446,400	1,414,400
Registration	846,700	845,500
Tribute	777,400	776,200
Interest	567,700	789,900
Post-office, telegraphs, mint	2,899,700	2,428,400
Civil departments	1,518,700	1,521,500
Miscellaneous	1,825,500	1,243,000
Railroads	16,508,900	17,151,400
Irrigation	1,985,300	2,085,000
Buildings and roads	649,200	589,400
Military departments	1,022,100	982,600
Total revenue	84,636,300	84,982,100

The expenditure under each head as set down in the revised estimates for 1889-'90 and the budget for 1890-'91 reaches the following amounts, in tens of rupees:

EXPENDITURES.	1889-'90.	1890-'91.
Interest	4,262,300	4,296,300
Refunds, compensation, etc.	1,790,300	1,782,600
Cost of collection	7,224,100	8,042,900
Post-office, telegraphs, mint	2,205,100	2,229,800
Civil salaries	13,282,500	12,566,800
Miscellaneous civil charges	4,845,700	4,945,400
Famine relief and insurance	605,500	600,000
Railroad construction	5,600	4,800
Railroad revenue account	18,406,900	19,017,900
Irrigation	2,719,800	2,789,400
Buildings and roads	5,489,400	5,717,300
Army	20,928,600	21,505,100
Defense works	758,400	692,300
Total	82,474,100	85,419,400

To arrive at the true total of expenditure for 1889-'90 Rx 352,500 must be added to the estimate, being the balance due the Imperial Government in the adjustment of accounts with the provincial administrations, making the total charged against revenue Rx 822,826,600, while for 1890-'91, Rx 757,700 of provincial balances should be deducted, reducing the net estimate for that year to Rx 84,661,700. The estimates for 1889-'90 and the actual receipts and expenditures varied very slightly, the surplus amounting to Rx 2,612,000, or Rx 65,000 less than was predicted. In 1890-'91, instead of the expected surplus of Rx 270,400, there was a surplus at the end of the year of Rx 3,665,000. The improvement in the rate of exchange, due to the rise in the price of silver brought about by legislation in the United States, accounts for Rx 2,544,100 of the difference. In the receipts for the year there was a falling off in the opium revenue, and provincial contributions ceased, but the land revenue increased by Rx 307,200. There was an increase in various branches of expenditure. The total revenue for 1888-'89 was Rx 81,696,678, and the expenditure Rx 81,659,650. The budget estimates for 1891-'92 show an increase on these figures of Rx 2,408,000 in revenue and Rx 2,329,000 in expenditures. The expected surplus is Rx 396,000. There will be a further falling off in the opium revenue, a much smaller crop having been grown in Bengal. A further increase of Rx 370,000 in the land revenue was looked for. Since 1889 it has increased by Rx 1,010,000, while the decrease in the opium revenue has been Rx 646,000. While expenditure for the army and similar imperial purposes has grown less, more is spent on public works and local improvements, causing the disappearance of the grants from provincial revenues. To meet the extraordinary military expenditure determined on in the face of the financial strain caused by the fall of the rupee, the provincial governments, by the arrangement of 1887, have yielded up very large sums to the Central Government. Another important act of restoration is the replacing of the Famine fund. For the first time since 1886 the full appropriation of Rx 1,500,000 is set aside for famine relief and insurance. The interest on the debt has decreased by Rx 810,000 and the railroad revenue account by Rx 732,000 since 1889. The interest on the money borrowed in England to build the railroads is payable in gold, and consequently they have been worked at a loss for many years. But for the fall of the rupee there would have been a considerable profit.

The people of India are discontented with the military expenditures, from which they derive no benefit, and which have increased enormously within a recent period, and with the general expensiveness of the Indian Government and the grinding and unjust taxation to which they are subjected. The salt tax has been successively raised until it is five times as great as it was in the early part of the century, amounting to sixteen times the cost of production. The consequence is that many poor people must take their food without salt. The military expenses are twenty times as great as the expenditure on education, and the pension list of the Indian army is proportionately the heaviest in the world, amounting to £4,250,000. The Hindus complain that the licensing of opium shops is conducted in a way to force the consumption of the drug on the people, and that the excise laws have encouraged the spread of the drinking habit, although in quite recent years a better supervision has enabled the Government to collect more revenue from alcohol and at the same time to diminish the number of stills and drinking shops, narrowing the producers and sellers down to a limited number of large distillers and licensees who can be watched. Opium is manufactured by the Government, and is grown in the native states of Malwa and in Bengal, where no one can cultivate the poppy without a license. The gross revenue from opium in 1890 was Rx 8,500,000, and the net revenue Rx 5,500,000. The production and the revenue have diminished chiefly because of the extension of poppy cultivation in China. The land devoted to the poppy in Bengal in 1890 was 100,000 acres less than in 1880, and the quantity of the drug manufactured in British India had fallen from 5,606 to 4,800 chests. The Government is accused of having endeavored to stop the decline in the revenue by encouraging the smoking of opium in India, and deliberately introducing it into Burmah, where, in the reign of Thebaw, it was death to sell opium. Under British rule the consumption of the narcotic has become alarming, and the people are visibly impoverished and demoralized thereby. On April 10, 1891, Sir Joseph Pease, a member of the Temperance party in England, moved in the House of Commons a resolution declaring the system by which the opium revenue is raised morally indefensible, and urging upon the Indian Government that it should cease to grant licenses for the cultivation and sale of opium, and take measures to arrest the transit of Malwa opium into Indian territory. Members of the Government endeavored to refute the assertion that Great Britain had waged wars to force the opium traffic on the Chinese. Sir J. Ferguson said that China was free under the Chefoo convention to impose any tax she chose on Indian opium or to exclude it entirely, and declared that if the Chinese thought proper to place a prohibitive duty on it, Great Britain would not "expend a sovereign or provide a soldier or the cost of a single gunshot to force it upon them." The attendance was slim, and when the House divided 160 members went into the lobby with Sir Joseph Pease, while the Government had only 130 supporters present. War, famine, a further fall in the price of opium, decreased railroad traffic, military armaments, and a fall in the rate of exchange

are contingencies that may interfere with the realization of the budget estimates for 1891-'92, in which the revenue is calculated at Rx 85,313,500, and expenditure at Rx 82,526,000, reckoning the rupee at 1s. 5½d. The rate of exchange affects not only the regular expenditure of the Indian Government in Great Britain, which amounted to Rx 21,954,657 in 1889, but also the interest payable in gold on the Indian railroad bonds. The actual and expected action of the American Congress caused the price of silver to rise in 1890-'91 from 43½d. an ounce to 54½d., and then to fall again to 45d., corresponding to the rate of exchange anticipated for 1891-'92. Before 1873 the rupee was practically worth its nominal value of 2s., but for many years it has remained below 1s. 5d.

In addition to the expenditure charged against revenue, there was a capital expenditure for public works of Rx 3,461,800 in 1889-'90, and Rx 3,750,000 in 1890-'91. The public debt of British India in 1889 amounted Rx 206,619,559; the permanent debt in India being Rx 100,879,742, the permanent debt in England Rx 95,033,610, and the unfunded debt in India Rx 10,706,207.

The Army.—The Penjdeh incident and the conquest of Upper Burmah, bringing India into contact with Russia and China, led to a great reorganization and extension of the Indian defenses, the notable results of which are the fortification of the northwestern frontier and a line of strong places farther back, a network of railroads and military roads giving access to the frontier, and a large addition to the European and native army. The coast defenses have also been improved, and the principal harbors protected by submarine mines and torpedo boats. The frontier railroads, which are the most expensive part of the new defenses, having been practically completed according to programme, Sir Frederick Roberts, commander-in-chief, and Sir George Chesney, military member of the Council, have worked out a plan for the general rearmament of the troops, the European infantry with the new British magazine rifle, the native infantry with Martini-Henry rifles having the same bore, which is 303, the cavalry with a new carbine, the field artillery with breech-loading 12-pounder cannons in part mounted on hydraulic-buffer carriages, and the siege artillery with 4-inch and 5-inch breech-loading guns with hydraulic gear that can be anchored down, and with the new howitzers not yet furnished to the British army. The turret-ships are to have 10-inch breech-loaders and torpedo catchers. The military expenditure rose from under £18,000,000 average during the three years ending with 1885 to over £20,000,000 a year in the succeeding four years, besides £1,500,000 annually for special defense works for three years of the four. In 1890 the expenditure was £21,000,000, taking the rupee at the conventional rate of ten to the pound sterling. The necessity of frequently rearming the Indian troops and extending the defense works, and the constant danger of war are a perplexing feature in Indian finance. While the British forces have been greatly strengthened at the cost of new burdens on the impoverished people, a change in the policy of the Government toward the feudatory states has either added greatly to the defensive

power of the empire or possibly introduced a serious element of danger. Instead of treating the standing armies of the native princes as a menace, the attitude of hostile watchfulness has been abandoned, and these armies, making an aggregate of 350,000 men, are being trained and fostered by the British in the expectation that they can be utilized as a fighting force for the defense of India in the event of a war with Russia. Corps of picked men in many of the states, hereditary soldiers commanded by native princes and nobles, numbering in the aggregate 25,000, are equipped with modern weapons and instructed by British officers as a reserve force to co-operate with the Indian army in war. A scheme to open a career for the native chiefs and nobles of Bombay, the Punjab, and other provinces of British India by educating them in military colleges is regarded as a political necessity; but Sir Frederick Roberts has resisted the proposal, because British soldiers will not serve under native officers, and the Sepoys, who are recruited from the military races, would lose in efficiency if young native officers from military schools were placed over them and their native officers who have won promotion by service. In June, 1891, Gen. Brackenbury succeeded Sir George Chesney as military member of the Council, and in October, Sir Frederick Roberts retired, and was succeeded by Maj.-Gen. Sir George White, who commanded the field force in Burmah from 1886 to 1889, and has since been in command in Beluchistan.

The established strength of the European army for the year 1890-'91 was 3,527 officers and 69,843 men, or in all 73,370, comprising 12,723 artillery, 5,679 cavalry, 254 engineers, 53,701 infantry, 793 on the staff, and 220 unemployed officers, etc. The native army numbered 1,576 European officers, 2,760 native officers, and 140,369 rank and file, making 144,705 altogether, comprising 3,757 artillery, 23,547 cavalry, 3,872 sappers and miners, and 113,529 infantry. The total present strength of the army was thus 218,075. Of the European troops, 46,322 were in the army of the Governor-General, 13,096 in the Bombay army, and 13,949 in the army of Madras. The Eurasian volunteers reported as efficient in 1889 numbered 17,500. The exact strength of the feudatory armies in 1884 was 349,835 men, with 4,237 guns. Of the native auxiliaries in the feudatory and independent states placed at the disposal of the Indian Government for war purposes and inspected by British officers, 4,000 belong to Cashmere, 600 cavalry and 1,000 infantry to Patiala, 150 cavalry and 300 infantry to Bahawalpur, 150 cavalry and 600 infantry to Jhind, 150 cavalry and 600 infantry to Kapurthala, 50 cavalry and 150 infantry to Faridkot, 50 cavalry and 150 infantry to Maler Kotla, 800 cavalry and 600 infantry to Bhurtpore, a camel corps of 500 men to Bikanir, 1,000 cavalry and 600 infantry to Ulwar, and 1,200 cavalry to Jodhpore. The two armored turret ships belonging to the Indian Government are the "Abyssinia," of 2,908 tons, armed with four guns, and the "Magdala," of 3,344 tons, carrying the same number of guns. The British naval force in East India numbered 14 ships of war in 1890, besides 18 on the China station.

Production.—More than 90 per cent. of the inhabitants of India are dependent on agricult-

ure. The land belongs to the Government, and is leased either to *zemindars* or village communities for the whole period of the settlement or directly to the ryots or cultivators, who may vacate their land after notice given at the end of any year. In Bengal the *zemindars* were made virtual proprietors of the soil by a permanent settlement made by Lord Cornwallis. In other parts of India there is a resettlement of the land rent or tax every thirty years, and consequently the cultivators are tempted to exhaust, rather than to improve, the land, because their improvements are made the basis of a higher assessment. There is an agricultural department established by the Government in every province to instruct and advise the farming class regarding rotation of crops, new staples, breeding of animals, implements, fertilizing, etc. The area under wheat in 1889 was 19,170,013 acres, of which over 7,000,000 acres were in the Punjab, 3,500,000 in the Central Provinces, nearly the same in the Northwest Provinces, and large areas in Bombay, Oudh, and Berar. The rice area was 26,810,806 acres, scattered over Madras, the Northwest Provinces, Lower Burmah, the Central Provinces, Oudh, Bombay, and other provinces. The area devoted to other food grains was 76,178,925 acres, exclusive of Bengal, which made no returns. The tea plantations covered 241,077 acres, of which 216,676 were in Assam. Cotton was raised on 9,215,464 acres in Bombay, Berar, Madras, the Northwest Provinces, and other districts. There were 7,381,811 acres devoted to oil seeds, 998,217 to indigo, chiefly in Bombay and the Northwest Provinces, and 347,769 to tobacco.

The forest reservations in 1889 covered 19,712 square miles in the Central Provinces, 10,236 in Bombay, 5,111 in Lower Burmah, 4,998 in Bengal, 3,727 in Madras, 3,727 in the Northwest Provinces and Oudh, 3,447 in Assam, 1,535 in the Punjab, and 1,059 in Berar. There were 108 cotton mills in 1889, with 22,156 looms and 2,669,922 spindles, employing 92,126 persons. The jute mills employed 59,722 persons.

The area under food grains during the six years ending with 1890 increased from 112,085,401 to 119,600,465 acres, equal to 6·7 per cent., while the exports of food grains increased 8·8 per cent. J. E. O'Connor, the Government statistician, in his report on foreign trade for 1890-'91, takes pains to refute the opinion conceived by friends of India that the country by its large exportation of rice and wheat denudes itself of food supplies. The exports of food grains in 1890-'91 were 51,049,000 hundred-weight, against 42,416,000 hundred-weight in 1888-'89. Still, they were only a small fraction more than in 1887, and very little greater than in 1886, 1884, and 1882, and they would not have exceeded the average except for an extraordinary demand for Burmah rice to supplement a deficient crop in Japan. The rice area in the six years ending with 1890 increased 26 per cent. and the exports 23 per cent. In the same period there was a decrease of 13 per cent. in the wheat exports and of 6·6 per cent. in the acreage. The exports in 1886 were the largest ever known. In 1891 the area in wheat was 1,651,000 acres more than in 1890, and in the first five months of 1891-'92 the shipments from Bombay, brought out by high prices consequent on the failure of the

French crop, were greater than in any similar period since the beginning of the wheat trade in 1874, and two thirds greater than during the same part of the preceding year. In 1891 a deficient rainfall in Madras caused a partial famine. More serious distress occurred in Upper Burmah, where the failure of the monsoon, following on a series of lean years, drove the people to eat the seed grain, sell their plow cattle, and migrate in large numbers. The Commissioner ordered relief works, especially the repairing of the irrigation canals, which since the English occupation have been allowed to become useless.

The Manchester cotton manufacturers brought sufficient influence to bear on the British Government to secure the abolition of the Indian import duties on cotton goods when the development of the mills of Bombay began to interfere with the imports of Lancashire cottons into India. This action of the Indian Government failed to crush the new Indian industry, and therefore in 1891 another attack was made upon it by the friends of the powerful English milling interest in Parliament, who proposed that the principles approved by the Berlin Labor Conference should be carried out in Indian factories, although they successfully obstructed the enactment of the laws recommended by the Berlin Conference in Great Britain, preventing the Government from fulfilling an international engagement to which it was distinctly pledged. The Indian Government appointed a commission to inquire into the conditions of factory labor. A new factory act was passed which satisfied some of the demands of the British competitors by raising the age of children who may be employed from seven to nine and the adult age from twelve to fourteen, restricting the labor of women to eleven hours, and requiring complete rest on Sunday, unless a holiday occurs within three days. The efforts that have been made to create a demand in Europe for Indian art work have not been very successful. The project of having an official assay of silverware to satisfy the requirements of English purchasers is regarded by the Indian authorities as desirable only if it be made optional. Obligatory hall-marking would destroy the industry intended to be benefited, as the system of family labor by which the art is preserved precludes the use of silver of uniform fineness. The art of silk weaving in Assam and other parts of India, wood carving, and other arts have become or are becoming extinct, only a few families are still engaged in ivory carving, inlaying metal work, or making the pictured silk of Moorshedabad. The filigree work of Dacca and Cuttack and other jewelry work alone maintains its high standard in Bengal.

Commerce.—The sea-borne foreign trade of India for the year ending March 31, 1890, consisted of Rx 86,656,990 of imports, and Rx 105,367,720 of exports of merchandise and treasure on both Government and private account. The imports of merchandise amounted to Rx 69,197,489, and of treasure to Rx 17,459,501; the exports of merchandise to Rx 103,460,398, and of treasure to Rx 1,907,392. Excluding Government stores and treasure, the imports of merchandise were Rx 66,560,120, and of treasure Rx 17,459,301, making a total of Rx 84,019,421; and the exports of domestic and foreign merchandise were

Rx 103,096,862, and of treasure Rx 1,841,920, a total of Rx 105,238,782. The domestic exports amounted to Rx 99,101,054. Of the imports on private account, Rx 26,314,803 were imported into Bengal, Rx 42,292,342 into Bombay, Rx 3,503,989 into Sindh, Rx 6,457,425 into Madras, and Rx 5,457,752 into Burmah. The exports from Bengal amounted to Rx 39,806,476; from Bombay, Rx 40,976,131; from Sindh, Rx 5,072,433; from Madras, Rx 11,594,508; from Burmah, Rx 7,781,542. The imports of specie and bullion, both private and Government, consisted of Rx 12,388,474 of silver and Rx 5,066,030 of gold, and the exports consisted of Rx 1,450,598 of silver and Rx 455,724 of gold. The distribution of the foreign trade is shown in the following table, giving the values of the imports of merchandise from the principal countries and British colonies in 1890, and of the exports of Indian products to each of them, in tens of rupees:

COUNTRIES.	Imports.	Exports.
Great Britain.....	50,291,140	87,960,864
China.....	2,449,501	18,501,477
France.....	975,647	7,714,867
Italy.....	510,508	4,217,755
Straits Settlements.....	2,441,400	4,686,746
United States.....	1,729,156	8,786,324
Egypt.....	75,598	8,869,974
Belgium.....	873,927	5,641,043
Austria.....	708,716	2,960,484
Ceylon.....	632,119	2,105,241
Australia.....	391,732	1,063,439
Japan.....	28,127	1,218,998
Germany.....	568,911	2,764,057
Mauritius.....	1,735,001	1,015,580
Arabia.....	373,570	825,148
Netherlands.....	9,469	255,705
East Africa.....	419,623	663,263
Persia.....	803,916	497,103
Spain.....	9,242	407,075

The values of the different classes of imports of merchandise on private account and of exports of Indian produce, in tens of rupees, for the year ending March 31, 1890, are given in the following table:

MERCHANDISE.	Imports.	Exports.
Live animals.....	239,768	98,085
Articles of food and drink.....	7,865,584	25,855,544
Hardware and cutlery.....	1,096,191	11,055
Metals.....	5,706,063	52,189
Machinery.....	2,435,885	97
Railroad materials.....	1,321,837	
Chemicals, drugs, etc.....	1,250,342	14,990,462
Oils.....	2,645,218	54,946
Raw materials.....	8,724,027	44,286,481
Yarns and textile fabrics.....	33,291,674	9,924,733
Apparel.....	1,296,894	118,312
All other articles.....	5,157,946	8,721,010
Total.....	66,560,120	99,096,862

The imports of cotton manufactures were Rx 29,874,050 in value, and the exports Rx 6,745,259; exports of raw cotton, Rx 18,669,934; exports of oil seeds and other seeds, Rx 10,620,693; exports of opium, Rx 10,115,936; exports of rice, Rx 10,110,482; exports of wheat, Rx 5,792,377; exports of raw jute, Rx 8,639,861; exports of jute manufactures, Rx 2,791,242; exports of tea, Rx 5,277,650; exports of hides and skins, Rx 4,524,260; exports of indigo, Rx 3,863,084; exports of coffee, Rx 1,489,872; exports of wool, Rx 1,086,069; imports of raw and manufactured silk, Rx 2,845,159; exports of raw silk and cocoons, Rx 639,545; exports of silk manufactures, Rx

260,731; imports of raw and refined sugar, Rx 2,300,049; exports of sugar, Rx 917,179; exports of timber, Rx 660,696; exports of lac, Rx 488,513; exports of spices, Rx 464,140; exports of saltpetre, Rx 411,276; imports of liquors, Rx 1,485,145; imports of coal, Rx 1,308,590; imports of woollen goods, Rx 1,455,235; imports of salt, Rx 894,532; imports of spices, Rx 852,350. The duty collected on salt was 23,789,888 rupees. The gross amount of the import duties was 31,249,315, and of the export duty on rice 7,182,821 rupees. The imports that came through the Suez Canal amounted to 553,773,853 rupees; and the exports that passed through the canal to 572,271,909 rupees. The overland trade with countries beyond the frontiers in 1890 was valued at Rx 3,505,300 for imports and Rx 4,930,550 for exports.

The imports of merchandise for the year ending March 31, 1891, were valued at Rx 71,975,775, and the exports of domestic produce at Rx 100,215,058. The decrease in exports was confined chiefly to raw materials. The cotton exports fell off over Rx 2,000,000, rape seed nearly as much, and jute over Rx 1,000,000; while exports of rice and wheat were much larger than in the previous year. The export of Indian yarn, mainly to China, increased from Rx 5,748,732 to Rx 6,516,088. The exports of cotton piece goods also show a steady increase from year to year. The imports of cotton yarns and piece goods were Rx 31,010,349 in value. Imports of merchandise and of treasure were stimulated, and exports were checked by the sudden rise of the rupee and speculation in silver and silver securities in London. Exchange rose from 1s. 5d. in the beginning of 1890 to 1s. 8½d., by the end of August, then fell more rapidly than it had risen, with fluctuations that continued till the end of the financial year, when the rate was 1s. 5½d. The net imports of silver during the year were Rx 14,175,136, and the net imports of gold Rx 5,636,000.

Navigation.—The number of vessels entered at Indian ports during the official year 1889-'90 was 5,282, of 3,658,181 tons. Of these, 1,869, of 2,960,551 tons, were British; 1,093, of 156,670 tons, were British Indian; 1,612, of 84,254 tons, were native; and 708, of 456,706 tons, were foreign. The total number cleared was 5,391; total tonnage, 3,657,405. The steamers entered and cleared by way of the Suez Canal numbered 1,608, of 3,055,364 tons, against 1,722, of 3,143,957 tons, in 1888-'89.

Communications.—There were 16,095 miles of railroad open to traffic on March 31, 1890, an increase in twelve months of 854 miles. The capital expended by the state on railroads was Rx 122,949,693. The companies had Rx 82,979,671 invested. The gross receipts for 1889 were Rx 20,493,662. The number of passengers was 110,644,749; the quantity of freight, 22,155,164 tons. The net earnings amounted to Rx 10,116,262, the working expenses having been Rx 10,377,400, or 50·64 per cent. of the gross earnings. The net profit was 4·93 per cent. on the capital of all the lines, against an average of 5·12 per cent. in the year preceding.

The number of letters, money orders, and postal cards delivered through the post-office in 1888-'89 was 260,628,110; of newspapers, 22,

696,378; of parcels, 1,797,705; of packets, 8,102,035. The receipts were Rx 1,281,540, and the expenses Rx 1,342,452.

The Government telegraph lines, exclusive of the Indo-European telegraph cable and land line running through Persia, had a total length at the close of the fiscal year 1889 of 33,462 miles, with 96,654 miles of wires. The number of private messages sent during the year was 2,983,152. The receipts amounted to Rx 742,148, and the expenses to Rx 704,092.

Hindu Marriages.—The agitation for the reform of the marriage laws of the Hindus resulted in the enactment by the Legislative Council in March, 1891, of a law amending the section of the penal code relating to rape by raising the minimum age of consent from ten to twelve years. The pressure which brought about this change came partly from England. A committee of prominent and influential Englishmen memorialized the Indian Government to induce it not only to raise the age of consent, but to declare infant marriages invalid unless they are afterward consummated, to repeal the law for the restitution of conjugal rights, and to forbid the religious excommunication and social proscription of widows who remarried. In India the agitation for the protection of child-wives was led by a Parsee journalist, Mr. Malabari, who was supported by the unorthodox Hindus, the section who are imbued with European ideas and free thought. The Mohammedan community, though pervaded to some extent with the Hindu custom of early marriages, stood aloof from the controversy. The orthodox Hindus of Bengal were a unit in combating the measure, which contravened the teachings of their sacred books. The Bombay and Maratha Brahmans, who follow other commentators, found nothing in this proposition contrary to the religious law, and were divided regarding its desirability. Hindus everywhere resented the interference of outsiders with their family life and religious customs. The Bengalee expounders, represented in the Governor-General's Council by Sir Romish Chunder Mitter, denounced the measure as a breach of the Queen's proclamation promising to abstain from disturbing the religious and social customs of the people. Many feared that it was an entering wedge that would result in the interference of the Government with important precepts of their religion, as, for instance, by declaring marriage contracts for infants void unless ratified. The Hindu marriage is divided into three stages—the betrothal, the wedding, and the *gavna* or leading home of the bride into the house of the bridegroom or of his parents. The book of Manu prescribed twenty-four as the right age for a young man to marry. In modern times it is customary to betroth boys of ten or twelve to girls of five or six. It is a sin for a Hindu of the higher castes to neglect to provide husbands for his daughters at an early age, and the practice is copied by those of inferior castes. Religious duty requires the consummation of the marriage as soon as the girl reaches the child-bearing age, for it is the desire of every Hindu to have male offspring, without which he will find no place in heaven. Through a son one attains the future life, through a grandson immortality, and through a great-grandson the celestial world. The promoters of the age-of-con-

sent bill made no pretense that it was required for the strict Hindus, who are known to be ruled by high religious and moral motives. Medical evidence was advanced in favor of raising the age of consent to fourteen, or even sixteen, because physical growth and development is not more precocious in India than in colder countries; but this was impossible. Child marriages occur mostly in the wealthier and better educated social class, and the abuses incident to the custom among the irreligious. It was said that the evils had their origin to some extent and derived their sanction from principles of English law incongruously grafted on the Indian system. By fixing the age of consent as low as ten years the authors of the penal code showed their regard for the marriage customs of the natives. Still, the father of a girl was not obliged to deliver her to the husband before the age of puberty, nor would he ever do so until the law for the restitution of conjugal rights was introduced, which left the judges no option but to order immature girls to be given into the custody of their affianced husbands at the suit of the latter.

Sir Madhava Rao and other opponents of the age-of-consent bill asserted that the evils that it was designed to remedy had no existence, and that it would merely serve as a means of oppressive treatment of husbands by the families of wives or as a weapon in the hands of revengeful or extortionate constables and magistrates, enabling them to dishonor high-caste Hindus by invading the *zenana* and profaning the sacred family life that is held religiously dear. To obviate this objection the bill, as far as it relates to married persons, made offenses under it non-cognizable, except by resident magistrates and police inspectors. The law is expected to have little practical effect, except to enable parents to retain the custody of brides until they come to the marriageable age as defined in the act. Unlike previous British legislation in religious matters, the present act had the support of a large part of the Hindu community. The law against suicide of widows, that exempting sons from obligation to pay their fathers' debts, and that legalizing remarriage of widows remained long a dead letter, and the two last are still of slight effect.

The Vernacular Press.—The congress movement in India has been held in check by official pressure, but the political unrest at the bottom of it has found a voice in the numerous native newspapers, which could not be effectually hushed without suppressing the liberty of the press already accorded. A large part of the Anglo-Indians have urged such action. The congress party has divided into two groups, one of which adhered to the political programme represented in Parliament by Charles Bradlaugh, the object of which was to secure elective representation for the native races in the Imperial and provincial councils; while the other deemed social reform of greater consequence, and wished to bring forward for discussion the treatment of children and widows and the wasteful extravagance of marriage and funeral ceremonies, much to the disgust of conservative and orthodox Hindus. These social subjects were practically excluded from the *agenda* of the Congress. When the age-of-consent question was submitted, it required all the influence of Mr. Hume, the originator of

the congresses, to obtain for it a hearing. The press organs of the native party, such as the "Amrita Bazar Patrika," the "Hindu Patriot," and "Bangabasi," offered an uncompromising opposition to the age-of-consent bill, which they represented as an intermeddling measure of the foreign conquerors, tending to undermine the Brahmanical faith and destroy the religious and social liberty of the people. The reformers threatened to desert the congress movement.

The freedom taken by native editors in criticising the Government has long been the bugbear of the older bureaucrats, who believe that the creation of a public opinion and national sentiment in India would be the death-blow of British rule. The present Government has been more inclined to their view than its predecessors. In July an order was issued forbidding the publication of newspapers or periodicals in places outside British India under the control of the Governor-General without the written consent of the political agent, which may be withdrawn at any time. Any person disobeying the order can be banished by order of the political agent. On Aug. 7 the Government arrested the proprietor and editor of the "Bangabasi," one of the most important native papers, representing the orthodox Hindu section of the Calcutta University and the educated class in Bengal generally. They were prosecuted for seditious libel under a section of the penal code which makes it an offense punishable with transportation for life or imprisonment for three years to attempt to excite disaffection toward the Government. The articles complained of, written at the height of the agitation against the age-of-consent bill, described the British rule as one of brute force and selfish self-interest, which pursued objects disadvantageous to India with the aid of taxes wrung from the people, and made no real provisions against flood and famine. Facts were cited to show that in states where the people were happy and prosperous under native rule British annexation had been followed by impoverishment of the people and disorganization of the public administration, and that the spread of cholera, fevers, and other preventable diseases had marked the extension of British dominion. The section of the code under which the prosecution was brought contains an explanatory clause stating that disapprobation of measures of the Government, compatible with a disposition to render obedience to the lawful authority of the Government and to support it against unlawful attempts to subvert or resist that authority, is not disaffection. The Indian law of trial by jury allows the judge, when there is a majority of six to three, to pronounce a verdict in accordance with the opinion of the majority. The jury stood seven to two, and the Chief Justice, Sir W. C. Petheram, without asking the opinion of the majority, discharged the jury. The defendants afterward apologized to the Lieutenant-Governor of Bengal, acknowledging that the articles, though not intended to excite disaffection, were intemperate and disrespectful. The native journalists in general took warning from the Chief Justice's charge to the jury, and formed a press association as a safeguard against ignorant infractions of the press laws. When Lord Ripon was Governor-General, in 1880, Sir

Roper Lethbridge, then Press Commissioner, reported regarding the difficulty under which native journalists labored in having no information regarding the acts and policy of the Government, except such as they gathered at second hand from the Anglo-Indian press. He recommended that the official *communiqués* given out to all the Anglo-Indian papers should also be circulated among the native editors. Owing to considerations of expense, or to the disinclination to bridge the gulf between the conquering and the subject race in any particular, this recommendation has never been acted upon.

Religious Riots.—In addition to the tumults that occur annually when the Hindus and Mohammedans mob each other in the great centers of population on the occasion of their religious festivals, the British authorities had to contend with a serious riot in 1891 that they provoked themselves by demolishing a Hindu temple in the sacred city of Benares in order to clear the site for water works. The people closed their shops, and the whole population gathered in the streets. A guard of soldiers was posted around all the principal buildings, and troops were stationed at the points of vantage throughout the district. Yet when the workmen began to raze the shrine, on April 16, the violence of the mob could not be restrained. The telegraph wires were cut and the railroad station sacked, and volunteers had to be summoned to check the disturbance and arrest the more violent rioters. The Hindus and Buddhists throughout India shared in the indignation against the destruction of this ancient temple. The persons arrested for causing the disturbance were sentenced to three years' rigorous imprisonment.

The Legislative Councils Bill.—The national congresses, after living down the opposition which naturally attended such a movement in India, had in 1889 already extracted from the persons at the head of the Administration a qualified assent to the expansion of the legislative councils and the introduction of the elective principle for the non-official members. The Congress of 1889, under the lead of Charles Bradlaugh, put back the reform by adopting the more radical scheme of popular representation through electoral colleges. The Government was willing to receive into the councils representatives of boards of commerce, municipal boards, great land owners, and the universities, but set its face against Mr. Bradlaugh's proposition for the indirect representation of all classes, with the right to discuss the budget, the right of interpellation, the right to call for papers, publication of the proceedings, and other attributes of Parliamentary government. A bill to appoint some representative members and to permit discussion of the budget and interpellation with restrictions was introduced by Lord Cross in Parliament in 1890, but was crowded out. In 1891 Lord Northbrook brought forward a somewhat more liberal measure, giving powers to the Viceroy to nominate from 10 to 16 additional members to the Council instead of from 6 to 12, as at present, and making the non-official members in Bombay and Madras from 8 to 20, instead of from 4 to 8. In making such nominations, the Governor-General, governors, or lieutenant-governors may accept the advice of cor-

porate or public bodies, and conditions under which nominations shall be made may be regulated by an order in Council, approved by the Secretary of State. The powers of the additional members of the Viceroy's Council are limited to discussing and voting on the specific measures brought forward for enactment.

Manipur.—The small native state of Manipur, occupying a round depression in the mountains of northeastern India between Assam and Upper Burmah, has an extent of 8,000 square miles, and in 1881 contained 221,070 people of a Mongoloid type with a considerable admixture of Aryan blood. Their habits are barbarous, but not warlike. In the raids which formerly were frequent between the Manipuris and the Burmese, the Indian Government interfered two or three times to save the country from being annexed by King Thebaw. The neighboring mountains are inhabited by the fierce Naga, Suti, Kuki, and Lushai tribes. The Maharajah Chandra Kirti Sing, who established his supremacy after a dynastic war in 1851, aided the British in the Naga war of 1877, and was made a Knight of the Star of India. Up to 1866 he had to contend against various pretenders, members of the reigning family, who instigated the hill tribes to raid the country. In the last century, when Manipur was about to be eaten up by the Emperor Akbar, the Maharajah threw himself upon British protection, which he received. Then came the first Burmese war, and Manipur again fell into danger. When the first treaty with Burmah was made, the safety of the little state was specifically treated for. When territorial changes on the eastern frontier were made, the Indian Government arranged for a small transfer of the Manipur territory to Burmah, and granted to the Maharajah an allowance of £50 a month in consideration of the same. About 1830 trouble arose about the succession, and the Queen mother and her infant son found refuge in British territory. The son was later established on the throne, and received British recognition. Sur Chandra Kirti Sing died in 1885, leaving eight sons, who divided into two or three factions. Sur Chandra Sing, the eldest, was installed as Maharajah in 1887, and Kula Chandra Dhuja Sing was recognized as Jubraj or heir-apparent. The order of succession in Manipur is that the eldest son of a ruler who dies leaving no brother shall succeed him, and that the throne shall descend to his brothers in the order of their age. Since they are usually numerous and born of different mothers, attempts to overturn the reigning Maharajah are frequent. A dispute having arisen between the Senaputty, the second in descent from the old Maharajah, Sur Chandra Sing, and a younger brother, the Pucca Sena, and the Maharajah having sided with the latter, the Senaputty, commander of the military forces, numbering about 7,000 men, in September, 1890, seized the palace and the person of the Maharajah. The English political resident, Frank St. C. Grimwood, acquiesced in the abdication of the Maharajah, and arranged for his safe conveyance to the neighboring British province of Cachar. Mr. Grimwood stood under the orders of the Chief Commissioner for Assam, James W. Quinton, who approved of his course

in not attempting to undo the palace revolution, and directed him to recognize as Regent the Jubraj or next heir to the throne, who had proclaimed himself Maharajah as soon as he was informed by the Senaputty of the forced abdication and deportation of Chandra Sing. He had taken no part in the affair, having gone away into the country to avoid being mixed up in the conflict between his brothers. As soon as the old Maharajah had reached British territory, where he knew that his life was safe, he telegraphed to Mr. Quinton, denying that he had formally abdicated, and asking for the intervention of the Indian Government to restore him to the throne. When the trouble first began Mr. Quinton sent word to Mr. Grimwood that he could have troops to maintain the authority of the Maharajah, which the Indian Government was bound to defend under the treaty of protection. Mr. Grimwood did his best to persuade the Maharajah to recall his decision to resign the *gaddi* or sovereignty and flee from the country. After he had abdicated and fled in a panic, the local British authorities, following the settled policy of the Indian Administration, were obliged to provisionally recognize the *de facto* native government until the Supreme Government at Calcutta should decide who was to be ruler. Mr. Quinton and Mr. Grimwood, in their reports to the Viceroy, said that the Senaputty had made himself exceedingly popular by his courage, generosity, ability, and force of character, and that things were going on tranquilly under the new Maharajah. Chandra Sing, who was accompanied in his flight by the Pucca Sena, went to Calcutta and prayed to be reinstated, convincing the Viceroy by his arguments until the officers on the spot urged the objections to his restoration. The Governor-General and his Council took a long time to deliberate, and meanwhile Mr. Grimwood established cordial relations with the Jubraj and the Senaputty. In January the Viceroy signified a desire to restore the old Maharajah. Mr. Quinton, who went to Calcutta, strongly advised against such a step, as it would involve the maintenance of a large garrison in Manipur and the frequent interference of the paramount government. The deposed ruler was a weak and vacillating man, who had shown himself too timid to punish the Senaputty with banishment, as advised by the Chief Commissioner on the occasion of a defiant outbreak in 1888, and had lived in dread of his brother ever since. On further consideration the Governor-General in Council decided to confirm the Jubraj as Maharajah, since he had taken no part in the revolution, but to punish its leader, the Senaputty, by internment in some distant part of India. Mr. Quinton received orders on Feb. 21 to proceed to Manipur with a sufficient military force and to arrest the Senaputty as secretly and quietly as possible. The Chief Commissioner took a force of 400 Goorkhas from two of the best regiments in the Indian army. The escort was under the command of Col. Charles McDowal Skene, who was experienced in frontier warfare, and it was supposed to be strong enough to deal with the whole Manipuri army. Another body of 200 Goorkhas, under Capt. Cowley, was ordered to Manipur. The Chief Commissioner was prepared

to fight, and he did not take a large force because he anticipated little resistance from the untrained Manipuri militia, whose only good weapons were 200 Enfield rifles and two 7-pounder guns presented to the Maharajah in 1887 for assisting the British troops in Burmah. It has ever been the military policy of the Government of India in dealing with the native princes by bold and adventurous action to impress them with the superior prowess of the British troops. Kept in complete ignorance of the wish of the Viceroy to restore the ex-Maharajah and of his final decision to remove the Senaputty, Mr. Grimwood cultivated cordial relations both with the new Maharajah and with the Senaputty, who was practically the ruler. When Mr. Quinton entered Manipur from the north by way of the Kohima pass, he sent forward Lieut. Gurdon, who arrived in the city of Manipur on March 15, 1891, but told him nothing of the Chief Commissioner's plans. Mr. Quinton, on the 20th, informed Mr. Grimwood that it was his intention to call a *darbar*, and that it would be his duty as resident political agent to arrest the Senaputty and deport him from the country. His wife begged that the task should be given to some person who had not received the prince's hospitality and kindness. Mr. Grimwood had gone to Sengmai to meet the Chief Commissioner, and the Senaputty came out to receive him with honor, and conduct the party into the capital with a military escort. Mr. Quinton's purpose to arrest the Senaputty in open *darbar* was communicated by telegraph to the Viceroy and approved on March 19. A council was held on the 21st, at which Mr. Grimwood advised against making the arrest, saying that formidable opposition would be offered. He was overruled by the civil and military chiefs of the expedition. The British force had no mountain guns or other artillery, and the soldiers carried only forty rounds of ammunition, as the march was through a rugged country and there was known to be a supply of cartridges at the Residency.

On his ceremonious entry into Manipur, on March 22, Mr. Quinton announced that a *darbar* would be held in the Residency at noon. The Senaputty, rising from a sick bed, went to the Residency, where he was kept outside for a long time. Surmising from the number of guards the intention to arrest him, he went away. The Regent appeared at the appointed hour, but the Chief Commissioner refused to receive him and his ministers because the Senaputty and the other princes were not present. The Regent said that the Senaputty was unwell. Mr. Quinton demanded that he should be sent for, and detained him as a prisoner until he sent an order for his brother to come. When the Senaputty returned answer that he was too ill to come, the *darbar* was dismissed. After a conference between the political agent and the ministers, another *darbar* was appointed for the following morning. But to this no one came. The Chief Commissioner then sent a message to the Regent, saying that if the Senaputty was not produced he would have him arrested. The Regent was frightened at the menaces of the Chief Commissioner, who threatened to depose him, but was still more in dread of the Senaputty, who

had suspected the treacherous plot to arrest him in *darbar*, and was determined to fight for his liberty. During the day he gathered into the palace inclosure some of his best fighting men, Manipuris, Nagas, and Kukis, and distributed arms and ammunition. Although no cartridges were found in the Residency that would fit the rifles of the Goorkha soldiers, the Chief Commissioner had gone too far to recede. At a council of war it was decided to arrest the Senaputty in his house within the walled palace inclosure at daybreak on the 24th. The Senaputty was prepared for the force of 250 men who attempted to surround his house before it was light in the morning. They were received with rifle and artillery fire, and when they succeeded in gaining possession of the house after a sharp struggle, the Senaputty was no longer there. Meanwhile the Manipuris attacked the Residency and finally shelled it with two guns. The detachment that held the Senaputty's house, Col. Skene's reserve force of 120 men that took position at the polo ground within the inclosure, and the party that was posted at the outer gate, all fell back on the Residency. This was made untenable by the artillery fire, and when evening came, the Chief Commissioner and Col. Skene decided to seek a truce. On the bugle signal to cease fire the Regent ordered his troops to stop also, and sent a letter reciting the services that had been rendered by his state to the British Government, and promising that his troops would cease hostilities if the British would throw down their arms. On these conditions being refused, the Senaputty sent word that he would like to discuss terms with the Chief Commissioner at a point midway between the palace and the Residency. Mr. Quinton, Col. Skene, Mr. Grimwood, William H. Cosins, Mr. Quinton's secretary, and Lieut. Simpson, a guest of Mr. Grimwood who was acquainted with the Manipuri rulers, went to the outer gate without a military escort, the officers even leaving their side arms. After a parley they went inside the gate, and were seen no more. They were put in irons and publicly beheaded. Investigation showed that Mr. Grimwood was speared by a soldier, but that the others were killed by the public execution by order of the second in command, the Tongal general. The people in the Residency were uncertain regarding the fate of their chiefs until firing was reopened after midnight. Soon it was found that the cartridges were nearly exhausted. Withdrawing from the Residency, they retreated by the road toward Cachar, expecting to meet Capt. Cowley's force. They had with them seventeen wounded, Mrs. Grimwood, and many unarmed followers. Harassed by Manipuris and Nagas, they took to the hills, and on the 26th, having been two days without food, they effected a junction with Capt. Cowley, who had also been attacked and was short of ammunition and of rations. Capt. Cowley and Lieut. P. R. Gurdon, who commanded in the retreat from Manipur, therefore decided to retire from the enemy's country. By forced marches they gained the Cachar frontier after one more fight with the garrison at Khowpum. Only one fourth of the Chief Commissioner's escort were brought back from Manipur in safety.

A punitive expedition was at once ordered. Three columns were directed to converge on the Manipur capital from the three passes leading into the valley from Kohima, Silchar, and Tamu. A detachment of Mr. Quilton's force that had been left at Langtobal, four miles south of Manipur, when the others fled to Assam, retreated in good order to Tamu, fighting all the way, and reaching that place on March 27. Lieut. Charles William James Grant, who was stationed there, telegraphed for permission to go to the rescue of Mrs. Grimwood and the rest. Setting out the next morning with 50 Sikhs and 30 of the escaped Goorkhas, he drove 150 Manipuris out of an intrenchment and 200 out of Palel on the 30th, and the same night attacked the fort at Langtobal, which was defended by 900 of the Senaputty's troops. The firing was so true and the advance so rapid that the intrenchments were carried with the loss of only a single man. Lieut. Grant, who was made a major for his gallantry in the capture and defense of the fort, while the Goorkha *jemadar* Birdal Nagarkote was rewarded with the title of *bahadur*, remained in the fort to await re-enforcements. The Manipuris attempted to attack the position, first with infantry, and then with their guns, but were so frightened by the accurate shooting of the Indian troops that they dared not venture within rifle range. Earthwork parapets were made to strengthen the fort against shells. Word was brought from some captives that the Senaputty had 108 prisoners, and would kill them unless the British retired from in front of the city, and the Senaputty sent food for their retreat, threatening to destroy them if they did not return to Tamu. On April 6 the Manipuris made a bold effort to storm the fort, and a large number were killed. On the 8th, in obedience to orders sent from Burmah, Lieut. Grant withdrew. Joining Capt. Presgrave, who came up with re-enforcements, on the following day, the whole force of 180 men put to flight about 400 Manipuris at Palel. On the 10th Major Sir Charles Leslie came up with 400 Goorkhas, and they waited till Brig.-Gen. Graham brought up the main body of the Burman column, which had from Tamu, south-east of Manipur, a shorter march and better roads than the Silchar column, advancing from the west, under the command of Lieut.-Col. R. H. F. Rennick, or than Maj.-Gen. H. Collett, who advanced southward from Nigring, on the Brahmaputra, with a considerable army as fast as the bad state of the roads would allow. No resistance was encountered by the Assam and Silchar columns, but the intense heat, the heavy rains, and the outbreak of cholera caused more suffering and mortality than battle could have done. During the expedition 86 men died from cholera. Maj. Grant and Capt. Drury, advancing from Palel, where Gen. Graham's troops were encamped, found 1,000 Manipuris intrenched in the hills near Tobal. They sent back for artillery and more men. The position was surrounded, and 190 of the enemy, who fought desperately, were killed. Maj. Grant was shot in the neck. This was the last engagement. The other columns had arrived simultaneously before the city, and the entire population fled to the mountains. The British troops marched

into the deserted town on April 27. Gen. Collett was appointed Acting Chief Commissioner of Assam, and thus clothed with the chief civil authority in addition to the command of all the military forces, numbering about 4,000 men. The hills were searched for the Senaputty, the Maharajah, and the other members of the Manipur Government, who fled with their army northeastward, but could find no secure asylum either in Manipur or in Burmah. All were captured within a few weeks.

One of the chief results of the Manipur catastrophe has been a solemn declaration of the British Government that the perfidious practice of enticing an enemy into a *darbar* in order to make him a prisoner, although there have been many precedents, will never again be permitted in India. It was deemed necessary for the sake of British prestige to make an example of the Senaputty and the Maharajah and all who were concerned in the execution of the British officers. Not being British subjects, they could not be tried under Indian law. The Indian Government holds that an attack on the Queen's forces in a protected native state, though not technically to be called treason or rebellion, is not war, and is something that demands exemplary punishment. A military court of inquiry was instituted to try the Manipuri princes. The old Senaputty, Tekendrajit Sing, the chief actor in the events, who became titular Jubraj on the accession of his brother as Maharajah, but still retained command of the forces, was tried on the double charge of making war on the Queen and of abetting murder. The Maharajah or Regent and his brother Angao Sena, who succeeded to the title of Senaputty, were tried on the first charge only. Manipuri officers who were proved to have taken part in carrying out the order for the execution of the British officers were first tried, convicted, and executed. The Senaputty brought witnesses to prove that he had begun fighting only in self-defense when attacked by the British force, and that so far from having ordered Mr. Quinton and his companions to be killed, he had endeavored to save them from his enraged soldiery. They had refused the terms of absolute surrender that he demanded, and when descending the palace steps to return to the Residency were mobbed by the Naga and Kuki soldiers. The Senaputty came on the scene after Mr. Grimwood had been stricken down. He had the officers conducted to a room in the palace, and said that he was asleep when the Tongal general ordered them to be fettered and led out one by one to be decapitated. All three princes were pronounced guilty, as well as the Tongal general, and were condemned to death. The Senaputty and the Tongal general were hanged at Manipur, where the trial took place, on Aug. 13. The Viceroy commuted the sentence of the Regent and the other brother to lifelong transportation and confiscation of all their goods.

The British Government decided not to annex Manipur, which would involve the introduction of British law and much expense and conflict with the natives. The same object was practically accomplished by choosing as ruler, with the diminished rank of rajah, a child of five years, Chura Chand, in whose name the govern-

ment will be directed by a British political officer. The succession was made hereditary in the direct line, each successive rajah being bound to acknowledge the paramount authority of the Indian Government. The payment of tribute and other incidents of political dependency will impress on the natives the fact of the extinction of the national liberties that they have enjoyed for more than one thousand years, and prepare them for eventual absorption in the Indian system.

The Miranzai Expedition.—The work of reducing the warlike Pathan tribes beyond the border of the Punjab, and thus extending and consolidating British dominion on the most vulnerable frontier, was carried forward by two considerable military expeditions in 1891. The Miranzai field force operated from the Miranzai valley, inhabited by a section of the Bangash Pathans, who are obedient British subjects, against the Orakzais living in the hills beyond. These hillmen afforded a pretext for a so-called punitive expedition by their border feuds with the neighboring tribes. For every raid on a British village a heavy fine was charged up against them. In January, 1891, Gen. Sir William Lockhart set out with an army to wipe out old scores and to push the British boundary a little farther into Afghanistan by building roads and establishing military posts in these hills. Though the tribesmen offered little resistance, the campaign was trying to the troops, owing to the severe cold. Between Jan. 20 and Feb. 20 every considerable village in the Khanki valley was visited, twenty towers were blown up, fines were collected, arms seized and hostages taken, and Makhmaddin Malik, leader of some of the last raids, was carried off a prisoner. A small garrison was left to protect working parties employed in building roads and a line of fortified stations on the Samana range, which overlooks the Khanlik valley. The Orakzais, who have boasted undisputed possession of these hills for ages, were stirred up by fanatical priests to attack the fortified posts on April 4. The guards and laborers were driven back into British territory, and nine Sikh soldiers were killed. Gen. Lockhart, who had joined the Black Mountain expedition, in which he commanded the reserve force, immediately organized an army of 7,000 men with 18 guns at Kohat, and by April 17 he was on the spot and had made his dispositions to deliver a general attack on the Orakzais, who were assembled in force to defend the Samana hills, the inhabitants of the valley having been joined by other clans and by some of the Afridis. The tribes were still gathering when the advance from Gulistan began. Sistopi was first captured, enabling the British forces to occupy the Mastaon plateau, which is the key to the whole range, and on the following day the main attack was made on Saragarhi, and the village of Ghuztang was attacked simultaneously, forcing a retreat into the Khanki valley along the whole line. Three days of severe fighting, with a loss to the Pathans of 300 left dead on the field, in addition to the great number carried off, according to their custom, arrested the movement and caused the warriors arriving from distant tribes to disperse to their homes. Those who were already involved in the disturbances still floated their

standards within sight of the British camps, and much more fighting was necessary to terminate the expedition satisfactorily; for after scouring the Khanki valley, Sir William Lockhart invaded the Akhel country, where a sharp engagement took place on April 22, and the districts of the Shekhan and Marnozai Darabar tribes, destroying towers and exacting reparation. Movable columns ranged through the country for more than a month, inflicting punishment on all who failed to make submission or were suspected of having taken part in the uprising. The military surveys were continued as far as the Kurmana valley. After all the tribes had apparently been cowed, the expedition was recalled, on May 23, three regiments and a mountain battery being left to guard the newly annexed territory at Samana. In the expedition the British lost 78 killed and 73 wounded, including 5 British and 3 native officers.

The Black Mountain Expedition.—The tribes of the Black mountains have successfully defied the British power on several occasions, and punitive expeditions sent against them have failed. In order to consolidate British power at Gilghit, Chitral, and other strategic points in the extreme northwest, the Indian Government has decided to reduce the tribes to submission and open the roads which the Allaiwals, Akazais, and Hazanzais have forcibly opposed. Gen. McQueen, who failed in the expedition of 1888, and was unable to advance into the Hazanzai country in the autumn of 1890, was replaced by Maj.-Gen. Elles, who started out from Derband on March 12, 1891, with an army of 6,800 fighting men and 1,900 followers. The Hazara field force was divided into two columns, one of which ascended the valley of the Indus, while the other crossed the hills. The troops were fired on as soon as they passed the Hazara frontier. On March 19 there was a sharp skirmish, on March 23 the village of Dilari was captured, and on March 27 Gen. Hammond took the Akazai village of Sural, after which Col. Williamson joined him with the river column, and the united force advanced into the Akazai country. The Hazanzai district was afterward invaded. No attempt was made to punish the tribesmen. The troops intrenched themselves, built roads, and announced that they would occupy the positions until Hashim Ali, who had led the attacks on the former expeditions was delivered up.

The Pamir Region.—The Anglo-Russian Afghan Delimitation Commission of 1884-'86 failed to complete the work in the region of the upper Oxus, and left unsettled the northeastern frontier of Afghanistan and the relations of the Ameer with various khanates in and around the Pamir. The Anglo-Russian arrangement of 1872-'73 declared the Oxus up to its source to be the southern limit of the Russian sphere. Assuming that the southern tributary of the Oxus is the true upper course of the river, the Russians in Turkestan have explored and laid claim to Shignan and a great part of the Pamir plateaus, and forbidden Capt. Younghusband, Lieut. Davison, and other British officers to enter that region (see *AFGHANISTAN*). The Indian Government has displayed still greater military activity, having annexed Cashmere, occupied and garrisoned Gilghit and Chitral, and attempted to

conquer the Nagar and Hunza clans and other tribes of the Pamir, on the pretext that they were once tributary to Cashmere, although Indian scholars assert that they have maintained unbroken independence for more than twelve centuries. According to the British view of the region inclosed between the southern arm of the Oxus and the Aksu, or northern headwater, the territory now claimed by Russia, the western part has been under the effective sovereignty. To the larger eastern part the Chinese Government, probably prompted by England, has advanced a claim, and when Col. Yanoff, leader of the Russian exploring party, advanced into the Alichur Pamir, a Chinese official protested ineffectually. Subsequently explanations were asked by the Chinese ambassador in St. Petersburg. On the southeast the Russians claim that their line reaches to the northern passes of the Hindu-Kush, bringing them into actual contact with the Hunzas and other hill tribes that the British have vainly attempted to subjugate. In November Col. Durand attacked the Hunzas in Nilt, their stronghold on the side of Gilghit, and stormed the place. He and two other officers were wounded. A railroad is to be built through Cashmere. The state will not be annexed, but will be governed under strict British supervision.

Movements in Beluchistan.—During the winter of 1890-'91 Sir Robert Sandeman visited various chiefs in Beluchistan, with a view of composing tribal differences and reopening the old Kaffla route between India and southern Persia, which will likely be chosen for the future railroad to India in preference to the more vulnerable route through Khorassan to Herat and Candahar. The state of Panjgur, on the frontier of Persia, has been occupied by Beluchi levies, who have restored the old degree of peace and prosperity. The route from Karachi to Panjgur, which leads to Seistan, in Persia, is less difficult than that through the Zhob valley, where a railroad is being built that will unite the Sindh-Pishin line with the railroads of the Punjab. After the occupation of the Zhob valley by the British forces in 1889-'90, a section of the Sheranis, the Kidarwai clan, continued their depredations. Maj.-Gen. Sir G. S. White, since appointed commander-in-chief, who had full charge of the military arrangements, as Sir R. Sandeman had of political affairs, on the border fronting the Russian approach, went with a force sufficient to thoroughly impress the inhabitants with the necessity of thorough submission and with the object of winning their loyalty and co-operation, because the Zhob valley is the route of direct communication between the Punjab and Ghazni and Cabul, and affords an alternative means of approach to Candahar. The country is to be entirely amalgamated and governed by a British resident.

Burmah.—In the beginning of 1891 Sir Charles Crossthwaite was succeeded as Chief Commissioner of Burmah by Sir Alexander Mackenzie. The British forces were engaged at that time in Momeik and in operations against the Chins and the Kachins, and soon fresh trouble broke out in the Shan state of Wuntho. The policy of the Government after the annexation was to leave the Kachyens of the Bhamo district to themselves, that they might serve as a neutral

zone between Burmah and China. This course resulted in raids and disturbances requiring punitive expeditions, and, as the less costly method, the military authorities occupied the country of the Kachins south of the Tapin river, and reduced them to submission. North of the Tapin the tribes remained practically independent. The Chinese value the trade connection with Burmah, and on their side of the border they protect it with outposts and escorts. The plundering of caravans on the British side led to complaints, which were unheeded, and it was not until they prepared to place a garrison on the British bank of the Nampoung that the Chief Commissioner decided to post detachments on the river so as to take away every pretext for Chinese encroachment, because the boundary line is not settled by treaty and must yet be fixed by an Anglo-Chinese boundary commission. The jade mines were occupied also, lest China should advance a claim to that district. Disturbances in the district of the ruby mines necessitated a large re-enforcement of the military police in the district of Momeik, and the force was strengthened also in Katha and Bhamo and in the Chindwin district, which Sir Alexander Mackenzie determined to reduce to the settled and orderly condition of most parts of Upper Burmah. It was possible to draw away police from many districts, because Upper Burmah had become less free from dakoity and robbery than Lower Burmah. The difficulties that have continually arisen in the relations with the rich and powerful semi-independent state of Wuntho Sir Charles Crossthwaite thought he had removed, by treating the Tsawbwa that the British had set up after removing the old one with great honor and consideration. Sir Alexander Mackenzie saw reason to reverse this policy. He demanded the payment of fines for outrages committed in Katha and the surrender of dakoits, and sent expeditions to punish disturbers within the limits of Wuntho. The Tsawbwa at first co-operated in these measures. Afterward he took offense, conspired with the old Tsawbwa, his father, who still lived in the district, entered into correspondence with rulers of other Shan states, and collected arms for a rebellion against British authority. The old Tsawbwa begun hostilities by attacking and putting to flight a British force that had entered Wuntho to put down disturbances. The whole country instantly rose in rebellion. Railroad buildings were destroyed, telegraphs torn up, and all Indian officials driven out. A force of troops was at once thrown into Wuntho, but not sufficient to check the rebellion. The old Tsawbwa went so far as to attack outposts in British territory, and several times assailed Kawlin, which was held by 600 British troops. On Feb. 20 Sir A. Mackenzie issued a proclamation deposing the Tsawbwa and announcing the annexation of Wuntho. Brig-Gen. Wolsley took command of the operations, and 2,500 European and Indian soldiers advanced into Wuntho in two columns. The town of Wuntho was occupied on Feb. 26, and the Tsawbwa's palace was burned, to convince the people that his rule was terminated. The British carried on the war with great severity, but offered free pardon to all who submitted without resistance. The Tsawbwa attempted to make a

stand in a stockade near his capital. His forces were routed, and he fled with his father and the noted dakoit chief Bo Le into the mountains. The country was scoured by flying parties searching for the fugitives and collecting rifles and ammunition, of which a vast quantity had been smuggled in, and there was constant fighting for weeks until the people were so thoroughly cowed that they flocked in to deliver up their arms. The elder Tsawbwa fled into China. The younger one with his family went into hiding between Mansi and the Chindwin river. He applied for pardon, promising to pay a heavy fine if he were reinstated or his son made Tsawbwa in his stead, and pleading that the rebellion was the act of his father. The military occupation was continued until the people settled down to their ordinary occupations, and the country was organized as a British province. A military force took possession of the district of the jade mines also. As soon as its subjugation could be effected, the Chief Commissioner decided to bring Momeik, which had been administered by a tsawbwa as an autonomous Shan state, although the people are mostly Kachyens and Burmans, under direct British rule, as the disturbances which had been harshly suppressed by the British troops were caused by the misrule of the chief whom Sir C. Crossthwaite had placed over them. The district was occupied by 300 soldiers. The company that had leased the ruby mines asked to be released from payment of rent on account of the disturbed state of the district. The operations against the Chins in the hilly country on the Bengal frontier were prosecuted by a force of 2,000 men, who carried out nine expeditions before the rainy season without making much impression. The Thetta Chins, who had murdered Mr. Wetherell and had cut the telegraph and killed Sepoy pickets, repulsed a punitive expedition sent against them in January, killing Lieut. James and a number of Goorkha soldiers. This was the second defeat they had inflicted on the British, and they only yielded when two strong columns, with artillery, were sent against them. Five columns, aggregating 800 rifles, made a start toward the conquest of the Kachyens of the Bhamo district.

The failure of the monsoon caused a serious scarcity throughout Upper Burmah. Rice had to be imported, and was sold at double the usual price. Relief works, such as Sir A. Mackenzie could provide with the means at his disposal, did little to lessen the distress. The retarded rainfall, though deficient, averted a general famine. The parsimonious policy pursued toward Burmah by the Indian Government is the chief obstacle to the pacification of the country. When the railroads through Katha and Wuntho are completed the difficulties with the Chins, Kachyens, and Shans will cease, and if the ancient irrigation works were restored, dakoity and other disorders would disappear. The railroad to Mogaung will not be finished before April, 1895. The Indian Government wishes to replace the present army of occupation with Madras Sepoys, but the Chief Commissioner objects to this material because the Chins and Chinese Shans, and even the Burmese dakoits, show contempt for the Madrassis, who have proved themselves worthless in the field. The Shans, Karens, and Kachyens

can not yet be utilized as soldiers. The local regiments or military police are recruited from the same source as the Indian army, the warlike Sikhs, Goorkhas, Punjabis, and Pathans of northern India. Many are time-expired soldiers. This force is being strengthened, to relieve the Indian Government from the necessity of sending a large proportion of its best fighting forces to Burmah, and to prepare for the emergency of the withdrawal of the entire present army of occupation in the event of complications with Russia. The military police in 1891 numbered 430 officers and 15,500 men.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census, was 147,178 in 1820; 343,031 in 1830; 685,866 in 1840; 988,416 in 1850; 1,350,428 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; 2,192,404 in 1890. Capital, Indianapolis.

Government.—The following were the State officers during the year: Governor, Alvin P. Hovey, Republican, who died on Nov. 23, and was succeeded by Lieutenant-Governor Ira J. Chase, Republican; Secretary of State, Claude Matthews, Democrat; Auditor, J. O. Henderson, Democrat; Treasurer, Albert Gall, Democrat; Attorney-General, Alonzo G. Smith, Democrat; Superintendent of Public Instruction, Harvey D. Vories, Democrat; Judges of the Supreme Court, Silas D. Coffey, Walter Olds, Byron K. Elliott, Robert W. McBride, and John D. Miller.

Finances.—For the fiscal year ending Oct. 31, 1890, the report of the State Auditor presents the following figures: Balances in all funds of the State treasury on Oct. 31, 1889, \$974,109.35; total receipts for the year ensuing, \$3,737,195.18; total expenditures, \$4,471,948.13; balance in all funds on Oct. 31, 1890, \$239,356.40. For the general fund alone the figures are as follow: Balance on Oct. 31, 1889, \$811,734.56; total receipts for the year ensuing, \$1,631,978.83; total disbursements, \$2,315,980.99; balance on Oct. 31, 1890, \$127,732.40. Of the total general fund receipts the sum of \$183,827.38 was derived from advanced payments made to the State by the several counties and not properly belonging to the year's revenue, leaving \$1,448,151.45 as the net receipts for the year. These receipts were derived from the following sources: From the State tax levy, \$1,087,700.44; from insurance taxes, \$83,702.49; insurance fees, \$14,830.50; earnings of State Prison North, \$100,000; earnings of State Prison South, \$69,076.68; sale of State lands, \$21,224.84; earnings of Reform School, \$26,505.75; other sources, \$45,110.75. The expenditures of the fund may be classified as follow: Judiciary expenses, \$217,282.71; executive and administrative departments, \$77,638.74; State educational institutions, \$80,185.44; State benevolent institutions, \$721,333.45; State reformatory institutions, \$106,000; State prisons, \$109,076.68; interest on public debt, \$274,074.68; special appropriations, \$423,798.97; miscellaneous, \$246,590.32.

The receipts of the general fund for the year, as appears from the figures above given, fell short of the expenditures by over \$850,000. In 1890, as in every year since 1877, the State failed to raise a revenue sufficient to pay its current

expenses. As a result, the constantly increasing State debt had, on January, 1891, reached the enormous sum of \$8,540,615.12, with no surplus in the treasury as an offset. Successive legislatures had refused to raise the tax rate or to provide any relief till the General Assembly of 1891 grappled with the problem and passed a series of acts which are likely to work out a complete solution.

One of these acts provides for the levy of a tax of 6 cents on each \$100 of property for each of the years 1891 and 1892, the proceeds of which shall form a "Benevolent Institution Fund," so called, and shall be appropriated to the use of the benevolent and reformatory institutions of the State. The State tax rate is thereby increased from 12 cents (the rate heretofore levied for the general fund) to 18 cents on each \$100. Another act thoroughly revises and reconstructs the law regulating the assessment and collection of taxes. It creates a State Board of Tax Commissioners, consisting of the Governor, Secretary of State, Auditor, and two other persons appointed by the Governor, whose duty is to enforce the tax laws, to supervise their operation, to suggest improvements to the General Assembly, and generally to make efficient the tax system of the State. The board shall also assess all railroad property in the State, and shall equalize the assessment of real estate made by the local assessment boards. In performing these duties it is required to appraise and assess all property at its true cash value. As a result of this provision, the total valuation of the State for 1891 was increased by the board nearly \$400,000,000 over the valuation of 1890. The same act provides for the collection of the following taxes in addition to the general *ad valorem* tax on property: From foreign insurance companies, a sum equal to 3 per cent. of their gross receipts of premiums from business in the State, less losses actually paid in the State; from express companies, a sum equal to 1 per cent. of their gross receipts in the State, after making certain specified deductions; from telegraph companies, a sum equal to 1 per cent. of the gross receipts of their agents in the State; from telephone companies, a sum equal to one fourth of 1 per cent. of their gross receipts in the State; from sleeping-car companies, a sum equal to 2 per cent. of their gross receipts from business in the State.

A further source of revenue was provided by an act requiring the Secretary of State to charge fees for filing articles of incorporation and other certificates relating to corporate franchises, these fees to be in addition to the fees already allowed, and to be by him paid over to the State treasury. To provide funds for support of the State government until the revenues under these laws should become available, the Governor, Auditor, and Treasurer were authorized by another act to borrow \$700,000, issuing 3½-per-cent. bonds therefor, payable in ten years, but redeemable at the option of the State in five years. If further sums should be needed to meet the appropriations of the session, the same officials were authorized to borrow not over \$700,000 additional, issuing the same kind of bonds therefor. They were also authorized to issue 3½-per-cent. bonds to raise money for re-

tiring outstanding State bonds which may fall due, and whenever any temporary loan indebtedness of the State can be funded at a lower rate of interest they were authorized to issue bonds at such lower rate in amounts sufficient to retire such indebtedness.

Legislative Session.—The fifty-seventh regular session of the General Assembly began on Jan. 8 and ended on March 9. Early in the session United States Senator Daniel W. Voorhees, Democrat, was re-elected for the full term of six years over Gov. Alvin P. Hovey, the Republican nominee. The most important legislation of the session pertains to State finances, and is considered separately under that topic. The Democrats were again in control of both houses, and proceeded to pass a series of measures, abridging the appointive power of the Governor. As a result of similar measures passed at the session of 1889 and of rulings made by the State Supreme Court thereon, the Governor had already lost the right to appoint the State Geologist, the State Statistician, and the trustees of nearly all the penal and charitable institutions of the State, the two first-named offices being now filled by popular election, and the trustees being elected by the General Assembly. By the legislation at this session the office of State Inspector of Oils, filled by appointment of the Governor, was abolished, and the office of State Supervisor of Oil Inspection was created, to be filled by appointment of the Democratic State Geologist; the office of Mine Inspector, filled by appointment of the Governor, was abolished, and the office of Inspector of Mines, to be filled by appointment of the State Geologist, was created; the State Board of Agriculture, appointed by the Governor, was abolished, and the State Agricultural and Industrial board was established, its members being appointed by the Governor, the Secretary of State, and the State Auditor, or a majority of them (the present Secretary and Auditor being Democrats); the Board of Trustees of the Eastern Indiana Hospital for the Insane, appointed by the Governor, was abolished, and a new board was created, to be elected by the General Assembly; the office of Natural Gas Supervisor was created, to be filled by appointment of the State Geologist. All these acts were passed over a veto.

The State was redistricted in the interest of the Democrats, both for members of Congress and for members of the State Legislature, the bills therefor being passed over a veto. The new congressional districts are as follow:

- I. Counties of Posey, Gibson, Vanderburgh, Warrick, Pike, Spencer, and Perry.
- II. Counties of Knox, Greene, Daviess, Martin, Dubois, Lawrence, Orange, and Crawford.
- III. Counties of Harrison, Washington, Jackson, Jennings, Scott, Jefferson, Clark, and Floyd.
- IV. Counties of Shelby, Ripley, Decatur, Rush, Franklin, Dearborn, Ohio, and Switzerland.
- V. Counties of Owen, Putnam, Hendricks, Morgan, Monroe, Brown, Johnson, and Bartholomew.
- VI. Counties of Henry, Delaware, Randolph, Wayne, Fayette, and Union.
- VII. Counties of Marion, Madison, and Hancock.
- VIII. Counties of Sullivan, Vigo, Clay, Parke, Vermillion, Fountain, and Montgomery.
- IX. Counties of Boone, Tippecanoe, Clinton, Tip-ton, Hamilton, Howard, Benton, and Warren.

X. Counties of Carroll, Cass, White, Fulton, Pulaski, Newton, Jasper, Lake, and Porter.

XI. Counties of Grant, Miami, Wabash, Huntington, Wells, Adams, Jay, and Blackford.

XII. Counties of Allen, Whitley, Noble, De Kalb, La Grange, and Steuben.

XIII. Counties of Starke, Laporte, St. Joseph, Marshall, Elkhart, and Kosciusko.

To relieve the crowded docket of the State Supreme Court, an appellate court of five judges was created, which has exclusive jurisdiction of all appeals from the lower courts in cases of misdemeanor, cases originating before a justice of the peace where the amount in controversy exceeds \$50 exclusive of costs, all cases for the recovery of money where the amount does not exceed \$1,000, and all cases for the recovery of specific personal property, actions between landlord and tenant for the recovery of leased premises, and all appeals from orders allowing or disallowing claims against decedent's estates. In such cases the decision of the court shall be final. The act is to be in force for six years only.

The sum of \$75,000 was appropriated to secure an exhibit of the resources and development of the State at the World's Columbian Exposition, and its expenditure was intrusted to a board of 26 persons to be appointed by the Governor. To complete and furnish the Southern Indiana Hospital for the Insane, the sum of \$45,000 was appropriated, and for improvements at the Soldiers' and Sailors' Orphans' Home the sum of \$55,000. The practice of letting out by contract the labor of pupils at the State benevolent institutions is forbidden, and provision was made for their industrial education under direction of the authorities of these institutions.

In order to complete the State Soldiers' and Sailors' Monument in Circle Park, Indianapolis, a tax of 5 mills on each \$100 was authorized, in addition to other taxes, for each of the years 1891 and 1892, the proceeds of such levy up to the sum of \$100,000 to be expended upon this work. An immediate appropriation of \$30,000 was made from the State treasury for the same purpose.

Persons or companies engaged in mining or manufacturing were required to pay their employees at least once in two weeks, and were forbidden to sell, directly or indirectly, to any employé any merchandise or supplies at a higher price than they sell to other persons for cash. The Australian ballot law of 1889 was amended in many of its details.

The following amendments to the State Constitution were proposed and referred to the next General Assembly for concurrence: First, providing that corporations may be taxed upon their net or gross earnings; second, extending the limit of regular legislative sessions to one hundred days; third, increasing the term of office of the Secretary of State, Auditor, and Treasurer to four years, and making each official ineligible for immediate re-election; fourth, making the term of all county officers four years, and declaring them ineligible for immediate re-election.

Other acts of the session were as follow:

Making the first Monday of September, known as Labor Day, a legal holiday.

Amending the law regulating the descent of property.

Exempting honorably discharged Union soldiers and sailors from work on the public highways.

To provide for the incorporation of boards for the relief of disabled ministers of the Gospel, missionaries or their dependents, orphans, and other persons.

Requiring the use of sound wrought or cast iron casings and pipes, tested to at least 400 pounds pressure to the square inch, in the transportation or conducting of natural gas (which shall not be conducted at a pressure exceeding 300 pounds to the square inch), and making it unlawful to use any device for pumping or any other artificial process to increase the natural flow of natural gas from any well.

To prohibit the killing of any wild bird other than a game bird or bird of prey, or the sale of such bird, or the destruction of its nest or eggs.

To establish a State board of health.

To authorize the formation of corporations for the purpose of laying pipe lines and transporting petroleum.

To prevent any person from unlawfully wearing the badge of the Grand Army of the Republic, Union Veterans, Sons of Veterans, or Military Order of the Loyal Legion.

To provide for filing and recording trade-marks, labels, brands, stamps, and wrappers.

Requiring every person or corporation employing women or girls to provide suitable seats for their use.

Permitting the establishment of a system of manual or industrial training in the schools of cities having over 100,000 inhabitants.

Making it unlawful to burn natural gas in what are known as flambeau lights.

Accepting from the Hendricks Monument Association its gift of the Thomas A. Hendricks monument.

To punish bank officers, brokers, and others who receive deposits after insolvency.

Accepting the act of Congress approved Aug. 30, 1890, for the better endowment and support of colleges of agriculture and the mechanic arts in the several States, and designating Purdue University as the beneficiary under the act.

To create a firemen's pension fund, for the pensioning of disabled firemen, and the widows and dependent children, mothers, and fathers of deceased firemen.

Requiring coal-mine operators to keep accurate scales of standard manufacture at their mines for the weighing of coal, and to have them tested daily, authorizing miners to appoint a check weighman to protect their interests in the weighing of coal mined, providing that all coal shall be weighed before screening, that 80 pounds shall form a bushel, and 2,000 pounds a ton, making various regulations for the safety of miners while at work, prohibiting the employment in coal mines of boys under fourteen years and females of any age.

Education.—For the school year ending in June, 1891, a total of 521,841 children were enrolled in the public schools of the State, the average daily attendance being 369,060. The total number of children of school age in the State was 763,247. The whole number of teachers employed was 13,441, and the total number of school-houses 9,801. During the school year the sum of \$5,636,199.94 was distributed for the support of the schools. The permanent school funds of the State increased in value during the year by the sum of \$71,548.62, their value on June 30, 1891, being as follows: Common-school fund held by counties, \$7,360,271.24; congressional township fund held by counties, \$2,496,314.53; total, \$9,856,585.77.

At the State Normal School the total enrollment of pupils for 1891 was 1,086, against 1,009 for 1890. The receipts of the institution for the year were \$53,794.59, and the expenditures only \$37,372.57.

Prisons.—At the State Prison North, Michigan City, there were 735 prisoners on Nov. 1, 1890; during the year ensuing 417 were committed to the prison and 352 were discharged, leaving 800 remaining on Oct. 31, 1891. The total receipts from prison contracts and other sources were \$117,833.90, and the cost of maintenance \$104,284.56, showing that the institution is more than self-supporting. At the State Prison South 311 prisoners were received during the year ending Oct. 31, 1891, and 275 were discharged, making an increase of 36 for the year in the total number of prisoners. The average daily number was 592. The receipts for convict labor were \$74,945, and the disbursements for maintenance \$74,764.88. This institution is also self-sustaining.

At the Plainfield Reform School there were 516 boys on Nov. 1, 1890, 241 were received during the year ensuing, and 237 discharged, leaving 520 remaining on Oct. 31, 1891. The net cost to the State of maintaining the institution was \$32,985.

Agriculture.—The State Bureau of Statistics reports the following figures, showing an exceptionally large yield of agricultural products in 1891:

Wheat: Number of acres sowed, 2,891,922; product in bushels, 58,305,766.

Corn: Number of acres sowed, 3,637,927; product in bushels, 125,092,649.

Oats: Number of acres sowed, 897,952; product in bushels, 23,123,189.

Barley: Number of acres sowed, 21,888; product in bushels, 467,773.

Rye: Number of acres sowed, 44,840; product in bushels, 808,148.

Buckwheat: Number of acres sowed, 9,541; product in bushels, 151,450.

Flax seed: Number of acres sowed, 14,146; product in bushels, 116,460.

Clover hay: Number of acres, 1,208,672; product in tons, 2,109,814.

Timothy hay: Number of acres, 1,257,758; product in tons, 2,034,242.

Irish potatoes: Number of acres, 85,921; product in bushels, 7,888,701.

Sweet potatoes: Number of acres, 3,339; product in bushels, 247,086.

Tobacco: Number of acres, 13,818; product in pounds, 10,720,323.

Coal.—What is known as the Central or Illinois coal field extends over the southwestern portion of Indiana, underlying an area of about 7,000 square miles, and includes 19 counties; Warren County, lying at the northern limit, and a line drawn through the eastern boundary of Greene County marking its extent eastward. The coals are bituminous, excellent for steam and heating, but of little value for the manufacture of coke and gas. According to reports made to the State Mine Inspector, the production of coals has declined since 1887, when the total product reached 3,217,711 short tons. This is due to the introduction of natural gas into the cities and larger towns, together with the use of crude oil as fuel at Chicago and elsewhere. For the year 1889 the statistics of coal production, as compiled by the Federal census, were as follow: Number of regular mines, 94; local mines, 256; total product, 2,845,057 short tons (of which there were shipped from the mines for sale 2,527,112 short tons); total amount received for sale of

coal, \$2,887,852; average price at the mines, \$1.02 per ton; total number of employes, 6,532; total wages paid, \$2,201,044; number of persons employed underground, 5,782.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,913 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; and 1,911,896 in 1890. Capital, Des Moines.

Government.—The following were the State officers during the year: Governor, Horace Boies, Democrat; Lieutenant-Governor, Alfred N. Poyneer, Republican; Secretary of State, W. M. McFarland; Auditor, James A. Lyons; Treasurer, Byron A. Beeson; Attorney-General, John Y. Stone; Superintendent of Public Instruction, Henry Sabin; Railroad Commissioners, Frank T. Campbell, Spencer Smith, and J. W. Luke; Chief Justice of the Supreme Court, Joseph M. Beck; Associate Justices, James H. Rothrock, Gifford S. Robinson, Josiah Given, and Charles T. Granger. These officials are all Republicans, except Gov. Boies.

Finances.—For the biennial period ending June 30, 1891, the receipts of the State treasury were as follow: From counties, \$3,120,287.96; from insurance companies, \$174,615.30; from State officers (fees), \$78,760.19; from telephone and telegraph companies, \$39,680.81; from miscellaneous sources, \$76,178.15; transfers from temporary school fund, \$30,957.31; balance on June 30, 1889, \$25,181.67; total receipts for the period, \$3,544,961.39. The disbursements for the period aggregated \$3,056,902.44, leaving \$488,058.95 as the cash balance on hand on June 30, 1891. At the latter date there were warrants drawn upon the treasury, outstanding and unpaid, amounting to \$33,960.42, leaving as the actual available surplus, \$454,098.53. The rate of State taxation for 1891 was 2 mills on the dollar. There is no State debt except a permanent bonded debt of \$245,345.19 held by the State School fund.

Education.—The following public-school statistics for the years ending July 1, 1890, and July 1, 1891, are reported by the State Superintendent:

ITEMS.	1890.	1891.
Children of school age.....	660,495	663,541
Enrolled in public schools.....	493,267	508,755
Average daily attendance.....	806,809	817,267
Male teachers.....	5,460	5,228
Female teachers.....	21,107	21,541
Number of school-houses.....	12,997	13,129
Value of school-houses.....	\$12,715,766	\$13,154,914

For the year ending July 1, 1890, the statement of school finances is as follows: Balance on hand July 1, 1889, \$2,976,676; receipts from district taxes, \$5,385,413; from semi-annual apportionment of State School fund, \$799,578; from other sources, \$651,885; total receipts, \$9,813,552; paid for teachers' wages, \$4,318,871; paid for school houses and sites, \$509,205; paid on bonds and interest, \$327,363; paid for fuel, rent, repairs, etc., \$834,831; paid for other purposes, \$720,046; total payments, \$6,710,316; balance on June 30, 1890, \$3,103,236.

At the State University there were 737 students in 1889-'90 and 890 in 1890-'91. The ex-

penses for the period were \$252,623.40. The Normal School contained 657 pupils in 1889-'90 and 746 in 1890-'91; its expenses being \$52,493.65. The students at the State Agricultural College in 1891 numbered 425, and the expenses were \$154,010.62.

Charities.—The Soldiers' Orphans' Home and Home for Indigent Children at Davenport had 426 inmates at the close of the year, of whom 255 were boys and 171 girls. The Soldier's Home at Marshalltown contained about 460 inmates at the same date.

In the Hospital for the Insane at Mount Pleasant there were 759 patients on June 30, 1889; in the two years following 643 persons were admitted and 586 discharged, leaving 816 on June 30, 1891. The current expenses for 1889-'90 were \$133,569.14, and for 1890-'91, \$139,161.60.

The Hospital for the Insane at Independence contained 766 patients on June 30, 1889; 617 were admitted in the succeeding two years and 550 discharged, leaving 833 on June 30, 1891. For the year 1889-'90 the cost was \$131,649.53, and for 1890-'91, \$131,051.89.

In the Hospital for the Insane at Clarinda there were 242 patients on June 30, 1889; in the two years following 313 were admitted and 246 discharged, leaving 309 on June 30, 1891. The current expenses for the two years 1889-'91, were \$113,933.98.

The Institution for Feeble-minded Children at Glenwood contained 432 pupils at the beginning and 457 at the close of the biennial period ending June 30, 1891. The number admitted during this period was 194; discharged, 167. The expenditures for the two years were \$185,968.98.

At the College for the Blind at Vinton 171 pupils were enrolled in 1889-'90 and 184 in 1890-'91. The expenditures for the two years were \$61,996.84.

Agriculture.—The following estimate of the product of Iowa farms in 1891 is made by the officers of the State Agricultural Society upon the basis of data collected by the society:

ARTICLES.	Product.	Value.
Corn, bushels.....	885,031,598	\$100,509,479
Wheat, bushels.....	2,071,968	25,741,089
Oats, bushels.....	115,810,800	26,686,494
Rye, bushels.....	2,051,400	1,388,410
Barley, bushels.....	4,528,669	1,811,467
Buckwheat, bushels.....	414,000	276,000
Potatoes, Irish, bushels.....	25,620,350	5,880,273
Potatoes, sweet, bushels.....	207,900	207,900
Grass seeds (estimated).....	1,750,000
Flax seed, bushels.....	3,154,016	2,528,212
Hay, tame, tons.....	5,582,300	38,497,340
Hay, prairie (estimated).....	6,800,000
Broom corn, tons.....	8,480	270,570
Sorghum, gallons.....	2,092,485	904,718
Butter, pounds.....	168,690,715	83,738,148
Cheese, pounds.....	5,000,000	450,000
Wool.....	800,000
Horses.....	1,095,300	76,726,750
Mules.....	42,739	3,822,618
Sheep.....	452,000	1,480,750
Hogs.....	5,921,100	29,475,236
Milch cows.....	1,278,612	28,973,975
Other cattle.....	2,680,247	47,083,841
Orchard and vine product.....	3,000,000
Hive product.....	650,000
Poultry product.....	5,600,000
Small fruits.....	750,000
Timber.....	3,000,000
Miscellaneous.....	10,000,000

Prisons.—At the close of the year there were 425 convicts in the State Penitentiary at Fort Madison, and 273 in the penitentiary at Anamosa. Of the Fort Madison convicts, 305 were employed by contractors, who pay the State for their labor prices ranging from 45 to 50 cents a day. The convicts at Anamosa are constructing the prison buildings.

At the Industrial School on June 30 there were 401 boys and 117 girls. The department for boys is at Eldora, and that for girls at Mitchellville.

Militia.—At the close of the year the National Guard numbered 2,466 officers and enlisted men, organized into six infantry regiments of eight companies each. They are well equipped and ready for active duty.

Railroads.—On June 30 there were 33 railroads in operation in the State, with a mileage of 8,440 miles. For the year ending on that day the number of passengers carried was 6,669,659, and the number of tons of freight, 19,769,150. The total earnings were \$43,102,399, an increase over 1890 of \$1,808,970. The number of employes was 27,580, or 296 fewer than in 1890.

The injunction case which was brought against the Railroad Commissioners by the Burlington, Cedar Rapids, and Northern Railroad Company for the purpose of testing the validity of the "joint-rate" law, and which was pending in the State Supreme Court at the beginning of the year, was decided on Feb. 9 in favor of the defendants. The objections to the constitutionality of the law were all overruled by the majority of the court, and its provisions were declared valid. The regulation by the State of joint through rates was declared not to be obnoxious to any constitutional provision, either of the State or of the United States. From this conclusion two of the five judges dissented. No progress was made during the year in the suits brought by the commissioners against various railroad companies to enforce the joint rates established under the provisions of the above-mentioned law.

Banks.—In the biennial term ending June 30, 1891, the number of savings banks increased from 50 to 83, and their deposits from \$13,125,058.88 to \$20,821,495.07, while the number of State banks increased from 80 to 122, and their deposits from \$7,271,515.22 to \$12,960,211.60.

Coal.—Almost half of the State is underlaid with coal. It is produced in 26 counties, and is of a quality generally well adapted for steam and heating. No cannel or gas coal is found in the State. The quantity produced during the census year ending June 30, 1880, from 25 counties was 1,461,116 short tons, valued at \$2,507,453 at the mines. The wages paid aggregated \$1,554,696, and the average number of persons employed was 5,024. The total product of all grades during the calendar year 1889 was 4,061,704 short tons, valued at \$5,392,220. The average number of persons employed during the year was 9,198, and the amount of wages paid \$2,903,291.

Political.—On June 10 the Prohibitionists met in State convention at Des Moines and nominated the following ticket for State officers: For Governor, Isaac F. Gibson; for Lieutenant-Governor, J. G. Little; for Justice of the Supreme Court, Daniel B. Turney; for Superintendent of Public Instruction, Mrs. M. H. Dunham; for

Railroad Commissioner, C. T. Hart. Before the election, candidates Dunham and Hart were succeeded on the ticket by Mrs. E. G. Cline and B. V. Draper, respectively. A platform was adopted favoring strict prohibition, free and unlimited coinage of silver, the Australian ballot reform, a State constabulary to enforce prohibition, and the immediate abolition of the whole United States internal-revenue system.

The Democratic State convention met at Ottumwa on June 24, renominated Gov. Horace Boies, and selected the following persons as his associates on the party ticket: For Lieutenant-Governor, Samuel L. Bestow; for Justice of the Supreme Court, L. G. Kinne; for Superintendent of Public Instruction, J. P. Knoepfler; for Railroad Commissioner, Peter A. Dey. The platform favors the Australian ballot system, denounces trusts and the importation of contract labor, urges the election of United States Senators by direct vote of the people, declares in favor of liberal pension laws, denounces the McKinley bill and the appropriations of the last Congress, opposes the non-residential ownership of lands and foreign syndicate ownership of American industries, and demands the restoration of unearned railroad grants.

The following are also a part of the platform:

We demand the repeal of the prohibitory liquor law, and in the interests of true temperance we favor the passing of a carefully guarded license-tax law which shall provide for the issuance of licenses in towns, townships, and municipal corporations, and which shall provide that for each license an annual tax of \$600 be paid into the county treasury and such further tax as the town, township, or municipal corporation shall provide, the proceeds thereof to go to the use of such municipalities.

We reaffirm our adherence to the doctrine of the control and regulation of railroads as now enacted into a law.

We reiterate our demands of one year ago for the free coinage of silver, and that it be made full legal tender for all debts, public and private.

On July 1 the Republican Convention met at Cedar Rapids, and made the following nominations: For Governor, Hiram C. Wheeler; for Lieutenant-Governor, George Van Houten; for Justice of the Supreme Court, Silas M. Weaver; for Superintendent of Public Instruction, Henry Sabin (renominated); for Railroad Commissioner, Frank T. Campbell (renominated). The platform praises the last Congress for the redemption of its pledges as to the revision of the tariff in the interest of home industry and for its work in behalf of liberal pensions for soldiers, approves the coinage act, commends the policy looking to reciprocal trade, declares that the party may be trusted to promote a plan of reform, Australian or otherwise, tending to protect the purity of the ballot, commends the law intending to protect our country from the immigration of paupers and criminals from foreign lands, declares in favor of equal taxation, favors the passage of the Conger land bill, and favors a liberal appropriation for the World's Fair.

On the leading question at issue in the canvass the following declarations were made:

In the interests of true temperance, and under the laws of Iowa, enacted by the representatives of sovereign people, the saloon was made an outlaw in this State. We charge that the outlaw has had the pat-

ronage, counsel, and protection of the Democratic party; that the Democratic party, as it has won power, has nullified the law, defied the authority of the State and the expressed will of its people, and that now appeal is made to the electors of the whole State for approval of the lawless work. We recognize that the issue is law against defiance of law, subordination against insubordination, and this State of Iowa against the Democratic party. We recognize that the issue is between the interest of true temperance and freedom and the rule of an indiscriminate traffic. We renew our allegiance to the people of Iowa and submit to them the determination of the issue, promising that the control of the next Legislature by the Democratic party means State-wide license, and that the control of the next Legislature by the Republicans means continued opposition to the behests of the saloon power through the maintenance and enforcement of the law.

There was also a fourth ticket in the field, nominated by the People's party and containing the following names: For Governor, A. J. Westfall; for Lieutenant-Governor, Walter S. Scott; for Justice of the Supreme Court, T. F. Willis; for Superintendent of Public Instruction, C. W. Bean; for Railroad Commissioner, D. F. Rogers.

A long and interesting canvass followed these nominations. Strenuous efforts were made by the Republicans to regain control of the office of Governor, which they lost for the first time in 1890, but they were somewhat divided regarding the policy of defending the prohibitory law, while the Democrats were united in denouncing it as a failure and in demanding high license. The contest turned chiefly on local issues, of which the liquor question was by far the most prominent, and the result seemed to indicate a change in popular feeling in the State upon this question. At the November election the entire Democratic ticket was successful, Boies receiving 207,575 votes; Wheeler, 199,759; Westfall, 11,918; and Gibson, 962. The plurality of Bestow for Lieutenant-Governor was 4,242; of Kinne for Justice of the Supreme Court, 2,977; of Dey for Railroad Commissioner, 7,946; and of Knoepfler for Superintendent of Public Instruction, 829. As a result of the election for members of the General Assembly, the Senate of 1892 will contain 25 Democrats, 24 Republicans, and 1 adherent of the Union Labor party; the House will contain 53 Republicans, 46 Democrats, and 1 member of the People's party.

ITALY, a constitutional monarchy in southern Europe. The Parliament consists of a Senate composed of members nominated from among citizens distinguished in professional or public life, or who pay 3,000 lire in taxes per annum, and a House of Deputies numbering 508 members, who are elected on collective tickets of two or three for each department. The elective franchise is the right of all adult males who are able to read and write and pay 20 lire or francs in taxes. The reigning king is Umberto I, eldest son of Vittorio Emanuele, whom he succeeded on Jan. 9, 1878, when not quite thirty-four years old. The chief of the ministry is Francesco Crispi, who was first appointed on July 29, 1887, as the successor of Depretis. In the beginning of 1891 the Cabinet was constituted as follows: President of the Council, Minister of the Interior, and Minister of Foreign Affairs *ad interim*, Francesco Crispi; Minister of the Treasury and Minister of Finance *ad interim*, Giovanni Giolitti,

appointed March 9, 1890; Minister of Justice and of Ecclesiastical Affairs, Giuseppe Zanardelli, appointed April 4, 1887; Minister of War, Gen. Ettore Bertolè-Viale, appointed April 4, 1887; Minister of Marine, Benedetto Brin, appointed March 30, 1884; Minister of Commerce, Agriculture and Industry, Luigi Miele, appointed Dec. 31, 1888; Minister of Public Works, Gaspare Finali, appointed March 9, 1889; Minister of Posts and Telegraphs, Pietro Lacava, appointed May 10, 1889. The Ministry of Finance was subsequently intrusted to Signor Grimaldi.

Area and Population.—The area is 286,588 square kilometres, with a population estimated in the beginning of 1890 at 30,947,306. The average annual mortality in 1862-'66 was 30.06 per 1,000; it decreased to an average of 27.7 in 1883-'87, and to 25.6 in 1889. The mortality of children under a year old sank from 225 per 1,000 in 1868-'72 to 196.8 in 1888. A further improvement is found in the decline in endemic and infectious diseases. Nevertheless, in 1888 the deaths from infectious diseases in Italy were 27.6 per 1,000. In 1885 there were 6,401 communes in Italy in which not a single drain existed. The percentage of deaths from smallpox is higher in Italy than in any other European country, amounting in 1888 to 59.4 per 100,000. In 1888 vaccination was for the first time made compulsory in Italy. In 26 years the number of pupils attending elementary schools has risen from 1,000,000 to 2,300,000. The illiterates entering the army have fallen from 64 per cent. in 1866 to 42.9 per cent. in 1888. In Germany the proportion of illiterate recruits is 1.2 per cent., and in France 10 per cent. In higher Italian educational institutions the increase has been considerable. The more serious forms of crime show a tendency to decrease, although acts of violence are still more common in Italy than in most European countries. Italy stands highest in Europe in homicides and sanguinary assaults. The number of prisoners decreased from 80,000 in 1880 to 68,000 in 1888.

Finances.—The budget estimate of revenue for the year ending June 30, 1891, was 1,850,248,142 lire, and the estimate of expenditure was 1,872,133,271 lire, adding 21,885,129 lire to the deficits of the previous three years. The deficit of 1889-'90 was stated in the budget estimate at 56,509,078 lire; in 1888-'89 the actual excess of expenditure was 230,461,086 lire, and in 1887-'88 it was 57,151,120 lire. The public accounts divide receipts and expenditures into four categories: (1) effective receipts and expenditures; (2) movement of capital; (3) construction of railroads, etc.; (4) receipts and expenditures *d'ordine*. The fourth category embraces the working expenses of the state domains, interest on the funds for securing paper money, treasury deposits, and loans for pensions, etc., in which receipts balance expenditures, as also in the third category. The receipts and expenditures in the second and third categories are classed as extraordinary. The ordinary receipts in the first category amounted to 1,588,022,815 lire, and the extraordinary receipts to 19,986,962 lire, making a total of 1,603,009,477 lire. The total expenditure in this category was reckoned at 1,613,972,792 lire, leaving a deficit of 10,963,318 lire. In the second category the receipts were estimated at 32,160,589 lire, and ex-

penditures at 43,082,400 lire. The total on each side of the account in the third category was 145,745,958 lire, and in the fourth 69,332,118 lire. Adding the latter sum to the ordinary effective revenue, the total ordinary receipts are found to be 1,652,354,663 lire, while the ordinary expenditures amount to 1,579,911,314 lire, giving a surplus of 72,443,349 lire. The sum of the extraordinary receipts is 197,893,509 lire, and that of extraordinary disbursements 292,221,957 lire, showing a deficit of 94,328,448 lire. Of the extraordinary expenditure, 165,816,114 lire were for public works, 32,461,600 lire for the army, and 13,200,000 lire for the navy. Of the extraordinary revenue, 11,886,580 lire were raised by the sale of property and 16,530,000 lire by new loans.

The revised budget for 1890-'91 showed a deficit of 45,000,000 lire, the previous estimate having made no provision for a falling off of over 20,000,000 lire in the revenue. This deficit was reduced by economies to 36,000,000 lire. The expenditure on public works was fixed at 194,251,698 lire; the ordinary expenditure for war at 259,620,402, and the extraordinary at 48,186,120 lire; the ordinary naval expenditure at 108,797,418, the extraordinary at 14,659,376 lire.

The interest on the consolidated debt, 5 per cent., except a small portion, amounted to 449,092,139 in 1889-'90. The interest on the debts separately inscribed, and on other terminable debts, varying from 3 to 6 per cent., was 21,178,408 lire for the former and 92,375,752 lire for the various obligations not in the separate book, while the sinking fund laid aside for both amounted to 1,340,353 lire for the year. The interest on treasury bonds and other floating debt was 13,113,635 lire, which, with the annuity of 3,225,000 lire set aside for the Pope, makes the total interest on the public debt 578,984,932 lire. The capital of the debt amounted to 11,241,000,000 lire, which is equal to \$75 *per capita*. The interest is about \$3.50 a head, and amounts to four sevenths of the total value of exports of domestic products. The property owned by the state is estimated at 6,506,404,645 lire, consisting of 526,479,530 lire of assets in the treasury, 707,111,479 lire in loans, real estate, etc., 3,398,800,658 lire in property of a reproductive character, 1,676,993,668 lire in buildings and other property used in the service of the state, and 197,019,310 lire worth of material in use in the army and navy. The revenue from state property in 1888-'89 was 68,214,394 lire from railroads, 4,368,306 lire from ecclesiastical property, and 12,304,339 lire from other resources, making 84,887,099 lire in all. The aggregate revenue of the communes of Italy in 1889 was 640,340,410 lire, and the revenue of the provinces 118,625,599 lire. The debt of the communes was 883,138,464 lire, and that of the provinces 172,409,115 lire at the beginning of 1886.

The Army.—The permanent army in 1890 numbered 14,211 officers and 248,036 men of all arms in active service, and 11,842 officers and 575,103 men on unlimited leave of absence. The mobile militia had 3,776 officers and 368,510 men on the rolls, and the territorial militia 5,224 officers and 1,625,621 men. This gives an aggregate nominal strength of 2,852,323 fighting men as the official estimate. The African corps, which forms a part of the standing army, consisted in

1890 of 109 officers and 3,180 men. The native levies in Africa numbered 152 officers, of whom 104 were Italians, and 5,295 men, including 108 Italian under-officers.

The Navy.—The Italian navy, which is counted the third strongest in the world, had seven great ironclads of from 11,000 to 13,898 tons, built between 1876 and 1888, all capable of steaming from 15 to 18½ knots an hour, armed with the heaviest ordnance, and having from 18 to 22 inches of armor over the vulnerable parts. An eighth, the "Sicilia," of 13,268 tons displacement, was launched at Venice on July 6, 1891. Two others, the "Re Umberto," of equal size, and a still larger one, the "Sardegna," were nearing completion. There were five armored battle ships of older type and under 5,000 tons displacement, a torpedo ram of 3,020 tons, three other second-class armor-clads of 3,530 tons, and seven under 3,000 tons, while eight more were building or waiting for engines or armament.

Commerce and Production.—Although the financial position of the Government has grown steadily worse, and the banking and currency system, disorganized by the acceptance of inflated values and shadowy securities that have since collapsed, now engages the anxious attention of statesmen, national wealth has accumulated in Italy faster, it is believed, than in France; and in spite of the depression that has succeeded, the era of speculation, it is still growing at the rate of 1,000,000,000 francs a year. The paper money issued by the six banks of issue was officially ascertained to be 1,102,900,000 lire on June 30, 1891, which is 200,000,000 lire in excess of the amount authorized by law. The excess of this circulation over the metallic reserve of 429,100,000 lire is, to a considerable extent, based on loans made on property now unsalable during the progress of the building mania. The illegal excess of the emissions is believed by experts to be nearer 500,000,000 lire. The amount officially established was legalized by the law of June 30, 1891, authorizing the banks to issue notes to the amount of four times their capital, on condition that one third of the circulation shall be protected by a metallic reserve. The notes of the other banks, though legal tender, are not regarded with the same confidence as the state notes. The circulation is kept on a gold basis, notwithstanding the loss of the French trade, partly compensated for by increased exports to Germany and other countries, and by the constant influx of gold spent by tourists and foreign residents, estimated at 500,000,000 lire a year, which exceeds the annual deficiency in the balance of trade of 325,000,000 lire for the past two years. The produce of the six great crops (wheat, maize, other cereals, rice, oil, and wine) increased from about 97,000,000 hectolitres in 1860 to 134,000,000 in 1890. The product of the mining industry in 1871 was valued at 42,000,000 lire, and gave employment to 30,000 men; in 1889 the value was 53,500,000 lire, and the number of men employed was 49,000. The pay of operatives in all branches of industry increased greatly between 1862 and 1869, except that of women in silk factories, owing to the crisis in the trade, and the workmen in the sulphur mines, owing to decreased market value. While a laborer in 1862 had to work

one hundred and ninety-five hours in order to earn the price of 100 kilos of wheat, in 1889 he would have to work only ninety-five hours.

The total value of the special imports in 1889 was 1,391,154,246 lire, and that of the special or domestic exports 950,645,760 lire. The imports of the precious metals were 49,612,800 lire; exports, 55,058,100 lire. The export trade shows a partial recovery from the sudden drop from 1,028,231,726 lire in 1886 and 1,002,136,762 lire in 1887 to 891,934,539 lire in 1888. The total for 1889 is almost exactly the same as that for 1885. The cultivated area in Italy is about 36 per cent. of the total superficies, while 12 per cent. is under forest and 13 per cent. is waste. Over 69 per cent. of the people are dependent on agriculture. The value of the chief articles of agricultural produce in 1889 was estimated at 2,889,943,399 lire, in which sum wine stands for 985,369,170 lire; wheat, 680,281,122 lire; olive oil, 332,625,150 lire; Indian corn, 276,545,999 lire; silk cocoons, 133,278,709 lire; rice, 103,105,700 lire; acid fruits, 72,967,712 lire; legumes, 71,353,790 lire; chestnuts, 65,533,641 lire. The other products contained in the list are hemp, oats, potatoes, barley, flax, rye, and tobacco. The imports of cattle in 1889 were 42,896, and the exports 26,282 head; 54,830 hogs were exported and 12,002 imported; and of sheep, 49,508 were exported and 7,381 imported. The woolen industry required 95,991 quintals of imported wool, while 17,722 quintals were exported. The yield of silk cocoons was 75,678,000 pounds, against 96,786,173 pounds in 1888. The value of animal produce, including cocoons, milk, wool, meat, etc., was 1,180,000,000 lire; and the produce of the forests, including fire-wood, charcoal, timber, and other products, with the exception of chestnuts, was 88,000,000 lire. The sulphur industry represents half the total value of mineral products, and employs more than half the labor engaged in mining. Next in importance are the zinc and lead mines. Almost equal to the sulphur mines in the number of men employed, and quite so in the value of their produce, are the marble quarries. The growth of Italian industry is shown in the increase of the coal and coke imports from 516,000 tons in 1867 to 4,000,000 tons in 1890. A large proportion of the agricultural products, such as wine, silk, and fruits, is raised for exports. The trade with the United States in Italian products has expanded much faster than the trade in American products in Italy, which are so burdened with the profits of intermediate English and German traders that they can not compete with European manufactures. The Italians are so well disposed toward American goods that Manchester sheetings, German machinery and implements, and Russian petroleum are spuriously labeled as American. The chief imports from the United States are raw cotton, tobacco, resins, and lard. In addition to these a market could be found for lumber, coal, grain and flour, candles, clocks and watches, machinery, edge tools, machine-made articles, cotton piece goods and yarns, and canned fish, meats, and vegetables. The prohibitory decree against the importation of American pork products was removed in October, 1891.

Navigation.—The number of vessels in the registered merchant navy on Jan. 1, 1890, was

6,721, of 824,474 tons; of which 667, of 481,439 tons, were engaged in ocean commerce; 387, of 140,260 tons, in long coasting voyages; and 5,667, of 202,775 tons, in the ordinary coasting trade and in the fisheries. Of the first class 75, of 123,122 tons, of the second 43, of 31,330 tons, and of the third 161, of 27,797 tons, were steamers. The number of Italian vessels entered at Italian ports in 1889 was 107,188, of 13,312,182 tons, and the number of foreign vessels was 9,602, of 7,594,133 tons.

Railroads.—A large part of the railroad system is the property of the state. In 1885 all the state lines were leased to private companies on contracts running sixty years, though terminable at the end of twenty or of forty years. The net, which comprised 2,561 kilometres of railroads in 1861, had grown in 1891 to 13,068 kilometres, exclusive of 2,262 kilometres of steam tramways. The lines are the Mediterranean, with a length of 4,770 kilometres; the Adriatic, 5,177 kilometres; the Sicilian, 714 kilometres; the Sardinian, 759 kilometres; others, 1,648 kilometres. The receipts in 1887 amounted to 236,266,276 lire, of which 95,132,681 lire were from passengers. The railroads, built to a large extent for political objects connected with the unification of Italy, and extended beyond the present needs for the sake of satisfying the various provinces, have been one of the main causes of the disorder in the public finances. The ordinary expenditure on public works in 1889-'90 was 29,496,155 lire, and the extraordinary 164,755,543 lire, to which must be added the interest on the railroad bonds, amounting to 138,000,000 lire. The debt bears interest at 4 per cent., while the returns, deducting working expenses, were only 1'41 per cent. on the Mediterranean line, 1'63 per cent. on the Adriatic, and on the Sicilian and Sardinian lines there was a large net loss on the working expenses.

Change of Ministry.—Signor Crispi obtained the general support of the country in the elections of September, 1890, on the programme of the continuance of the triple alliance and existing armaments without new taxation, and the rectification of the budget by retrenchments. In the previous three years the ministry had effected nearly 100,000,000 lire of economy in the expenses. The diminution of receipts by 20,000,000 lire made the deficit in 1890-'91 45,000,000 lire. In the corrected budget for 1891-'92 revenue was reckoned at 16,500,000 lire less than in the first estimate. Minister Giolitti, by cutting down expenses, reduced the deficit for that year to 38,000,000 lire, and this was further reduced by Signor Grimaldi to 29,000,000 lire. This trenched so close upon the necessary requirements of the Government that Signor Crispi despaired of being able to go further without destroying the efficiency of the army and of the public services. As he was unable to carry out his pledge, the conditions for a crisis were present in spite of the great majority that he commanded. His Conservative supporters demanded a larger share in the Government, and if it should accord it he would lose followers on the left of the Chamber, with whom he was more closely affiliated. In his financial statement Signor Grimaldi applied for increased duties on certain articles of import and a new excise duty on the manufacture of alcohol. The measure

was opposed by the Extreme Left, and was criticised by members of the Right, who suggested a further paring down of the military and naval budgets. Signor Bonghi, of the Conservative Opposition, who had been a member of Minghetti's Cabinet, taunted Signor Crispi with following a policy that was disorganizing at home and humiliating abroad. Goaded by these strictures, the Premier declared that the financial policy of the Government of the Right had been no better, and that the Minghetti Cabinet, which was defeated over the budget of 1876, had pursued a servile policy abroad. This provoked loud protests, and Signor Finali, the Minister of Public Works, left the ministerial bench. Signor Crispi went on to say that the country demanded the adoption of the bill, which would show that Italy desired a strong Government, not one that was "in a chronic state of doubt and uncertainty." Amid the uproar that followed, the reporter of the budget committee, Signor Luzatti, who had made a speech in favor of the bill, announced that he would give his vote against the Government, and took a seat with the Opposition. A motion to proceed to the order of the day was proposed and accepted by the Government after Signor Crispi had disclaimed any intention of offending his supporters on the Right, and the Government was defeated by 186 votes against 123. The Premier then gave notice of his resignation, which he tendered to King Umberto the same day, Jan. 31, 1891.

The unlooked-for defeat of the Crispi Administration was erroneously supposed in France to signify the reversal of Crispi's policy and the end of the triple alliance. The King found it difficult to find a successor to Crispi. The Liberals held a meeting with a view to the reconstitution of the historical Left and the formation of a purely Liberal ministry that would have the support of the 45 members of the Extreme Left, and could count on a majority of 300 against 200. This combination failed because Signor Zanardelli and Signor Nicotera could not compose their differences, and Zanardelli, to whom the King first applied, advised the recall of Crispi. He could not return because there was no prospect of a change in the conditions that led to his retirement. Signor Bertole Viale, and Signor Brin were consulted in succession, but neither was able to form a ministry. The Right demanded economies in the budget amounting to 40,000,000 lire. The Marquis di Rudini was called upon, and he came to an understanding with Signor Nicotera and Signor Saracco, who joined him in an attempt to get together a Cabinet pledged to the desired savings. Not being able to agree on the choice of their colleagues and the division of the offices, the combination was weakened by the withdrawal of Signor Saracco. The new ministry, as constituted finally on Feb. 9, was a coalition not only of Liberal and Conservative groups, but of both friends and opponents of Crispi's home and foreign policy. It was composed of the following members: President of the Council and Minister of Foreign Affairs, the Marquis di Rudini; Minister of the Interior, Signor Nicotera; Minister of Public Works, Signor Branca; Minister of Finance, Signor Colombo; Minister of War, Gen. Pelloux; Minister of Agriculture, Signor Chimirri; Min-

ister of the Treasury, Signor Luzatti; Minister of Public Instruction, Signor Villari.

The House of Deputies, which had adjourned on the resignation of Signor Crispi, was called together to hear the new Premier's statement on Feb. 14. He said that the Cabinet would conquer or fall under the standard of retrenchment. It proposed to effect an equilibrium in the budget by cutting down all estimates, including those of war, the marine, and the African department, and would not impose fresh burdens on the tax payers. A bill would be introduced dealing with banks of issue, but no bills of a political character would be brought forward. The foreign policy would be to maintain stanchly the league of peace, and at the same time dispel doubt and mistrust that had arisen in the relations with France. The change that the Marquis di Rudini had advocated from *scrutin de liste* to the single-district system was excluded from the programme. The bills of the late Administration, imposing duties on alcohol and heavy oils, abolishing certain prefectures, and reforming administrative districts, were withdrawn. The Parliament was adjourned several times to allow the new Government to make their financial plans. Signor Zanardelli led the Opposition; the Extreme Left, including Republicans, Socialists, and Irredentists, by whose votes the Crispi ministry had been overthrown, gave a qualified support to the Government; and Signor Crispi maintained a neutral and expectant attitude, waiting for the development of the financial scheme. Retrenchment in all departments was found to be impracticable, because in some economy had already been carried to the limit of efficiency. Legislation instituted by the late Government for the purpose of making certain taxes more productive was gone on with, and was expected to yield an increase of about 10,000,000 lire in the revenue. In presenting the revised budget, on March 21, Signor Luzatti stated that the deficit for 1890-'91 would reach 70,000,000 lire, and that the floating debt was 450,000,000 lire. For the coming year the Government proposed to restrict the area occupied in Africa to the triangle of Mas-sowah, Keren, and Asmara, and to reduce the expenditure for the maintenance of the Italian colony in Africa from 18,000,000 to 6,000,000 or 7,000,000 lire. Salaries were cut down in the consular service and other departments. In discussing the revenue estimates for 1891-'92, on June 24, the Minister of the Treasury promised that the expected deficit was only 5,424,000 lire, which would be cleared away by increased receipts and fresh economies. In August the deficit was reckoned by friends of the Government at 20,000,000 lire, and by the Opposition at thrice that figure. The Italian schools in the East, in which 80,000 children were instructed, were suppressed. Railroad building was stopped for the future, except on lines which were contracted for, which would require 30,000,000 lire. The Marquis di Rudini, in November, expressed the intention of covering railroad expenditure by the ordinary revenue. He expected to include pensions in the ordinary budget. A prospective deficit of 21,000,000 lire in 1892-'93 would be avoided by means of fresh measures, but the efficiency of the army and navy would

not be impaired. If he could not place the state in a position to dispense with borrowing, he said he would resign. A saving of 68,000,000 lire had been effected in the budget of 1891-'92, and 40,000,000 lire more would be saved in the budget for 1892-'93.

The Rudini ministry accepted the foreign policy of Crispi with all its obligations and renewed the triple alliance, notwithstanding the growing discontent with the burdens that it imposes. The new commercial treaties with Germany and Austria-Hungary, and the one with Switzerland that was still under discussion in the last months of the year, held out prospects of an improvement in the economical situation, by an increase in the exports of agricultural products. In negotiating the treaties the Government took care not to injure the manufacturing interests. In reference to the rumored adhesion of Great Britain to the triple alliance, the Marquis di Rudini answered an interpellation in the Senate on June 29 by saying that Italy sought to have understandings and agreements with powers animated with a desire to preserve peace and maintain the existing balance of power, and especially the *status quo* in the Mediterranean. Some years before there had been an exchange of views between Italy and Great Britain, and both countries had proposed to co-operate for the maintenance of peace and the *status quo*. An agreement with Germany and Austria had already been arrived at for the renewal of the treaties of alliance that would lapse in 1892. These alliances, he declared, firmly and sincerely maintained, "will assure the peace of Europe for a long time to come." At an interview between M. de Giers and King Umberto and his ministers, at Monza, on Oct. 14, the Russian minister was reported to have announced and explained the Franco-Russian *rapprochement*, saying that France while isolated was subject to anxieties, freed from which she would cease to be an element of uneasiness for other countries; as for Russia, the idea of leaning on so powerful a state was dictated as much by state reasons as by the mutual inclinations of the two nations; France can count on Russia so long as she is neither aggressive nor provoking. The Czar desired to learn the pacific sentiments of King Umberto. Between Russia and Italy the only points of difference that could arise were concerning the Dardanelles question, already settled, and the Bulgarian question, which the Czar had no desire to stir up so long as Europe enjoyed the present tranquillity.

The Roman Question.—The change of ministers removed some of the minor causes of friction that had arisen from Crispi's aggressive attitude toward the Church without altering the essential features of the ecclesiastical policy of the Government. The projects concerning divorce and the deposition of bishops were abandoned. The policy of the new Government the Marquis di Rudini summed up in the words, "No concession, no provocation, no condonation of affronts to the civil power." The tension caused by the renewal of the triple alliance and the new commercial treaties hastened the partial *rapprochement* between the Vatican and the Freycinet ministry in France. The fortunes of the monarchical parties had fallen so low and the parties

that had allied themselves with the Church in France had become so weak and disorganized, that the diplomatists of the Vatican thought it expedient to accept and approve the republic in France, and in doing so they calculated on receiving some support from France for the claims of the Papacy to Rome. The present Pontiff, while ostensibly clinging to the pretensions advanced by Pius IX to the full restoration of the temporal power, has permitted compromise propositions to be put forward under his auspices. By removing the ban of *non expedit* imposed on Italian Clericals by his predecessor and himself, by which they are not permitted to vote in national elections or to be elected to Parliament, he can change the balance of power in party politics and bring in a Government of the Right that would not be so purely hostile to Papal pretensions as the Left and the Right of the Chamber are equally, so long as the rule of electoral abstention is kept in force. As a preliminary condition, it is necessary to secure the acceptance of his compromise scheme by a strong enough combination of foreign governments, either the German and Austrian or the French and Russian, or all of them. This scheme has been supposed by some to involve the substitution of an international guarantee of the powers for the Italian law of guarantees of May 13, 1871, the removal of the Government and royal court to some other city, and the conversion of Rome into a free city. If this plan can not be carried out, it is supposed that Leo X would accept an arrangement by which the court of the Vatican and that of the Quirinal can be held in Rome at different periods of the year. A large section of the Clericals, comprising a few of the more Liberal of the prelates and many laymen of the provincial aristocracy, are in favor of participating in Italian politics on the simple condition that the *status quo* represented by the law of guarantees shall receive an international character. A part of the irreconcilable element, old ecclesiastics and nobles, look forward to the downfall of the united monarchy, and the establishment in its stead of a federal republic in which the territorial sovereignty of the Pope will find its natural place. The Papal question was brought before the public view in a practical shape by an untoward incident springing from the accentuation of the national jealousy between the French and the Italians. A vast number of pilgrims, societies of French Catholic working men and others, went to Rome in the beginning of October, 1891, to do homage to the Pope and receive his benediction. A party of these, on Oct. 2., insulted the memory of Vittore Emanuele by spitting on the visitors' register at his tomb in the Pantheon, and shouting perdition to him and to King Umberto and long life to the Pope. Three very young men, Michel Trufe, a student, Maurice Grégoire, a lawyer, and Eugène Choncarry, a journalist, were arrested for the outrage. The affair caused a great commotion in Rome. The bands of pilgrims were mobbed, thousands of young men paraded the streets cheering the King, public meetings were held and anti-French speeches delivered, great numbers of citizens went to the Pantheon to inscribe their names in the visitors' book at the tomb. The police prevented serious disorders, and the Government

authorities, seeking to minimize the international character of the incident, simply conducted the arrested pilgrims to the frontier, instead of prosecuting them for the desecration of a tomb and for committing "an act tending to diminish the independence of the state and to destroy its unity." In his speech delivered at Milan on Nov. 9, the Premier said:

We have established in our midst the Papacy, which sometimes assumes a threatening attitude; but its sphere of action is limited to the exercise of spiritual power, not only by the law, which will not be lightly contravened, but also by almost unanimous consent even on the part of those who deem themselves most religious. The country's ecclesiastical policy has become traditional, and the honor and strength of the Kingdom of Italy will be scrupulously maintained. The deplorable incidents brought about by a few short-sighted persons will not make us deviate from that policy. Not for so slight a matter will we raise questions regarding the Constitution of the kingdom. Not for that will we tamper with the immovable statutory law of guarantees, the wisdom and expediency of which have been proved by long experience. Italy will not fail in the respect which she owes to the liberty of conscience and religious toleration which it is our boast to profess.

Labor Disturbance.—The working men's demonstrations on May 1 were attended with more excitement in Italy than elsewhere. Strong guards of soldiers were posted in the chief cities at points where they could aid the police in preserving order. At Rome an open-air meeting of 5,000 persons was held in the Piazza Santa Croce. Several Deputies were seated on the platform, and most of the speeches were moderate. Suddenly, while a working man named Vincenzo Landi was making a speech of a more violent character than the rest, the cavalymen stationed in the square were ordered to mount. The crowd began to run away when the Socialist Deputy Amilcare Cipriani shouted, "We must act if we are not cowards." A pistol shot was fired, and the next moment a hail of stones was poured down on the heads of the advancing soldiers, who charged on a trot and dispersed the crowd, killing some and injuring several hundred, among them the Deputies Cipriani and Barzillai, who were arrested with 300 or 400 more persons. Among the police and military 10 men were wounded. In Florence the police attempted to break up a meeting on account of an incendiary speech, and when the mob began to stone shop windows the streets were cleared by a cavalry charge. In Naples two large gatherings were dispersed by the police and the orators arrested. On the day following, a strike began among the workmen connected with the building trades in Rome. On May 4 a fire, supposed to be incendiary, broke out in the barracks of the carbiniers at Rome. The Government was sharply assailed in the Chamber for the action of the authorities on May day and for the arrests that continued to be made. The attack was led by Deputy Imbriani, who was supported by all the Radicals, and several stormy discussions of the subject took place.

The Mala Vita.—A secret society, organized for criminal purposes, of the kind that formerly existed in southern Italy, but were thought to have been stamped out, was discovered early in 1891, and in April 179 persons were tried at Bari as being concerned in the conspiracy. The so-

ciety was called the Mala Vita. Its existence was betrayed by some of the members. A person wishing to become a member had to be introduced to the chief, who would instruct another associate to institute a rigorous inquiry as to whether the applicant was worthy. All these negotiations were conducted in thieves' slang. There were three grades of members, each possessing a separate head—the Camorristes, the Picciotti, and the Giovanotti, or novices. When the admission of a new associate had been resolved upon, a meeting of the section in which he was to be enrolled was convened. He took the oath with one foot in an open grave, the other being attached to a chain, and swore to abandon father, mother, wife, children, and all that he held dear in order to work out the objects of the association. Humility and self-abnegation were imposed upon the novice by the terms of the oath. No one was allowed to join the organization who had been a gendarme, a policeman, or a custom-house officer. The principal object of the society appears to have been brigandage. The booty obtained in predatory expeditions and the ransoms derived from the capture of unlucky travelers were thrown into a common stock, a certain proportion being, however, specially set apart for division among the Camorristes, whose duty it was, within eight days, to divide the remainder among all the members of the organization, an exceptionally large share being claimed by the chief. Breaches of the society's rules and disobedience to the orders of a supreme officer were punished by torture and death, the executioners being selected by lot. In the event of any person thus selected failing to carry out the society's decrees, he was visited with the same penalty. When a member was promoted to the superior grade and became a Camorriste, he had to undergo a ceremony similar to that which accompanied his first admission to the society, with certain additions, such as a mock combat with daggers. He was also obliged to have designs or hieroglyphics tattooed upon his body, by which he could at any time be identified. Many of the prisoners were women. The outcome of the trial was that 175 prisoners out of 179 were convicted as members of the criminal association. Extraordinary precautions were taken to protect the witnesses for the prosecution, who received threatening letters from the families of the accused, denouncing them as objects of the vengeance of the society. The police afterward unearthed an affiliated organization at Taranto, and many arrests were made.

Peace Congress at Rome.—An International Peace Congress was opened on Nov. 12, by ex-Minister Bonghi, its president. The five questions on the programme, with the answers given, were as follow:

(1) Pedagogical reforms. The principles of peace shall be propagated in the schools. We will try to infuse the students of Europe and America with a spirit of respect and consideration for foreign nations. (2) Peace and disarmament as questions of political and social economy. The main speaker on this subject was Capt. Siccardi, and his argument was that the maintenance of excessive armaments causes war, and does not avert it. The congress urges upon peace societies to agitate the subject of disarmament.

ment, and to call for the establishment of courts of arbitration to precede disarmament. A resolution was also adopted to urge arbitration for the settlement of disputes between employers and employes. (3) The establishment of an international peace bureau. Bern was selected as the seat of such a bureau, as a central place of information concerning the labors of the various peace societies. The bureau is not to exercise any authority, nor to control the labors of any peace society. Hodgson Pratt, Frederick Bajer, Ducommun, Mazzolini, and Love were elected to compose the bureau. (4) The establishment of a yearly conference for the purpose of securing a communion between the universities of Europe and America, particularly with respect to all questions of arbitration. The congress voted for a yearly conference of teachers and professors, and for unions of the students to meet at the various universities in turn. (5) The means whereby the public press may be influenced. The public press is too often the cause of a nation's quarrels. It was voted that the peace societies can not attain any lasting results so long as public opinion does not strive against national hatred and war ideas. The press has been too willing to encourage national prejudices. The next congress will be convened at Bern in August, 1892.

Colonies.—Italy possesses and actually occupies in Africa the country around Massowah, the sea-port giving access to Abyssinia, with Keren and Asmara, having a total area of 3,100 square miles; the Dahlak Archipelago, with an area of 420 square miles; and also the territory of As-

sab Bay on the Red Sea, opposite Aden, 548 square miles in extent. A protectorate is claimed over the Empire of Abyssinia, and, by an arrangement with Great Britain, Somaliland, as far southward as the limit of the British East Africa Company's territory, is recognized as lying within the Italian sphere of interest, which extends inland to the borders of the Egyptian Soudan. Italy has the right to occupy the town and district of Kassala, if strategic considerations require such a step, but has agreed to surrender the place to Egypt if the latter should wish to resume her rule in the district. In this region the line of demarkation between the Italian sphere and that of England runs from Ras Kasar on the Red Sea, through Bisha, which is between Kassala and Keren, to Famaki. The Italian Government has decided for the present to restrict military operations to the protection of Keren, Asmara, and Massowah. Degiac Mangascia, who is recognized as ruler of Tigre under the Emperor Menelek, was approached with a view to establishing good neighborly relations. A diplomatic representative was accredited to Degiac Makonnen, the Emperor's representative in Harrar, with whom friendly relations were established already. Overtures were made to Menelek for peaceful and cordial relations, based on assurances that Italy had no design to raise internal difficulties for him or to weaken his independence. Gen. Gandolfi, governor of the Italian colony of Erythria, was specially appointed to establish a civil administration, and to separate the duties of the governor from those of the military commandant.

J

JAPAN, a country in the north Pacific Ocean, east of China, between longitude east 156° 32' and 122° 45' and latitude north 50° 56' and 24° 6'. The most eastern portion of the empire is the island of Shimushu in the province of Chishima, and the most western Yonakunishima in the Riu Kiu archipelago. The portion most northerly is the island of Araitoshima in Chishima, and that most southerly is Hatemashima in Riu Kiu. The Russian term Kurile and the Chinese name Liu Kiu or Loo Choo are no longer known in Japan, and both these archipelagos at the extreme ends of the empire are integral parts of Japan. The Government is a constitutional monarchy, at the head of which is the Emperor Mutsuhito, born Nov. 3, 1852, and officially the one hundred and twenty-third of the line of mikados. The Empress, Haruko, was born May 28, 1850, and declared Empress of Japan on the day of her marriage to the Emperor, Feb. 9, 1869. No children have been born of this union, but by the imperial concubines there are four sons and seven daughters, the last born Aug. 7, 1891, all of whom have died, except Yoshihito, born Aug. 31, 1879, proclaimed heir to the throne Aug. 31, 1887, and elected Crown Prince Nov. 3, 1889. There are ten imperial houses or families, from which heirs to the throne may be taken, and which furnish the princes who sit in the upper house of the Diet. Their total allowance

out of the civil list is 212,000 yen, the silver yen being worth 80 cents. The civil list for 1890-'91 required to be taken from the treasury 3,214,381 yen.

Area and Population.—The geodetical, trigonometrical, and geological survey of the whole empire is being steadily carried on. The planimetric calculations for five provinces have been brought to completion. The measurements corrected to Dec. 31, 1889, showed the coast line of Hondo, the main island, to be 4,882 miles, and of the whole empire to be 17,575 miles. The area of Hondo is 91,819 square miles, and of the empire 155,962 square miles. The number of islands under official knowledge or inspection is nearly 4,000, but of these only 520 have a coast line of 1 *ri*, or 2.5 miles, or are inhabited, or serve for light-houses or other guides to navigation. For meteorological purposes the empire is divided into 7 divisions, in which are 31 well-equipped stations of observation and record. Politically, there are 85 provinces, 804 counties, or shires, 42 large cities (on communal organization of 1888), 1,111 towns, and 3,374 villages. The taxes are levied on private property as follows: Rice fields, 110,213 acres; ordinary meadow or arable land, 92,048 acres; land occupied by buildings, 12,737 acres; forests, 292,238 acres; other lands, sea-shore, springs, waste, etc., 42,669 acres; total, 552,424 acres. The property thus assessed is divided into 85,440,000 separate lots

or parcels, held by 6,035,000 proprietors, though in a small minority of cases owners hold several properties in different districts. The number of prefectures or local governments having executive officers appointed by the Emperor, local assemblies, courts, etc., is 47; subprefects, 567; towns having mayors, 11,687; the prefectures having an average population of 852,596 persons, and the subprefectures of 70,000.

According to the census returns compiled by the Department of Home Affairs, there were in Japan on Dec. 31, 1890, 7,806,052 houses and 40,453,461 inhabitants—20,431,997 males and 20,022,364 females. Of these, 3,768 were nobles, 589 being heads of families and 3,179 members of families; 2,008,641 were of the *shizoku* or gentry class, of whom 432,044 were heads and 1,516,597 members of families; 38,441,052 were of the *heimin* or commons, 7,762,322 being heads and 30,679,987 members of families. Foundlings not yet adopted numbered 4,725, and prisoners unregistered as citizens 1,018. Compared with the census of 1889, these figures show a decrease of 34,820 houses and an increase of 381,441 persons. Married couples numbered 7,420,341, and single persons 25,612,779, of whom 13,010,756 were males and 12,602,023 were females. Of births during the year there were 1,145,374, the boys numbering 586,121 and the girls 559,253, with 91,752 babes still-born. There were 823,718 deaths, 425,059 being of males and 398,659 of females. Divorces show no sign of decrease, there being about the usual average of one divorce to every three marriages, or 109,088 to 325,141. During the year 1889 19,160 Japanese lived abroad. Of persons living between ninety and one hundred years of age there were 7,394; between one hundred and one hundred and seven, 177; the women outnumbering the men in the proportion of 5,264 to 2,307. On Dec. 31, 1889, there were 9,062 foreigners residing in Japan, 1,701 being English, 889 Americans, 550 Germans, 335 French, 108 Swiss, 4,975 Chinese. Of the total, 90 were in the diplomatic service; 185 employed by the Japanese Government; 580 in special occupations, as teachers, missionaries, etc.; and 8,207 in other employments.

Finances.—The approximate budget for the fiscal year 1892-'93, as given by the Government's official organ in Tokio, shows an estimated total expenditure of 91,806,809 yen (as compared with 77,012,252 yen in the previous fiscal year). Of this sum the Crown receives 3,000,000; Foreign Office, 679,910,000; Home Department, 8,952,296; treasury, 2,957,848; army, 13,154,199; navy, 5,568,510; justice, 3,555,145; education, 1,021,413; agriculture and commerce, 1,132,605; communications, 5,104,985; total for ordinary expenditure, 71,372,221, as compared with 67,785,432 in the previous year. In extraordinary expenditure the chief items are: For construction, repairs in the Home Department, 4,470,970 yen; in war, construction of forts, 2,875,000; in navy, 6,645,121 for cruisers and men-of-war, with 1,000,000 for beginning an iron foundry; in education, for new construction, 800,000. Total of extraordinary expenditure, 20,434,588 yen, as compared with 9,226,819 yen of the previous year. These estimates were made before the great earthquakes of Oct. 28, 1891, which required an immediate outlay by the Government of 5,500,000 yen.

According to the official digest of 1890-'91, the total revenue was 78,198,910 yen, raised as follows: From land, 53,530,378; imposts, 1,053,631; saké, 15,184,537; tobacco, 1,825,183; stamps, 615,680; banks and societies, 402,169; internal revenue, 3,539,387; customs, 4,175,542; licenses, 1,776,834; profit on Government enterprises, 8,342,061; miscellaneous, 644,240; interest on funds, 1,108,268. The expenditures for 1890-'91 amounted to 70,515,570 yen of ordinary, and 14,388,081 yen of extraordinary expenses, the total being 84,903,651 yen. The public debt was 255,445,566 yen (less than 6,000,000 yen being to foreigners), or, counting the paper money in circulation, which amounts to 40,065,256, the total indebtedness was 295,510,822, most of it bearing interest at 5 per cent. In 1881 the public money expended in behalf of sufferers by earthquakes, floods, fire, pestilence, etc., amounted to 2,387,957 yen, the appropriations steadily increasing to 18,655,338 in 1888-'89. There are 196 national banks in Japan, one of them having a capital of 17,826,100 yen, another of 10,000,000, another of 4,500,000, and three of over 1,000,000. The capitals, reserves, and dividends of these banks are published semi-annually, from which in the first half of 1891, as compared with the same period in 1890, we find an increase of 2,860,000 yen in capital and a decrease of 265,801 in profits, an increase of 79,420 in dividends, which average 5.752 per 100, a decrease of 186 sen ($\frac{1}{5}$ of a cent). The total coinage of the mint at Osaka for the year ending March 31, 1891, amounted to 48,473,934 pieces of the real or nominal value of 11,001,843 yen; of these, 177,200 pieces, worth 886,000, were gold; 14,952,207 pieces, worth 8,448,616, were silver; and 33,344,527, worth 1,667,227, were nickel. The number of medals struck in 1891 amounted to 19,054 pieces. Since the foundation of the mint, in 1870, the total income has been 20,930,246 yen; expenditure, 11,701,214; net profit, 9,229,031; the amount of bullion imported into the mint being: Gold, 3,635,751 ounces (at 900 standard); silver, 93,923,077 ounces (at 900 and 800 standard); nickel, 12,440,978 ounces; and copper, 327,484,545 ounces; and of coins struck: Gold, 12,637,151, weighing 3,346,368 ounces, worth 62,450,403 yen; silver, 278,448,684, weighing 90,581,384 ounces, worth 104,844,931 yen; nickel, 75,363,738, weighing 11,302,179 ounces, worth 3,768,186 yen; copper, 1,203,922,113, weighing 248,816,420, worth 12,418,057 yen; total, 1,570,371,686 pieces, weighing 390,046,351 ounces, worth 183,481,057 yen.

Army and Navy.—The organization of the Japanese army differs somewhat from that of European forces. A regiment of infantry consists of three battalions of four companies each. On a peace footing a company is made up of 5 officers, 27 non-commissioned officers, and 160 privates—192 men of all ranks. On a war footing 80 privates are added, making a total of 272 men. In peace a regiment of infantry consists in all of 2,347 men and twelve horses, but in war the number of privates is 2,880. In cavalry, the respective figures for peace and war are 159 and 189 men in each company. In artillery a battery will have 148 men and 4 guns in the one case, and 158 men and 6 guns in the other. The field artillery consists of 74-centimetre guns of an Italian model, manufactured at the arsenal at

Osaka. At present only six foreigners are employed in the Japanese military service. The chief arsenal, at Koishikawa, in Tokio, equipped with English machinery, turns out 100 rifles and 30,000 cartridges (or 70,000 if necessary) daily. The Murata rifle, invented by a Japanese colonel, is in use, and the powder, which produces little smoke and makes little noise, is an invention of the Japanese Artillery Committee. By conscription and organization the total effective strength of the Japanese army is 209,326. The actual number of men under arms in the seven military districts, including the ordinary garrison of 9,210, together with the Imperial Guard of 5,591, always in Tokio, is 58,803. Military schools and gendarmes furnish 4,286; reserves and territorial army, 146,212; central staff, 2,014; making in all: staff officers, 450; commissioned officers, 3,360; non-commissioned officers, 10,391; rank and file, 193,804. The proportion of conscripts per 1,000 inhabitants is 16.94. Of the conscripts themselves, only 4.23 have been taken for actual service, while 40.59 of the total number were entirely exempted. The Japanese navy is organized like that of Great Britain, and is officered and manned entirely by natives. In 1889 there were 32 ships of war of 49,616 tons displacement and of 52,481 horse-power, mounting 182 guns, and manned by 5,889 men of all grades. A majority of the war ships and transports have been built in Japan, but the steel vessels of the first class in England. Fifteen torpedo boats and several large steel men-of-war are building in Europe for the Japanese navy, which has now a sea-going squadron of 6 steel and iron ships armed with ordnance of high power. Until 1884 service in the navy was wholly by volunteers; at present the proportion of conscripts to volunteers is 7 to 20. The total *personnel* of the naval establishment is 15,585. The total annual cost of the army and navy is 26.52 per cent. of the national expenditure.

The Imperial Diet.—The Upper and Lower Houses of the Imperial Diet were opened in due form in November, 1890, and held sessions during ninety-nine days, adjourning March 8, 1891. On the 20th of January the edifices, especially built for the purpose and magnificently furnished in modern style, were consumed by fire. The cause alleged was the electric-lighting apparatus, which the Tokio Electric-lighting Company deny. The bills that passed both houses were: Postponement of the execution of the new commercial code, supplementary rules of special export ports, law relating to the appropriations for new war ships, law of weights and measures, revision of term for collection of land tax, and reduction of the budget for the fiscal year 1891. The chief debates and most exciting interest centered upon the proposal of the budget committee of the Diet for a reduction, amounting to 9,000,000 yen of the Government's figures. After a deadlock between Cabinet and Diet, and under an implied threat of dissolution, the Diet yielded, but not until a reduction from 72,000,000 to about 65,000,000 had been acceded to by the Cabinet.

Since the closing of the Diet there has been a steady growth of party organization on lines of opposition to the present Cabinet, with the determination to overthrow it if possible. The

key to the situation is this: Representative government is established in form, but not in fact, nor will it be so long as the Cabinet ministers are responsible only to the Emperor and not to the people. "The Irresponsible Cabinet" is the nickname freely applied to the Government. On the assembling of the Diet for its second session, Nov. 26, 1891, the opposition to the Cabinet at once took pronounced form. The budget committee of the Diet recommended a reduction of the estimates to the amount of 7,942,748 yen. With a large standing army, and expenses of army and navy put in the "fixed expenditures" impregnable to popular criticism, "government by party," for which the majority of the representatives agitate, is not possible. The crisis was precipitated March 25, when, after a prolonged series of votes and resolutions carried against the Government, the Cabinet ministers met at the official residence of the Minister President and unanimously voted to dissolve the Lower and prorogue the Upper House. The Imperial Rescript was issued the same evening. No date is yet (Jan. 30) fixed for the new elections.

Earthquake.—Besides inundations causing great loss, the most destructive earthquake known to Japan since 1854 took place in central Japan at 6:30 A. M., Oct. 28. In a few minutes 8,000 people were killed or buried under the ruins of their houses, which quickly caught fire. Over 10,000 persons were reported wounded, many of them fatally, 90,000 houses were destroyed, whole villages and towns ruined, river banks broken, bridges twisted like writhing serpents, railways spoiled for miles, and public works destroyed. Rice fields rose and fell like waves of the ocean, houses were in some instances turned upside down, and groves of trees moved several rods. About 40,000 square miles were visited with instant and appalling severity, the greatest disasters being limited to the rich valleys of Aichi and Gifu, noted centers of porcelain manufacture. The earthquake storm lasted many days, so that at times it was impossible to walk or stand. In one day 700 minor shocks were counted, and in one month 1,700. Private aid, though liberal, being unequal to the emergency, the Government, without waiting for the Diet, appropriated 2,500,000 yen to the relief of the sufferers, and since the dissolution of the Diet has devoted nearly 4,000,000 yen to repair the public works and restore the industries of the desolated region.

Minor Events.—Among the deaths of the year are those of Prince Sanjo Saneyoshi, a leader of the revolution of 1868 and a noble of the highest rank, Feb. 22; the Hon. John F. Swift, the American minister plenipotentiary, March 10; Yoshida Kiyonari, Vice-Minister of Foreign Affairs and formerly the Japanese minister at Washington; and Nakamura Masanawo, Senator, educator, author, and translator of the Constitution of the United States. At Otsu, near Kioto, the Russian Crown Prince was suddenly attacked by an assassin, Tsuda Sanzo, a bigoted member of the police force, who feared Russian designs against Japan. The quick movement of two *jin-riki-sha* men defeated the attempt, and barely saved the Prince's life, the assassin's sword gashing his head in an ugly manner. An almost incredible political excitement followed. Theatres

were closed, and 10,000 telegrams of condolence were received by the Prince. The assassin died in prison, and no interruption of the friendly relations of Japan and Russia has followed.

Trade and Industry.—The tables of exports and imports show that the resources of the country are being steadily developed, and the imports are increasing over exports. In 1880 the exports were 29,373,400 yen, and the imports 41,101,937, showing an excess of imports over exports of 11,728,537. In 1889 the exports amounted to 70,060,706, imports 66,103,767. The half-yearly statistics from Jan. 1 to July 1, 1891, show that the exports have exceeded the imports by 7,500,000. There are now in Japan 36 mills for spinning cotton yarn, with 377,970 spindles, employing 17,248 persons. An attempt made by a foreigner to obtain a patent under Japanese laws was met by the decision that the granting of a patent is an executive act within the power of a minister of the department, and that he can not be forced to grant one to a foreigner. An appeal having been lodged, decision was again given against the foreign firm.

Morals, Education, and Religion.—The large Greek Church cathedral on Suruga Dai, Tokio, with buildings occupied by the Russian missionaries, whose work in Japan has resulted in 18,000 conversions, was dedicated with great ceremony. The old standards of public morality, excellent under feudalism, being somewhat altered under the new Western ideas of individuality and responsibility upon which Western laws, government, and progress are established. The Emperor, for the first time in the history of Japan, issued, in December, 1890, a rescript of twenty lines inculcating moral duties. The influence of this act has been very wide. Loyalty to the Emperor and obedience to parents is made the supreme duty. It was hung up in the schools with the Emperor's photograph, and teachers and students made obeisance to it, the Christians in some instances refusing to bow, and in others explaining that it was deference to a ruler but not worship of a god, as the Mikado still is in the eye of Japanese law. The total number of the school population of Japan is 6,920,345, but of these only 3,277,489, or less than half, are in school. There has been a reaction against female education, two thirds of the absentees from schools or non-attendants being girls. There are 530 middle schools for males and 1 for females. The number of female students in the special schools is 2,599. The Government is hostile to private schools, as tending to breed the *soshi* or turbulent and lawless young men who figure so prominently in contemporary politics, and even draw forth the special executive action of the Central Government. Only 21 students were sent abroad in 1890. Besides the agitation on treaty revision, economy, and education, the Minister of Home Affairs promulgated his "Instruction to Buddhist Priests," rebuking them for their "disgraceful struggle for worldly honors and profits." There are in Japan, of Shintoists, 8 heads of sects, 63,519 priests or preachers, and 965 students of the *cultus*; of Buddhists, 37 heads of sects, 52,293 priest-preachers, 39,673 simple priests, and 13,642 students of the *cultus*. The Buddhists sustain about a dozen journals and 300 minor

periodicals. Of temples, there are, 193,631 Shinto and 71,973 Buddhist. About 600 Christian missionaries of all forms of the faith labor in Japan, and the nominal Christian population is estimated at 250,000. There are 92 Christian churches and chapels in Tokio. The tendency of Japanese Christianity is less in the direction of doctrinal reception or development, and more directly toward reformation of morals, abolition of licensed prostitution, temperance, Sabbath keeping, purification of the home, moral elevation of family life, abolition of concubinage and polygamy, and lessening of divorce.

JEWS. The situation in Russia has been the question of the year. The persecutions endured by its Jewish inhabitants have continued with no prospect of cessation, despite the general expressions of disapproval from nearly every country on the globe—from Legislature, Senate, public gatherings, political organizations, the press, pulpit, and platform. All the recognized agencies of civilized intercourse seem powerless to restrain the severity of anti-Jewish enactments. The figure of Baron de Hirsch rises above the shadows of the time as the personification of philanthropy, and his magnificent provisions for the suffering Jews, which have spurred on active agencies in Europe and America in their behalf, form a bright chapter in the history of the year. The interest that Baron de Hirsch evinced in the welfare of his brethren, which was illustrated in his gift of three millions for the agricultural and technical training of Jewish youths in Austrian Galicia, culminated in his deed of trust, whose preamble was written Jan. 22, 1891, whereby the capital of \$2,400,000 was remitted to the Baron de Hirsch fund of New York for aiding exiles from Russia and Roumania. For some months previously about \$10,000 monthly had been sent for that purpose, and expended in educational work, transportation, the purchase of tools, and temporary relief. With the capital on hand and property invested, early in March, the Hirsch fund was enabled to continue and develop its lines of activity. According to the deed of trust, the corporation is to embrace among its objects the following:

1. Loans to emigrants from Russia or Roumania, actual agriculturists, settlers within the United States, upon real or chattel security.
2. Provision for the transportation of emigrants, selected (after their arrival at an American port) with reference to their age, character, and capacity to places where it is expected the conditions of the labor market or the residence of friends will tend to make them self-supporting.
3. Provision for training emigrants in a handicraft, and contributing to their support while learning such handicraft, and for furnishing the necessary tools and implements and other assistance to enable them to earn a livelihood.
4. Provision for improved mechanical training for adults and youths, emigrants and their children, whereby persons of industry and capacity may acquire some remunerative employment, either by the payment of apprenticeship or tuition fees, or the instruction of adults and minors in trade schools or otherwise, with contributions for temporary support.
5. Provision for instruction in the English language and in the duties and obligations of life and citizenship in the United States and for technical and trade education and the establishment and subvention of special schools, workshops, and other suitable agencies for promoting and maintaining such instruction.

6. Provision for instruction in agricultural work and improved methods of farming, and for aiding settlers with tools, and implements and the practical supervision of such instruction, conducted upon suitable tracts of land and in necessary buildings.

7. Co-operation with established agencies in various sections of the United States, whose duty it shall be in whole or in part to furnish aid or relief and education to needy and deserving applicants coming within the classes designated herein.

8. Contributions toward the maintenance of individuals and families, selected by such corporation or corporations, while temporarily awaiting work or when settled in the new homes in which they may be established.

9. Such other and further modes of relief and such other and further contributions to education and in such departments of knowledge as the said trustees or their successors or said corporations shall from time to time decide.

In conformity with the provision of the deed, which authorizes the capital of \$2,400,000 to be expended for "acquiring and improving land, allotting farm holdings, erecting and maintaining dwellings for the occupancy of families of Hebrew emigrants from Russia and Roumania, erecting and maintaining schools and other necessary buildings for the promotion of education and for manual and agricultural training," a large number of farmers have been aided in New England, Kansas, New Jersey, and elsewhere with loans bearing interest at 5 per cent. Dairy and truck farms have proved most successful, while small fruit and berries have been cultivated profitably. An agricultural settlement has been formed at Woodbine, N. J., near extensive factories not far from Cape May and Philadelphia. Similar colonies are projected in Pennsylvania, Minnesota, Texas, and New Mexico. In addition, classes are conducted in manual training in connection with the Hebrew Technical Institute of New York, and a school for young and old immigrants established, preparing them for the public schools, while transportation is furnished to emigrants who leave the crowded seaboard cities for the interior.

Almost simultaneously with the help given for American colonization, Baron de Hirsch launched his plan for carrying out the emigration of Jews from Russia. On Sept. 10, the Jewish Colonization Association was formed in London. The trust fund of £2,000,000 is divided into 20,000 shares of £100 each, of which Baron de Hirsch has taken 19,990. Among the objects for which the company is established are:

To assist and promote the emigration of Jews from any parts of Europe or Asia, and principally from countries in which they may for the time being be subjected to any special taxes or political or other disabilities, to any other parts of the world, and to form and establish colonies in various parts of North and South America and other countries for agricultural, commercial, and other purposes.

To purchase and acquire any territories, lands, or other property, or interests in or rights over territories, lands, or other property, in any parts of the world.

To establish commercial, agricultural, and other settlements in any territories or lands so acquired, except Europe, and to develop them by clearing, draining, fencing, etc.

To construct and maintain roads, tramways, railways, bridges, harbors, reservoirs, water courses, wharves, embankments, fortifications, telegraphs,

telephones, mills, factories, stores, synagogues, and places of recreation.

To establish emigration agencies in Europe, Asia, and other parts of the world, and to construct, hire, and equip vessels for the transport of the colonists.

To make or procure grants of land, concessions of mining and other rights, or other privileges to the colonists.

In close relation to Baron de Hirsch's plans was the visit of Arnold White to Russia during the year, whose report confirmed the published statements as to the wretched condition of the Jews. In particular he referred to the strong physique of the Jews engaged in agriculture, while he deplored the weak constitutions of town residents, due to the overcrowding, hard labor, and excessive poverty. He wrote also that the lamentable condition of the children, if known to the Czar, would bring about a softening of the laws against the Jews. Later in the year Harold Frederic spent several months in Russia, and his indictments of the Russian Government appeared in the "New York Times." Meanwhile the active work of distributing the Russian exiles has begun, and agencies are established in the chief European seaports. The appeal of the English committee resulted in the receipt of \$80,000 to Jan. 1, 1892, many Christians being among the donors. The first colony of 156 immigrants has been sent to the Argentine Republic, where Baron de Hirsch has bought 700,000 acres, while Dr. Friedman has undertaken an expedition to Midian to examine its fitness for the exiles. Turkey, while friendly, will not permit any emigration *en masse* in Palestine. The highest circles in Berlin, Vienna, and Amsterdam unite in raising funds for the refugees, to transport them to more hospitable climes.

Among events of special interest was the appointment of Luigi Luzzatti as minister of the Italian treasury; the election of John Philippon as member of the Swedish Upper House of Parliament; the appointment of Signor Malvano as Secretary-general of the Italian Ministry of Foreign Affairs; the election of A. F. K. Hartogh and J. A. Levy as members of the Dutch Parliament; the appointment of Ney Elias as British consul-general in Persia; the election to the Austrian Reichsrath of Freiherr von Oppenheim and Leopold Polak. In Australia, Hon. Julien E. Salomons was knighted and appointed member of Privy Council of South Australia; J. Sternberg elected member of Legislative Council of Victoria; and S. S. Myers, Mayor of North Dunedin, New Zealand. In England, Sidney Stern was elected member of Parliament for Stowmarket, and H. S. Leon for Northern Bucks, while Gustav Nathan was knighted. On June 23 Rev. Dr. H. Adler was installed chief rabbi of the Jews of Great Britain, and on March 26 M. Dreyfous was elected chief rabbi of Paris. The centenary of Jewish emancipation in France was celebrated on Sept. 27. Cardinal Manning was presented with an address from the Jews of England on the occasion of the jubilee of his ordination.

The record for the year in the United States is largely a chronicle of events connected with the Russian refugees, who have arrived at the rate of 8,000 a month. To develop the work of

reception, transportation, and distribution, a special organization was formed, and agencies established in many cities in the interior. The sympathy of all is assured, with the exception of the labor unions, whose opposition is bitter. On the general appeal of the New York committee, issued in October, about \$90,000 was received, several Christians contributing. The report of the New York United Hebrew Charities contains interesting figures on the subject of the immigrants. Records at the Barge Office show that, for the year ending Sept. 30, 1891, 62,574 Jewish immigrants landed in this city, of whom nearly 40,000 came after June. Their nationalities were as follow: Austrians, 6,450; Danes, 29; Dutch, 9; English, 98; French, 19; Germans, 864; Roumanians, 874; Russians, 54,194; Swedes, 24; Turks, 13—26,891 men, 16,393 women, 19,290 children; 195 were returned to Europe by the Government. Total, 62,574. There remained in the city 46,029; the rest left for other cities, but returned. About 70 families are provided weekly with work at distant mills; in a few weeks, 161 families, representing 892 persons, were found mill and factory work in 19 States, applications coming in from all quarters for desirable help. Owing to the outlay thus entailed, the expenses of the charities have increased to \$150,000 yearly, the Hirsch fund contributing to the transportation account. During the year ending Nov. 1 8,045 new applications were passed upon, and 3,581 that had been previously examined and were reinvestigated; 1,043 persons were aided with transient relief, 4,553 with transportation, 5,194 with employment, making a total of 39,916 persons.

Despite the strain caused by the increased immigration, the Jews of the United States show continued activity in benevolent and educational work, in what may be termed home missions. Philadelphia has erected a new edifice for the Hebrew Education Society; New York, a Hebrew Educational Institute in the heart of the overcrowded down-town district; Chicago, a manual training school for children of the refugees. New temples have been built or are in process of erection in New York, Philadelphia, Brooklyn, Baltimore, Salt Lake City, and elsewhere.

The Jewish question has been a prolific subject of discussion abroad and at home. The English reviews have contained steady references, while Baron de Hirsch and Goldwin Smith's articles in the "North American" and Baron de Hirsch's and M. Leroy Beaulieu's in "The Forum" have been of special interest. The latter author had a brilliant series of papers on the Jews and anti-Semitism in the "Revue des Deux Mondes" of Feb. 15, May 1, and July 15.

S. Schechter was appointed Reader of Talmudic Literature in Cambridge University; Dr. G. Deutsch, professor in the Cincinnati Hebrew Union College; Dr. Morris Loeb, Professor of Chemistry in the University of the City of New York; Dr. H. M. Leipziger, an assistant superintendent of the New York city public schools. S. W. Rosendale was elected Attorney-General of New York. Thanksgiving was marked by union services of synagogue and church in several cities. Among the first donations to relieve the Russian famine was \$1,400 from the synagogue in Sacramento. The condition of the over-

crowded Jewish district, due to the increased immigration, in the lower part of New York city, gave rise to much discussion. In an interview with a representative of the "Jewish Messenger," under date of Sept. 11, the New York Board of Health made various suggestions, urging better quarters up town and distribution in the rural district. The departure of Jesse Seligman for Europe was made the occasion of a public banquet in his honor on Oct. 1, at which \$30,000 was subscribed for the Russian refugees. The Emigration Commissioners sent to Europe by the United States have returned.

JOHNSTON, JOSEPH EGGLESTON, an American soldier, born at Longwood, near Farmville, Va., Feb. 3, 1809; died in Washington, D. C., March 21, 1891. His grandfather, Peter Johnston, a Scotchman, settled on James river

JOSEPH EGGLESTON JOHNSTON.

in 1727, and afterward gave to Hampden Sidney College the land on which its buildings were erected. Joseph's father (also named Peter) served with credit in the Revolutionary War, became a lawyer, and in 1809 was made a judge. He was a member of the General Assembly of Virginia, and in 1798-'99 was its Speaker. His wife was Mary Wood, a niece of Patrick Henry. Joseph was graduated at the Military Academy, West Point, in 1829, ranking thirteenth in a class of 46. Among his classmates were Gens. Robert E. Lee, of the Confederate, and Ormsby M. Mitchell, of the National service. Immediately after graduation he was commissioned a second lieutenant in the Fourth Artillery, and assigned to garrison duty at Fort Columbus, N. Y. He was stationed at Fort Monroe, Va., in 1830-'31, took part in the Black Hawk expedition in 1832, was in garrison at Charleston, S. C., in 1832-'33, at Fort Monroe again in 1833-'34, at Fort Madison, N. C., in 1834, and performed topographical duty in 1834-'35. He was promoted to first lieutenant in July, 1836, and was an aide to Gen. Winfield Scott in the Seminole War, but resigned on May 31, 1837, and became a civil engineer. On July 7, 1838, he was appointed first lieutenant of topographical engineers, and brevetted captain for gallantry in the war in Florida. A story is told of his service in that campaign to the effect that he was with a reconnoitering party that fell into an ambuscade, and nearly all the officers were killed or wounded; whereupon he took command, conducted an orderly retreat of 7 miles, repelled the enemy, and carried off the wounded. He was struck by a ball in the forehead, and 30 bullets passed through his clothing.

He had charge of the improvement of Black river, N. Y., in 1838-'39, of the Sault Ste. Marie in 1840, of the boundary survey between the United States and Texas in 1841, of the harbors on Lake Erie the same year, and of the Topographical Bureau at Washington in 1842. He served again in Florida in 1842-'43, and the next year assisted in surveying the boundary line between the United States and the British provinces. He was engaged in the coast survey in 1844-'46, and in the latter year was promoted to captain in the engineer corps.

During the Mexican War he served with the army of Gen. Scott, being in action at Vera Cruz, Cerro Gordo, Contreras, Churubusco, Molino del Rey, Chapultepec, and the City of Mexico. He was wounded at Cerro Gordo, and again at Chapultepec, where he was the first to plant a regimental color on the citadel. For his gallant services in these actions he was brevetted colonel, April 12, 1847. He was mustered out as lieutenant-colonel of volunteers Aug. 28, 1848, but was reinstated by act of Congress as captain of engineers. He was chief of topographical engineers in the Department of Texas in 1848-'53, and was in charge of the Western river improvements in 1853-'55. From that date till 1860 he was a part of the time on garrison duty, part in active service in Kansas (during the struggle there between Free-State men and Slave-State men), part on special duty at Washington, and part with the Utah expedition as acting inspector-general. He was made lieutenant-colonel of the First Cavalry in March, 1855, and on June 28, 1860, was promoted to brigadier-general and made quartermaster-general of the army, with headquarters at Washington. On April 22, 1861, he resigned this commission and returned to Virginia. He was the highest in rank in the United States army of all the officers who left it to take service in the Confederacy.

He was immediately commissioned major-general of Virginia volunteers, and engaged in organizing the troops that were pouring into Richmond. Two weeks later he was called to Montgomery, Ala., and made a brigadier-general in the army of the Confederate States, and assigned to the command of Harper's Ferry. Here he had about 7,000 men. But he protested against the policy of keeping a force at Harper's Ferry, a place that has no strategic importance, and in June he was authorized to abandon it and move toward Winchester. On the 16th of May the Confederate Congress had passed a bill creating the rank of full general and providing for five appointees. An earlier act of that Congress had provided that "in all cases of officers who have resigned, or who may within six months tender their resignations, from the army of the United States, and who have been or may be appointed to original vacancies in the army of the Confederate States, the commissions issued shall bear one and the same date, so that the relative rank of officers of each grade shall be determined by their former commissions in the United States army." In August, when Mr. Davis made the appointments under this law, instead of giving the first rank to Gen. Joseph E. Johnston (who had been a brigadier-general in the United States army), he gave it to Samuel Cooper (who had been a col-

onel), the second to Albert Sidney Johnston (who had been a colonel), the third to Robert E. Lee (who had been a lieutenant-colonel), the fourth to Joseph E. Johnston, and the fifth to G. T. Beauregard (who had been a captain). J. E. Johnston's commission was made to date from July 4. Gen. Johnston says in his "Narrative": "Information of these nominations and their confirmation came to me at the same time. On receiving it, I wrote to the President [Jefferson Davis] such a statement as the preceding, and also expressed my sense of the wrong done me. But, in order that sense of injury might not betray me into the use of language improper from an officer to the President, I laid aside the letter for two days, and then examined it dispassionately, I believe, and was confident that what it contained was not improper to be said by a soldier to the President, nor improperly said. The letter was therefore dispatched. It is said that it irritated him greatly, and that his irritation was freely expressed. The animosity against me that he is known to have entertained ever since was attributed by my acquaintances in public life in Richmond to this letter."

Gen. Johnston's force in the Shenandoah valley was opposed by a National force under Gen. Robert Patterson, and when in July Gen. McDowell was sent forward with an army to attack the Confederate army commanded by Gen. Beauregard at Manassas, Patterson was relied upon to prevent Johnston from going to the help of Beauregard. But Johnston, masking his movement by means of cavalry, went with a large part of his force by rail to the help of Beauregard, and arrived with part of his men while the battle of Bull Run (July 21, 1861) was in progress. He left Beauregard in command of the troops engaged, while he assumed command of the whole field and hurried forward the reinforcements. These came just in time to turn the scale of the contest. The National army, after an obstinate battle, was defeated, a large part of it becoming demoralized, and streamed back in confusion toward Washington. Gen. Johnston says: "If the tactics of the Federals had been equal to their strategy we should have been beaten. If, instead of being brought into action in detail, their troops had been formed in two lines with a proper reserve, and had assailed Bee and Jackson in that order, the two Southern brigades must have been swept from the field in a few minutes, or enveloped. Gen. McDowell would have made such a formation, probably, had he not greatly underestimated the strength of his enemy." Gen. Johnston was severely criticised at the South for not closely following the defeated army, and capturing the city of Washington. On this point he says:

If the tone of the press indicated public opinion and feeling in the South, my failure to capture Washington received strong and general condemnation. Many erroneously attributed it to the President's prohibition [Mr. Davis reached the field near the close of the battle]; but he gave no orders, and expressed neither wish nor opinion on the subject, that ever came to my knowledge. Considering the relative strength of the belligerents on the field, the Southern people could not reasonably have expected greater results from their victory than those accomplished: the defeat of the invasion of Virginia, and the preservation of the capital of the Confederacy. All the military condi-

tions, we knew, forbade an attempt on Washington. The Confederate army was more disorganized by victory than that of the United States by defeat. The Southern volunteers believed that the objects of the war had been accomplished by their victory, and that they had achieved all that their country required of them. Many, therefore, in ignorance of their military obligations, left the army—not to return. Some hastened home to exhibit the trophies picked up on the field; others left their regiments without ceremony to attend to wounded friends, frequently accompanying them to hospitals in distant towns. Such were the reports of general and staff officers and railroad officials. Exaggerated ideas of the victory, prevailing among our troops, cost us more men than the Federal army lost by defeat.

Gen. Johnston's difficulties with the Confederate Administration began early, and were quite serious. On the 1st of March, 1862, he was obliged to write directly to President Davis and remonstrate against the conduct of the Secretary of War, Hon. Judah P. Benjamin, who was granting leaves of absence and furloughs without consulting the commanding officers, and to such an extent as to impair the discipline of the army. In March he fell back with his forces to the line of the Rappahannock, in order to be nearer Richmond and better able to defend it, whatever route the National army under Gen. McClellan might choose in moving against that city. When that army was removed by water to Fort Monroe and chose the approach up the peninsula, Gen. Johnston, in a council of war with Mr. Davis, Gen. Lee, and other commanders, proposed that all the available Confederate forces in Georgia and the Carolinas and those at Norfolk, Va., be united with those on the peninsula and those on the Rappahannock, to make as large an army as possible to meet the invasion, and that this army be held near Richmond to await the advance of the enemy, instead of opposing his progress up the peninsula. Johnston says:

In the discussion that followed, Gen. Randolph, who had been a naval officer, objected to the plan proposed, because it included at least the temporary abandonment of Norfolk, which would involve the probable loss of the materials for many vessels-of-war contained in the navy-yard there. Gen. Lee opposed it, because he thought that the withdrawal from South Carolina and Georgia of any considerable number of troops would expose the important seaports of Charleston and Savannah to the danger of capture. He thought, too, that the peninsula had excellent fields of battle for a small army contending with a great one, and that we should for that reason make the contest with McClellan's army there. Gen. Longstreet took little part, which I attributed to his deafness. I maintained that all to be accomplished, by any success attainable on the peninsula, would be to delay the enemy two or three weeks in his march to Richmond, for the reasons already given; and that success would soon give us back everything temporarily abandoned to achieve it, and would be decisive of the war, as well as of the campaign. The President announced his decision in favor of Gen. Lee's opinion, and directed that Smith's and Longstreet's divisions should join the Army of the Peninsula, and ordered me to go there and take command, the Departments of Norfolk and the Peninsula being added to that of Northern Virginia.

Gen. Johnston assumed his new command on April 17, having about 53,000 men, and proceeded to strengthen the defensive works across the peninsula at Yorktown. McClellan constructed

elaborate works for the reduction of these, and when he was nearly ready to open his batteries Johnston fell back, May 3-4, to Williamsburg. In the afternoon of the 4th the rear guard of the Confederate army and the advance guard of the National came into collision; both sides were re-enforced, and the skirmish was developed into a battle on the 5th, which resulted in the withdrawal of the Confederates after heavy fighting, leaving 400 of their wounded in Williamsburg, and taking with them about that number of prisoners. The National loss was about 2,200, the Confederate about 1,800. McClellan moved slowly up the peninsula, establishing a base of supplies at White House, on the Pamunkey, and thence westward toward Richmond. The chief natural obstacle in his path was the Chickahominy river with its connecting swamps; and this runs in such a direction that he could not place his whole army on the south or right bank of it without imperiling his communications with his base. He threw his left wing across that stream, and with his right fought at Mechanicsville and Hanover Junction, in order to make the way clear for a re-enforcement of 40,000 men under Gen. McDowell to join him. But McDowell was called away to meet a Confederate force that was moving down the Shenandoah valley, and Johnston seized this opportunity to attack the isolated left wing, which was within six miles of the Confederate capital. He was favored by a heavy rain, which in the night of May 30 swelled the river and swept away some of the bridges. He supposed that all were impassable; but one remained, and the veteran Gen. Sumner, anticipating the battle, had his corps drawn up ready to cross as soon as he should receive the command to do so. Johnston attacked on the 31st, and his men almost surprised the enemy in their half-finished intrenchments; but they lost heavily before the works, and succeeded in carrying them only when a large detachment made a *détour* and took them in flank. Johnston's plan of battle depended mainly upon thrusting in a force between McClellan's detached left wing and the river: to strike that wing on its right flank, double it up, and at the same time cut it off from all connection with the main army. He began this movement, but it was frustrated by Sumner, whose corps crossed the river promptly on a single frail bridge, met the Confederate flanking force, and after hard fighting drove it off and cleared the ground. At the close of this battle—which bears the double name of Fair Oaks and Seven Pines, and which resulted in a National loss of over 5,000 men and a Confederate loss of nearly 7,000—Gen. Johnston received two wounds, a musket shot in the shoulder and a blow in the breast from a fragment of shell. He was carried from the field in an ambulance, and was not able to return to duty till autumn. Two days later the command of the forces about Richmond was given to Gen. Robert E. Lee; and Johnston, in his "Narrative," takes pains to point out the fact that as soon as he lost command of the Army of Virginia his suggestion was adopted, and the concentration of forces which had been denied to him was given to his successor. He criticises his own action at Seven Pines, saying that he brought on the battle too soon by one day; for twenty-four hours later

the river would have been higher and he would have received a re-enforcement of 8,000 men, who without his knowledge were on their way to him from the south.

On the 12th of November Gen. Johnston reported for duty at the War Office in Richmond, and on the 24th he was assigned to a command in the Mississippi valley, including the forces under Gens. Bragg, Pemberton, and Kirby Smith. Here he repeated his advice to concentrate forces, and form a large army in order to attack the army under Gen. Grant; but again his advice was unheeded. He proposed that the force near Little Rock, Ark., commanded by Gen. Holmes, which was not confronted by an enemy, should be brought across the Mississippi and united with that under Gen. Pemberton, while Bragg's should be held within co-operating distance, and that Grant should be vigorously attacked. "As our troops are now distributed," he added, "Vicksburg is in danger." During the winter and spring there were various movements in Gen. Johnston's department, with none of which was he intimately connected, because of the scattered condition of his forces. The principal events were the battle of Murfreesborough or Stone river (Dec. 31 and Jan. 2), fought by Gen. Bragg against Gen. Rosecrans, which is generally considered a drawn battle, though Rosecrans was left in possession of the field; the movements of Grant toward Vicksburg; the ascent of the Mississippi by National war vessels, which ran past the Confederate batteries, and the descent of ironclad gunboats. When Grant had crossed to the west side of the Mississippi, marched south as far as Bruinsburg, and recrossed to the east side in order to attack Vicksburg in the rear, Gen. Johnston (then in Tennessee) received orders from Richmond, May 9, to go at once to Mississippi and take chief command there. He says: "I had been prevented, by the orders of the Administration, from giving my personal attention to military affairs in Mississippi at any time since the 22d of January." He set out at once, and arrived at Jackson in the evening of the 13th, finding there about 12,000 men subject to his orders. He telegraphed to his Government that he was too late, but would do what he could. Grant's army, which had brushed away a small Confederate force at Raymond, advanced promptly on Jackson, reaching that place on the 14th, and attacking Johnston's. The latter, with a loss of about 800 men, mostly prisoners, evacuated the city, after burning most of his supplies. Grant destroyed the factories and a portion of the railroad, and then turned westward, fought Pemberton at Champion Hills and at the Big Black river, and drove him within the defenses of Vicksburg. Johnston had sent orders to Pemberton to abandon the defense of Vicksburg, and save his army, but Pemberton replied, May 18: "On the receipt of your communication, I immediately assembled a council of war. . . . The opinion was unanimously expressed that it was impossible to withdraw the army from this position with such *morale* and material as to be of further use to the Confederacy. . . . I have decided to hold Vicksburg as long as possible, with the firm hope that the Government may yet be able to assist me in keeping this obstruction to the enemy's free navigation of the Mississippi river.

I still conceive it to be the most important point in the Confederacy." Gen. Johnston wrote in reply: "I am trying to gather a force which may relieve you. Hold out." By the 3d of June he had received re-enforcements to the extent of, perhaps, 15,000 men, but he made no direct movement to relieve Vicksburg, for which he gives these reasons:

My forces, not equal to a third of the Federal army, were almost without artillery and field transportation, and deficient in ammunition for all arms; and could not, therefore, have been moved, with any hope of success, against that powerful army, already protected by lines of counter and circumvallation. All the supplies that had been collected in the department were, of course, with the troops in Vicksburg and Port Hudson. The troops coming from the east, by railroad, had brought neither artillery nor wagons. Frequent drafts upon the country had so much reduced the number of horses and mules that it was not until near the end of June that artillery and wagons, and draught-animals enough for them, could be procured, generally from long distances—most of the artillery and wagons from Georgia. Some twelve pieces, found without carriages, were mounted on such as could be made in Canton. There was no want of provision and forage in the department, but they were still to be collected; and we had small means of collecting them, and none of transporting them with a moving army.

Many telegrams passed between him and the War Department, he being urged to attack Grant's army at all hazards, not to let Vicksburg be lost without a struggle; replying that he could not attack with any prospect of success unless he first received large re-enforcements, and being told that it was impossible to give them to him. At length, about the 1st of July, he put his forces in motion toward the besieged city, but it fell on the 4th, and Pemberton's entire army became prisoners. A few days later Port Hudson also fell, and the Mississippi was then completely open to the National forces. Johnston then fell back to Jackson. A large force, under Gen. Sherman, advanced against him there, and in the night of the 16th he abandoned the place, moving eastward. On the 22d, at his own request, he was relieved from further command of the Department of Tennessee. In reply to the criticisms of Mr. Davis and Gen. Pemberton, which threw upon him the blame for the loss of Vicksburg, Gen. Johnston sums up a long argument:

Without reference to the military value of the place, the army should not have been exposed to investment in it; for the capture of the place was the certain result of a siege. After investment, surrender was a mere question of time; there could be no reasonable hope of relief. As the Confederate Government had been unable to prevent a siege, it was certain that it could not break one. As the capture of the place could not be prevented, the army should have been saved by leading it away. If I and the re-enforcements sent from Beauregard's department had been ordered to Mississippi in April, in time to join Gen. Pemberton's army, I *could* have directed the Confederate forces, and *would* have been responsible for events; but, by hesitating to transfer troops and send a new commander until too late, the Administration made itself and Gen. Pemberton responsible for consequences, and those consequences were the ruin of our affairs in Tennessee as well as in Mississippi.

Ten days after the fall of Vicksburg, Mr. Davis wrote a long letter to Gen. Johnston, in which he accused him of insubordination and mismanagement, to which the general replied at equal

length and with equal plainness. The correspondence was called for by the Confederate Congress, and Mr. Davis submitted his own letter, but took advantage of a misstatement of the dates to withhold Johnston's reply. Both letters are given in full in the general's "Narrative."

On Dec. 18, 1863, Gen. Johnston was transferred to the command of the Army of Tennessee—which, under the leadership of Gen. Bragg, had fought the bloody but fruitless battle of Chickamauga, and been defeated in that of Missionary Ridge—and established his headquarters at Dalton, Ga. He spent the winter in reorganizing his forces, constructing defensive works, and preparing for the spring campaign, which, it was generally believed, would decide the contest.

In May, 1864, he had about 55,000 men (if counted in the same way that the opposing force was counted) to which Polk's corps was added a few days later, when Gen. William T. Sherman, with an army of 98,000, moved against him. Sherman moved by his right flank, turning the position at Dalton, and sent McPherson's corps to march through the gap at Resaca, and cut the railroad over which Johnston drew his supplies. McPherson found fortifications at Resaca, feared to attack them, fell back to the gap in the mountains, and thus lost a golden opportunity, for before the rest of Sherman's army arrived, Johnston fell back to Resaca with his entire force. By some fighting and much manœuvring Sherman gained, with his right, an elevated position, from which his guns could destroy the railway bridge over the Oostenaula river, and at the same time threw two pontoon bridges across it three miles below the town. This made it necessary for Johnston to fall back again to save his communications, and in the night of May 15 he retreated, burning the bridges behind him. Sherman followed promptly, and on the 19th found him in position at Cassville, whence, after sharp skirmishing, he retreated again in the night of the 20th and crossed the Etowah to Allatoona. Johnston says he intended to fight a battle at Cassville, but Hood and Polk—two of his corps commanders—told him their positions were enfiladed by Sherman's artillery. That general avoided the strong position of Allatoona pass, and moved westward to draw Johnston out of it. In this he was successful, and the armies met at New Hope church, where there was irregular fighting for six days but no general engagement. During this time Sherman strengthened his right, and then extended his left, and secured the roads to Allatoona; after which he sent a force to occupy the pass and repair the railroad. Johnston then retreated again, and took up a position on the mountain slopes crossing the railroad above Marietta. Sherman followed him closely, and established an intrenched line parallel with his. Here, though no battle was fought, the firing from the rifle pits was incessant, and there was much loss of life. Johnston, finding that he could not hold a line 10 miles long, shortened it until he occupied only the slope of Kenesaw mountain. Sherman made corresponding contractions, kept the lines close, constructed elaborate works, and never intermitted the fire of artillery and musketry. He gained and held some good positions on the 21st, and pushed forward two corps to within three

miles of Marietta, where Hood's corps attacked them and was repelled with a loss of about 1,000 men. On the 27th Sherman made a heavy assault on Johnston's center, which failed with a loss of over 2,500 men, while the Confederate loss was but little over 800. Sherman, boldly letting go his communications for a time, now took ten days' provisions in wagons, and moved southward with his whole army, thus compelling his opponent either to come out of the intrenchments and fight him or to retreat again. Johnston fell back to the Chattahoochee, where he had elaborate fortifications on the north side of the stream, already prepared by the labor of a thousand slaves at work for a month. Sherman moved up promptly, and on July 9 threw a large part of his army across the stream, at a point above the Confederate position. This river was the last great natural obstruction in Sherman's path to Atlanta, and Johnston was now compelled to surrender it and fall back again. Sherman followed cautiously, and on the 17th made a grand right wheel toward Atlanta. But on that day came orders from Richmond removing Gen. Johnston from command, and making Gen. Hood his successor. Gen. Johnston thus explains his conduct of this campaign:

Gen. Sherman's troops, with whom we were contending, had received a longer training in war than any of those with whom I had served in former times. It was not to be supposed that such troops, under a sagacious and resolute leader, and covered by intrenchments, were to be beaten by greatly inferior numbers. I therefore thought it our policy to stand on the defensive, to spare the blood of our soldiers by fighting under cover habitually, and to attack only when bad position or division of the enemy's forces might give us advantages counter-balancing that of superior numbers. So we held every position occupied, until our communications were strongly threatened; then fell back only far enough to secure them, watching for opportunities to attack, keeping near enough to the Federal army to assure the Confederate Administration that Sherman could not send reinforcements to Grant, and hoping to reduce the odds against us by partial engagements.

The reasons for his removal, as given in the telegram announcing it, were that he had "failed to arrest the advance of the enemy to the vicinity of Atlanta, far in the interior of Georgia, and expressed no confidence that he could defeat or repel him." In answer, Gen. Johnston wrote: "As to the alleged cause of my removal, I assert that Sherman's army is much stronger compared with that of Tennessee than Grant's compared with that of Northern Virginia. Yet the enemy has been compelled to advance much more slowly to the vicinity of Atlanta than to that of Richmond and Petersburg, and penetrated much deeper into Virginia than into Georgia. Confident language by a military commander is not usually regarded as evidence of competence."

On his removal from command, Gen. Johnston went to reside in Macon, Ga., and afterward to Lincoln, N. C., where, on Feb. 23, 1865, he received orders to assume command of the Army of Tennessee and all troops in the Department of South Carolina, Georgia, and Florida, and "concentrate all available forces and drive back Sherman," who had made his march to the sea and was now moving northward through the Carolinas. The available forces were about 16,000 men, somewhat scattered. Such a force, even if

it had been well provisioned, was ridiculously inadequate to such a task, and Johnston had the greatest difficulty in procuring supplies. He proposed that Gen. Lee retreat with the Army of Northern Virginia into North Carolina and join forces with him, that they might together fall upon Sherman and crush him; but Lee answered that he could not leave Virginia. A few thousand additional troops were sent to Johnston from the West, and Hampton's cavalry came to him from Virginia. At Averysborough, 35 miles south of Raleigh, on Cape Fear river, March 16, a large part of Johnston's forces intrenched themselves in a line across the path of Sherman's left column, which was marching northward. A direct attack on the works was unsuccessful, and Kilpatrick's cavalry was roughly handled by a division of Confederate infantry. Then the flank was turned, and the Confederates retreated. Each side had lost about 500 men. They went to Bentonville, 20 miles east of Averysborough and about the same distance west of Goldsborough, toward which Sherman's columns were converging, and at Bentonville Johnston concentrated his whole force and intrenched again across the path of the left column. This time he commanded in person, and he had a very strong position, with black-jack thickets protecting his flanks. But Slocum's corps attacked vigorously as soon as they came within sight of the enemy, drove back the Confederate right flank, and planted batteries that commanded that part of the field. On the Confederate left the natural obstructions were greater and the fighting was more obstinate, but after nightfall Johnston retreated toward Raleigh and left Sherman's way open to Goldsborough. In this last action (March 19) fought by the forces of either Sherman or Johnston, the National loss was 1,600, the Confederate 2,300. Sherman's army rested for a time at Goldsborough, while Johnston's remained at Raleigh. Here Mr. Davis and his Cabinet, driven out of Richmond, passed him on their way southward, and Johnston tried in vain to convince Davis of the hopeless condition of their cause, and to induce him to end the war at once by some sort of negotiation for peace. He continued his flight, and ordered Gen. Johnston to obtain from a treasury agent \$39,000 in silver and send it after him; in-

stead of which, Johnston divided the money among his officers and men, all sharing alike. When Sherman resumed his march, Lee's army had surrendered, and on April 13 Johnston sent him a letter (which had been dictated by Davis, but was signed by Johnston), proposing an armistice and a meeting to arrange terms of peace. To this Gen. Sherman agreed, and the two commanders met on the 17th at Durham's Station. Sherman at first proposed the same terms that had been given by Grant to Lee, but Johnston rejected this, on the ground that his army was in no such straits as Lee's. He proposed instead that they arrange terms of permanent peace, and they drew up and signed a memorandum of agreement, which provided not only for the disbandment of the Confederate armies but for a general amnesty and the immediate reinstatement of the State governments at the South. This was rejected by the United States Government, as transcending the authority of a military commander in the field. On the 26th the two commanders signed a simple military agreement, by the terms of which Johnston's army was surrendered on the same terms as Lee's. In his "Narrative," Gen. Johnston argues that the failure to establish the Confederacy resulted not from lack of men or of devotion to the cause, but simply from the faulty financial policy of its Government, which neglected the opportunity, at the beginning, to send to Europe the whole of the great cotton crop of 1860 and buy at once a plentiful supply of arms and equipments, but, instead, flooded the country with a worthless paper currency.

After the war, he was successively president of a railroad company in Arkansas, president of an express company in Virginia, and an insurance agent in Savannah, and in 1877 he was elected to Congress from the Richmond, Va., district. President Cleveland appointed him Commissioner of Railroads of the United States. He was a pall-bearer at Gen. Sherman's funeral about a month before his death. His wife, a daughter of Hon. Louis McLane, died in 1886. They had no children. Gen. Johnston's only publication was his "Narrative of Military Operations during the Late War between the States" (New York, 1874).

K

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,206 in 1860; 364,399 in 1870; 996,096 in 1880; and 1,427,096 in 1890. Capital, Topeka.

Government.—The following were the State officers during the year: Governor, Lyman U. Humphrey, Republican; Lieutenant-Governor, Andrew J. Felt; Secretary of State, William Higgins; Auditor, Charles M. Hovey; Treasurer, S. G. Stover; Attorney-General, John N. Ives; Superintendent of Public Instruction, George W. Winans; Superintendent of Insurance, Daniel W. Wilder, succeeded by William H.

McBride; Railroad Commissioners, George T. Anthony, A. R. Greene, and James Humphrey, succeeded on April 1 by William M. Mitchell; Chief-Justice of the Supreme Court, Albert H. Horton; Associate Justices, William A. Johnston and Daniel M. Valentine; Supreme Court Commissioners, Benjamin F. Simpson, J. C. Strang, and George S. Green. Attorney-General Ives was elected on the Democratic and Farmers' Alliance tickets; the other elective State officers are Republicans.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, as reported by the Federal census:

COUNTIES.	WHITE.		COLORED.		COUNTIES.	WHITE.		COLORED.	
	1890.	1880.	1890.	1880.		1890.	1880.	1890.	1880.

There were 107 Chinese and 856 Indians in the State in 1890.

Legislative Session.—The Legislature began its regular biennial session on Jan. 13 and adjourned on March 13. As the adherents of the new People's or Farmers' Alliance party were in control of the Lower House, and of both Houses on joint ballot, the proceedings of the session were watched by the public with great interest. The choice of a successor to United States Senator John J. Ingalls first claimed the attention of the legislators. The Republicans nominated Senator Ingalls, and made earnest efforts to win over the Alliance members to his support, but without success. The latter decided to nominate a candidate directly representing their own principles, and in caucus on Jan. 26 selected William A. Peffer, on the seventeenth ballot the vote standing Peffer, 56; John F. Willits, 38. The Democratic candidate was Charles W. Blair. On the separate ballot in each branch, on Jan. 27, the following vote was cast: Senate—Ingalls 35, Peffer 2, scattering 3; House—Ingalls 23, Peffer 96, Blair 5. The first joint ballot, which was taken on the following day, resulted in the election of Peffer by the following vote: Ingalls 58, Peffer 101, Blair 3, for other candidates 3.

An important act of the session provides a system of law for the promotion of irrigation. It declares that all natural waters, whether standing or running, and whether surface or subterranean, in that portion of the State west of the ninety-ninth meridian, shall be devoted, first, to purposes of irrigation in aid of agriculture, subject to ordinary domestic uses, and, second, to other industrial purposes, and may be diverted from natural beds, basins, or channels for such purposes and uses, provided that existing vested rights in such waters shall not be affected without due legal condemnation and compensation. Provision is made for the creation of irrigation districts, which are authorized to construct ditches and works, to borrow money and issue bonds, and to levy taxes to pay for such works. The charges for water supplied by

any private person or corporation to another for irrigation shall be fixed in each county by the county commissioners, and the rights and duties of such person and corporation, as well as of public irrigation districts, are defined at length. The sinking of artesian wells and the rights of owners thereof are also regulated.

By another act the business of public warehouse men is carefully defined and restricted. The maximum rates for storage and handling of grain, including cost of receiving and delivering, are fixed at one cent a bushel for the first fifteen days or part thereof, one half cent a bushel for each fifteen days or part thereof after the first fifteen, but not over four cents a bushel in the aggregate for continuous storage from Nov. 15 to May 15 following. Any board of trade issuing licenses hereunder shall appoint a State weighmaster and such assistants as shall be needed for the transaction of business in its locality. There shall also be a State inspector of grain, appointed by the Governor, who shall appoint deputy inspectors upon the nomination of local boards of trade. The inspectors shall determine the grade of grain offered to public warehouses, but an appeal may be taken from their decision.

The sum of \$60,000 was appropriated to purchase seed grain for those farmers who lost their crops by reason of the drought of 1890. The railroad commissioners were authorized to purchase such grain and the county commissioners of each county to distribute it, taking the note of each beneficiary for the cost of the grain supplied to him. In addition, certain specified counties were authorized, on their own account, to purchase and distribute seed grain, taking the note of each beneficiary, and to issue bonds for the sums needed for such purchase.

A new law for the management of the State Penitentiary provides for a board of three directors, to be appointed by the Governor, one each year, for a term of three years. The warden of the Penitentiary shall be appointed by the Governor. By another act is established a State Board of Public Works, composed of three members appointed by the Governor.

For each of the fiscal years ending June 30, 1892, and June 30, 1893, the rate of State taxation for current expenses was fixed at 3-5 mills, and for interest on the public debt at .2 mill, on each dollar. Numerous acts were passed authorizing various townships and cities to issue bonds and use the proceeds in building flouring mills, or in aid thereof. A new apportionment of members of the Legislature, on the basis of the census of 1890, was made at this session. Eight hours were declared to constitute a day's work for all laborers, workmen, mechanics, or other persons employed by or in behalf of the State, or by or in behalf of any county, city, township, or other municipality of the State.

Provision was made for submitting to the people, at the November election in 1892, the question whether a convention shall be called to revise, amend, or change the State Constitution.

Another important act provides for the regulation and control of State banks. It requires from each bank a sworn quarterly statement showing the condition of its business. It creates the office of State Bank Commissioner, with

salary of \$2,500, and empowers him to close any bank that does not comply with the law.

An act to prevent ownership of land by non-resident aliens provides that "every non-resident alien, firm of aliens, or corporation incorporated under the laws of any foreign country, shall be incapable of acquiring title to or taking or holding any land or real estate in this State, by descent, devise, purchase, or otherwise, except that the heirs of aliens who have heretofore acquired lands in this State under the laws thereof, and the heirs of aliens who may acquire lands under the provisions of the act, may take such lands by devise or descent and hold them for the space of three years and no longer, if such alien at the time of so acquiring such lands is of the age of twenty-one years, and if not twenty-one years of age, then for the term of five years from the time of so acquiring such lands; and if at the end of the time herein limited such lands so acquired have not been sold to *bona fide* purchasers for value, or such alien heirs have not become actual residents of this State, the lands shall revert and escheat to the State of Kansas." Corporations or associations in which more than 20 per cent. of the stock is owned by others than citizens of the United States are prohibited from holding real estate in the State. But alien residents of the United States who have declared their intention to become citizens may acquire and hold real estate for six years, when it shall escheat to the State if they have not become full citizens. Minor alien residents of the United States may acquire and hold real estate for six years after they might have declared their intention of becoming citizens under the naturalization laws, subject to escheat if they have not become full citizens in that time.

The sum of \$60,000 was appropriated to continue the construction of the main and central wings of the State House, the further sum of \$60,000 for building and equipping a cottage and for other improvements at the Ossawatimie Insane Asylum, and the sum of \$9,000 for an industrial building at the Deaf and Dumb Institute at Olathe.

Bills to establish the Australian ballot system, to resubmit the prohibitory amendment to the people, to establish reduced rates on railroads, and to permit woman suffrage were discussed at great length, but failed to pass both Houses.

Other acts of the session were as follow:

Changing the bounty on sugar manufactured in the State from beets, cane, or other plant grown in the State, to three fourths of one cent a pound.

Prescribing the manner of conducting primary elections.

Appropriating \$3,500 to establish an experiment station at the State University to propagate the contagion or infection supposed to be destructive to chinch bugs, and to furnish it to farmers free of charge.

To prohibit the sale or gift of intoxicating or stupefying liquors or drugs to inmates of soldiers' homes.

Declaring the first Monday in September of each year a legal holiday, to be known as Labor Day.

Allowing sureties on official bonds to fix the limit of their liability thereon.

Regulating the casing of oil and gas wells, and the mode of plugging them when abandoned.

Prohibiting combinations to prevent competition among persons engaged in buying and selling live stock.

To prohibit the editing, publishing, circulating, disseminating, and selling of newspapers or other publications devoted largely to the publication of scandals, intrigues between men and women, and immoral conduct.

Providing a new law for the regulation, support, and maintenance of the common schools in cities of the first class.

Accepting the provisions of an act of Congress granting aid to State or Territorial homes for disabled soldiers and sailors.

To abolish survivorship in joint tenancy.

To protect associations and unions of working men in their labels, trade-marks, and forms of advertising.

Accepting the act of Congress granting aid for the endowment and support of colleges of agriculture and the mechanic arts.

Increasing the salaries of the Secretary of State, Treasurer, Auditor, and certain other State officers, and providing for the payment of assistants and clerks for State offices.

The Botkin Impeachment.—Charges of misconduct in office against Judge Theodosius Botkin, of the Thirty-second Judicial Circuit, were brought to the attention of the Lower House of the Legislature during its session this year, as a result of which that body, after investigation, framed numerous articles of impeachment, charging Judge Botkin with intoxication and with unjudicial conduct on the bench. For the purpose of trying the case the Senate reassembled on April 20 as a court of impeachment. Several weeks were occupied in taking testimony and in hearing arguments of counsel. A vote upon the several articles was not taken till May 26, when the judge was acquitted upon every article, although upon the articles charging unjudicial conduct in court there was a narrow majority against him of the Senators voting.

Education.—The State University continues to show unusual prosperity. At the close of this year there was an enrollment of about 590 resident students, an increase of more than 100 over the number enrolled at the same date last year.

Mortgage Debts.—The Federal Census Bureau reports that the total number of mortgages on real estate recorded in the State during the ten years ending in 1889 was 620,049, of which 415,622, or 67.03 per cent. of the total, were on acres, and 204,427, or 32.97 per cent., were on lots. The yearly totals exhibit the fact that in 1880 the amount of recorded mortgages was \$18,625,284; in 1881, \$21,343,449; in 1882, \$22,410,810; in 1883, \$27,697,409; in 1884, \$39,579,854; in 1885, \$53,203,087; in 1886, \$76,259,403; the amount reached \$97,520,069 in 1887; declined to \$69,977,822 in 1888, and to \$56,082,244 in 1889. In 1880 the amount of mortgages recorded against acres in the State was \$15,425,775; in 1881, \$17,514,735; in 1882, \$17,634,017; in 1883, \$21,463,133; in 1884, \$31,241,851; in 1885, \$42,115,311; in 1886, \$56,724,122; and the largest amount, \$61,227,479, was in 1887, from which year the amount decreased to \$44,865,279 in 1888, and to \$35,006,542 in 1889. The *per capita* mortgage debt of the State is \$165.

Coal.—The coal measures of Kansas cover about 10,000 square miles, underlying the entire eastern portion of the State. The coals are bituminous, excellent for coking, steam, gas, smelting, and domestic purposes. Lignite deposits have also been worked to some extent along the western limits of the coal areas in Cloud, Re-

public, Ellsworth, Russell, and Jewell Counties. Regular mining operations are conducted in but six counties. The veins vary from one to five feet in thickness, and are mined by shaft as well as by "stripping." The scarcity of wood in the western part of the State is stimulating the developing of the coal-beds as well as the construction of branch railroad lines. The output for 1889 is reported as 2,230,763 short tons, valued at \$3,204,754, or an average of \$1.48 a ton at the mines. The average number of persons employed in 1889 was 5,065, and the amount of wages paid \$2,320,591. The State conducts coal-mining operations at Lansing, Leavenworth County, where the convicts in the Penitentiary are employed.

The Prohibitory Law.—On May 25 the United States Supreme Court rendered its decision in the case of *Wilkerson vs. Rahrer*, appealed in 1890 from the Circuit Court for the district of Kansas, in which the chief question at issue was whether the Kansas prohibitory law ought to be re-enacted before it could operate to prevent the sale of imported liquors in the original packages. The court unanimously decided that such re-enactment was not necessary; that by virtue of the previous decision of the court in *Leisy vs. Hardin* the Kansas law had been made inoperative upon imported liquors only, but that the Wilson law, subsequently enacted by Congress, had placed imported liquors in the same category as liquors already within the State, and had therefore made the State law again operative upon such liquors.

World's Fair Convention.—As the Legislature adjourned without passing an appropriation in aid of the World's Columbian Exposition of 1893, a call was issued on March 17, by the Board of Agriculture, for a State convention to meet at Topeka on April 23, to devise means to secure a proper representation of the State at the Exposition. About 300 delegates from all parts of the State attended the convention. They decided that at least \$100,000 ought to be raised in order to insure a creditable exhibit. A committee of 21 members was elected and organized as a Bureau of Promotion. On April 30 this bureau issued an address to "The People of the State," which called upon each county and each railroad company operating lines within the State to contribute such portion of the sum of \$100,000 as the assessed value of their property for the year 1890 bore to the total assessed value of the property of the State for that year. To raise the allotted sum promptly, the organization of County Columbian Associations was recommended, and plans for such associations were submitted. The April convention had agreed upon June 16 as the day for assembling another convention composed of delegates representing the subscribers to the fund, for the purpose of electing a permanent board of managers. The Bureau of Promotion, at their meeting on June 10, finding that sufficient progress had not been made in securing subscriptions, postponed the date for assembling the convention until Sept. 16. On this latter date the records showed that counties and railroad companies representing \$46,560.56 of the apportionment had paid in the first installment or had assented to the plan and paid in part, and could be relied upon for the re-

mainder. Delegates representing these subscriptions met in convention at Topeka on Sept. 16, and elected a board of managers, who thereafter attended to the collection of subscriptions and to the task of securing a creditable State exhibit.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 40,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 406,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,684 in 1860; 1,321,011 in 1870; 1,648,690 in 1880; and 1,858,635 in 1890. Capital, Frankfort.

Government.—The following were the State officers during the year: Governor, Simon B. Buckner, Democrat, succeeded by John Young Brown, Democrat; Lieutenant-Governor, James W. Bryan, succeeded by Mitchell C. Alford; Secretary of State, George M. Adams, succeeded by John W. Headley; Auditor, L. C. Norman; Treasurer, Henry S. Hale; Attorney-General, P. W. Hardin, succeeded by William J. Hendrick; Superintendent of Public Instruction, Joseph D. Pickett, succeeded by Edward P. Thompson; Insurance Commissioner, Henry T. Duncan; Register of the Land Office, Thomas H. Corbett, succeeded by G. B. Swango; Commissioner of Agriculture, C. Y. Wilson; Railroad Commissioner, I. A. Spaulding, J. F. Hagar, W. B. Fleming; Chief Justice of the Court of Appeals, William H. Holt; Associate Justices, William S. Pryor, Joseph H. Lewis, and Caswell Bennett. Gov. Brown and the other State officers elected with him in August assumed office on Sept. 1.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, as reported by the Federal census:

There were also 29 Chinese, 1 Japanese, and 98 Indians in the State in 1890.

Finances.—At the close of the fiscal year ending June 30, 1889, there was a balance in the State treasury of \$72,925.24; the total receipts for the year following were \$3,709,819.41, and the total expenditures for the same period were \$3,811,248.32, leaving a deficit on June 30, 1890, of \$28,503.67. For the year ending June 30, 1891, the total receipts were \$3,652,343.72, and the total expenditures \$3,623,820.01, leaving a balance on the latter date, after deducting the deficit existing at the beginning of the year, of \$11.04. Although the books of the State Treasurer showed this slight balance, there was, in fact, at that time a deficit of \$229,025.77, for which amount warrants had been issued by the State Auditor, and were paid by the banks of the city of Frankfort, by virtue of an arrangement made with them by the Treasurer in consideration of his having placed with them the State deposits at an agreed rate of interest. The Auditor estimates that there will be, at the close of the present fiscal year, June 30, 1892, a deficit of \$472,755.71. The new Constitution provides that so much of any moneys as may be received by the Commonwealth from the United States, under the recent act of Congress refunding the direct tax, shall become a part of the school fund; but that the General Assembly may authorize the use by the Commonwealth of the money so received, or any part thereof, in which event a bond shall be executed to the Board of Education for the amount so used. The Governor recommends that such an appropriation of this money be made, in order that it may be used to redeem these outstanding warrants.

The State tax rate for 1891 was 42.5 cents on each \$100, of which 15 cents was for general State expenses, the remainder being devoted to school purposes. The bonded State debt remained unchanged in amount during the year, being \$674,000.

Education.—The following public-school statistics, covering the year ending June 30, 1888, and June 30, 1889, are the latest available:

WHITE SCHOOLS.

ITEMS.	1888.	1889.
Highest number attending.....	288,024	288,460
Average number attending.....	192,594	193,721
Number of school age.....	540,727	555,509
Teachers, male.....	3,959	3,910
Teachers, female.....	8,599	8,751
Total.....	12,558	12,661
Average wages per month.....	\$7.21	\$7.26
Value of school property.....	\$2,968,604 87	\$3,226,563 76
State fund.....	\$1,071,137 45	\$1,161,990 92
Raised by local taxation, etc.....	\$558,895 47	\$572,562 66

COLORED SCHOOLS.

ITEMS.	1888.	1889.
Highest number attending.....	42,811	42,526
Average number attending.....	28,455	28,893
Number of school age.....	107,170	109,158

State fund.....	\$208,628 00	\$228,996 08
Raised by local taxation, etc.....	\$61,270 79	\$67,786 19

Charities.—At the three State asylums for the insane there were about 2,120 patients on Dec.

31. Each institution has nearly reached the limit of its capacity.

Prisons.—The report of the State Penitentiary at Frankfort for the two years ending Dec. 1, 1891, is as follows: Number of prisoners on Dec. 1, 1889, 1,127; number received for the year ending Dec. 1, 1890, 611, and for the year ending Dec. 1, 1891, 791; number discharged for the year ending Dec. 1, 1890, 837, and for the year ending Dec. 1, 1891, 779; number in confinement on Dec. 1, 1891, 913. The reduction in prison population during the period is due to the transfer of 534 prisoners to the new branch Penitentiary at Eddyville. The number remaining in the latter institution on Dec. 31, of this year was 381, and the number at Frankfort was 893.

The buildings at Eddyville were completed and turned over to the State on Dec. 24, 1890. A total of \$484,143.93 was appropriated by the Legislature for their construction, of which \$470,753.41 was expended.

Coal.—The coal areas of the State represent both the Appalachian and the Central or Illinois fields. The Appalachian field covers the eastern section of the State to the extent of 10,000 square miles, and underlies thirty counties.

In the western part of this State the lower extremity of the Central field extends over about 4,000 square miles. Twelve coal seams are identified in this district, but only five are worked to any extent.

The various seams comprise all varieties, from bituminous shale to the finest canal coal. The State possesses some of the finest beds of canal coal known in the country, which are found in both the eastern and western districts.

The product of coal in Kentucky during the census year ended June 30, 1880, was 946,288 short tons. During the year 1889 the total product was 2,399,755 short tons, valued at \$2,374,339. The number of employes in 1889 was 5,260; the wages paid, \$1,756,363; and the capital invested, \$6,581,380, of which the largest amount was in Hopkins County, \$1,268,440.

Constitutional Convention.—The convention that assembled at Frankfort on Sept. 8, 1890, to revise the State Constitution, after taking a recess from Dec. 19 to Jan. 6, 1891, continued its sessions until April 11, when it adjourned to meet on the first Wednesday of September following, having completed a new Constitution and provided for its submission to a vote of the people at the August election. One of the chief evils permitted under the old Constitution was that of local or special legislation. The General Assembly of 1889-'90 sat one hundred and forty-nine days, and passed local laws, including index, covering 4,893 pages, at a cost to the State in printing of \$17,223.65, and in other respects of \$151,014.82. The average time and cost of the four preceding Legislatures had been but little better. The new Constitution prohibits special laws on a large number of subjects and in all cases where general laws can govern, and limits the regular sessions of the Legislature to sixty days. Other important features of the new Constitution are the provisions forbidding lotteries in the State; establishing the secret or Australian ballot system for all elections (under the old Constitution the *viva-voce* system of voting prevailed); prohibiting the working of con-

viets outside the Penitentiary; providing for the government of counties, cities, and towns by uniform laws; providing a uniform system of courts; limiting the rates of local taxation; allowing county officers regular salaries, instead of fees; and providing an easy method of constitutional amendment by vote of the people. Under the old Constitution amendment was impossible. The date of the State election was changed from August to November. The number of grand jurors was reduced from 16 to 12, and the General Assembly may provide that three fourths of a jury may render a verdict in civil cases. The proslavery provisions of the old Constitution were replaced by a declaration in the Bill of Rights prohibiting slavery and involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted. The time for the regular meeting of the General Assembly was changed from December to the first Tuesday after the first Monday in January of the odd-numbered years. Senators shall be chosen for four years, half of their number being elected every second year, and Representatives shall be chosen for two years. The number of Senators shall be 38, and of Representatives 100. Other provisions are as follow:

No person who may have been a collector of taxes or public moneys for the Commonwealth, or for any county, city, town, or district, or the assistant or deputy of such collector, shall be eligible to the General Assembly, unless he shall have obtained a quietus six months before the election for the amount of such collection, and for all public moneys for which he may have been responsible. The General Assembly shall have no power to enact laws to diminish the resources of the sinking fund as now established by law until the debt of the Commonwealth be paid, but may enact laws to increase them.

The General Assembly may contract debts to meet casual deficits or failures in the revenue; but such debts shall not at any time exceed five hundred thousand dollars: *Provided*, The General Assembly may contract debts to repel invasion, suppress insurrection, or, if hostilities are threatened, provide for the public defense.

No act of the General Assembly shall authorize any debt to be contracted in behalf of the Commonwealth, except for the purposes above mentioned, unless provision be made therein to levy and collect an annual tax sufficient to pay the interest stipulated, and to discharge the debt within thirty years; nor shall such act take effect until it shall have been submitted to the people at a general election, and shall have received a majority of all the votes cast for and against it: *Provided*, The General Assembly may contract debts by borrowing money to pay any part of the debt of the State, without submission to the people, and without making provision in the act authorizing the same for a tax to discharge the debt so contracted, or the interest thereon.

The General Assembly shall have no power to release, extinguish, or authorize the releasing or extinguishing, in whole or in part, the contract, indebtedness, liability, or obligation of any corporation or individual to this Commonwealth, or to any county or municipality thereof.

The General Assembly shall have no power to limit the amount to be recovered for injuries resulting in death, or for injuries to person or property.

No act, except general appropriation bills, shall become a law until ninety days after the adjournment of the session at which it was passed, except in cases of emergency.

No bill shall become a law until the same shall have been signed by the presiding officer of each

of the two Houses in open session; and before such officer shall have affixed his signature to any bill, he shall suspend all other business, declare that such bill will now be read, and that he will sign the same to the end that it may become a law. The bill shall then be read at length and compared.

The credit of this Commonwealth shall never be given or loaned in aid of any person, association, municipality, or corporation.

The Governor and Lieutenant-Governor shall be elected for the term of four years, and shall be ineligible for re-election. The Governor shall have the power to fill vacancies by granting commissions, which shall expire when such vacancies shall have been filled according to the provisions of this Constitution.

The Lieutenant-Governor shall, by virtue of his office, be President of the Senate, have a right, when in committee of the whole, to debate and vote on all subjects, and when the Senate is equally divided, to give the casting vote.

A Treasurer, Auditor of Public Accounts, Register of the Land Office, Commissioner of Agriculture, Labor, and Statistics, and an Attorney-General shall be elected by the qualified voters of the State at the same time the Governor is elected, for the term of four years.

The Attorney-General shall have been a practicing lawyer eight years before his election.

The Treasurer, Secretary of State, Commissioner of Agriculture, Labor, and Statistics, Attorney-General and Register of the Land Office shall be ineligible to re-election for the succeeding four years after the expiration of the term for which they shall have been elected; and the Auditor of Public Accounts shall be ineligible to re-election for the succeeding four years after he shall have held the office for two succeeding terms.

The Court of Appeals shall have appellate jurisdiction only, which shall be coextensive with the State.

This court, after 1894, shall consist of not fewer than five nor more than seven judges. They shall be elected by districts, and the General Assembly shall divide the State into districts, in each of which one judge shall be elected.

A circuit court shall be established in each county.

Every male citizen of the United States of the age of twenty-one years, who has resided in the State one year and in the county six months, and in the precinct in which he offers to vote sixty days, next preceding the election, shall be a voter in said precinct and not elsewhere.

Not more than one election each year shall be held in this State, or in any city, town, district, or county thereof. All elections of State, county, city, town, or district officers shall be held on the first Tuesday after the first Monday in November; but no officer of any city, town, or county, or of any subdivision thereof, shall be elected in the same year in which members of the House of Representatives of the United States are elected. District or State officers, including members of the General Assembly, may be elected in the same year in which members of the House of Representatives of the United States are elected. All elections by the people shall be between the hours of 6 o'clock A. M. and 7 o'clock P. M., but the General Assembly may change said hours, and all officers of any election shall be residents and voters in the precinct in which they act. The General Assembly shall provide by law that all employers shall allow employees, under reasonable regulations, at least four hours on election days in which to cast their votes.

The cities and towns of the State shall be divided into six classes, according to population, and the organization and powers of each class shall be defined by general laws.

The tax rate of cities, towns, counties, taxing districts, and other municipalities, for other than school purposes, shall not, at any time, exceed the following rates, viz: For all towns or cities having a population of 15,000 or more, \$1.50 on the hundred dol-

lars; for all towns or cities having less than 15,000 and not less than 10,000, \$1 on the hundred dollars; for all towns or cities having less than 10,000, 75 cents on the hundred dollars; and for counties and taxing districts, 50 cents on the hundred dollars; unless it should be necessary to enable such city, town, county, or taxing district to pay the interest on, and provide a sinking fund for the extinction of, indebtedness contracted before the adoption of this Constitution. No county, city, town, taxing district, or municipality shall be authorized or permitted to become indebted, in any manner or for any purpose, to an amount exceeding in any year the income and revenue provided for such year without the assent of two thirds of the voters thereof, voting at an election to be held for that purpose; and any indebtedness contracted in violation of this section shall be void.

The respective cities, towns, counties, taxing districts, and municipalities shall not be authorized or permitted to incur indebtedness to an amount, including existing indebtedness, in the aggregate exceeding the following-named maximum percentages on the value of the taxable property therein, viz: Cities of the first and second classes, and of the third class having a population exceeding 15,000, 10 per cent.; cities of the third class having a population of less than 15,000, and cities and towns of the fourth class, 5 per cent.; cities and towns of the fifth and sixth classes, 3 per cent.; and counties, taxing districts, and other municipalities, 2 per cent.

Whenever any county, city, town, taxing district, or other municipality is authorized to contract an indebtedness, it shall be required, at the same time, to provide for the collection of an annual tax sufficient to pay the interest on said indebtedness, and to create a sinking fund for the payment of the principal thereof, within not more than forty years from the time of contracting the same.

The Commonwealth shall not assume the debt of any county, municipal corporation, or political subdivision of the State, unless such debt shall have been contracted to defend itself in time of war, to repel invasion, or to suppress insurrection.

The credit of the Commonwealth shall not be pledged or loaned to any individual, company, corporation or association, municipality, or political subdivision of the State; nor shall the Commonwealth become an owner or stockholder in, nor make donation to, any company, association, or corporation, nor shall the Commonwealth construct a railroad or other highway.

The General Assembly shall not authorize any county or subdivision thereof, city, town, or incorporated district, to become a stockholder in any company, association, or corporation, or to obtain or appropriate money for, or to loan its credit to, any corporation, association, or individual, except for the purpose of constructing or maintaining bridges, turnpike roads, or gravel roads.

In distributing the school fund no distinction shall be made on account of race or color, and separate schools for white and colored children shall be maintained.

No railroad, steamboat, or other common carrier, under heavy penalty to be fixed by the General Assembly, shall give a free pass or passes, or shall, at reduced rates not common to the public, sell tickets for transportation to any State, district, city, town, or county officer, or member of the General Assembly, or judge, and any State, district, city, town, or county officer, or member of the General Assembly, or judge, who shall accept or use a free pass or passes, or shall receive or use tickets for transportation at reduced rates not common to the public, shall forfeit his office.

Consolidation of competing lines of railroad is forbidden.

A commission is established, to be known as the "Kentucky Railroad Commission," which shall be composed of three commissioners, appointed by the Governor, by and with the advice and consent of the

Senate, one from each superior court district. No person in the employ, or in any wise pecuniarily interested as a common carrier, or in a railroad corporation, or in railroad business, shall hold such office. The powers and duties of the Railroad Commissioners shall be regulated by law, and until otherwise provided by law the commission so created shall have the same powers and jurisdiction, perform the same duties, be subject to the same regulations, and receive the same compensation, as now conferred, prescribed and allowed by law to the existing Railroad Commissioners.

All wage-earners in this State employed in factories, mines, workshops, or by corporations shall be paid for their labor in lawful money. The General Assembly shall prescribe adequate penalties for violations of this section.

The seat of Government shall continue in the city of Frankfort, unless removed by a vote of two thirds of each House of the first General Assembly that convenes after the adoption of this Constitution.

If three fifths of the members of each House of the General Assembly shall approve an amendment to this Constitution, it shall be submitted to the people at the next general election, and if a majority of the the votes cast shall be in favor of such amendment, it shall become a part of the Constitution; but no more than two proposed amendments shall be submitted to the people at one time, and the first General Assembly hereunder shall have no power to propose amendments.

This Constitution, as submitted to the people by the convention, was at first attacked by an influential section of the Democratic party, and when the Democratic nominating convention met in May the party was so divided with reference thereto that no platform declaration was made on this subject. Later there was a change of feeling, and before the election was held the outspoken opponents of the instrument had become very few. The people voted overwhelmingly in its favor. The Constitutional Convention, which adjourned in April till the first Wednesday of September, reassembled on the latter day, and, in spite of the fact that the people had emphatically approved their work, proceeded to make amendments and alterations. The section of the new instrument giving the Governor power to appoint, with consent of the Senate, all State officers not required to be elected by the people, was stricken out. The State Auditor, Superintendent of Public Instruction, and Clerk of the Court of Appeals were made ineligible for re-election. Special legislation was allowed on questions of local option, turnpikes, bridges, and public roads, public improvements and buildings, and common schools and paupers.

The Railroad Commissioners after the term of the first board appointed by Gov. Brown shall expire, shall be elected by the people. Numerous minor changes were made, and the instrument in its altered form was finally signed and published as the law of the State on Sept. 28, on which day the convention adjourned *sine die*.

Political.—On May 14, a State convention of the Democratic party met at Louisville, and nominated the following ticket for State officers: For Governor, John Young Brown (chosen on the thirteenth ballot over three competitors, Cassius M. Clay, Jr., P. W. Hardin, and John D. Clardy); for Lieutenant-Governor, Mitchell C. Alford; for Treasurer, H. S. Hale; for Auditor, L. C. Norman; for Attorney-General, W. J. Hendrick; for Superintendent of Public Instruction, E. P. Thompson; for Register of the

Land Office, G. B. Swango; for Clerk of the Court of Appeals, Abram Addams.

The platform contains the following declarations:

We insist that tariff reform is the paramount question before the American people, and denounce the McKinley bill as the most outrageous measure of taxation ever proposed in the American Congress.

Recognizing the fact that the United States is the greatest silver-producing country in the world, and that both gold and silver were equally the money of the Constitution from the beginning of the Republic until the hostile and fraudulent legislation of the Republican party against silver, which unduly contracted the circulating medium of the country, and feeling that the great interests of the people demand more money for use in channels of trade and commerce, we tender our gratitude to the Democrats in the last Congress for their almost unanimous votes in both Houses in favor of free coinage of silver and demand its restoration to the position of equality before the law, given to it by our fathers.

No reference was made to the question of adopting the proposed new State Constitution. The convention also refused to take action on a resolution approving Grover Cleveland as the next Democratic presidential candidate.

On May 29, a Prohibition State convention met at Louisville and selected the following party candidates: For Governor, Josiah Harris; for Lieutenant-Governor H. M. Winslow; for Treasurer, J. M. Holmes; for Auditor, W. W. Goddard; for Attorney-General, E. J. Polk; for Superintendent of Public Instruction, A. B. Jones; for Register of the Land Office, Bradford McGregor; for Clerk of the Court of Appeals, R. S. Friend. The platform contained the following:

Resolved: That the necessity of the times requires a party whose dominant issue in American politics is the principle of legal prohibition of the traffic in intoxicating liquors as a beverage, and all other public wrongs that rest upon the people as the result of partisan, class, and corrupt legislation; such we believe the Prohibition party to be, whose utterances at Indianapolis in convention assembled we approve.

We favor a larger circulating medium in our national currency.

The Republican nominating convention was held at Lexington on May 20. Its nominees were Andrew T. Wood for Governor, Henry E. Huston for Lieutenant-Governor, Eli Farmer for Treasurer, Charles Blanford for Auditor, L. J. Crawford for Attorney-General, L. V. Dodge for Superintendent of Public Instruction, W. J. A. Hardin for Register of the Land Office, and E. R. Blaine for Clerk of the Court of Appeals. The platform contains the following:

The Republicans of Kentucky in convention assembled declare their adherence to the principles of the Republican party as enunciated in the platform of the National Convention of 1888.

They heartily indorse the administration of President Harrison, as pure, wise, and patriotic. They approve the actions of the Fifty-first Congress, and especially what are known as the silver, tariff, and pension bills, and are opposed to the free and unregulated coinage of silver.

We declare that we recommend the adoption of

the new Constitution because it blots from our laws all provisions that authorize human slavery, secures a secret ballot, and provides against fraud and corruption in elections; subjects to regulation by law all public corporations; prohibits the abuse of special legislation, abolishes lotteries, enlarges and protects the Common-school fund, increases the opportunities of popular education, makes more equal the burdens of taxation, better protects the agricultural and laboring interests, and makes provision for its own ready amendment by the people.

We believe the national election laws should be so amended that every American citizen should be allowed to cast a free ballot and have it fairly counted.

A resolution recommending President Harrison for renomination aroused opposition, and was not pressed to a vote.

On the same time, May 20, a fourth ticket was placed in the field by the People's party, a new State organization in sympathy with the Farmers' Alliance. On this ticket were the following names: For Governor, ——— Erwin; for Lieutenant-Governor, S. F. Smith; for Treasurer, I. G. Sallee; for Auditor, W. G. Fulkerson; for Attorney-General, B. L. D. Guffy; for Superintendent of Public Instruction, J. B. Secrest; for Register of the Land Office, T. B. Harreld; for Clerk of the Court of Appeals, W. B. Ogden. The platform of the new party demands

the free and unlimited coinage of silver; declares that no more banks of issue should be organized, and those already chartered discontinued as soon as possible, under the law; opposes alien ownership of lands; favors laws to prevent dealing in futures; opposes all taxation that has for its object the building up of one class or interest at the expense of another class; demands a Bureau of Labor Statistics; that the Government should pay the Union soldier the difference between currency and specie at the time he was paid paper money, with interest added, and that to meet such payment Congress should issue enough Treasury notes, making them full legal tender for all debts, public or private.

On State questions the party demands that

the State tax of fifty cents be taken off mortgages; that fees and salaries of all national, State, and county officers be reduced, allowing only reasonable compensation for services rendered; that the time of assessing property be changed to Jan. 1; that convicts shall be worked inside the walls; that the employment of children under fourteen years of age in factories be prohibited; that all bonds, notes, mortgages, and evidences of debt of \$200 or more shall be presented to the assessor or county court clerk, and be stamped by him at the time that assessments of other property are made, and the failure of such evidences of debt bearing such stamp shall render them void of collection; that the mechanic's lien law be made the same as that of Ohio.

At the August election the entire Democratic ticket was successful. For Governor Brown received 144,168 votes; Wood 116,087; Erwin, 25,631; and Harris, 3,293. The vote for the other candidates did not vary materially from these figures. Members of the State Legislature were elected as follow: Senate, Republicans 10, Democrats 29, People's party 1; House, Republicans 17, Democrats 70, People's party 12.

The new Constitution was adopted by a vote of 213,950 yeas, to 74,446 nays.

L

LITERATURE, AMERICAN, IN 1891.

Book production in the "Copyright Year," as it has been called, the International Copyright bill going into effect July 1, 1891, reached 4,665 volumes, about one hundred more than in the preceding year, and was very nearly the same as that of 1886. But new editions and translations are included in this number with the new books. Fiction was, as usual, the most largely represented, and in the higher class of books science was perhaps the poorest. Few notable books were contained in any department except that of biography. It is interesting to note, from the summary given by the "Publishers' Weekly," that the increase in literature and the book trade in the United States during the past decade is not more than five times that of the population, while for the thirteen years preceding 1853 it was precisely double that amount, the increase in the production of books being 800 per cent. and that of the population not 80 per cent. Special lines of study from standard authorities, as in the Chautauqua and Epworth circles, and the growing influence of newspaper and periodical literature, is believed to have much to do with the tendency toward a decrease in the new and original work offered to the public.

Biography.—This is in some respects the fullest and most interesting class of books published during the year. In all, 218 were recorded. Vols. IX and X of "The Writings of George Washington," edited by Worthington C. Ford, brought the work nearer to completion, as did Vol. II of "The Writings and Correspondence of John Jay, First Chief Justice of the United States," the editor of which is Henry P. Johnston. William Wirt Henry began a new biography of his grandfather, in three volumes, in 1890, the second of which appeared in 1891, the title being "Patrick Henry: Life, Correspondence and Speeches," and the material in great measure new. "The Financier and the Finances of the American Revolution," by William Graham Sumner, in two volumes, was the first attempt at a fitting monument to the genius of Robert Morris, to whose financial operations, in the words of a distinguished historian, "Americans owed, and still owe, as much acknowledgment as to the negotiations of Benjamin Franklin or even the arms of Washington." "John Winthrop, First Governor of the Massachusetts Colony," by Joseph Hopkins Twichell, the "Life of Francis Higginson," by his descendant, Thomas Wentworth Higginson, "Cotton Mather," by Barrett Wendell, "Thomas Hooker," by George Leon Walker, and the "Life of General Houston," the gallant Texan Governor, by Henry Bruce, all belong to the series of "Makers of America," while "The Life and Times of John Dickinson, 1732-1808," by C. J. Stillé, was an important contribution. Vols. I, II, and V of "Chronicles of the Builders of the Commonwealth," historical character studies by Hubert Howe Bancroft, appeared somewhat irregularly in order but full of inter-

est and instruction, as was also the volume of "Literary Industries," which tells the story of the great work of the "History of the Pacific States." One of the most important and timely books of the year was Justin Winsor's "Christopher Columbus, and how he Received and Imparted the Spirit of Discovery." "Biographical Sketches of the Delegates from Georgia to the Continental Congress" were made by Charles C. Jones, Jr., and Louis Henry Boutell printed privately an essay on "Alexander Hamilton, the Constructive Statesman." In the series of "American Statesmen" "Lewis Cass" was from the pen of Andrew C. McLaughlin. "General Andrew Jackson, Hero of New Orleans and Seventh President of the United States," was the subject of a volume by Oliver Dyer, while the "Journal of William Maclay, United States Senator from Pennsylvania, 1789-1791," was published for the first time, edited by Edgar S. Maclay. It is esteemed of the highest value as giving insight into the early workings of Congress. "Governor William Smith of Virginia" was a memorial volume by J. W. Bell. "Recollections of President Lincoln and his Administration," by Hon. Lucius E. Chittenden, is a work of the Register of the Treasury during the exciting period of the war, and from Carl Schurz came an essay on "Abraham Lincoln." Charles Wallace French also treated "Abraham Lincoln, the Liberator," in the Series of "American Reformers." "The Life and Letters of Gen. Thomas J. Jackson (Stonewall Jackson)," by his wife, Mary Anna Jackson, had an introduction by the Rev. Henry M. Field. "Midshipman Paulding," in the "Young Heroes of our Navy" series, was by Molly Elliot Seawell, and from Major John G. Bourke we have a stirring volume, "On the Border with Crook." Eugene Coleman Savidge, M. D., wrote the "Life of Benjamin Harris Brewster." In the "American Reformers" series we have "Frederick Douglass: the Colored Orator," by Frederic May Holland; "William Lloyd Garrison, the Abolitionist," by Archibald H. Grimké; and "Dr. S. G. Howe, the Philanthropist," by F. B. Sanborn; while somewhat in line with the same are a second series of "Speeches, Lectures, and Letters," by Wendell Phillips, and "The Biography of Dio Lewis, A. M., M. D.," prepared, at the desire and with the co-operation of his wife, by Mary F. Eastman. "The Biography of Ephraim McDowell, M. D., The Father of Abdominal Surgery," was written by Mary Young Ridenbaugh. The "Autobiography, Diary, and Correspondence of James Freeman Clarke" was edited by Edward Everett Hale, and a library edition was made of the "Life and Works of Horace Mann," by his wife, in five volumes. Frances Anne Kemble added "Further Records, 1848-1883," to those of her girlhood and later life, already given to the world, and Elizabeth Stuart Phelps (Mrs. Herbert D. Ward) contributed a memoir of her father, "Austin Phelps." "Recollections and Impressions, 1822-1890," by Octavius Brooks

Frothingham, was odd but entertaining, and "Anne Bradstreet and her Time," by Helen Campbell, tells the story of the first American woman writer. In the "Evolution Series," Prof. Edward D. Cope supplied a short sketch of "Alfred Russel Wallace," "Phillips Brooks, Bishop of Massachusetts," was a biography by Newell Dunbar; "William Pinkney, Fifth Bishop of Maryland," a review by Rev. Hall Harrison of Dr. Hutton's recent biography of the bishop; "Life and Letters of Joseph Hardy Neesima," by Arthur Sherburne Hardy, told the story of the first Japanese evangelist educated in our country; "Memorabilia of George Cheever, D. D.," was of special interest to old New Yorkers; "Days of my Years," by Joseph Cross, D. D., "The Field and the Fruit," a memorial of a twenty-five years' ministry, by James H. Tuttle, D. D., and "Reminiscences of a Long Life," by J. M. Pendleton, are autobiographical. "Truman Marcellus Post, D. D.," by his son, T. A. Post, gives the record of one of the early abolitionists; from Rev. Walter Elliott we have "The Life of Father Hecker"; from Wilton Tournier "The Cross of Iron," a sketch of the life and work of Father Field; from Rev. John Lobb a "Life of Rev. T. De Witt Talmage, D. D.," and from John R. Howard a study of "Henry Ward Beecher" in his entire personality. In the series of "American Religious Leaders" appeared "Charles Grandison Finney," by Dr. G. F. Wright, and "Francis Wayland" by James O. Murray. "Poliuto" (Franc B. Wilkie) supplied "Personal Reminiscences of Thirty-five Years of Journalism"; "Robert Carter, his Life and Work, 1807-1889" was from the pen of the daughter of the well-known publisher; William Brotherhead described "Forty Years among the Old Booksellers of Philadelphia," "Life and Labors of Henry W. Grady, his Speeches, Writings, etc.," were published in Atlanta, Ga. "A Score of Famous Composers," by Nathan Haskell Dole, "The Story of a Musical Life," by George F. Root, "My Three Score Years and Ten: An Autobiography" of the sculptor Thomas Ball, and "The Life and Professional Career of Emma Abbott," by Mrs. S. E. Martin, belong to biography of artists; while "The Salem Seer," by George C. Bartlett, was the title given to reminiscences of Charles H. Foster. "In Memory of Elizabeth Haven Appleton" a selection was printed from her lectures, and Mrs. J. Davis published "In Memoriam: Lucy Webb Hayes." "Thirty Days with President Harrison" contained all his speeches during his vacation trip through the country during the year, and a second series of "Captains of Industry" was written for young Americans by James Parton. "Success and its Achievers" formed the theme of William M. Thayer; "The Women of the French Salons" by Amelia Gere Mason, was a sumptuous volume on an attractive theme; J. L. M. Curry, ex-United States minister to the court of Spain, wrote on "William Ewart Gladstone" from personal acquaintance; and Harold Frederic made a study of character development on a throne in his "Young Emperor William II of Germany." "Famous English Statesmen of Queen Victoria's Reign," eight in all, were treated by Mrs. Sarah K. Bolton in her usual felicitous style; while "Unhappy Loves of Men of Genius" were de-

plored by Thomas Hitchcock. "The Life and Times of Kateri Tekakwitha, the Lily of the Mohawks, 1656-1680," were described by Ellen H. Walworth; and "Service in the King's Guards by Two of Them," is a narrative of missionary work on the Western frontier which includes studies of Indian life. "The Goodwins of Hartford, Conn., Descendants of William and Ozias Goodwin," was a compilation by James Junius Goodwin. Of special interest was "The Life of Christopher Columbus," translated by Henry F. Brownson from the Italian of Francesco Tarducci. "Canadians in the Imperial, Naval, and Military Service Abroad," were chronicled by J. Hampden Burnham. "Eli Perkins's Thirty Years of Witty, Wise, and Eloquent Men," by Melville D. Landon, contains the experiences of that humorist, and tells many bright stories.

Criticism and General Literature.—In this department some excellent work was done. "Latest Literary Essays and Addresses" of James Russell Lowell saw the light in the year which closed the poet's career; from William Dean Howells we had hints on "Criticism and Fiction" (selected from the Editor's Study of Harper's Magazine); from Theodore Child, "Art and Criticism," monographs and studies; from Agnes Repplier, "Points of View"; from Charles Dudley Warner, "As we were saying," twenty or more delightful essays; from William Wetmore Story, "Excursions in Art and Letters," charming as usual; from Thomas Wentworth Higginson, "The New World and the New Book," a series of literary papers; and George William Curtis was heard from in "From the Easy Chair." The first series of "Studies, Literary and Social," by Richard Malcolm Johnston, was issued, while an address delivered by Col. Robert G. Ingersoll as a testimonial to Walt Whitman, Oct. 21, 1890, made a plea for "Liberty in Literature." "A Study of Genius" was made by N. K. Royce, and "Forensic Eloquence" was the theme of John Goss. "Beginnings of Literary Culture in the Ohio Valley" were traced by W. H. Venable, and J. Walker Fewkes edited Vol. I. of "A Journal of American Ethnology and Archaeology." The native tribes of North and South America were linguistically classified and ethnographically described by Daniel G. Brinton, M. D., in "The American Race"; and "Emblematic Mounds and Animal Effigies," by Stephen D. Peet, formed Vol. II of the "Antiquarian Library, Prehistoric America." Maj. John G. Bourke, U. S. A., wrote on "Scotologic Rites of all Nations." "The History of Modern Civilization," a hand-book based upon G. Ducoudray's *Histoire Sommaire de la Civilization*, while a continuation and completion of "The History of Ancient Civilization" is rather an adaptation than a translation. Ellen M. Mitchell made "A Study of Greek Philosophy," while "Studies of the Gods in Greece" was the title given by Louis Dyer to eight lectures delivered in 1890 at the Lowell Institute. Philip Schaff, D. D., treated "The Renaissance" under the most favorable conditions. Nature was charmingly described in "Sharp Eyes: a Rambler's Calendar of Fifty-two Weeks among Insects, Birds, and Flowers," kept by William Hamilton Gibson; in "Short

Cuts and By-paths," by Horace Lunt; in "Under the Trees and Elsewhere," by Hamilton Wright Mabie; in *Bird-dom*," by Leander S. Keyser; and in "Arcadian Days," actually written out of doors by William Howe Downes, and devoted to American landscapes in nature and art. "Gray Days and Gold," by William Winter, wove thought and fancy into twenty-four essays and thirteen poems on rambles in the British Isles, and Laurence Hutton traced "Literary Landmarks of Edinburgh." "The Sabbath in Puritan New England" was handled in an interesting and at times racy manner by Mrs. Alice Morse Earle, and Mrs. Caroline E. Upham presented "Salem Witchcraft in Outline." Rev. W. H. Myers gave a series of lectures on "The Nineteenth Century Young Man," and C. C. Everett wrote "Ethics for Young People." George Sumner Weaver, D. D., was "Looking forward for Young Men," while Annie Nathan Meyer edited "Woman's Work in America," with an introduction by Julia Ward Howe. "The Woman's Club" was a practical guide and hand-book prepared by Olive Thorne Miller, and Rose Porter compiled "Women's Thoughts for Women." Eliza Chester held "Chats with Girls on Self-culture"; Eleanor A. Hunter, "Talks to Girls"; Annie H. Ryder bade "Go right on, Girls"; and William H. Black, D. D., wrote on "Womanhood." "The New Womanhood," vigorously studied by James C. Fernald, had an introduction by Marion Harland. "The Stage History of Famous Plays" was traced by Henry P. Phelps, giving Hamlet from the actor's standpoint, its representatives, and a comparison of their performances; William D. O'Connor reviewed "Mr. Donnelly's Reviewers," while "The Mortal Moon; or Bacon and his Masks," by J. E. Roe, ascribed not only Shakespeare's works, but the entire literature of his age, to Lord Verulam. George Willis Cooke gave us "A Guide to the Poetic and Dramatic Works of Robert Browning"; "A Few Words on Robert Browning" were said anonymously; "Petrarch: a Sketch of his Life and Works," is to be attributed to May Alden Ward, while the translation in prose of the two first parts of "The Divine Comedy of Dante Alighieri," by Prof. Charles Eliot Norton, is unique, and one of the finest literary productions in years. A book of much interest to Dante scholars is a translation of "Eleven Letters of Dante," by Charles S. Latham; and the completion of Prof. Geo. H. Palmer's translation of Homer's "Odyssey" in rhythmic prose is worthy of special note. G. Bernard Shaw extracted "The Quintessence of Ibsenism," and Charles Morris devoted three volumes to "King Arthur and the Knights of the Round Table." "A Study in Corneille" was made by Lee Davis Lodge. "Sparks from a Backlog," by Nathan Green, was a collection of short, detached miscellanies; Sarah Ball Kitchen suggested "Thoughts on Life" in the form of helpful aphorisms; and "The Professor's Letters," by Theophilus Parsons, written many years ago to a young girl, and now published, are concerned largely with the doctrines of Swedenborg. Louis F. Day laid down "Some Principles of Every-day Life," and Henry C. Trumbull eulogized "Friendship, the Master Passion." "George Washington's Rules of Civility" were traced to their sources

and restored by Moneure D. Conway. Vol. II of "Hermetic Philosophy" appeared, and Prof. Morris Jastrow translated "A Fragment of the Babylonian 'Dibarra' Epic." Greenough White was responsible for a "Sketch of the Philosophy of American Literature," Charles F. Richardson directed "The Choice of Books," and a popular edition was also made of his work on "American Literature, 1607-1885," comprising both volumes under one binding. Other works of value are "Short Studies in Literature," by Hamilton Wright Mabie; "English Versification for the Use of Students," by Rev. James C. Parsons; "The Compounding of English Words," by F. Horace Teall; "English Words," an elementary study of derivations, by Charles F. Johnson; "English Composition," eight lectures given at Lowell Institute by Barrett Wendell; "The World's Literature," by Mary E. Burt, a course in English, in four parts; "From Chaucer to Tennyson: English Literature in Eight Chapters," by Henry A. Beers (from the Chautauqua Press); "English Authors," by Miss Millie Rutherford; "The Study Class," a guide for the student of English Literature, by Anna B. McMahon; "American Literature: an Elementary Text-book for Use in High Schools and Academies," by Julian Hawthorne and Leonard Lemmon; "Lamb's Essays: a Biographical Study," selected and annotated by Elizabeth D. Hanscom; "Notes on English Literature," by F. Parker Emery; "Poetic and Verse Criticism of the Reign of Elizabeth," by Felix E. Schelling (in the University of Pennsylvania series in Philology, Literature, and Archæology). "The Story of the Odyssey" was told by E. Brooks, as were "Children's Stories in English Literature" by Henrietta C. Wright. "Child Classics" were compiled by Mary R. Fitch. A new Riverside edition in thirteen volumes was published of "The Writings of Oliver Wendell Holmes." An invaluable work accomplished by John Foster Kirk was "A Supplement to Allibone's Critical Dictionary of English Literature and British and American Authors," in two volumes, containing over 37,000 articles (authors) and enumerating over 93,000 titles; while "The American Slang Dictionary," by James Maitland, in a limited edition of 250 copies, embodied all American and English slang phrases in current use, with their derivation and philology. J. Devoe Belton's "Literary Manual of Foreign Quotations" found a place also, as did Rev. Tryon Edwards's "Dictionary of Thoughts."

Dictionaries.—See special article on page 249 of this volume.

Educational.—Treating the subject of education from a general point of view, we have "The Teacher as he should be," an address delivered by C. W. Bardeen before the New York Teachers' Association, July 8, 1891, and, with slight changes, July 21, 1891, before the Chautauqua Assembly; "Organization and System vs. Originality and Individuality on the Part of Teacher and Pupil," a paper read before the National Educational Association at St. Paul, by Henry Sabin, and "Inspirations of the School-teacher," by Eva H. Walker. C. A. Barry asked "What shall we do with our Children?" and T. G. Rooper published a monograph, "Apperception,

or the Essential Mental Operation in the Act of Learning." In the "Educational Monographs" Henry M. Leipziger presented "The Education of the Jews"; and "Prussian Schools through American Eyes" was a report to the New York State Department of Public Instruction by James Russell Parsons, Jr. "Higher Education in Indiana," by James Albert Woodburn, formed No. 10 of "United States Bureau of Education Circulars of Information," and in the "Johns Hopkins University Studies" we have "The History of University Education in Maryland," by Bernard C. Steiner, also "The Johns Hopkins University, 1876-1891," by President Daniel G. Gilman, with supplementary notes on "University Extension and the University of the Future," by R. G. Moulton, of Cambridge, Eng., University. "Cornell University, her General and Technical Courses," was the theme of Frank C. Perkins, and of individual interest are "St. Mary's Seminary of St. Sulpice" (Baltimore, Md.), a memorial volume of the centenary of the institution, and "Memorials of St. Paul's School," by Joseph H. Coit, D. D. Vol. I appeared of "A History of Dartmouth College," edited by John K. Lord. "The Great Conspiracy against our American Public Schools," by Rev. R. Harcourt, has an introduction by Bishop C. H. Fowler, and is illustrated by Thomas Nast and others; the "Effect of the College Preparatory High School upon Attendance and Scholarship in the Lower Grades" was considered by C. W. Bardeen, who also delivered an address, July 2, 1891, on "The Tax Payer and the Township System," and Elizabeth Harrison made "A Study of Child Nature from the Kindergarten Standpoint." "The Relation of the Kindergarten to the Public School" was discussed by Mrs. Kate Douglas Wiggin, the popular author for children, and Martha S. Hussey proffered "Helps in Teaching Reading," "Conduct as a Fine Art," including "Laws of Daily Conduct," by N. P. Gilman, and "Character Building," by Edward P. Jackson, in one or separate covers, is commended to every teacher by Hon. W. T. Harris, United States Commissioner of Education; and George M. Steele, D. D., also prepared a text-book of "Rudimentary Ethics" for high schools and academies. "Duty" was a book for schools by Julius H. Seelye. "Literature in the Public Schools" formed the theme of F. L. Pattee, and Caroline F. Cutler devoted a volume to "Primary Manual Training." Books containing instruction and suggestions to teachers under the guise partially of fiction are "Evenings at School," by Clara Marshall, and "Buckeye-Hawkeye, Schoolmaster, or the Life of Carl Mackenzie, dedicated to the School-teachers of America by One of the Teachers." In "Appletons' Science Text-books" was issued "Appletons' School Physics, embracing the Results of the Most Recent Researches in the Several Departments of Natural Philosophy," by John D. Quackenbos, Alfred M. Mayer, Francis E. Nipher, and others. Charles F. King published Vol. II of "The Picturesque Geographical Readers," and Jacques W. Redway wrote on "The Reproduction of Geographical Forms." John N. Tilden, M. D., prepared "A Commercial Geography for Academies, High Schools, and Business Colleges," and Wilbur S. Jackman took up the subject of "Nature Study

for the Common Schools." Among school-books may be mentioned a "Grammar of the English Sentence, and Introduction to Composition," by Jonathan Rigdon; "A Briefer Practical Rhetoric," by J. Scott Clark; "Practical Language Exercises," by Mara L. Pratt; "A Brief French Grammar," by William Dwight Whitney; "Lessons in Industrial Drawing," by Mary Isabel Gilmore; and, in "Appletons' Standard Arithmetics," "First Lessons in Arithmetic," by Andrew J. Rickoff.

Fiction.—As no novel among the 1,105 works of fiction published in 1891 attained especial prominence, "Khaled, a Tale of Arabia," by F. Marion Crawford, may be placed at the head of the list, being characterized by all the subtle charm that distinguishes that author, who also contributed "The Witch of Prague." Julien Gordon (Mrs. Van Rensselaer Cruger) wrote "A Puritan Pagan," "Vampires," and "Mademoiselle Réséda" (the last two stories being contained in one cover), and Frank R. Stockton delighted his admirers with "The Squirrel Inn," "The House of Martha," "a novel of delightful incongruities," and also took "The Rudder Grangers Abroad" in a volume containing other stories in addition. "Mea Culpa" was a powerful but tragic effort of Sidney Luska (Henry Harland); Edward Eggleston depicted "The Faith Doctor" in a story of New York, ridiculing the tenets of his disciples; and, in collaboration with Dolores Marbourg, George Cary Eggleston produced "Juggernaut," a veiled record, from which it would have been as well if the veil had never been withdrawn. "She loved a Sailor" and "A Rose of a Hundred Leaves: a Love Story," "A Sister of Esau" and "The Beads of Tasmier," emanated from the prolific pen of Mrs. Amelia E. Barr. "In the 'Stranger People's' Country," by Charles Egbert Craddock (Miss Mary N. Murfree) deals with the prehistoric inhabitants of her native State, and from her sister, Miss Fanny N. D. Murfree, came a novel, "Felicia," treating largely of the stage, which aroused considerable comment. F. Hopkinson Smith's first novel, "Colonel Carter, of Cartersville," portrayed the Virginia gentleman of the old school, while the latest from Amélie Rives (Mrs. John Armstrong Chanler) was entitled "According to St. John," giving a startling interpretation to familiar words. "The Mammon of Unrighteousness," by Hjalmar H. Boyesen, deals with the leading foible of American life thrown strikingly into relief; "Murvale Eastman, Christian Socialist," and "A Son of Old Harry" (the last a story of heredity), belong of right to Albion W. Tourgée; while "An Imperative Duty," by William Dean Howells, pleased some and shocked others by its treatment of the race question. "Jerry," which at first appeared anonymously, but before the close of the year was owned by Sarah Barnwell Elliott, handles momentous questions ably, if with crudity, while "Dally," by Maria Louise Pool, describes the gradual civilization of a little North Carolina savage. "Ciphers," by Mrs. Ellen Olney Kirk, proves that the charming author of "The Story of Margaret Kent" has lost none of her power. Another favorite, Captain Charles King, published "Captain Blake," "Two Soldiers," and "Dunraven Ranch" in one volume, and "The

Trials of a Staff Officer"; he also edited *"By Land and Sea,"* a collection of stories by army and naval officers. In *"A Suppho of Green Springs and other Stories"* Bret Harte is again at his best, while an entirely new departure was made by Stanton Page (Henry B. Fuller) in *"The Chevalier of Pensièri-Vani."* Another novel of Italy was *"An Utter Failure,"* by Mrs. Miriam Cole Harris, the author of the familiar *"Rutledge."* Stories of marked local coloring are *"A Pagan of the Alleghanies"* and *"Told in the Hills"* (of Montana), by Marah Ellis Ryan; *"On Newfound River,"* by Thomas Nelson Page; *"Old Abraham Jackson and his Family: an Episode in the Evolution of Nebraska Dug-outs,"* by Anson Uriel Hancock; *"Otto, the Knight, and other Trans-Mississippi Stories,"* by Octave Thanet (Alice French); *"From Timber to Town Down in Egypt,"* by an early settler who prefers to remain nameless; *"Down the O-hi-o"* in antebellum days, by Charles H. Roberts; *"The Impress of a Gentlewoman,"* by Fannie E. Newberry; *"The Puritan's Daughter"* (sequel to *"Creole and Puritan"*), a character romance of two sections, by T. C. De Leon; *"Tom and Joe, Two Farmer Boys in Love and War and Peace: a Louisiana Memory,"* by Clarence B. Collins; *"Flute and Violin, and other Kentucky Tales and Romances,"* by James Lane Allen; *"The Primes and their Neighbors: Ten Tales of Middle Georgia,"* by Richard Malcolm Johnston; *"An Indiana Man,"* by Le Roy Armstrong; *"Pine Valley,"* the story of a Western mining region, by L. B. France; *"In the High Valley,"* by Susan Coolidge (Sarah C. Woolsey); *"In Biscayne Bay,"* by Caroline W. Rockwood; George Fox Tucker's literal transcript of *"A Quaker Home"*; *"Ringing Bells,"* by Reese Rockwell; *"Jolly Good Times at Hackmatack,"* by Mary P. Wells Smith; *"A New England Nun and other Stories,"* by Mary E. Wilkins; and *"Huckleberries gathered from New England Hills,"* by Rose Terry Cooke; while *"A New York Family,"* by Edgar Fawcett, presents an unattractive picture. Mexico was the scene of *"The Yellow Snake,"* by William Henry Bishop. *"Columbia: a Story of the Discovery of America,"* by John R. Musick, opens a series of twelve historical novels to embrace the leading events of American history. *"A Woman of Shawmut,"* by Edmund Janes Carpenter, was a capital romance of colonial times, and *"Betty Alden, the First-born Daughter of the Pilgrims,"* followed in the series of romances of the old Plymouth Colony, of which Mrs. Jane G. Austin has already sent out three. Another of Mrs. Mary Hartwell Catherwood's tales of Acadia was *"The Lady of Fort St. John,"* while *"From Colony to Commonwealth,"* by Nina Morre Tiffany, was a collection of stories of the Revolutionary days in Boston. *"In Old Quinnebasset"* belonged to the same period, and had Washington for the central figure; it was by Sophie May (R. S. Clarke); while *"The Lost Colony,"* by James F. Raymond, *"Yankee Doodle Dixie,"* by John Vincent Ryals, the *"Adventures of a Fair Rebel,"* Matt Crim's first novel, are essentially Southern in tone. Stories of the war are *"The Iron Game,"* by Henry F. Keenan; *"Reunited,"* by a popular but anonymous Southern author; *"Love and Rebellion,"* by Martha Caroline Keller, which includes re-

construction also; *"The Captain of Company K,"* by Joseph Kirkland, the author of *"Zury,"* a strikingly realistic tale; and *"Huldah Brent's Will,"* by Mrs. S. S. Robbins.

"Monk and Knight: an Historical Study in Fiction," in two volumes, by Rev. Frank W. Gunsaulus, is intended rather for the student of history than the average novel reader; *"A King of Tyre,"* by James M. Ludlow, carries us back to the times of Ezra and Nehemiah; *"Aleph the Chaldean,"* by Dr. E. F. Burr, was religious also in character; from Alice K. Cooley we have *"Asaph,"* an historical romance, and from Harriet Prescott Spofford *"Azarian: an Episode."* *"Dr. Huguet,"* by Edmund Boisgilbert, M. D. (Ignatius Donnelly), has the race problem at the South for its motive, and deals largely with the supernatural; *"Dr. Lamar,"* by an unknown author, deliberates the question of ending suffering or useless lives; *"A. D. 2050"* described the electrical development of Atlantis by a former resident of the "Hub," and belongs to the type of novel inaugurated by Edward Bellamy, another of which is *"A. D. 2000,"* by Alvarado M. Fuller. *"The Crystal Button,"* by Chauncey Thomas, details adventures in the forty-ninth century, while Milton W. Ramsey contemplated *"Six Thousand Years hence."* *"The Enchanted,"* by John Bell Bouton, *"Atmân,"* by Francis Howard Williams, *"Beyond the Bourn,"* by Amos K. Fiske, *"The Hidden City,"* by Walter H. McDougall, *"Zanthon,"* by James Doran, and *"Prisons of Air,"* by Moncure D. Conway, deal with the obscure and improbable, while books that grapple with the problems of actual daily life, its struggles and necessities, are *"Masters and Men,"* by Eugene J. Hall; *"Which Wins? a Story of Social Conditions,"* by Mrs. Mary H. Ford; *"Moira, or against the Mighty,"* dealing with socialism, by Lawrence L. Lynch; *"A Tramp in Society,"* by Robert H. Cowdrey; and *"The Rice Mills of Port Mystery,"* by B. F. Heuston. *"His Cousin the Doctor"* was directed against Christian science by Minnie Willis Baines, and *"Rabbi and Priest,"* by Milton Goldsmith, is founded on facts of Russian persecution of Jews. *"Senator Lars Erikson"* was a story of love and politics by Franklin W. Lee, while how *"The Bachelor's Club"* was finally dissolved was told by I. Zangwill. *"St. Martin's Summer,"* by Rose Porter, *"The Romance of a Spanish Nun,"* by Alice M. Baldy, *"Phyllida,"* by Maude Howe, *"The Sardonyx Seal,"* by Belle Gray Taylor, *"Marguerite,"* by Mrs. Mary J. Holmes, *"Mostly Marjorie Day,"* by Virginia F. Townsend, *"Sweet and Twenty,"* by Mary F. Sanborn, *"The Story of Two Lives,"* by Stuart Sterne (Gertrude Bloede), *"If she Will, she Will,"* by Mary A. Denison, *"An Exceptional Case,"* by Itti Kinney-Réno, *"One Woman's Way,"* by Edmund Pendleton, *"No Saint,"* by Anne Bozeman Lyon, *"The Heirs of Bradley House,"* by Amanda M. Douglas, *"Diana Fontaine,"* by Algernon Ridgeway, *"Di,"* by Squier L. Pierce, *"The Man with a Thumb,"* by W. C. Hudson, *"The Lady of Cawnepore,"* by Frank Vincent and Albert E. Lancaster, *"The Adventures of Three Worthies,"* by Clinton Ross, *"A Manless World,"* by Agnes Bond Yourell, *"Cross Roads,"* by Mary Holloway, and *"John Winthrop's Defeat,"* by John K. Ludlum, found

readers and were excellent of their kind. "A Nameless Novel," by M. G. McClelland, opened "The Nameless Series": "In Office," a story of department life in Washington, by Louis Vital Bogy, "Back to Life," by T. W. Speight, "Two Men of the World," by Harriet True Bates, "Her Playthings, Men," by Mabel E. Cahill, and "A God of Gotham," by Lee Bascom, are all of the sensational type; while "Lost in Samoa," by E. S. Ellis, and "The Spanish Galcon," by Charles Sumner Seeley, with "The Braganza Diamonds," by James Otis Kaler, treat of the adventurous. Healthy, wholesome books are "Out at Twinnett's," "The Chautauquans," and "Country Luck," all three by the familiar author of "Helen's Babies"; "In the Cheering-up Business," by Mary Catherine Lee; "Adopting an Abandoned Farm," by Kate Sanborn; "Farming," by Richard Kendall Munkittrick; "Around Bronton," by Mrs. Mary R. Baldwin; "In One Girl's Experience," by Mary H. Howell; "An Entire Stranger," by Rev. T. L. Baily; "A Modern Exodus," by Faye Huntington; "Christie's Home-making," by Minnie E. Kenney; and "Thrown on her own Resources," by Mrs. Jennie E. Croly (Jennie June), which tells what girls can do under similar circumstances. "A Fisherman's Daughter" was written for the Order of King's Daughters by Jenny Harrison.

Short stories were numerous, and we have several excellent volumes, among which may be mentioned "Balaam and his Master," by Uncle Remus (Joel Chandler Harris); "Zadoc Pine and other Stories," by H. C. Bunner; "With my Friends," tales told in collaboration, but written out by James Brander Matthews; "The Chase of the Meteor and other Stories," by Edwin Lassetter Bynner, the author of "The Begum's Daughter"; "Gallegher and other Stories," by Richard Harding Davis, who published also "Stories for Boys"; "Main-traveled Roads: Six Mississippi Valley Stories," by Hamlin Garland; "Three Tales," by William Douglas O'Connor; "Elsket and other Stories," by Thomas Nelson Page; "Holiday Stories," by Stephen Fiske; "The Johnstown Stage," by Robert Howe Fletcher; "Maid Marian and other Stories," by Molly Elliot Seawell; "Iduna and other Stories," by George A. Hibbard; "Fourteen to One," by Elizabeth Stuart Phelps; "A Violin Obligate and other Stories," by Margaret Crosby; "A Book o' Nine Tales," by Arlo Bates; "Stories of the Land of Evangeline," by Grace Dean McLeod; "The Will and the Way Stories," by Mrs. Jessie Benton Frémont; two volumes by Thomas A. Janvier, "The Uncle of an Angel and other Stories" and "Stories of Old New Spain"; Juliana Horatio Ewing's "Last Words"; "The Old Stone House and other Stories," by Anna Katharine Green (Mrs. Rohlf); "A New Mexico David and other Stories and Sketches of the Southwest," by Charles F. Lummis; and "A Woman's Talent and other Stories," by Julia M. Hunt. "Eleven Possible Cases" were proposed by Frank R. Stockton, Joaquin Miller, and several other brilliant authors, who combined to make an entertaining book. "Twenty Good Stories" were told by Opie P. Read, the Arkansas Traveler.

Juvenile Books.—The quality as well as the number of this class of books increases year by

year. Many are read and enjoyed by older people, and among the best of 1891 are: "The Modern Aladdin" and "Men of Iron," by Howard Pyle; "The Abandoned Claim," by Mrs. Flora Haines Loughead, who also opened a new series, to be issued monthly, with "The Man from Nowhere"; "Frü Dagmar's Son," by Julia McNair Wright; "Ryle's Open Gate," by Mrs. Susan T. Moore; "We All," by Octave Thanet (Miss Alice French); "The Scarlet Tanager and other Bipedes," by J. T. Trowbridge; "Four and Five: a Story of a Lend-a-Hand Club," by Edward Everett Hale; Kirk Munroe's "Prince Dusty: a Story of the Oil Regions" and "Campmates: a Story of the Plains"; Oliver Optic's (W. T. Adams) "Stand by the Union" and "A Missing Million"; "Among the Camps: Young People's Stories of the War," by Thomas Nelson Page; "Through Forest and Fire," by E. S. Ellis; "The New Senior at Andover," by Herbert D. Ward, partly autobiographical; "John Auburntop, Novelist: his Development in the Atmosphere of a Fresh-water College," by Anson Uriel Hancock; "How I became a Sailor" and other sketches by Omer T. Gillett, M. D.; "The Boy Settlers," a story of early times in Kansas, by Noah Brooks; "Our Clerk from Barkton," by Rev. E. A. Rand; "The Boyhood of John Kent," by Willis Boyd Allen; "The Jo-Boat Boys," by Rev. J. F. Cowan; "The Little Corporal" and its companion volume, "The Colonel's Charge," war stories, by Carlisle B. Holding; "Master William Mitten," by A. B. Longstreet, D. D.; "Percy Wynn," by Francis J. Finn; "Gid Granger" and "Little Smoke: a Tale of the Sioux," by William O. Stoddard; "Wynema: a Child of the Forest," another Indian tale by S. Alice Callahan; "The Boy Convict of Bermuda," by Margaret Winslow; "Old Rough, the Miser," by Lily F. Wesselhoeft; "A Queer Family," by Effie W. Merriman; "Extraordinary Experiences of Little Captain Doppelkop on the Shores of Bubbleland," described by Ingersoll Lockwood and illustrated by Clifton Johnson; "Betty, a Butterfly," by A. G. Plympton, the author of "Dear Daughter Dorothy"; "Lady Jane," a story of child life in New Orleans, by Mrs. C. V. Jamison; and "Witch Winnie's Mystery," by Mrs. Elizabeth W. Champney. Pansy (Mrs. Isabella M. Alden) wrote "Helen the Historian" and "Miss Dee Dunmore Bryant"; Mary E. Bamford, "Eleanor and I: a Tale of the Days of King Richard II," "Number One or Number Two," and "Janet and her Father"; and Mrs. H. Dorsey, "Tomboys" and "Two Ways" two stories in one volume. John Kendrick Bangs was responsible for "Tiddleywink Tales."

"A Descriptive List of Romantic Novels" and "A Descriptive List of International Novels" were compiled by William M. Griswold.

Fine Arts.—The decline in the character of art books was even more marked this year. From Josephine L. Abbott we have "Outlines for the Study of Art in its Three Main Divisions: Architecture, Sculpture, Painting"; and from F. N. Scott, "Æsthetics, its Problems and Literature"; George O. Seilhamer's "History of the American Theatre, New Foundations," carries on the work (of which three volumes have now appeared), and covers the period 1792-1797. Ellen Russell Emerson wrote on "Masks, Heads,

and Faces, with Some Considerations respecting the Rise and Development of Art"; and E. B. Warman on "Gestures and Attitudes," giving a practical exposition of the teachings of Delsarte. Mrs. J. W. Shoemaker prepared "Delsartean Pantomimes," "Mexican Painting and Painters," by Robert H. Lamborn, gave a brief sketch of the development of the Spanish school of painting in Mexico; while "Colonial Furniture of New England" was "A Study of the Domestic Furniture in Use in the Seventeenth and Eighteenth Centuries," by Irving Whitall Lyon, M. D. "A Message to China Decorators" was delivered by Mrs. C. Goodyear. Helen M. Sparmann made "An Attempt at an Analysis of Music"; "Preludes and Studies: Musical Themes of the Day," were treated by W. J. Henderson; and "The Theory of Music as applied to the Teachings and Practice of Voice and Instrument in the New England Conservatory," by Louis C. Elson. "The Study of Vocal Physiology" was recommended by Otto T. Simon. "How shall I practice?" by Julie Rosewald, contained practical suggestions to students of vocal music, and Henry E. Krebhiel made "Studies in the Wagnerian Drama." "Landscape Gardening," by Samuel Parsons, Jr., Superintendent of Parks of New York city, is a work as valuable as handsome. S. R. Koehler compiled a "Catalogue of the Engraved and Lithographed Work of John Cheney and Seth Wells Cheney," and from Leon Barritt we have "Engravings: how to estimate their Cost." Among gift books are to be mentioned "Scenic Utah, Pen and Pencil," by Alfred Lambourne; "Leaves from an Artist's Field-book," by Wedworth Wadsworth; "Ideals of Beauty," fac-similes of new paintings in water colors by Maud Humphrey, with poems by various poets, illustrated by Joseph M. Gleeson and other artists; "Yvernelle: a Legend of Feudal France," illustrated by J. J. Bissegger, John J. Boyle, F. S. Church, and others; "Our Amateur Circus, The Greatest Show on Earth: Society," by H. W. McVickar; "Where Meadows meet the Sea," sea songs and pastoral lays, edited by H. S. Morris, and illustrated by F. F. English; "Favorite Water-colors," fac-similes of favorite works, by Francis Day, Charles Howard Johnson, H. W. McVickar, and others; "Through Woodland and Meadow and other Poems, with Sketches from Nature," by Marie Low and Maud West. Fine editions were issued of "Ben Hur," by Gen. Lew Wallace, with over one thousand marginal drawings; of William Dean Howells's "Venetian Life"; of Washington Irving's "Alhambra" and "Sketch-Book," and of Mrs. Stowe's "Uncle Tom's Cabin." "Elizabethan Songs" and Whittier's "Snow-Bound" were illustrated by Edmund H. Garrett, and Holmes's "One-Hoss Shay" by Howard Pyle.

General Science.—But 97 works of this class were published during the year. H. W. Conn wrote "The Living World, whence it came and whither it is drifting"; Hubbard Winslow Mitchell, M.D., on "The Evolution of Life, or Causes of Changes in Animal Form, a Study in Biology"; N. S. Shaler, on "Nature and Man in America"; "Caucasian," an "Anthropology for the People," a refutation of the theory for the Adamic origin of all races; and Thomas H. Musick, "The Genesis of Nature con-

sidered in the Light of Spencer's Philosophy, as based upon the Persistence of Energy"; while in special departments, Montagu Chamberlain supplied "A Popular Hand-book of the Ornithology of the United States and Canada," based on Nuttall's Manual, in two volumes; John B. Grant, "Our Common Birds and how to know them," giving 99 varieties of the Northern States; N. S. Goss, a "History of the Birds in Kansas"; Charles J. Maynard, "A Manual of North American Butterflies"; Charles S. Newhall, "The Leaf Collector's Hand-book and Herbarium"; and Charles Sprague Sargent, Vol. II of "The Silva of North America. "Typical Elms and other Trees of Massachusetts," by Lorin L. Dame, had an introductory chapter by Oliver Wendell Holmes, and Fanny D. Bergen caught "Glimpses at the Plant World." "Nature's Wonder Workers," by Kate R. Lovell, consisted of short life histories in the insect world; Alpheus Hyatt and J. M. Arms described "Insecta"; W. K. Brooks, "The Oyster" (a popular summary of a scientific study); William T. Hornaday, for eight years Chief Taxidermist of the United States National Museum at Washington, published a volume on "Taxidermy and Zoological Collecting." "Fossil Resins: a Compilation," was the work of Clarence Lown and Henry Booth, and in the miscellaneous collections of the Smithsonian Institute (No. 785) Alfred Tuckerman prepared a "Bibliography of the Chemical Influence of Light." Thomas Egleston's "Catalogue of Minerals and Synonyms" contains, it is claimed, several thousand more names than any other published index; and from Thomas Sterry Hunt we have a "Systematic Mineralogy," based on a natural classification. G. Frederick Wright gave 29 pages to "Supplementary Notes to the Third Edition of 'The Ice Age in North America,'" and James D. Dana wrote "On the Four Rocks of the New Haven Region," in illustration of the features of non-volcanic igneous ejections, with a guide to walks and drives about the city. A second revised edition was made of Prof. Joseph Le Conte's "Evolution"; Josiah Parsons Cooke published a companion volume to "The New Chemistry" in "Laboratory Practice"; Samuel P. Sadler, "A Hand-book of Industrial Organic Chemistry"; Arthur V. Abbott, "A Treatise on Fuel"; Edwin H. Hall and Joseph Y. Bergen, Jr., "A Text-book of Physics," largely experimental, on the basis of the Harvard College "Descriptive List of Elementary Physical Experiments," "Experiments of Aërodynamics," by Prof. Samuel P. Langley ("Smithsonian Contributions to Knowledge," No. 801), attempted to demonstrate—not explain—any act of mechanical flight as possible. Sidney Perley made a study of "Historic Storms" from 1620 to the present time, and a revised edition was published of "War and the Weather," by E. Powers. Samuel Sheldon supplied "Chapters on Electricity"; T. O'Connor Sloane, "Electricity Simplified"; Philip Atchinson, "The Elements of Dynamic Electricity and Magnetism"; Edward Trevert, "Electricity and its Recent Applications" and "Dynamos and Electric Motors and all about them." "Dynamo Construction," by John W. Urquhart, and "Electro Motors," by S. R. Bottone and Alfred M. A. Beale, "A Practical Guide to the Testing of Insulated Wires and Cables," by Herbert Laws

Webb, "The Electric Transmission Hand-book," by F. B. Badt, "A Practical Treatise on the Incandescent Lamp," by J. E. Randall, "Telephones, their Construction and Fitting," by F. C. Allsop, and "The Electro-Plater's Hand-book," by G. E. Bonney, were timely and useful volumes. "The Electrical Boy," by the inimitable author for boys, J. T. Trowbridge, conveyed scientific information in the most attractive manner, while "Ethereal Matter, Electricity, and Akasa," was a theory advanced by N. Kolkin. "Hints to Power Users," by Robert Grimshaw, and "The Chemical Analysis of Iron," by Andrew A. Blair, belong to applied science also. In mathematics we have "Geodesy," by J. Howard Gore; "An Introduction to Spherical and Practical Astronomy," by Dascom Greene; "Plane and Solid Geometry," by Seth T. Stewart; a "College Algebra" and "Six Place Logarithmic Tables," by Webster Wells; "A Higher Algebra," by G. A. Wentworth; and "The Sextant and other Reflecting Mathematical Instruments," by F. R. Brainerd. "The Young Astronomer," by James H. Carlisle, supplied helps to a knowledge of the constellations, and "Optical Projection," by Lewis Wright, was a treatise on the use of the lantern in exhibition and scientific demonstration.

In mental philosophy we have "Hegel's Logic, a Book on the Genesis of the Categories of the Mind; a Critical Exposition," by Hon. William T. Harris, the accomplished metaphysician and United States Commissioner of Education; "Mechanism and Personality: an Outline of Philosophy in the Light of the Latest Scientific Research," by Francis A. Shoup, D. D.; "Outlines of Physiological Psychology," by George Trumbull Ladd; "Studies in Psychology," by S. G. Burney; "The Soul of Man, an Investigation of the Facts of Physiological and Experimental Psychology," by Paul Carus; and a "Hand-book of Psychology, Feeling, and Will," by James Mark Baldwin. "Quickness of Perception," in the "Memory and Thought Series," was by Hans Breitman (Charles Godfrey Leland), while "Eye and Ear Memory" consisted of chapters Rev. Jesse L. Hurlbut, D. D., and others. In the "Evolution Series" "The Scientific Method" was set forth by Francis Ellingwood Abbot; "Form and Color in Nature," by William Potts; "Herbert Spencer's Synthetic Philosophy," by B. F. Underwood. H. E. Haferkorn compiled "Handy List of Books on Mines and Mining."

History.—Fewer works of history were published in 1891 than in 1890, the total number being 124. "Historical Essays," by Henry Adams, covered various periods, while, proceeding chronologically, we have "The Defenses of Norembe," by Eben Norton Horsford; "The Pilgrim Fathers in Holland," a paper read before the New England Historical and Genealogical Society, March 4, 1891, by William C. Winslow, D. D.; "The Colonies, 1492-1750," by Reuben Gold Thwaites, in the new series of "Epochs of American History"; "Sir William Johnson and the Six Nations," by William Elliot Griffis, in the "Makers of America" series; two volumes upon "The American Revolution," by John Fiske, in continuation of his plan for a complete history of the United States from 1492 to 1865; "The French in America during the War of Independence," by Thomas Balch (deceased), first

printed in French, in Paris, and now translated by Thomas Willing Balch (his son); "Spanish Institutions of the Southwest," by Frank W. Blackmar; "The Spanish Conspiracy," kindred in theme, by Thomas Marshall Green; "The United States and Spain in 1790: an Episode in Diplomacy described from hitherto Unpublished Sources," edited, with an introduction, by Worthington Chauncey Ford; and the "Evolution of the Ordinance of 1787," with an account of the earlier plans for the government of the Northwest Territory, by Jay A. Barrett, in the "University of Nebraska Seminary Papers." Horace E. Scudder wrote "A Short History of the United States" for beginners, and Alexander Johnston "A Shorter History of the United States" for schools. Part IV of Vol. IV and Parts I, II, and III of Vol. V "American Historical Association Papers" were published, and the fifth and last volume of the "History of the United States of America under the Constitution," by James Schouler, saw the light, closing with the election of President Lincoln. "The Voice of the People," by W. H. F. Henry, contained valuable documents and information; and "Studies in American History," by Mary Sheldon Barnes and Earle Barnes, were intended for young students. "The Story of Kentucky" was told by Emma M. Connelly in the "Story of the States" series, and that of "New York in the War of the Rebellion, 1861-65 (Historical and Statistical)," was compiled by Frederick Phisterer. Other histories of the civil war are: "Thirty Years after," by Edwin Forbes, the famous war correspondent, who modestly declares it an artist's story; "Battlefields and Victory," by Willis J. Abbot; "The Battle of Gettysburg, 1863," by Samuel Adams Drake; "The Battle of Seven Pines," by Maj.-Gen. Gustavus W. Smith, C. S. A.; a second edition of "The Defense of Charleston Harbor," by Maj. J. Johnson; "Recollections of a Private: a Story of the Army of the Potomac," by Warren Lee Goss; and, from contemporary newspaper columns, the account of the "Kinston, Whitehall, and Goldsborough (North Carolina) Expedition." Gouverneur Morris wrote "The History of a Volunteer Regiment" (Sixth New York), while the "Orderly Book of the Maryland Loyalists Regiment, June 18, 1778, to Oct. 12, 1778," was edited by Paul Leicester Ford. To the series of "Historic Towns" Henry Cabot Lodge contributed "Boston" and Theodore Roosevelt "New York." The first of four volumes of "The Memorial History of the City of New York from its First Settlement to 1892," edited by James Grant Wilson, was issued, covering the period from 1492 to 1700. "A Classic Town: the Story of Evanston, by an Old Timer," came from the pen of Miss Frances E. Willard; Herman P. De Forest and Edward C. Bates were joint authors of "The History of Westborough" (Mass.), and J. J. Babson supplied a second series of "Notes and Additions to the History of Gloucester" (also Mass.). "The Birth, Marriage, and Death Register, Church Records, and Epitaphs of Lancaster, Mass., 1643-1850," were edited by Henry S. Nourse, and the "History of St. George's Parish," Spottsylvania County, Va., by Philip Slaughter, D. D., was edited by R. A. Brack. "The Communes of Lombardy from the 6th to the 10th Century" were treated by W. Klapp Will-

iams in the "Johns Hopkins University Studies," another volume of which was a "History of Liberia," by J. H. T. McPherson, and H. H. Northrop wrote "The History of the French Revolution, 1789-1795, or a Country without a God." "The Parnell Movement," by T. P. O'Connor, had a sketch of the author by Thomas Nelson Page. S. M. Burnham described "Struggles of the Nations," or the principal wars, battles, sieges, and treaties of the world. "The History of Historical Writing in America" was given by J. Franklin Jameson (originally in four lectures delivered at Johns Hopkins University in 1887); and to the press of the same institution we are indebted for "Seminary Notes on Recent Historical Literature," by H. B. Adams, J. M. Vincent, and other authorities.

Housekeeping.—"House and Hearth," by Harriet Prescott Spofford, gives 23 chapters of thoughts on the making and keeping of homes. "The Washington Cook-book: Statesmen's Dishes" consists of autographic receipts by Mrs. Benjamin Harrison, Mrs. William Windom, and others, followed by "The Chafing-dish and the Blazer," by Mrs. H. P. Bailey. "Cookery with a Chafing-dish" was handled by Thomas J. Murray, and Mrs. H. Llewellyn Williams prepared "The Book of Ices." No. 1 of "The Information Readers," by E. A. Beal, M. D., covered "Foods and Beverages," and Mrs. T. J. Kirkpatrick supplied "The Modern Cook-book." "Good Housekeeping," anonymous, contained information relating to the management of the household and servants, costs, and quantities, etc., and more than 2,000 practical recipes are to be found in "The Every-day Cook and Recipe Book," by Miss E. Neil.

Jurisprudence.—"Constitutional Legislation in the United States," by John Ordronaux. "Statutes and Statutory Construction," by J. G. Sutherland, and a second edition of "The General Principles of Constitutional Law in the United States of America," by Hon. Thomas M. Cooley, belong to the higher departments of jurisprudence, while works of the year having a more or less national bearing are: "A Treatise on the Law of Citizenship in the United States, treated historically," by Prentiss Webster; "A Treatise on Extradition and Interstate Rendition," in two volumes, by John Bassett Moore; "The Interstate Commerce Law," by John T. Wentworth; "Laws of the United States relating to Currency, Finance, and Banking from 1789 to 1891," compiled by Charles F. Dunbar; "The Question of Copyright," a summary of the copyright laws at present in force in the chief countries of the world, by George Haven Putnam; "The Pension Lawyer's Digest"; "Interference Proceedings in the United States Patent Office," edited by Woodbury Lowery; Vol. II of a "Digest of the Decisions of the Supreme Court of the United States," by Henry C. Danforth, bringing the same down to October, 1891; Vols. IV and V of the "American Digest" (Annals 1890 and 1891) and "The Statutes at Large from December, 1889, to March, 1891," sent out by the Government Printing Office, making Vol. XXVI. Russell H. Curtis edited "Important Federal Statutes annotated."

In general law we have "Commentaries on the Jurisdiction of Courts," by Timothy Brown,

an "Index - Digest of Rights, Remedies, and Practice at Law under the Codes and in Equity," by John D. Lawson; "A Treatise on Suits in Chancery," by Henry R. Gibson; "A Treatise on the Law of Judgments, including the Doctrine of Res Judicata," in two volumes, by Henry Campbell Black; and a "Brief for the Argument of Questions arising upon the Pleadings on the Trial of Issues of Law, or Fact in Civil Actions at Law, in Equity and under the New Procedure," by Austin Abbott, who published also "New Cases selected chiefly from Decisions of the Courts, with Notes," "A Digest of New York Statutes and Reports, from July, 1882, to Jan. 1, 1890," and "New Cases selected chiefly from Decisions of the Courts of the State of New York, with Notes" (Vol. XXVI). A second edition was made of "The Practice in the Courts of Law in Civil Cases," by R. T. Barton, and of "The Law of Liens," by Leonard A. Jones; and William A. Keener arranged "Selections from Leake's Elements of the Law of Contracts and Finch's Cases on Contracts," in two volumes, as a text-book for law students. John A. Finch prepared a "Digest of Insurance Cases," Frederick H. Cooke wrote on "The Law of Life Insurance," and James H. Gilmore "Notes of a Course of Lectures on Smith's Mercantile Law." From William G. Myer came "Vested Rights: Selected Cases and Notes on Retrospective and Arbitrary Legislation affecting Vested Rights in Property"; from Emlin McClain, a "Synopsis of Elementary Law (Substantive and Remedial) and the Law of Personal Property"; from John Chipman Gray, "Select Cases and other Authorities on the Law of Property"; from William T. Brantly, "Principles of the Law of Personal Property"; from Christopher G. Tiedeman, "A Treatise on the Law of Sales of Personal Property"; from Joseph J. Darlington, "A Treatise on the Law of Personal Property, founded on Williams"; and from Alfred S. Bolles, "The Law of the Suspension of the Power of Alienation in the State of New York." "Suspension of the Power of Alienation and Postponement of vesting under the Laws of New York, Michigan, Minnesota, and Wisconsin," was treated by Stewart Chaplin; and concerning corporations we have two volumes by Walter Murphy on "Corporations in Pennsylvania"; "Company Law," by Charles Fisk Beach, Jr., in two volumes also; Vol. VI of "American Railroad and Corporation Reports," edited and annotated by John Lewis; "The Law of Receivers of Corporations including National Banks," by James Fraser Gluck and August Becker; "Municipal Bonds," by Eben H. Gay; "Nebraska Railroad Law," by Leavitt Burnham; "The Law of Railway Lines," by William C. Anderson; Vols. XXXI, XXXII, and XXXIII of "American and English Corporation Cases"; and Vols. XLIV, XLV, and XLVI of "American and English Railroad Cases." Vol. III of "The Law of Liens in Pennsylvania," by W. Trickett, was issued, also "A Treatise on the Law of Bills of Lading," by William W. Porter, and "A Treatise on the Law of Chattel Mortgages," by Darius H. Pingrey. A second edition, rewritten and enlarged, appeared of "The Law of Expert Testimony," by Henry Wade Rogers, and S. D. Thompson laid down the "Law of Electricity."

"New Commentaries on Marriage, Divorce, and Separation," by Joel Prentiss Bishop, filled two volumes. James M. Kerr was the author of "A Treatise on the Law of Homicide"; H. W. Chaplain, of "Cases on Criminal Law" (for use in the law school of Harvard University); and Charles A. Ray, of "Negligence of Imposed Duties, Personal." Russell Duane selected "The Case of the Sayward" for the law oration delivered at the commencement exercises of the University of Pennsylvania, June 11, 1891; "Cases on Torts" were selected and arranged for the use of law students in connection with "Pollock on Torts," by Francis M. Burdick, and "Interrogatory Law" comprised 1,230 questions submitted to the graduating classes of the law school of Cincinnati College for the years 1879-'91. Vols. XVI to XXI, inclusive, of "American State Reports," by A. C. Freeman, were issued, also Books 9 and 12 of "Lawyers' Reports annotated," edited by Robert Desty. Of local importance are "The Statutes of Oklahoma, 1890," compiled under the supervision and direction of Robert Martin, Secretary of the Territory; "Real-estate Statutes of Indiana," by T. E. Ballard and E. Emerson; an "Analytical Index and Digest of the Supreme Court Reports of Georgia," by Howard Van Epps; a "Digest of Decisions of the Supreme Judicial Court of Massachusetts," edited by Henry E. Randall and A. E. Wislizenus; and "A Treatise on Practice in the Courts of Pennsylvania," by F. Carroll Brewster, in two volumes. Everett W. Pattison prepared "Forms for Missouri Pleading," and Gorham D. Williams "The Massachusetts Peace Officer." The average number of reports were also reached from the several States. Vols. XIV, XV, and XVI of the "American and English Encyclopedia of Law," compiled under the editorial supervision of John Houston Merrill, appeared; also a "Dictionary of Law," by Henry Campbell Black, and "Martindale's American Law Directory for 1890-91."

To the literature of law belong "The History of the Supreme Court of the United States," by Hampton L. Carson, in two superb volumes, and "The Criminal Jurisprudence of the Ancient Hebrews," by Rabbi S. Mendelsohn, LL.D.

Medicine and Surgery.—In medicine we have "Fever: its Pathology and Treatment by Antipyretics," by Hobart Amory Hare, M.D., an essay to which was awarded the Boylston prize of Harvard University July, 1890; "The Modern Antipyretics," by John Ott, M.D.; "The Physical Diagnosis of the Diseases of the Heart and Lungs and Thoracic Aneurism," by D. M. Cammann, M.D.; a "Practical Treatise on Diseases of the Skin," by Henry G. Piffard, M.D., and Robert M. Fuller, M.D.; "Familiar Forms of Nervous Disease," by M. Allen Starr, M.D.; and a ninth edition, corrected and enlarged, of "A Treatise on the Diseases of the Nervous System," by William A. Hammond, M.D., and M. Graeme, M.D. Part II of "A Text-book of Ophthalmoscopy," by Edward G. Loring, M.D., was edited and revised by F. B. Loring, and D. N. Skinner, M.D., wrote on "The Care of the Eyes in Health and Disease." "Prof. Koch's Cure for Consumption (Tuberculosis)" was popularly explained by H. Feller, M.D. Samuel C. Bussey, M.D., treated "Congenital

Occlusion and Dilatation of Lymph Channels," and J. Compton Burnett, M.D., "The Greater Diseases of the Liver." "Insomnia and its Therapeutics" was by A. W. Macfarlane, M.D.; "Sprains: their Consequences and Treatment," by C. W. Mansell Moullin, M.D.; "Dyspepsia" (in the "Red Cross Series"), by John Dewar; "Lectures on Tumors from a Clinical Standpoint," by John B. Hamilton, M.D.; and "La Grippe and its Treatment, for General Readers," by Cyrus Edson, M.D., Chief of the Health Department of New York. "Abnormal Intra-thoracic Air Pressures and their Treatment" was the title of an address by Charles Denison, M.D., before the American Climatological Association, Sept. 2, 1890. "Studies in Pathological Anatomy," by Francis Delafeld, M.D., filled two volumes; and Frederick B. Robinson published Vol. I of "Practical Intestinal Surgery." E. Martin, M.D., and Hobart Amory Hare, M.D., were joint authors of "The Surgical Treatment of Wounds and Obstruction of the Intestines," and Egbert H. Grandin, M.D., and Josephus H. Gunning, M.D., of a "Practical Treatise on Electricity and Gynecology." Vol. II of "Materia Medica and Therapeutics," by John V. Shoemaker, M.D., had especial reference to the clinical application of drugs. From C. H. Leonard, M.D., came "The Pocket Materia Medica and Therapeutics," and from William D. Gentry, M.D., "The Rubrical and Regional Text-book of the Homœopathic Materia Medica: Selection on the Urine and Urinary Organs." "A Treatise on Practical Anatomy for Students of Anatomy and Surgery" was prepared by Henry C. Boenning, M.D., and "The Student's Atlas of Artistic Anatomy," by C. Roth, was edited, with an introduction, by C. E. Fitzgerald, M.D. John Hund, M.D., wrote "A Sketch of Surgical History (after Hecker)," and P. C. Remondino, M.D., a "History of Circumcision from the Earliest Times to the Present," with moral and physical reasons for its performance. A second edition was made of "Diseases of the Digestive Organs in Infancy and Childhood," by Lewis Sparr, M.D. "Health without Medicine," by Theodore H. Mead; "Power through Repose," by Anna Payson Call; "Drinking Water and Ice Supplies, and their Relations to Health and Disease," by T. Mitchell Prudden, M.D.; "An Elementary Hand-book on Potable Water," by Floyd Davis; "Taking Cold," by Francke H. Bosworth, M.D.; "Hygienic Physiology," by D. F. Lincoln, M.D.; "Household Hygiene," by Mary Taylor Bissell, M.D., who wrote also "Physical Development and Exercise for Women"; "Comprehensive Physical Culture," by Mabel Jenness; "Woman and Health," by M. Augusta Fairchild, M.D.; "The Mother's Guide and Daughter's Friend," by an old practitioner; and "Vacation Time," by H. S. Drayton, M.D., with "Hints on Summer Living," deal with methods of prevention rather than cure; while "Helps for Home Nursing," by Irene H. Ovington; "The Doctor at Home and Nurse's Guide-book," edited by George Black, and "A Cyclopædia of Family Medicine, Surgery Nursing, and Hygiene," by Henry Hartshorne, M.D., are excellent and useful of their kind. "Therapeutic Sarcognomy," by Joseph Rodes Buchanan, M.D., is an application of the science of the soul,

brain, and body to the therapeutic philosophy and treatment of bodily and mental diseases. From Frederick S. Sozinsky, M. D., we have a work on "Medical Symbolism," and from Paul Paquin, M. D., another on "The Supreme Passions of Man." "Wood's Medical and Surgical Monographs" reached No. 1 of Vol. XII, and Vol. XII was also issued of the "Index Catalogue of the Library of the Surgeon-General's Office," Washington, D. C.

Poetry.—Among the 193 books of poetry published in the year not one possessed striking merit, though there were several charming and graceful collections. "The Sister's Tragedy, with other Poems, Lyrical and Dramatic," of Thomas Bailey Aldrich, stands in the foremost rank. "The Poet and his Self," by Arlo Bates, is reflective, as is also "Two Worlds," by Richard Watson Gilder. Edgar Fawcett published "Songs of Doubt and Dream"; Waitman Barbe, "Ashes and Incense"; James Whitcomb Riley, "The Flying Islands of the Night" and "Neighborly Poems on Friendship, Grief, and Farm Life"; Lizette Woodworth Reese, "A Handful of Lavender," 75 short poems dedicated to "the sweet memory of Sidney Lanier"; Nora Perry, "Lyrics and Legends"; Kate Tannatt Woods, "Grandfather Grey, a companion to 'Grandmother Grey'"; Mrs. Laura Garland Carr, "Memories and Fancies"; Elizabeth Akers, "The High Top Sweeting and other Poems"; Madison Cawein, "Days and Dreams"; Celia Thaxter, "Verses"; Frank Chaffee, "Songs of Spring"; J. D. Vinton, "Shadows from Life"; Isabella T. Aitken, "Bohemia and other Poems"; Morris Garth, "Cuba," an incident in the insurrection, and other verse; I. McC. Wilson, "The Fate of the Leaf"; Henry O'Meara, "Ballads of America"; Anna M. Richards, "Letter and Spirit Poems"; and Isaac Baxley, "Songs of the Spirit." Mrs. Sarah M. B. Piatt's volume of short poems was entitled "An Irish Wild-flower"; "The Perfume Holder" was a Persian love poem by C. L. Betts; Dr. Weir-Mitchell contributed "A Psalm of Deaths"; William S. Taylor, "Man Immortal, an Allegorical Poem"; Emma Withers, "Wildwood Chimes"; and Meredith Nicholson entitled his "Short Flights" into the region of fancy poems and sonnets. We have "Allen Dorman," a biography and poems; Joseph H. Young was responsible for "Lyrics"; M. I. Anson, for "The Vision of Misery Hill"; G. H. A. Conrard, for "A Junior's Poems"; Louis J. Block, for "Dramatic Sketches and Poems"; and Richard Hovey, for "Launcelot and Guenevere, a Poem in Dramas." Franklyn W. Lee wrote "Dreamy Hours"; Charles L. Thompson, "Etchings in Verse"; Frank W. Gunsaulus, "Phideas and other Poems"; Denton J. Snider, "Homer in Chios: an Epopee"; and Prof. W. Cleaver Wilkinson, "The Epic of Saul." "The Ride to the Lady," by Helen Gray Cone, and "An Idyl of the Sun," by Orrin C. Stevens, are not to be forgotten, nor a second series of "Poems," by Emily Dickinson. "The White Shoshone," by Charles L. Paige, and "Winona: a Dakota Legend," by E. L. Huggins, are akin in that they treat of Indian life. Walt Whitman bade "Good-by, my Fancy." A memorial volume of James Russell Lowell was entitled "Odes, Lyrics, and Sonnets," and "The Lost

Ring and other Poems," by Mrs. Caroline A. Mason, had an introduction by Charles G. Ames. "Lyrics of the Living Church: Original Poems," were edited by C. W. Leffingwell, while "Tales of the Turf and 'Rank Outsiders,'" by Richard L. Cary, Jr. (Hyder Ali), were illustrated by Gean Smith. "A Midsummer Lark," by W. A. Croffut, went through a second edition, and William Dean Howells opened a new series ("Harper's Black and White") with "The Albany Dépôt," a laughable farce. "Sunshine in Life" was a collection of poems for the King's Daughters, compiled and arranged by Florence P. Lee. The "Treasury of Favorite Poems" was a contribution to the "Vignette Series" by Walter Learned. "The Passion Play in 'Oberammergau,' 1890," was described by William Allen Butler. Three unique volumes were "Republica: a National Poem in Seven Parts," by J. P. Campbell"; the "Story of the Union in Rhyme, 1492-1892," anonymous; and "The American Epic," a poetic history of our country from the Stamp act, 1764, to the McKinley Tariff bill, 1890, by Drummond Welburn.

Political, Social, and Moral Science.—In politics we have an "Introduction to the Study of Federal Government," by Albert Bushnell Hart ("Harvard Historical Monographs," No. 2), and, in the "Johns Hopkins University Studies," "Government and Administration of the United States," by Westel W. and William F. Willoughby. "State and Federal Government in Switzerland" was treated by John M. Vincent. Prof. John W. Burgess devoted two volumes to "Political Science and Comparative Constitutional Law," and Alex. L. Peterman wrote "Elements of Civil Government," a text-book for use in public schools, etc. Samuel Freeman Miller delivered "Lectures on the Constitution of the United States," and Alfred Bayliss prepared "Easy Lessons on the Constitution." "The British *versus* the American System of National Government" was a paper read by A. H. F. Leffroy before the Toronto branch of the Imperial Federation League, Dec. 18, 1890, and John George Bourinot, clerk to the Canadian House of Commons, made "Canadian Studies in Comparative Politics." "Recent Constitution-making in the United States: North Dakota, South Dakota, Montana, Washington," by Prof. Francis Newton Thorpe, appeared in publications of the American Academy of Political and Social Science, and, in the "Johns Hopkins University Studies," "The Constitutional Development of Japan, 1853-1881," by Iyenaga Toyokichi. Prof. Arthur Latham Perry published an entirely new work on "Principles of Political Economy," and "The Educational Value of Political Economy" was handled by Prof. Simon N. Patten. "The Reader's Guide in Economic, Social, and Political Science" was supplied by Richard R. Bowker and George Iles, and "Rudimentary Economics for Schools and Colleges," by George M. Steele. Slack Worthington had a volume on "Politics and Property," and Henry S. Chase, M. D., wrote "Letters to Farmers' Sons on the Questions of the Day." "The Report of the Proceedings of the American Economic Association" at the fourth annual meeting was issued, and from its publications was reprinted "The Tide of Economic Thought," an address delivered by Francis A.

Walker, at Washington, D. C., before the Association, Dec. 26, 1890. "The Riddle of the Sphinx," by N. B. Ashby, was a discussion of various economic questions, and "Food and Feeding considered as a Factor in making the Rates of Wages or Earnings" formed the substance of an address by Edward Atkinson to the Cotton Manufacturers' Association, April 26, 1891. "Which? Protection, Free Trade, or Revenue Reform?" consisted of the best articles of the most eminent political economists and statesmen on these subjects, edited by H. W. Furber, and another volume of the same character was "Both Sides of the Tariff Question by the World's Leading Men." "Protective Philosophy," by D. H. Rice, discussed the principles of the protective system as embodied in the McKinley bill, and John D. Goss wrote "The History of Tariff Administration in the United States from Colonial Times to the McKinley Administrative Bill." William Draper Lewis, in the "University of Pennsylvania Series of Political Economy and Public Law," considered "Our Sheep and the Tariff," and Porter Sherman sent out "A Tariff Primer." "The Corporation Problem" disturbed William W. Cook as to the public phases, uses, abuses, benefit, dangers, wealth, and power of corporations, as well as the industrial, economic, and political questions to which they have given rise; and A. B. Stickney discussed "The Railway Problem." Achille Loria submitted to the American Academy of Political and Social Science a paper entitled "Economics in Italy," and "How to Co-operate" was explained by Herbert Myrick. "Economic and Industrial Delusions" was a discussion of the case for protection by Arthur B. and Henry Farquhar. "Radical Wrongs in the Precepts and Practices of Civilized Man," by J. Wilson, opens, not inaptly, another class of works, among which are: "The Condition of Labor," an open letter to Pope Leo XIII by Henry George, with the "Encyclical Letter" of that prelate; "White Slaves; or the Oppression of the Worthy Poor," by Lewis Albert Banks, and "Thirty Years of Labor," a history of the organization of working men by T. V. Powderly. "Recent Development of American Industries," by the Class of '91, initiated Vol. I of "Wharton School Studies in Politics and Economics of the University of Pennsylvania." "Public Lands and Agrarian Laws of the Roman Republic" were treated by Andrew Stephenson in the "Johns Hopkins University Studies," and in publications of the American Economic Association appeared "Government Forestry Abroad," by Gifford Pinchot; "The Present Condition of the Forests on the Public Lands," by E. A. Bowers; and "Practicability of an American Forest Administration," by B. E. Fernow. "The Farmer's Side: his Troubles and their Remedy," by Hon. W. A. Peffer, United States Senator from Kansas, gives an authoritative presentation of the aims and views of the Farmers' Alliance, and, in line with the same, John N. Cunningham proposes "The New Constitution: how the Farmer may pay off his Mortgage, and the Working Man become his own Master." Marshall M. Kirkman contributed a monograph on "Railway Rates and Government Control," and Edward W. Bemis wrote on "Municipal Ownership of Gas in the United States." "The Char-

acter and Influence of the Indian Trade in Wisconsin" was discussed by Frederick J. Turner. In the "Questions of the Day Series" "Parties and Patronage in the United States," by Lyon Gardiner Tylor, traced the "spoils system" back to the organization of the National Government in 1789-1801; "Congress and Cabinet," by Gamaliel Bradford, discussed the advisability of giving the heads of executive departments seats in the national Legislature; while John S. Billings, M. D., delivered an address before the American Academy of Political and Social Science at the Art Club, Philadelphia, Jan. 14, 1891, on "Public Health and Municipal Government." "Africa and America" was the title of addresses and discourses by Rev. Alexander Crummell, rector of St. Luke's Church, Washington, D. C., an African, on subjects connected with his race, and from W. Cabell Bruce came a consideration of "The Negro Problem," which offered no solution. Henry D. Barrows published "International Bi-metallism, an Essay"; W. W. Admire, a "Political and Legislative Hand-book of Kansas"; Charles F. Dole, "The American Citizen"; A. D. Peterman, "Elements of Civil Government"; and Harriette R. Shattuck, "The Woman's Manual of Parliamentary Law." George Gunton wrote on "Principles of Social Economics inductively considered and practically applied, with Criticisms on Current Theories"; Robert Archey Woods, on "English Social Movements"; Walter Francis Wilcox, on "The Divorce Problem: a Study in Statistics." H. S. Pomeroy asked "Is Man too Prolific? the So-called Malthusian Idea," and "The New School of Criminal Anthropology" formed the subject of an address by Robert Fletcher, M. D., before the Anthropological Society of Washington. Andrew J. Palm also treated "The Death Penalty," and a second series of "Papers in Penology" was compiled by the editor of the "Summary," Elmira, N. Y. "The Prison Question," by Charles H. Reeve, and "The American Siberia, or Fourteen Years' Experience in a Southern Convict Camp," by J. C. Powell, bear further on the subject; while of special interest are the collection of papers by George Kennan on "Siberia and the Exile System," from the "Century Magazine" (with additions), into two superb volumes; "Siberia and the Nihilists; why Kennan went to Siberia," by William Jackson Armstrong; and "The New Era in Russia," by Charles A. de Arnaud. "The Cyclopædia of Temperance and Prohibition," a volume of 670 pages, provides all possible information on all phases of the drink question.

Sports and Pastimes.—"Sport: or Fishing and Shooting," edited by A. C. Gould, and illustrated from the fifteen original water colors by A. B. Frost, Henry Sandham, F. H. Taylor, and others, is by far the handsomest book falling under this class. "The Camp-Fires of the Everglades, or Wild Sports in the South," were described by C. E. Whitehead, and "The Fishes of North America that are taken on Hook and Line," by William C. Harris, the latter work being in forty monthly parts, illustrated with colored lithographs. "The Complete Angler" is a practical guide to bottom fishing, trolling, spinning, and fly fishing, with a chapter on sea fishing. Henry Austin drew up "American Game and Fish Laws," and "Will Wildwood" (Fred. E. Pond)

prepared "The Sportsman's Directory." "Who Won? the Official American Yacht Record for 1891," compiled by James C. Summers, completes the fifth year of that important publication, and in the "Hand-book Library" we have an "Aquatic Guide" and "Campbell's Lawn Tennis, and the Way to play it." James M. Rice wrote a "Range Manual and Score Record," and Henry W. Struss "Ring Riding," a collection of movements and commands designed for the use of riding schools and clubs. "How to get Muscular" is the title of five addresses by Charles Wadsworth, Jr., and Walter Camp treated "American Football." To Fisher Ames we are indebted for "A Practical Guide to Whist by the Latest Scientific Methods" and for "American Leads at Whist"; to J. T. Mitchell for "Duplicate Whist," and to Robert F. Green for "Solo Whist." "Concise Whist," giving accepted American leads, was anonymous. As a supplement to "American Whist illustrated," G. W. P. supplied "Whist in Diagrams." T. H. B. compiled "Conventional Whist Leads," while Eugene S. Elliott chronicled "Proceedings of the First American Whist Congress held at the City of Milwaukee, April 14-17, 1891." "Gambling" was discussed by James Harold Romain from the standpoint of "true philosophy and ethics," and "The Gambling Games of the Chinese in America" by Stewart Culin in the "University of Pennsylvania Series in Philology, Literature, and Archaeology" (Vol. VI, No. 4). "The Two-move Chess Problem" was treated by B. G. Laws. "A Box of Monkeys and other Farce Comedies," by Grace Livingston Furniss, are intended for amateur and parlor presentation, and "Original Charades," by L. B. R. Briggs, were collected from "Scribner's Magazine." Sports and pastimes of all kinds are covered by the small numbers of the "Manual Library," from eminent authorities. Among these may be mentioned the "Swimming Instructor," by Capt. Webb, and the "Amateur and Professional Oarsman's Manual" by W. Beach. "Man's Friend the Dog," by George B. Taylor, gave information as to the value of the different breeds of dogs and the best way to care for them.

Theology.—More works in this department were published in 1891 than in the year preceding, but none more important. "Church and Creed," three sermons by Rev. R. Heber Newton, presents that divine's understanding of "the doctrine of Christ as this Church hath received the same," and from the same author we have "Five-Minute Talks for Young People, or the Way to Success." Twenty-two "Sermons" were selected and published from the writings of Rev. Howard Crosby; from Andrew P. Peabody, D. D., came "King's Chapel Sermons"; from Rev. Edwin H. Burgess, a volume of sermons entitled "At the Place which is called Calvary"; from Charles H. Parkhurst, D. D., "Three Gates on a Side, and other Sermons"; from Charles Cuthbert Hall, D. D., a volume of twenty discourses, entitled, "Into His Marvelous Light"; and Wellesley W. Bowditch, D. D., edited "Interdenominational Sermons" by prominent ministers of different sects. Frederick H. Hedge, D. D., contributed twenty-four "Sermons"; J. DeWitt Burkhead, D. D., "Theology for the Masses"; Dr. James Boyd Brady, "Saengerfest Sermons," on the sanctity of the Sab-

bath; and John Steinfert Kedney, D. D., "Mens Christi, and other Problems in Theology and Christian Ethics." "Prayer, its Nature, Conditions, and Effects" were treated by C. A. Van Ando, D. D.; "Jesus Christ, the Proof of Christianity," by Bishop John F. Spaulding; "Our Father's Kingdom," by Julius H. Seelye; "The Larger Christ," by George D. Herron; "The Advancing Kingdom, or the Wonders of Foretold History," by Rev. F. E. Tower. "Baptismal Remission," by G. W. Hughey, D. D., and "Christianity and Some of its Evidences: an Address," by Oliver Mowat, are more or less allied in tone. "Different New Testament Views of Jesus" were collated by Joseph H. Cooper from the Unitarian standpoint, while the "Socialism of Christ" was contended for by Austin Bierbower. From James M. Hoppin (Professor of the History of Art in Yale University) came nine "Sermons upon Faith, Hope, and Love, together with Horæ Homilecticæ." "Institutes of the Christian Religion," by Emanuel V. Gerhart, D. D., had an introduction by Rev. Philip Schaff. James Strong considered "The Doctrine of a Future Life from a Scriptural, Philosophical, and Scientific Point of View." "Waymarks, 1870-1891" was the title of discourses of Bishop Henry C. Potter, D. D., with some account of their occasions. Prof. John Bascom, of the University of Wisconsin, formulated "The New Theology," and P. H. Steenstra, in a series of lectures, discussed "The Being of God as Unity and Trinity." Francis Howe Johnson asked "What is Reality?" "Positive Religion" consisted of essays, fragments, and hints, by Joseph H. Allen, and J. Macbride Sterrett argued upon "Reason and Authority in Religion." Richard N. Davies presented the Biblical evidence for the "Doctrine of the Trinity," while "The Harmony of Ethics with Theology" was an essay in revision by Henry E. Robbins, D. D. E. H. Johnson, D. D., drew up an "Outline of Systematic Theology," and James T. Bixby denominated an examination of rational ethics in the light of modern science "The Crisis in Morals." J. R. Miller, D. D., wrote on "Making the Most of Life"; A. J. Baird, D. D., on "The World and how to take it"; W. Thornton, on the "Origin, Purpose, and Destiny of Man"; Prof. Robert Ellis Thompson delivered the L. P. Stone Lectures for 1891 on "The Divine Order of Human Society"; the Bohnen Lectures for the same year were by Rev. William Reed Huntington upon "The Peace of the Church"; and the Yale Lectures on Preaching by James Stalker, D. D., on "The Preacher and his Models." Rev. T. De Witt Talmage preached "Among the Holy Hills: Sermons principally relating to Palestine," and "Twenty-five Sermons on the Holy Land"; he also published "From Manger to Throne." A second edition was made of the "Evolution of Man and Christianity," by Rev. Howard Macquary, whose "Topics of the Times" consisted of eight lectures and nine sermons, and whose defense before the ecclesiastical court of the Episcopal Church in northern Ohio against the charge of heresy was printed under the title of "Ecclesiastical Liberty." Rev. Morgan Dix, in a series of sermons during Lent, 1891, defined "The Authority of the Church as set forth in the Book of Common Prayer, Articles, and Canons," and Henry R. Per-

cival also digested and arranged "The Doctrine of the Episcopal Church so far as it is set forth in the Prayer Book." "The General Ecclesiastical Constitution of the American Church" was the theme of the Bohlen Lectures for 1890 (published in 1891) by Bishop William Stephens Perry (of Iowa), and George R. Crooks, D.D., edited a symposium upon "The Present State of the Methodist Episcopal Church." A "Hand-book of the Presbyterian Church in the United States of America, 1891" was edited by Rev. William P. White, and Edward D. Morris wrote "A Calm Review of the Inaugural Address of Prof. Charles A. Briggs. Rabbi Isaac M. Wise, in his "Pronaos to Holy Writ," established on documentary evidence the authorship, date, form, and contents of each of its books and the authenticity of the Pentateuch, while the "Harmony of Ancient History and Chronology of the Egyptians and Jews" was traced by Malcolm Macdonald. "Exegesis" was the theme of an address delivered at the opening of the autumn term of Union Theological Seminary, Sept. 24, 1891, by Bishop Marvin Vincent, and Orello Cone, D.D., had a volume upon "Gospel Criticism and Historical Christianity." "Christus Mediator," by Charles Elliott, D.D. (an historical and exegetical treatise on the atonement); "Fact and Fiction in Holy Writ," by J. Hendrickson McCarty, D.D.; "The People of the Book" by Maurice H. Harris; "Who wrote the Bible, a Book for the People," by Washington Gladden, D.D.; "Seven Lectures on the Credibility of the Gospel Histories," by Rev. John Henry Barrows; "Biblical Scholarship and Inspiration," two papers, by Llewellyn J. Evans and Henry P. Smith; "The Change of Attitude toward the Bible," an address before the Biblical Institute in Boston, by Joseph H. Thayer; "The Great Discourse of Jesus the Christ, the Son of God," anonymous; "Historical Evidences" of both the Old and New Testaments, published by the American Tract Society; "Studies in Old Testament History," by Jesse L. Hurlbut, D.D.; Vol. II of a "Commentary on the Old Testament," by Daniel Steele, D.D., and John W. Lindsay; "Saint Matthew's Witness to Words and Works of the Lord," by Francis W. Upham; "Studies in John's Gospel," by David Gregg, D.D.; "A Commentary on the Epistle to the Romans," by R. V. Foster, D.D.; "The Apocalypse, its Structure and Primary Predictions," by David Brown, D.D.; a new translation of "The Psalms," by John De Witt, D.D., as another of the book of Job under the title of "The Epic of the Inner Life," by John F. Genung; "The Gospel of Spiritual Insight, Studies in the Gospel of St. John," by Dr. Charles F. Deems; and "The Busy Man's Bible," by George W. Cable, have special value, while from J. N. Fradenburgh, D.D., we have "Fire from Strange Altars," a study of the environment of the religion of the Hebrews, with the necessary effects thereon, and "Departed Gods," a concluding volume of a series on the great religions of the world. Rev. J. A. Birkhauser narrated "The History of the Church (Roman Catholic) from its First Establishment to our Own Times," and Henry Eyster Jacobs that of "The Lutheran Movement in England during the Reigns of Henry VIII and Edward VI." Vol. II was issued of "Papers of the American Society of

Church History." J. E. Alexander, D.D., wrote "A Brief History of the Synod of Tennessee from 1817 to 1877"; Brooke Foss Wescott, D.D., "Essays in the History of Religious Thought in the West"; Rev. Dwight M. Pratt, D.D., "A Decade of Christian Endeavor, 1881-1891"; while from Mary Abigail Dodge (Gail Hamilton) came "A Washington Bible Class," followed by "A Chicago Bible Class," from the pen of Ursula N. Gestefeld. Vols. I and II of a second series of "A Select Library of the Nicene and Post-Nicene Fathers of the Christian Church" were edited by Philip Schall, D.D., who made "St. Chrysostom and St. Augustine" the subject of "Studies in Christian Biography." The errors, ignorance, etc., of "John Calvin" and the Presbyterian Church were disclosed and exposed by T. H. Hinchman and James Bell, while "What Rome teaches" was shown by "The Nun of Kenmare," Mary Frances Clare Cusack. "From Ocean to Ocean" described the march of the Salvation Army from the Atlantic to the Pacific, chronicled by Ballington Booth. Twenty-five "Sermons on the Way to Salvation," by Rev. Charles G. Finney, the revivalist, were selected and arranged by Henry Cowles, while "Intimations of Eternal Life" were given by Caroline C. Leighton, and Lucy Larcom had a small volume, "As it is in Heaven." "The Drift of the Young Men with relation to the Churches" was studied by Rev. C. E. Harrington, D.D., and "How to become a Christian" was told in five simple talks to the young by Lyman Abbott, D.D. "Sovereign Grace" and "Four Gospel Dialogues" comprised addresses by D. L. Moody, and John M. Armour wrote on "Mercy and the Law." "What can Ethics do for us?" was asked by William Mackintire Salter in an address. The "Standard Eclectic Commentary on the International Sunday-school Lessons for 1892," by Alfred N. Gilbert, had geographical notes by J. W. McGarvey, and Drs. David J. and Joseph D. Burrell prepared "Hints and Helps on the Sunday-school Lessons for 1892." "Selections from the Religious and Literary Writings of J. H. Bocock, D.D.," were edited by his widow, and "Living Thoughts of John Wesley" were put in shape by James H. Potts. Henry F. Reddall compiled "Golden Memories of the Book of Books," in picture, song, and story, J. F. B. Tinling furnished "Fifteen Hundred Facts and Similes for Sermons and Addresses," and Rev. Elias B. Sanford edited "A Concise Cyclopædia of Religious Knowledge." "The Public Uses of the Bible" was a study in Biblical elocution by George M. Stone. "The Miracles of Missions" were recounted by Arthur T. Pierson, who published also "Stumbling Stones removed from the Word of God," "The Divine Enterprise of Missions," a series of lectures, and "The Greatest Work in the World." Philo F. Leavens, D.D., in "The Planting of the Kingdom" gave a synopsis of the missionary enterprise, and L. P. Brockett, M.D., told "The Story of the Karen Mission in Bassein, 1830-1890."

Voyages and Travels.—A country which has of late been brought prominently to the attention of the world was visited by two journalists of distinction in 1891, Thomas Stevens performing a ride of more than 1,000 miles "Through Russia on a Mustang," taking photo-

graphs *en route*, with which his book is illustrated, and Charles A. Stoddard going "Across Russia from the Baltic to the Danube." Henry T. Finck published "Spain and Morocco: Studies in Local Color," and George Bailey Loring, M. D., ex-United States minister to Lisbon, described "A Year in Portugal, 1889-1890." "The Boy Travelers in Northern Europe," by T. W. Knox, and "Our Young People in Norway," by Augusta W. Kellogg, were juvenile in tone, as indicated by their names, and from Virginia W. Johnson we had "The Lily of the Arno, or Florence Past and Present," "The Swiss Republic," by Winchester Boyd, consists of notes made during four years of diplomatic service in that country, and "Three Vassar Girls in the Tyrol" suggests at once Mrs. Elizabeth W. Champney. "The Stream of Pleasure" is the title given a narrative of a journey on the Thames, from Oxford to London, by Joseph and Mrs. Elizabeth Robins Pennell, with a practical chapter by J. G. Legge, and Leonard Allison Morrison made a tour in seven countries "Among the Scotch-Irish." "By Land and Sea" chronicled incidents of travel, with chats about history and legends, and was from the pen of Mrs. J. M. Francis, wife of the United States minister at the courts of Greece, Portugal, and Austria-Hungary. Alpheus Spring Packard, M. D., in "The Labrador Coast" gave a journal of two summer cruises, with notes on the history, geology, etc., of that region, and Helen Mather described "One Summer in Hawaii." From Edward Everett Hale we have "Afloat and Ashore," and from Matthew Woods, M. D., "Rambles of a Physician," in two volumes. Under the title of "Our Italy" Charles Dudley Warner describes southern California in his own inimitable way, and Charles Ledyard Norton completed his "Hand-book of Florida," Part I of which appeared in 1890. C. V. Hine writes with enthusiasm of his trip in a canoe "On the Indian River," in that State, and from Cecil Charles we have "Honduras: the Land of Great Depths," which supplies much practical information. "The South and its People" are treated by W. Robbins Falkner, and "Southwest Virginia and Shenandoah Valley" by Thomas Bruce. Alfred Robinson delineates "Life in California during a Residence of Several Years," and 26 papers by Frank Bolles are entitled "Land of the Lingering Snow: Chronicles of a Stroller in New England from January to June." "California and Alaska" were visited by William Seward Webb, and in "Atlantis arisen" Mrs. Frances F. Victor described "Washington and Oregon." Book 4 of "The World and its People," edited by Larkin Dunton, is by Fanny E. Coe, and devoted to "Our American Neighbors." "The Spanish American Republics" is a richly illustrated volume for which we are indebted to Theodore Child, and in this connection may be mentioned bulletins issued by the Bureau of American Republics, State Department, Washington, D. C., entitled "Hand-books of the American Republics." "A Run around the World," anonymous, describes the adventures of three young Americans, and from Elizabeth Bisland we have "A Flying Trip around the World." "Nota: an Unexplored Corner of Japan" was welcomed from Percival Lowell; Alice Mabel Bacon described "Japanese Girls

and Women"; Eliza Ruhamah Scidmore, "Jinrikisha Days in Japan"; and M. B. Cook, "Japan, a Sailor's Visit." "How we went and what we saw," by Charles McCormick Reeve, was the record of a flying trip through Egypt, Syria, and the Ægean Islands, and "The Beautiful Land, Palestine," by John Fulton, D. D., had an introduction by Bishop Henry C. Potter. Rev. Nathan Hubbell chronicled "My Journey to Jerusalem," with travels in other countries, and a tour around the world to study missions was summed up by Daniel M. March, D. D., in "Morning Light in Many Lands." Martin Brimmer published an illustrated volume describing the history, religion, and art of ancient Egypt. Samuel A. Mutchmore, D. D., devoted two volumes to "The Moghul, Mongol, Mikado, and Missionary." Bishop John F. Hurst wrote "Indika: the Country and People of India and Ceylon," and supplied an introduction to "A Winter in India and Malaysia among the Methodist Missions," by M. B. V. Knox, D. D. Rev. Josiah Tyler described "Forty Years among the Zulus." "The Land of the Lamas," by William Woodville Rockhill, consists of notes on a journey through China, Mongolia, and Tibet, made in disguise by the adventurous young American, who has had but two predecessors in the region, and who traveled 700 miles where no white man had ever set foot before. Herbert Ward gave to the world "My Life with Stanley's Red Guard," and important translations bearing on the vexed question of the Emin Relief Expedition are "New Light on Dark Africa" from the German of Carl Peters, by H. W. Dulcken, and "Ten Years in Equatoria and the Return with Emin Pasha," from the Italian of Gaetano Casati, by Mrs. J. Randolph Clay, assisted by I. Walter Savage Landor. Hezekiah Butterworth continued his "Zigzag Journeys in Australia," and from Charles Erskine, the only survivor of the United States exploring expedition under Admiral Charles Wilkes (1838-40), we have "Twenty Years before the Mast." Charles Paul Mackie went "With the Admiral of the Ocean Sea" on his momentous voyage. Hugh Craig compiled "Great Arctic Travelers," and among guide-books may be mentioned, "Chicago and its Environs," by L. Schick; "Chicago, the Marvelous City of the West," by John J. Flinn; "San Antonio de Bexar, a Guide and History," by William Corner; "Glimpses of Pilgrim Plymouth," anonymous; "The Canadian Guide-book," by Charles G. D. Roberts; "A Week in New York," by Ernest Ingersoll; "Appletons' Dictionary of New York," in its thirteenth year; and Appletons' Hand-books of summer and winter resorts.

Unclassified.—On an all-absorbing topic we have "The World's Fair: its Meaning and Scope," by H. G. Cutler, and "World's Fairs, from London, 1851, to Chicago, 1893," by Gen. Charles B. Norton, a pamphlet of 93 pages, profusely illustrated, sent out by the committee of the World's Columbian Exposition. "The New York Obelisk: Cleopatra's Needle" was the subject of a volume by C. E. Moldenke, and Robert Coltman, Jr., M. D., treated "The Chinese; their Present and Future; Medical, Political, and Social." "Federal Finances," or the income of the United States, by W. E. Burke, explains simply and concisely the system of taxation as carried

on by the Government, with no attempt to discuss its merits or those of any other system; George M. Coffin prepared a "Hand-book for National Bank Shareholders," defining their legal rights and liabilities, while a third edition with important additions was made of his "Hand-book for Bank Officers" in general. Three additional chapters were annexed to Charles F. Dunbar's "Chapters on the Theory and History of Banking," and Hon. John Wanamaker published an argument in favor of "Postal Savings Banks." G. M. Harcourt wrote a "Banking and Commercial Guide"; Mrs. Sallie Joy White, on "Business Openings for Girls," eminently practical; while "Type-writing and Type-writers," by Arthur E. Moore, told also how to choose a machine. The "Book of Legal Dictation," by Charles Currier Beale, and "Office Work in Short-hand" are useful in their line, as is also a practical guide for inventors by E. P. Thompson, entitled "How to make Inventions." "How to make Money out of Inventions" was told by A. Schemmel. D. Walter Brown explained the "American Patent System." "Stories of Industry" for young people, by A. Chase and E. Clow, give an idea of the trades and manufactures of the world; only Vol. I, however, was issued during the year. T. O'Connor Sloane described "Rubber Hand-stamps and the Manipulation of India Rubber." Vol. II was published of the "Architectural and Building Monthly." "The Domestic House Planner" was anonymous. "A Move for Better Roads" was the title given to prize essays on the subject of the common roads of the United States. F. Hodgman drew up a "Manual of Land Surveying," and Francis Wyatt wrote on "The Phosphates of America." "The Tannins," of which Vol. I appeared, by Henry Trimble, leads naturally to "Leather Manufacture," by John W. Stevens, and thence to "That Uncomfortable Shoe," a plain and practical treatise by Avard J. Moore. "The Principles of Agriculture" were set down for common schools by I. O. Winslow, and "Mushrooms" were exhaustively treated by William Falconer. Mrs. Nettie Colburn Maynard startled the public with the question "Was Abraham Lincoln a Spiritualist?" "The Transition Curve Field Book," by Conway R. Howard; "The Engine Runner's Catechism," by Robert Grimshaw; "Constructive Steam-Engineering," by Jay M. Whitham; "The Corliss Engine," by John T. Henthorn; "Valve Gears," by H. W. Spangler; Vol. IV of "Practical Blacksmithing," by M. T. Richardson; "Strength and Properties of Materials," by William G. Kirkaldy; "Architectural Iron and Steel," by William H. Birkmire; with "The Metal Worker," a series of essays on house-heating, edited by A. O. Kittredge; and "A Treatise upon Wire," by J. Bueknall Smith, are pre-eminently suggestive and valuable. "Hannibal," in the "Great Captain Series," by Theodore Ayrault Dodge, carries on his history of the art of war to the battle of Pydna, 168 B. C.; while "The Principles of Strategy" were illustrated mainly from American campaigns by John Bigelow, Jr. "A Manual of Guard Duty," by L. W. V. I. Cannon, was published by the authority of the War Department, Washington, D. C., and "Drill Regulations for Street Riot Duty" were drawn up by Gen. Albert Ordway. Vol. II of "Modern

was translated from the French of V. Derrecagaix, by C. W. Foster; Henry Metcalf devoted two volumes to "Ordnance and Gunnery"; A. C. Gould (Ralph Greenwood) wrote on "Modern American Rifles"; a second edition was made of "Notes on Military Science and the Art of War," by Joseph M. Califf, and William W. Dietz prepared "The Soldier's First-aid Hand-book." But perhaps the most important book of the year, in this line, was "The New Infantry Drill Regulations," which supersedes Upton's "Tactics." "The Old Navy and the New" was the subject of a timely volume by Rear-Admiral Daniel Ammen, U. S. N., with an appendix of personal letters from Gen. Grant; and "Ocean Steamships" was the title given to a series of articles giving a popular account of construction, development, management, and appliances which appeared in "Scribner's Magazine," from the pens of F. E. Chadwick, J. D. J. Kelley, Ridgely Hunt, and others, collected into a handsome book.

"Patterson's Illustrated Nautical Dictionary" was edited by Howard Patterson; William Gilpin proposed a scheme for "The Cosmopolitan Railway"; William R. Hutton described "The Washington Bridge," known during its construction as the Harlem River Bridge and Manhattan Bridge; and Wolcott C. Foster wrote "A Treatise on Wooden-trestle Bridges." "Weddings" were treated by the author of "Cards," and the work entitled "Gentlemen" gave hints necessary on occasion. "Shall Girls propose?" was asked by a speculative bachelor, among other papers on "Love and Marriage." "Health, Happiness, and Longevity" were eulogized, and rules given for their attainment by L. P. McCarty, and Eleanor Kirk (E. M. Ames) told succinctly "The Woman's Way to Health and Beauty." Agnes H. Morton's handy little volume on "Correspondence" gave suggestions, precepts, and examples for the constructing of letters, and a practical guide for "copy" writers, by Alexander G. Nevins, was entitled "The Blue Pencil and how to avoid it." "The Press of North Carolina in the Eighteenth Century," by Stephen B. Weeks, was of special interest to printers and publishers. "National Flowers," by Fannie A. Dean, was suggested by the discussion concerning the national flower of America. A. Minott Wright contended for the United States as the greatest country in the world in "Three Months with the New York Herald"; while "The Britannica answered and the South vindicated" was a defense of that section against the aspersions of the "Encyclopædia Britannica" and a criticism of the work by T. K. Oglesby. "The American Catalogue," in three parts (founded by F. Leyboldt in 1876, and compiled under the editorial direction of R. R. Bowker), covered the books from July 1, 1884, to June 30, 1890, and other valuable works of reference were "United States Government Publications, July 1, 1884, to June 30, 1890," by R. R. Bowker and J. H. Hiccox; Vol. I of a "Complete Index to Littell's Living Age," for which we are indebted to Edward Roth; and "The Co-operative Index to Periodicals for 1890," edited by William I. Fletcher. "The Scientific American Cyclopædia of Receipts, Notes, and Queries," edited by Albert A. Hopkins, contains upward of 12,000 recipes. L. P. McCarty issued the "Annual Statistician and Economist," and

Oliver Optic his "Annual." "The Debater's Treasury," by William Pittinger, comprised a list of 200 questions, with notes and arguments; "Poor's Manual of Railroads of the United States for 1891" completed the twenty-fourth year of the work issued by H. V. Poor, whose "Second Annual Number of Poor's Hand-book of Investment Securities for 1891" was issued. "The Gast-Paul Directory of Bankers and Attorneys and Digests of the Laws" proved useful to many. Vol. XV of "Appleton's Annual Cyclopædia" for the year 1890 was sent out, and Vols. V and VI completed the great work of the "Century Dictionary." Among other noteworthy books of reference that appeared were "An Elementary Latin Dictionary," by Charlton T. Lewis, and the ninth enlarged edition (which he intimates is the final one) of John Bartlett's admirable "Familiar Quotations."

The following are the figures of book production in the United States for the years 1890 and 1891, as arranged for comparison under special classifications by the "Publishers' Weekly":

CLASS OF WORKS.	1890.	1891.
Fiction.....	1,114	1,105
Theology and religion.....	467	528
Juvenile.....	408	460
Education and language.....	399	355
Law.....	458	343
Literary history and miscellany.....	188	251
Fine art and illustrated books.....	135	228
Biography, memoirs.....	218	211
Political and social science.....	183	197
Poetry and the drama.....	165	193
Description, travel.....	162	189
History.....	153	124
Medical science, hygiene.....	117	108
Useful arts.....	183	106
Physical and mathematical science.....	98	97
Sports and amusements.....	82	79
Domestic and rural.....	29	71
Mental and moral philosophy.....	11	39
Humor and satire.....	42	26
Total.....	4,559	4,665

LITERATURE, BRITISH, IN 1891.

About the same number of books were produced during the year as in 1890; the total of new books, in all departments, exceeding by 15 the record of the previous year, while new editions were slightly fewer. The falling away was in divinity and sacred literature (about 10 per cent.), in *belles-lettres* and essays, in classical and school books, and in the fine arts and illustrated volumes. The estimate of about four novels for every working day (1,216 in all, of which 896 were new) includes a large collection of juvenile books, between which and fiction intended for older people the border line is growing yearly less defined. In travel and biography, in law books and in poetry, the increase was decidedly marked. Works on medicine and surgery were less numerous, while miscellany, including pamphlets, held its own.

Biography.—The most important contribution to literary biography made during the year was "The Life and Letters of Robert Browning," in two volumes, by his intimate friend Mrs. Sutherland Orr, which, falling short as it does of our desires and expectations, is nevertheless valuable. "Browning as a Philosophical and Religious Teacher" was also studied by Prof. Henry Jones. Mrs. Margaret O. W. Oliphant supplied a "Mem-

oir of the Life of Laurence Oliphant and of Alice Oliphant, his Wife," in two volumes; "Letters of Charles Dickens to Wilkie Collins" were edited by Lawrence Hutton; Frederic G. Kitton portrayed "Charles Dickens by Pen and Pencil"; and Percy Fitzgerald gave "The History of Pickwick" in addition to publishing "The Life of James Boswell," in two volumes. Mrs. Annie E. Ireland attempted, without signal success, to add to our knowledge of "The Life of Jane Welch Carlyle," reviving a painful story. "Swift, the Mystery of his Life and Love," by James Hay, was foolish and pretentious; while in the "Great Writers Series" the "Life of W. M. Thackeray" was ably written by Herman Merivale and Frank T. Marzials. "Dr. John Brown and his Sister Isabella" were sympathetically treated by E. T. McLaren; Elizabeth Wordsworth contributed a monograph on "William Wordsworth"; and from Bishop Charles Wordsworth came "Annals of my Early Life, 1806-'46," entertaining in the highest degree. Another interesting volume was "Richard Redgrave, R. A., C. B.: a Memoir compiled from his Diary," by his daughter, Miss F. M. Redway. "Later Leaves" was the title of further reminiscences by Montagu Williams, while "A Publisher and his Friends," being the memoir and correspondence of the late John Murray, with an account of the origin and progress of the house, in two volumes, and "Jasmin: Barber, Poet, Philanthropist" were two exceptionally attractive emanations from Dr. Samuel Smiles. "Letters of John Keats to his Family and Friends" were edited by Sidney Colvin, and "Select Passages from the Letters of Lady Mary Wortley Montagu" by A. R. Ropes. "Early Days recalled," by Janet Ross, and "Early Papers and Some Memories, 1850-'70," by Henry Morley, contain agreeable reminiscences. Three volumes are filled with the diary and letters of "Madame D'Arblay," edited by her niece, Charlotte Barrett; and "Mrs. Thrale, afterward Mrs. Piozzi" was a sketch of her life and passages from her diaries edited by L. B. Seeley. "Charles Stewart Parnell: a Memory," by T. P. O'Connor, was remarkable for its rapid accomplishment, having been written and published within a week; and other volumes dedicated to political leaders are: "Sir Robert Peel in Early Life, 1788-1812; as Irish Secretary, 1812-'18; and as Secretary of State, 1822-'27," edited by Charles Stuart Parker, M. P.; "Sir Robert Peel," by Justin McCarthy, M. P., in the "Series of Prime Ministers of Queen Victoria," the sixth number of which was "The Right Hon. William Ewart Gladstone," by George W. E. Russell; "Peel," again, in the "Series of Twelve English Statesmen," this time by J. R. Thursfield; "The Rt. Hon. Arthur MacMurrough Kavanagh," by his cousin, Sarah L. Steele, and from papers chiefly unpublished; and an "Anecdotal Life of Sir John Macdonald," by E. G. Biggar. "A Life of Love and Duty" was a memoir of Commodore Goodenough edited by his widow, and "Memorials of Rev. John Frederick Stevenson" were prepared by his wife. "George Gilfillan" was the theme of anecdotes and reminiscences by David Macrae; Arnold White edited "The Letters of S. G. O." (Rev. Lord Sidney Godolphin Osborne), in two volumes; "The Naturalist of Cumbria: a True Story,

being the *Life of David Robertson*," by his friend the Rev. Thomas R. R. Stebbing, was full of interest to admirers of the scientist. "Letters and Correspondence of John Henry Newman during his Life in the English Church" were edited by Annie Mozley, prefaced by a brief autobiography of the cardinal, whose brother, F. W. Newman, published "The Early History of the Late Cardinal Newman" in anything but a brotherly spirit. Edith C. Kenyon wrote a "Centenary Life of John Wesley," and "Wesley and his Successors" was a centenary memorial of the death of the founder of Methodism, from an unknown source; "Wesley: the Man, his Teaching, and his Work" was the title of sermons and addresses delivered in City Road Chapel at the centenary commemoration of John Wesley's death, and in the "Series of English Leaders in Religion" we have "John Wesley," by Canon Overton, and "Bishop Wilberforce," by G. W. Daniell. "The Life of Archibald Campbell Tait, Archbishop of Canterbury," was carefully and conscientiously written by Randall T. Davidson, Bishop of Rochester, and Canon Benham. "The 'Autobiography of Archbishop Ullathorne' was edited, with selections from his letters, by Augusta Theodosia Drane. Elizabeth R. Vermilye attempted "The Life of Alexander Duff" in the "Missionary Annals Series"; "A Modern Apostle: Alexander N. Somerville" was treated by Dr. George Smith, and the story of "John Kenneth MacKenzie, Medical Missionary to China," was told by Mary F. Bryson. Bishop Oxenden wrote the "History of my Life," and "General Booth" was an historical sketch by W. T. Stead. "Memorials of Robert T. Cunningham," edited by Rev. David Miller, "Thomas Sopwith," by B. W. Richardson, and "George Fife Angas: Father and Founder of South Australia," by Edwin Hodder, are lives of good if not illustrious men. "Speaking Years" was a memory of Rev. William Carus, formerly Canon of Winchester, by Rev. C. Bullock, and "Bishop Vesey of Sutton, Coldfield, and Exeter" came from J. R. Willington. "The Memoirs of the Tenth Royal Hussars (Prince of Wales's Own)" were collected and arranged by Col. R. S. Liddell, late their commander, and Vol. I was issued of "Heroes of Britain in Peace and War," by E. Hodder. "Some Historic Women" were chronicled by W. Davenport Adams, and among their number is to be reckoned "Emma, Lady Hamilton," by Hilda Gamlin. In the "English Men of Action Series" we have "Warwick, the King-maker," by C. W. Oman; "Sir Francis Drake," by Julian Corbett; and "Rodney," by David Hanney. In the "Rulers of India" "Clyde and Strathnairn," by Sir Owen Tudor Burne; "The Marquis Cornwallis," by W. S. Seton-Karr; "The Earl of Mayo," by Sir W. Wilson Hunter; and "Viscount Hardinge," by his son and private Secretary in India, Charles Viscount Hardinge. The "Life and Writings of Sir Thomas More," by Rev. T. E. Bridgett, is by far the most substantial and scholarly biography of the chancellor that has ever been written, and appeared opportunely. Albert Hastings Markham supplied the "Series of Great Explorers" with the "Life of Sir John Franklin, and the Northwest Passage." "Heroes of the Nations" who were chronicled in 1891 were:

"Pericles," by Evelyn Abbott; "Theodoric the Goth," by Thomas Hodgkin; and "Sir Philip Sidney," by H. R. Fox Bourne. "Thomas Beterton," by Robert W. Low, and "Charles Macklin," by Edward A. Parry, were the two contributions to the "Series of Eminent Actors"; and from J. R. Robinson and H. Hunter came "The Life of Robert Coates." Two volumes were devoted by (Canon) H. S. Holland and W. S. Rockstro to "Jenny Lind, the Artist, 1820-51." "Randolph Caldecott" was a personal memoir by H. Blackburn, and "The Life of Henry Dawson, Landscape Painter, 1811-78" was written by his son, Alfred Dawson. "Watts Phillips: Playwright and Artist" was contributed by his sister, Miss Watts Phillips, and a sketch of "Maria Drummond" came from C. Kegan Paul. "Colingwood" was the subject of a volume by W. Clark Russell, and Admiral Sir Augustus Philipmore dubbed Admiral Sir William Parker "The Last of Nelson's Captains." "Heroes of the Telegraph" were immortalized by J. Munro, and to close this long but always interesting department, Vols. XXV, XXVI, XXVII, and XXVIII were issued of the "Dictionary of National Biography," edited by Leslie Stephen and Sidney Lee.

Essays.—Among the best books falling under this classification, which includes general literary miscellany, may be mentioned "Studies in Literature," by John Morley, covering a space of twenty years in date, and ranging from Wordsworth to "Maine on Popular Government" in theme, collected for the first time from various magazines and other sources. George Moore published his "Impressions and Opinions," and Oscar Wilde his "Intentions," a volume of essays containing the one on "The Decay of Lying"; Andrew Lang's "Angling Sketches" were illustrated by W. G. Burn-Murdoch, and he also sent out "Essays in Little." "A Characteristic of Modern Life" was studied by A. Jessopp, in five essays; while Robert Buchanan was the author of "The Coming Terror and other Essays and Letters." Lady Wilde's "Notes on Men, Women, and Books," the first series of selected essays, and "A Few Impressions from the Poems of Robert Browning," by Emily Atkinson, were received with favor, as were Joseph Jacobs's "Essays and Reviews from the Athenæum"; "Essays in English Literature" and "Essays on French Novelists," by George Saintsbury; "Writers and Readers," by G. Birbeck Hill; "Boethius: an Essay," by H. F. Stewart; "With Poet and Player," essays on literature and the stage, by W. Davenport Adams; and "On the Stage and Off," by Jerome K. Jerome, who also kept the "Diary of a Pilgrimage." Cardinal Newman's "Poetry with Reference to Aristotle's Poetics" was edited with an introduction and notes by Albert S. Cook, while the essay of the same prelate upon ecclesiastical miracles was discussed, not to say dissected, in "Philomythus: an Antidote against Credulity," by Dr. Edwin A. Abbott. "Forty Years in a Moorland Parish," by Rev. J. C. Atkinson, proved excellent reading, and contained much curious and antiquarian lore; somewhat in line with which was "Parson and Peasant: Some Chapters of their Natural History," by J. B. Burne. "Old Time Punishments" were the theme of William Andrews. Andrew Wilson

caught "Glimpses of Nature," while nowhere is she more tenderly and lovingly portrayed than in "Annals of a Fishing Village" and "On Surrey Hills," by J. A. Owen, who calls himself on the title-page of the last volume "A Son of the Marshes." J. R. Rees was at his best "With Friend and Book in the Study and the Fields." An "Introduction to the Study of the History of Language," by H. A. Strong, W. S. Logeman, and B. I. Wheeler, was a literary curiosity. "Primitive Folk Studies in Comparative Ethnology" were made by Elie Reclus in the "Contemporary Science Series," and a second series of "Yorkshire Legends and Traditions" was issued by Rev. Thomas Parkinson. "The Women of Turkey and their Folk Lore" were carefully studied by Lucy Garnett. "Studies in the Arthurian Legend," by John Rhys, held a high place, as did also "Olympus: Tales of the Gods of Greece and Rome," by Talfourd Ely. Two volumes contained "The Story of the Iliad" and "The Story of the Odyssey," by Rev. Alfred J. Church, with illustrations from Flaxman. Charles Godfrey Leland, with Albert Barrère, compiled "A Dictionary of Slang, Jargon, and Cant," in two volumes, embracing every variety known, and, as Hans Breitman, Leland also gave his attention to "Gypsy Sorcery and Fortune-Telling." Vols. I and II were published of the "Journal of the Gypsy Lore Society," and Dr. Raven, the well-known antiquarian, devoted himself to "The Church Bells of Suffolk." A fourth series of the "Bookworm," an illustrated treasury of old-time literature, appeared. J. C. Collins, in "The Study of English Literature," made a plea for its recognition and organization at the universities; and John Earle treated of "English Prose." "Names and their Meanings" was a book for the curious by Leopold Wagner; a second edition was made of "Pessimism," by James Sully, published fourteen years ago; and Alfred W. Pollard spoke "Last Words on the History of the Title-page," with notes on some colophons and twenty-seven facsimiles of title-pages. University life was described in "In Cambridge Courts," by R. C. Lehmann. and Andrew Clark edited "The Colleges of Oxford: their Histories and Traditions." Arthur Acland, M.P., compiled "The Guide to the Choice of Books," E. B. Sargent and Bernard Whishaw together prepared "The Guide Book to Books," and Henry Morley sent out Vols. VI and VII of "English Writers," covering the periods "From Chaucer to Caxton" and "From Caxton to Coverdale."

Fiction.—Several good novels were written, though not one made a marked sensation, not even "One of our Conquerors," by George Meredith, the first from his pen in a long time, but inferior to nothing that he had previously produced. Ralph Iron, now confessedly Miss Olive Schreiner, contributed "Dreams"; William Black wrote "Donald Ross of Heimra," dealing once more with the Scotch Highlands; Rudyard Kipling's reputation gained nothing by "Life's Handicap," a volume of very poor stories, "Mine Own People," and "Under the Deodars"; and his sister Miss Beatrice Kipling, made a first attempt in literature, not altogether successful, with "The Heart of a Maid." "Blanche, Lady Falaise," by J. H. Shorthouse, is, of course, mystical and

religious; and "My Danish Sweetheart," by W. Clark Russell, has the breath of the sea, as usual. "The Little Minister" and "Better Dead" were by J. M. Barrie, author of "A Window in Thrums"; "An Old Maid's Love," by Maarten Maartens; "The Scapegoat," by Hall Caine; "The Blue Pavilions," by Arthur Thomas Quiller-Couch, who masqueraded for a time under the pseudonym "Q," producing "Noughts and Crosses," a volume of short stories, which established his claim to originality and power. "Lord Arthur Saville's Crime and other Stories," by Oscar Wilde, possessed unusual merit. Three historical novels were "Darkness and Dawn, or Scenes in the Days of Nero," by Archdeacon Farrar; "The Story of Francis Cludde," by Stanley J. Weyman (whose latest was "The New Rector"); and "The White Company," by A. Conan Doyle. Maxwell Grey (Miss M. G. Tutielt, of the Isle of Wight) followed "Dean Maitland" with "In the Heart of the Storm," while the two novels of Walter Besant were "Children of Gibeon," a strong book dealing with the laboring classes, and "St. Katherine's by the Tower." Thomas Hardy's "A Group of Noble Dames" proved well worth reading, though out of his customary vein. "Eric Brighteyes," by H. Rider-Haggard, and Grant Allen's four books—"The Great Taboo," "Dumaresq's Daughter," "What's bred in the Bone," and "Recalled to Life"—with their suggestive titles, were welcomed by the admirers of the respective authors. Beatrice Whitby, who made her name by "The Awakening of Mary Fenwick," published "A Matter of Skill," "One Reason why," and "On the Lake of Lucerne," the last volume containing five other stories. F. Anstey Guthrie wrote "Tourmalin's Time Cheques"; B. L. Farjeon, "Ties—Human and Divine" and "The Shield of Love"; George Mannville Fenn, "A Double Knot" and "A Golden Dream"; George Macdonald, "There and Back"; Mrs. Campbell-Praed, the "Romance of a Châlet" and "The Soul of the Countess Adrian"; F. W. Robinson, "Her Love and his Life"; Miss M. E. Braddon (Mrs. J. Maxwell), "The World, the Flesh, and the Devil"; Mrs. Margaret O. W. Oliphant, "The Railway Man and his Children," "The Heir Presumptive and the Heir Apparent," and Janet"; Adeline Sergeant, "Brooke's Daughter," and, in collaboration with Lester Ewing, "Name and Fame"; William Morris, the "Story of the Glittering Plain"; Du Maurier, the famous caricaturist, came out in a new rôle with "Peter Ibbetson"; and David Christie Murray and Henry Herman were together responsible for "He fell among Thieves." "The Wages of Sin" were graphically portrayed by Lucas Malet (Mrs. Kingsley Harrison). "Save me from my Friends," by E. F. Knight, conveyed more than one moral; Rosa Nouchette Carey contributed three of her cheery little romances, "Our Bessie," "Averil," and "Mary St. John," while novels pronounced excellent, but which can be only enumerated, without comment, are "A Just Impediment" and "Miss Maxwell's Affections," by Richard Price; "Mr. Chaine's Sons" and "Miss Wentworth's Idea," by W. E. Norris; "My First Love and my Last Love," by Mrs. J. H. Riddell; "Well Won," by Mrs. Alexander; "Within Sound of the Weir," by T. St.

E. Hake; "Consequences," by Egerton Castle; "The Roll of Honor," by Annie Thomas; "The Mischief of Monica" and "A Pinch of Experience," by Mrs. L. B. Walford; "A Divided Duty," by Ida Lemon; "A Man's Conscience," by Avery Macalpine; and "The Nugents of Carriconna," a delightful Irish story, by Tighe Hopkins. "Cross Currents" was by Mary Angela Dickens, a granddaughter of the great novelist; Miss Kettle dwelt upon "The Magic of the Pine Woods"; and "The Three Miss Kings" was an Australian story by Ada Cambridge. "From Shadow to Sunlight" came from the pen of the Marquis of Lorne; Rhoda Broughton, with the assistance of Elizabeth Bisland, described "A Widower Indeed"; Ouida's sole book was "Santa Barbara." Mrs. Hungerford (the Duchess) wrote "Little Rebel"; F. W. Maude, "A Merciful Divorce"; and Mona Caird, "A Romance of the Moors." "The Pilots of Pomona," by Robert Leighton, was an exceptionally fine contribution to juvenile literature, intended for boys.

Fine Arts.—In the "University Extension Manuals" the "Fine Arts" were exhaustively treated by Prof. G. Baldwin Brown, covering the whole field of painting, sculpture, and architecture, their philosophy, function, and historic accomplishment. The fourth number of the "Manuals" was "The Philosophy of the Beautiful," by William Knight. Philip Gilbert Hamerton described "The Present State of the Fine Arts in France," and L. F. Day studied "Nature in Ornament." "Hints to Amateurs: a Hand-book on Art," by Mrs. Louise Jopling, offered many useful suggestions. "Architectural Perspective" was by F. O. Ferguson; "Architecture of the Renaissance in England," illustrated by views and details from buildings erected between the years 1560–1630, by J. Alfred Gotch and W. Talbot Brown; while the "History of Indian and Eastern Architecture," formerly the third volume of the second edition of a "History of Architecture," by James Ferguson, was expanded into an independent and original work, in two volumes. A third revised edition of the "History of the Modern Styles of Architecture," by the same author, was also issued, a large additional space being given to the architecture of England and America. Vol. III appeared of "The Castellated and Domestic Architecture of Scotland," by David Macgibbon and Thomas Ross, the first two of which came out two years ago, and a fourth is to be expected. "An Inventory of the Church Plate of Leicester," by Rev. Andrew Trollope, filled two volumes, and was pronounced the most complete work of the kind that has yet appeared, the work on which occupied six years. "Engravings and their Value" was a guide for the print collector by J. H. Slater, and "The Masters of Wood Engraving," a magnificent volume, by W. J. Linton, admirably illustrated. A second edition, in one volume, of "A Century of Painters of the English School," by Richard and Samuel Redgrave, was welcomed, and "William Hogarth," by Austin Dobson, was filled with photographs of the artist's masterpieces. "G. G. Clivio (Miniaturist): Life and Works," with notices of his contemporaries and of the art of book decoration in the sixteenth century, by John W. Bradley, had 18 plates. In the "Illustrated Bi-

ographies of Great Artists Series" the "Landscape and Pastoral Painters of Holland" were treated by Frank Cundall, as were "David Cox and Peter De Windt," by Gilbert R. Redgrave (who also supplied a "History of Water-color Painting in England," in the "Series of Illustrated Art Hand-books"), and F. G. Stephens wrote a "M memoir of George Cruikshank." Edward Gilpin Johnson edited "Reynolds's Discourses on Art," fifteen addresses of Sir Joshua, with a biographical and historical introduction. G. Woolisroft wrote on "Etching," supplying original illustrations, and W. H. May edited Vol. VIII of "English Etchings." For students of art J. Spencer prepared "Practical Perspective"; and R. Pratt, "Sciography, or Parallel and Radial Projection of Shadows." As in our own country, handsome gift-books were rare. "The Warwickshire Avon," by A. T. Quiller-Couch, with illustrations by Alfred Parsons; "The British Seas," with picturesque notes by W. Clark Russell and other writers, and the etchings and engravings after J. C. Hook, Colin Hunter, etc.; "The Flowers of Japan," by Josiah Conder; "By Seashore, Wood, and Moorland" peeps at nature, with 145 illustrations, by Edward Step; and "United States Pictures drawn with Pen and Pencil," by Richard Lovett, are among the best. "Players of the Period," by Arthur Goddard, was the title of a first and second series of anecdotal, biographical, and critical monographs on the leading English actors of the day.

History.—"The Imperial History of England," in three volumes, by William Cooke Stafford and Henry W. Dulcken, reaches from the earliest records to the present time; and from George Carter we have "Outlines of English History from 1066–1815." Part I of Vol. III appeared of "Annals of our Time," by H. Hamilton Fyfe, covering the period from the accession of Queen Victoria to the end of the year 1890; also Vol. IV of "Cassell's History of England," Jubilee edition. S. R. Gardiner's "History of the Great Civil War 1642–1649" and "The Interregnum (A. D., 1648–1660)," by F. A. Inderwick, approach each other closely in point of time. Osmund Airy wrote a "Text-book of English History for Colleges and Schools"; J. H. Anderson, a "History of George the Third's Reign"; while "The Industrial and Commercial History of England," traced in lectures delivered to the University of Oxford by the late James E. Thorold Rogers, was edited by his son, Arthur G. L. Rogers. "The Divorce of Catherine of Aragon," intended by James Anthony Froude as a supplementary volume to his "History of England," possesses all the brilliancy which marks the larger work, and was one of the marked contributions to literature of the year. "Body, Parentage, and Character in History: Notes on the Tudor Period" came from F. Jordan. Vol. II of "The History of Sicily from the Earliest Times," by E. A. Freeman, brought the work from the beginning of Greek settlements to the first intervention of the Athenians; Stephen A. Morse published Vol. II of "A History of the French Revolution," and also wrote "The Story of Portugal" for the "Story of the Nations Series"; "Waterloo Letters," hitherto unpublished, by officers who served in the cam-

paign of 1815, were edited with explanatory notes by Maj.-Gen. H. T. Siborne. Rev. E. Cobham Brewer's "Historic Note-book," with an appendix of battles, met many needs; R. Carstairs described "British Work in India"; J. T. Wheeler wrote "A College History of India, Asiatic and European"; and Archibald Forbes dealt with the same country in "Barracks, Bivouacs, and Battles." In the "Series of Events of our Own Time" he also depicted "The Afghan Wars," 1839-'42, and 1878-'80. "Eight Days: a Tale of the Indian Mutiny," by R. E. Forrest, filled three volumes. A. H. Howland made reflections upon "The New Empire," its origin and constitution and its relation to the great republic. A. Weir established the "Historical Basis of Modern Europe," and R. Hassencamp wrote a "History of Ireland." "South Africa from Arab Domination to British Rule," by R. W. Murray, and Vol. II of a "History of South Africa," by George McAll Theal, covering the period from 1795-1834, are cognate; "Mahdism and the Egyptian Soudan" were treated by F. R. Wingate, and "The Caliphate, its Rise, Decline, and Fall," by Sir William Muir. For an "Early Grecian History" (to 495 B. C.) we are indebted to A. H. Allcroft and W. F. Mason; for "The History of Commerce in Europe," to H. de B. Gibbins; while "Ten Years in Upper Canada, 1805-1815, being the Ridout Letters" was edited by Matilda Edgar. Vol. IV of William Kingsford's "History of Canada" covered the years from 1756-'63. In local history we have a "History of Hendon," by E. F. Evans; "A Short History of Clent," by John Amphlett; Vol. III of "The History of Hampton Court Palace," describing Orange and Guelph times, by Ernest Law; "London Past and Present," in three volumes, by Henry B. Wheatley, essentially a new work, though based on Cunningham's hand-book of the city. Richard Watson Dixon, "one of the few remaining clergy of the Church of England who have won for themselves a recognized place in modern literature," gave to the world Vol. IV of his "History of the Church of England from the Abolition of the Roman Jurisdiction"; and Vol. IV of "The Church of Scotland," edited by Prof. Story, consisted of "The Church and the Law," by Andrew Macegeorge, and "The Doctrine of the Church," by Rev. Dr. Milroy. A "History of the Christian Church from the Earliest Times to the Death of Constantine" was written by F. J. Foakes-Jackson, and a "History of the Church of England," for schools and families, by A. H. Hore. To educational history belongs "Eighteen Years of University Extension," by R. D. Roberts.

Physical, Moral, and Intellectual Science.

—In the first division we have "The Causes of an Ice Age," explored by Sir Robert Stawell Ball, the initial volume of the "Modern Science Series." Agnes M. Clerke set forth "The System of the Stars," while "The Meteoritic Hypothesis," by the able spectroscopist J. Norman Lockyer, was a statement of the results of a spectroscopic inquiry into the origin of cosmical systems. Dr. William Huggins, by whom stellar spectroscopy was, to a great extent, initiated, delivered an "Address to the British Association for the Advancement of Science" (of which he is president), at Cardiff, Aug. 19, 1891, devoted to

the increase of our knowledge of the heavens incident to the introduction of the spectroscope and the modern photographic plate into the observatory; and William F. Denning provided "Telescopic Work for Starlight Evenings," "Molecular Motion in the Radiometer, in Crookes's Tubes, and in Some other Phenomena" was studied by Daniel S. Troy, and "An Introduction to the Study of Petrology: the Igneous Rocks," by Frederick H. Hatch, brought together an amount of useful information impossible to be obtained elsewhere in the same compass. "The Scientific Papers of James Clerk Maxwell" were edited in two volumes, by W. D. Niven, eleven years after the death of their author, but proved neither less valuable nor less welcome for the delay; and "Zoölogical Articles," contributed by Prof. E. Ray Lankester and others to the recently completed edition of the "Encyclopædia Britannica," were collected into a volume and lavishly illustrated. "Animal Life and Intelligence" were studied by Prof. C. Lloyd Morgan, and David Syme wrote "On the Modification of Organisms." "A Hand-book of European Birds" was supplied for field naturalists and collectors by James Backhouse, Jr., and Henry Seebohm attempted the "Classification of Birds" in general. "The Riverside Naturalist" was from the pen of E. Hamilton. "A Text-book of Chemical Physiology and Pathology" was written by Prof. W. D. Halliburton, and Vol. II was issued of "A Dictionary of Applied Chemistry" by T. E. Thorpe. William Jago published "Inorganic Chemistry." "Color Blindness and Color Perception" were treated by T. W. Eldridge-Green, M. D., and "The Right Hand: Left-handedness" by Sir Daniel Wilson. "The History of Human Marriage" was a contribution to sociology by Edward Westermarck; Archdeacon Farrar gave himself to "Social and Present-day Questions"; "Modern Humanists," according to John M. Robertson in his sociological essays, were Carlyle, Stuart Mill, Emerson, Matthew Arnold, Ruskin, and Spencer, the author being himself a disciple and formerly a colleague of Charles Bradlaugh; Sidney Webb and Harold Cox united on "The Eight Hours' Day" question, and Mr. Webb produced, unassisted, the "London Programme." Vol. II of the "Labor and Life of the People," by Charles Booth, was published, with maps and appendix under a separate cover; and "The Co-operative Movement in Great Britain" was traced by Beatrice Potter. "Social Diseases and Worse Remedies" were the theme of letters written to the London "Times" by Prof. T. H. Huxley on Mr. Booth's scheme, and "A Plea for Liberty: an Argument against Socialism and Socialistic Legislation" consisted of an introduction by Herbert Spencer and essays by various writers, edited by Thomas Mackay. John Rae's "Contemporary Socialism" appeared in a new edition, and David Maxwell wrote "Stepping Stones to Socialism." George Howell described "Trade Unionism, New and Old," and John A. Hobson propounded "Problems of Poverty." "Black America," by W. Laird Clowes, was a volume of letters to the London "Times" on the subject of the ex-slave and his late master in the United States, written in 1890-'91; and Joseph Renner Maxwell studied "The Negro Question," offering hints for the

physical improvement of the negro race. Col. F. Maurice republished, with additions, his article on "War" in the "Encyclopædia Britannica"; "The Development of Navies during the Last Half-century" was traced by Capt. S. Erdley-Wilmot, the third volume of "Popular Lectures and Addresses," by Sir W. Thomson, was devoted to "Navigational Affairs"; and "The Last Great Naval War," by A. Nelson Seaforth, traced in imagination the future of England's fleet. In the "University Extension Manuals" "The Use and Abuse of Money" was discriminated by Dr. William Cunningham, and "English Colonization and Empire" formed the theme of Alfred Caldecott. "Short History of Political Economy in England" was also supplied by L. L. Price in the same series. J. N. Keynes gave himself to "The Scope and Method of Political Economy," and R. H. Inglis Palgrave issued the first part of a "Dictionary of Political Economy," to be completed in 12 parts. Part II of Vol. II of "The Theory of Credit," by Henry Dunning Macleod, was issued. "National Life and Thought of the Various Nations throughout the World," a series of addresses by the late J. E. Thorold Rogers, Erik Magnusson, and others, was designed to give information in a popular form, and "Studies in Statistics," by George Blundell Longstaff, performed the same office in a different manner. "The Oxford Movement," by the late Dean Church, covered the twelve years from 1833 to 1845, and Dr. B. F. Westcott furnished "Essays in the History of Religious Thought in the West." Goldwin Smith discussed "Canada and the Canadian Question," and "Canadian Studies in Comparative Politics" were made by John George Bourinot. "The Elements of Politics" were exhaustively discussed by Prof. Henry Sidgwick, and "Teaching in Three Continents" was reviewed by W. Caton Grasby from personal observation. "Modern Customs and Ancient Laws of Russia" were the theme of six lectures delivered at Oxford, by Maxime Kovalevsky, as was "The Little Manx Nation," of the Royal Institution Lectures, by T. Hall Caine. "The Lesson of the Revolution" was impressed on his fellow-countrymen by David Balsillie. J. R. Fisher and J. A. Strahan rendered lasting benefit by setting forth lucidly "The Law of the Press," while "The Pentateuch of Printing, with a Chapter on Judges," by William Blades, undertook in a somewhat fanciful manner to trace the rise and development of the art. The appearance of "Justice: being Part II of the Principles of Ethics," by Herbert Spencer, was welcomed in the intellectual world. The Gifford Lectures for 1890 before the University of Glasgow by Prof. F. Max Müller were upon "Physical Religion," following the former series delivered by him in 1888 upon "Natural Religion." Those upon the same foundation for 1891 were from Prof. Sir G. G. Stokes, M. P., upon "Natural Theology." The Bampton Lectures for 1891 were by Rev. Charles Gore, who in 1890 edited "Lux Mundi," and were upon "The Incarnation of the Son of God." The additions to the "Expositor's Bible" were six, namely: "The General Epistles of St. James and St. Jude," by Rev. Alfred Plummer; "The Gospel of St. John," by Rev. Marcus Dods; "The Acts of the Apostles," by Rev. G. T.

Stokes; "The Book of Proverbs," by Rev. R. F. Horton; "The Book of Ecclesiastes," by Rev. Samuel Cox; and "The Book of Leviticus," by Rev. S. H. Kellogg. "Matthew XXII to Mark XVI" and "St. Luke to St. John III" continued the "Sermon Bible," and Vols. XIII-XV were also issued of the "People's Bible." "An Introduction to the Literature of the Old Testament," by Dr. S. R. Driver, opened the "International Theological Library," and Frederick Gardener supplied "Aids to Scripture Study." To the "Men of the Bible Series" George Rawlinson contributed "Isaac and Jacob" and "Ezra and Nehemiah." Leonard A. Wheatley delighted the bibliographer with "The Story of the Imitatio Christi," and Rev. H. R. Haweis defined the limits of "The Broad Church." An address by Charles H. Spurgeon was entitled "The Greatest Fight in the World," and from the great preacher we have also sermons, as from Liddon, Cheyne, McLaren, Lightfoot, and several other eminent divines. Rev. G. Matheson made a careful analysis of "The Spiritual Development of St. Paul." Descending to the practical, we have "A Text-book of the Science of Brewing," by E. Ralph Moritz and George Harris Morris; notes on "Epidemic Influenza," its origin and method of spreading, by Richard Sisley, M. D., and "Diphtheria: its Natural History and Prevention," by R. Thorne Thorne, being the Milroy Lectures before the Royal College of Physicians of London for 1891. "Racing Reminiscences and Experiences of the Turf," by Sir George Chetwynd, in two volumes, and "Turf Celebrities I have known," by William Day, delighted sportsmen, who also received, in the "Badmington Library," "Riding and Polo," from Robert Weir, and "Famous Golf Links," from several experts. W. A. Kerr published "Practical Horsemanship" and "Riding for Ladies," and Alfred Hutton a manual for teacher and pupil called "The Swordsman."

Poetry.—"The Light of the World," by Sir Edwin Arnold, long expected and hailed with wide acclaim, proved somewhat disappointing. Volumes of "Poems" by Ruskin and Lecky attracted some attention because of the fame of their authors as prose writers. "Narrative Poems" and "Lyrical Poems," by Alfred Austin, are pronounced the most varied, spontaneous, and attractive of his verse; and another volume of rare merit was "Renasceance," by Walter Crane. Frederick Tennyson published "Daphne and other Poems." "The Shorter Poems of Robert Bridges" were received with favor; Lord Houghton's "Stray Verses, 1889-1890," recall his father in some measure; and from Robert Buchanan came "The Outcast, a Rhyme for the Times." William Sharp followed Walt Whitman in "Sospiri di Roma"; "In the Valhalla," by J. Y. Geddes, attracted attention as the effort of a working man; Rev. J. F. Langbridge produced "The Cracked Fiddle"; and other volumes which possessed merit in varied directions were "A Light Load," by Dolly Radford; "Michael Villiers, Idealist, and other Poems," by Emily Hickey; "Charybdis and other Poems," by Helen M. Wraithman; "The March of Man," by Alfred Hayes; "Gleanings," by E. L. Tomlin; "Verses Grave and Gay," by Ellen Thornycroft Fowler; and Aus-

tralian "Songs from the South," by J. B. O'Hara; while "Younger American Poets, 1830-1890," were edited by Douglas Sladen, with an appendix of "Younger Canadian Poets." "The Poets and Poetry of the Century," edited by Alfred H. Miles, to be completed in ten volumes, had four issued in 1891, covering "Crabbe to Coleridge," "Southey to Shelley," "Keats to Edward, Lord Lytton," and "William Morris to Robert Buchanan." Andrew Lang edited "The Blue Poetry Book," and W. E. Henley "Lyra Heroica." "Elizabethan Songs in Honour of Love and Beautie," collected and illustrated by Edward H. Garrett, had an introduction by Andrew Lang. A cheap edition of the "Poetical Works of Dante Gabriel Rossetti" was made, and "Poems," by Mrs. Archer Clive, were reprinted, with additions, after fifty years.

Voyages and Travels.—Among the most prominent books of the year in this department were: "Japonica," three papers originally written for "Scribner's Magazine," by Sir Edwin Arnold, collected into a handsome volume, with illustrations from life, and "Seas and Lands," a series of letters also from his pen to the London "Daily Telegraph" from both America and Japan. "The Story of the Rear Column of the Emin Pasha Relief Expedition," edited by Mrs. James S. Jameson, and "My Personal Experiences in Equatorial Africa as Medical Officer of the Emin Pasha Relief Expedition," by Dr. T. H. Parke, practically, it is to be hoped, closed the unfortunate controversy of last year. From Jane F. Moir we have "A Lady's Letters from Central Africa," and from L. Monteith Fotheringham, "Adventures in Nyassaland," a two years' struggle with Arab slave dealers in the same region. "Home Life on an Ostrich Farm," by Mrs. Annie Martin, was one of the most striking descriptions of South Africa ever penned, and attracted wide attention. Ronald Smith was at home in the "Great Gold Lands of South Africa," and E. P. Mathers dwelt upon "Zambesia: England's El Dorado in Africa." "Life in Ancient Egypt and Assyria," by G. Maspero, and "Pharaohs, Fellahs, and Explorers," a series of lectures delivered by Miss Amelia B. Edwards in the United States in 1889, were of special value. Henry C. Barkley took "A Ride through Asia Minor and Armenia," and H. de Windt "A Ride to India Across Persia and Beloochistan." "Journeys in Persia and Kurdistan," by Isabella L. Bird (Mrs. Bishop), included a summer in the Upper Karun region and a visit to the Nestorian Rayans; Miss Ellen Miller went "Alone through Syria"; Rose Monteiro described "Delagoa Bay: its Natives and Natural History"; J. Foreman, "The Philippine Islands"; and Mrs. Dora Hoyt, "Tahiti: the Garden of the Pacific." Other women who traveled and described their travels during the year were Mrs. Oliphant, who visited "Jerusalem," and Charlotte Elizabeth Riddell, who made "A Mad Tour, or a Journey undertaken in an Insane Moment through Central Italy on Foot." "Glimpses of Italian Society in the Eighteenth Century," from the journal of Mrs. Piozzi, were furnished with an introduction by the Countess Evelyn Montenegro Cesaresco. "A Girl in the Karpathians," by M^{lle} Muriel Norman; "Peeps at Portugal," by W. O'Connor

Morris; "Across the Border; or, Pathan and Biloch," by E. E. Oliver; "A Summer in Kieff, or Sunny Days in Southern Russia," by Isabel Morris; "In Troubadour Land: a Ramble in Provence and Languedoc," by S. Baring-Gould; "The Country of the Vosges" and "Watering Places of the Norumbega," by Henry W. Wolff; "New China and Old: Personal Recollections and Observations of Thirty Years," by the venerable Arthur E. Moule; and "With Gordon in China," letters from Thomas Lyster, lieutenant R. E., edited by E. A. Lyster, possessed a varied interest and found many readers, as did "Russian Traits and Terrors," a faithful picture of the Russia of to-day, by E. B. Lanin (the collective signature of several writers in the "Fortnightly Review"), with an ode by Algernon Charles Swinburne. "The Melanesians," by R. H. Codrington, was devoted mainly to anthropology and folk lore. "My Canadian Journal," by the Marchioness of Dufferin and Ava, consisted of extracts from letters written home during the six years Lord Dufferin was Governor-General of the province. Cecil Roberts described work and adventure in the States in "Adrift in America." George Broke, "With Sack and Stock in Alaska," and H. W. Seton Karr, "Bear Hunting in the White Mountains," made themselves very entertaining, and Max O'Rell (Paul Blouet) talked of himself as "A Frenchman in America." T. Fitzpatrick took "A Transatlantic Holiday" in the Eastern States, and "Dark Days in Chile" was an account of the revolution of 1891, by M. H. Hervey. Hume Nisbet filled two volumes with the travels and adventures of "A Colonial Tramp" in Australia and New Guinea; "Vicissitudes of Bush Life in Australia and New Zealand" were recounted by Dugald Ferguson; G. E. Mannering went "With Axe and Rope in the New Zealand Alps"; "The Golden Lake," by W. C. Dawe, told the marvelous history of a journey through the great lone land of Australia; Robert Wallace described "The Rural Economy and Agriculture of Australia and New Zealand"; and W. D. Pitcairn narrated his experience in "Two Years among the Savages of New Guinea." "My Three Years in Manipur and Escape from the Recent Mutiny" was thrillingly told by Mrs. Ethel St. Clair Grimwood; "A Month in a Dandi" was the record of a woman's wanderings in northern India, by Christina S. Bremner, and "Young India" was the title given a series of letters written to the "Pall Mall Gazette" during a political tour in India in the winter of 1890-91 by W. S. Caine. J. J. Hissey went "Across England in a Dog-cart" from London to St. David's and back, and William R. Hughes took "A Week's Tramp in Dickens-land," collecting reminiscences of the "inimitable Boz." According to V. Cecil Cotes, "Two Girls on a Barge" made a trip on the Thames and through some of the canals of England, and R. Brougham enjoyed his "Cruise in Friesland Broads."

The following is the analysis of the book-publishing trade in England during the year, according to the figures of the "Publishers' Circular," together with the corresponding figures for 1890, printed in parallel columns for the purpose of rendering comparison easy. It will be observed that the totals present only a slight difference:

DIVISIONS.	1890.		1891.	
	New books.	New editions.	New books.	New editions.
Theology, sermons, biblical, etc.	555	153	520	107
Educational, classical, and philological.....	615	88	587	107

LITERATURE, CONTINENTAL, IN 1891.

During the present year literature has flourished, on the whole, and manifested about its usual vigor. The state of political and civil affairs was mostly favorable, and authors and publishers availed themselves thereof with profit in both directions. We give the record, as heretofore, in the alphabetical order of countries on the Continent of Europe.

Belgium.—History and historical research maintain in Belgium the high position of former years. M. Piot, Keeper of the National Records, has printed Vol. VIII of the "Correspondence of Cardinal Granville," who was a somewhat famous ecclesiastic in the Low Countries when religious troubles broke out under Philip II. M. Vander Haeghen, M. Arnold, and M. Vanden Berghe are continuing the publication of the admirable bibliography of the Low Countries, entitled "Bibliotheca Belgica." So valuable was the work esteemed to be that it secured the quinquennial prize of 5,000 francs awarded by the Belgian Government for the best publication of the year dealing with national history. A Jesuit father, C. Sommervogel, has undertaken to supply a work of hardly less importance, to be issued under the title of "Bibliothèque de la Compagnie de Jésus." M. Namèche, the veteran worker in this department, has brought out two new volumes of his large "Cours d'Histoire Nationale," begun in 1883, and now nearly finished. Canon Daris, also a veteran laborer in this field, has added a new volume to his "History of the Diocese and Principality of Liège." The most important contribution to Belgian history is pronounced to be the "Introduction à l'Histoire des Institutions de la Belgique au Moyen Age," by Prof. L. Vanderkindere, of the University of Brussels. The author has brought the narrative down to the Treaty of Verdun in 843. Under the title of "La Renaissance des Lettres et l'Essor de l'Erudition Ancienne en Belgique," Prof. Felix Nève, of the University of Louvain, has collected in a volume essays previously printed on Erasmus, Sir Thomas

More, and some other humanists of the sixteenth and seventeenth centuries, who left marks of their influence on the literature of the Low Countries. Pupils of the state universities at Liège and Ghent have shown zeal and ability in various historical publications, such as the "Quarrel about Investitures in the Dioceses of Liège and Cambray (1075-1107)," by M. A. Cauchie, of Louvain, and the "Election of Pope Clement V," by M. L. Leclère, of Brussels. In connection with these historical notes we must not omit to state that two eminent workers have been taken away by death, viz., Baron de Lettenhove, who was just finishing the ninth volume of valuable records relating to the Low Countries and England during the reign of Philip II, and M. Van Weddinghen, court almoner, and distinguished among the Roman Catholic clergy of Belgium, who was at work to the very last. Weddinghen was in the prime of life, while Lettenhove was seventy-four years old. In political economy M. E. Mahaim, though a beginner, has shown real ability in sketching annals of the colleges of Roman artisans, of the corporations of workmen in the middle ages, and under the *ancien régime*, of the professional syndicates in France, the trade unions in England, the societies of workmen in Germany and Austria, and the professional unions of Belgium. Baron H. de Royer de Dour's book on "Workmen's Dwellings in Belgium," with appropriate plates, was esteemed to be so good that it was crowned by the Royal Academy. M. E. de Laveleye has issued an interesting monograph on "La Monnaie et le Bimétallisme International," and has also brought out new and revised editions of his "Contemporary Socialism" and "Property and its Primitive Forms." M. de Harlez's monograph on "The Modern Philosophical School of China" is noteworthy, as is also Prof. P. Hoffman's volume "Religion basée sur la Morale." The topic is rather new on the Continent, and the author draws material from American writers as to the point of framing a new religion based mainly on morality and the like. The book is practically a supplement to Count G. d'Alviella's "Contemporary Religious Evolution among the English, Americans, and Hindus," published in 1884, and spoken of at that date. A work by Messrs. L. and E. de Taye, on "The Plastic Arts in Belgium," has been considered worthy of the prize of 25,000 francs founded by Leopold II. A superbly illustrated volume on towers and belfries has attracted much attention. In *belles-lettres* "Young Belgium" still stands prominent, and both claims and receives a large share of public consideration. The chief of the school, Max Waller, died a year ago. M. Macerlinck, a Fleming of Ghent, brought out a play, "La Princesse Maleine," in the summer, written in French, about which the Paris "Figaro" talked very extravagantly, even averring that it was "superior to the best of Shakespeare's"! Literature in the Flemish language continues to flourish in verse and prose. Several works of the year have attained popularity, such as M. Gittens's historical drama of the times of Napoleon I, "De Maire van Antwerpen," M. Styns's little volume "In de Ton," M. Brans's "Gedichten in Proza," etc. M. F. de Potter has done service to archæology in adding a new volume to

his history of the buildings and streets of Ghent. M. I. Vuylsteke's dissertations on the Artevelde, etc., are highly commended by the critics. Prof. J. Vercoullie, of the University of Ghent, has furnished an excellent "Etymologisch Woordenboek der Nederlandsche Taal," in which is proved the revival of Germanic philology, of late languishing in Belgium. The poet of West Flanders, Albert Rodenbach, has been well treated of by M. F. Vanden Weghe, and an industrious school-master near Ghent has written a book on "Medical Folk Lore" of Flanders, said by the critics to be well worthy of its theme. The Willems-Fonds have brought out a capital first volume for the study of popular poetry, entitled "Nederlandsch Liederboek." It contains patriotic and local *chansons* (texts and melodies) from the sixteenth century to the present time, such as songs of the Gueux in revolt against Spanish tyranny, national lyrics of Flanders, Holland, the Orange Free State, and the Transvaal, the song of Ypres, etc. A second volume is soon to appear, containing mediæval ballads, love songs, children's ditties, and the like, under the editorship of M. Florimond van Duyse, a very competent authority on Flemish music.

Bohemia.—Our record of the year shows that there has been more than usual activity in literature in Bohemia. By the side of older schools of thought, designated by the critics as "romantically patriotic and pessimistic," has sprung up a realistic movement of much interest. Lyric poetry, on the whole, is less remarkable than in previous years. The poet V. Jos. Pokorný-Pikulík published a collection entitled "Coming to the Mill with my Little Store," the result of twenty years' toil. The critics give only faint praise to the book, while acknowledging its love of freedom and art. Another poet, Vojtěch Pakosta, in his "Forest Walks," shows greater power, and delineates nature with rare skill and ability. The pessimistic school is represented by Jar. Vrchlický's "Voices in the Desert," similar to the productions of Jos. V. Sládek noted last year. "A Day of Bliss," by the gifted Bohdan Kamiński, evinces deep feeling, but in general is too melancholy in tone for most readers. F. X. Svoboda's patriotic "In our Atmosphere" is sharply criticised as weak in thought as well as in descriptive power. Several of the younger poets are highly praised, especially Klasterský and Kvapil. Emanuel z Cenková's "Eros a Psyche" unites pessimistic and naturalistic tendencies, and Z. Janko-Dvorský's "Floating Clouds" are pronounced to be approximating so nearly to the extreme of naturalism as to be devoid of all poetic illusion or ideal. The most noteworthy realist is A. Sova, who writes under the pseudonym "Ilja Georgov." The critics give him credit for powerful individuality, and much good fruit is expected in due time. Patriotic poems are not numerous or of much account. The pessimistic school has been unusually active. Karel Kucera has published a collection of "Lost Stars," in which are united old Greek legends with patriotic motives and mediæval lore. The critics praised B. Kamiński's tale "Má Tatána," J. Zeyer's "A Tale of Charlemagne," K. Leger's tale in verse, "In Retirement," and M. Cervinka's "Hynek." Works of fiction have been numerous this year and of good quality. "The Three

Votes" is an historical romance by the chief Bohemian novelist of the present day, Alois Jirásek. The period is the fifteenth century, and the story is well calculated to arouse Bohemian patriotism. Shorter historical stories are J. Brann's "In Olden Times" and B. Brodský's "Ze Zručkych Matrik." Among tales of modern life much praised are: S. Heller's effective story "The Romance of the Battle Field," F. Herites's "Nobility of a Borough," V. Vleck's last work, "The Black Lake," and I. Hermann's realistic story in four parts, "At the Ruined Shop," in the city of Prague. In shorter tales and sketches the romantic school prevails, with realism now and then appearing. These are very numerous, too numerous, in fact, for us to give even titles here. The drama has been enriched this year by several works of merit. "The Bracelet" is a capital comedy in one act, by E. Bozdech, who died suddenly since last year's record. J. Vrchlický's comedy "The Ears of Midas" is highly spoken of, while a tragedy by the same author, "Love and Death," taken from Spanish history, is said to be destitute of dramatic interest. Other productions named with favor are A. Jirásek's "Vojnarka" (Bohemian country life), G. Preissova's "Gazdina Roba" (life among the Slovenes in Moravia), V. Stech's "Gold Rain" (social life), and K. Pippich's "Visionary Greatness." For the most part the verdict is that the drama has been but slightly affected by realism. In the departments of science, philosophy, and theology we have no material of sufficient value to put on record here.

Denmark.—Literary efforts in Denmark this year have been mostly put forth by writers of established reputations. H. Drachmann, who had rather fallen in public estimation, has renewed his popularity by a collection of lyric poems and by a new romance, "Forskrevet." This is described as being remarkable for a masterly picture of the author's self under two personalities, and for keen, rapier-like thrusts at men and things, as well as for pictures of fascinating beauty and perspicuity. Besides this, Drachmann has issued a volume of fresh and entertaining matter, "Tarvis: Tales from the Alps of Carinthia," and a series of sketches, "Trolldtoj" (with appropriate drawings by good artists), of well-known popular superstitions. Indeed, sketches of various sorts form a large part of the year's literary harvest. H. Pontopidan's "Chronicles" and N. Möller's "Occurrences" give clear glimpses into the limitations of life and the depths of the human soul, the former painting more broadly, the latter more minutely and delicately, after the manner of verses which he published two years ago under the title of "A Purgatory." C. Ewald's "Erotik" is said to evince subtle skill in analyzing and depicting love in its different shapes. Thor Lange, L. Petersen, and A. E. Betzonick are spoken of as only in part successful. The number of novels and tales is as large as usual. Of these, the critics praise Capt. P. F. Rist's "Soldiers," a collection of short tales; S. Schandorph's two volumes of tales, "From Abroad and from Home" and "On Journeys"; P. Mariager's "The Queen of Cyrene, and other Antique Tales"; and O. Madsen's "A Hole in the Ice, and other Tales." Several beginners

have tried their hands, but to little purpose. New novels have been published by H. F. Ewald, Holm-Hansen, C. Möller, F. C. v. d. Burgh, J. Meyer, B. Elmgaard, etc. In verse there is nothing demanding special mention. Nik-Bøgh has brought out "Reminiscences and Melodies"; V. Røse, a narrative poem, "Master Dubitans"; C. Richardt, "The Lord's Prayer" (illustrated); E. v. d. Reeke, a new collection of verses, which is rather sharply criticised; and O. Madsen, a beginner, "Wild Wine," which exhibits considerable talent. In the drama, Mrs. E. Gad's new comedies, "A Warning" and "A Silver Wedding," mark an advance; both were received with applause in the theatre. G. Esman's "In the Province" was also successful, and an anonymous comedy, "At Gotham," is praised. E. Christiansen, well known in this department, has published "Idle Tales," a clever comedy, and "Peter Plus," a romantic fairy play. The author who writes under the pseudonym "Woldemar" has issued a play, "Gregers," in which the seventeenth-century people and style of speech are brought to the front. K. Gjellerup's new tragedy "Hermin Vandel" is held to be in measure a failure. "King Waldemar," a lyrical drama, by Anna Erslev ("A. Borch") is a success, and is accompanied by a treatise on Danish historical plays. In history, attention has been confined to Denmark and Norway. One volume only, "The Fall of Robespierre," by L. F. Toft, deals with foreign history. Prof. E. Holm's "Denmark-Norway, 1720-1730," is very valuable. The aged historian F. Barford has begun, in continuation of a previous work, "The History of Denmark, 1536-1670," and R. Petersen has collected a series of "Reminiscences from the Shore of the Sound." Two books add to the war literature of the country, viz., "A Parsonage in Sundevad (Sleswick) during the war of 1864," by N. L. Fejlberg, and "The Chief Physician," by an anonymous writer, an old army chaplain. Many new contributions to history have been made in the form of biographies. C. Blangstrup's "Christian VII and Caroline Mathilde" is well done, and a new life of Christian IV is under way by L. Beering and A. Larsen, handsomely illustrated. The life of the naval hero Tordenskjold has been told once more by P. Ancher. To these may be added "Reminiscences of C. E. Bardenfleth," Minister of Justice and personal friend of King Frederick VII. "Personal Events of a Long Life," by Rev. V. Birkedahl, is valuable for politics, theology, and literature. Timely also are J. Michaelsen's "My Contemporaries," Commodore Wilde's "From Sea and Land," and H. Bang's "Ten Years," containing recent experiences as author, journalist, etc. G. Brandes, who began his elaborate work on "Young Germany" in 1871, gives a sixth volume, in which he concludes his "Main Currents in the Literature of the Nineteenth Century." K. Madsen, a skillful critic, has published the first volume of "Dutch Painting," which is highly commended. Prof. J. Steenstrup has issued a treatise on "Our Popular Ditties of the Middle Ages," giving their true form, age, and æsthetic value. F. Rønning has brought out a second volume of his "Age of Rationalism in Denmark," devoted to Ewald and Wessel. J. Stefansson deals with the English poet Brown-

ing, and K. Gjellerup with R. Wagner. Of new books of travel, favorable mention is made of the "Journey in Four Parts of the World," by Irgens-Bergh (illustrated); "A Trip to Norway," by K. Arentzen; and Capts. Martini and Schoenberg's "Two Danish Travellers on the Congo." In the department of philosophy, of little account this year, we may place on record here, as more or less valuable, "Ethical Inquiries," by Prof. H. Höfding; "Skepticism," by C. N. Starke; "The Philosophy of Hobbes," by E. Larsen; and "Æsthetics and Life," by A. C. Larsen. Two small volumes, in aid of the study and understanding of the Bible, according to more "advanced" criticism, have been brought out, viz., "The Childhood and Youth of Jesus" and "Jesus in Galilee." A volume or two of ecclesiastical controversies have appeared, coming from two theological professors, H. Scharling and F. Nielsen.

France.—Politics have had some though not much effect upon literature this year in France. Students of history proper have been occupied to a large extent with memoirs, journals, etc., in search after facts and sound views and conclusions; while, in what is called pure literature, public sentiment is awakened, and novelists, being tired of psychological fiction, are disposed to return to the older opinion about romance and its proper form. In our last year's record we simply noted that Renan had published Vol. III of his "History of Israel." The volume comprises the prophets and Babylonish captivity. Critics generally are in raptures over the wonderful erudition and profound research of the writer. A few others, who cling to the old-fashioned orthodox view of Bible history, are not satisfied that Renan is any more safe here in his teaching than he has proved to be in his former volumes. M. Taine has undertaken, in his "Origines de la France Contemporaine," to set forth and prove that the *régime* inaugurated by the despotism of Napoleon is still in force, and that he was really "the architect of modern France." Taine's widespread popularity is likely to lead many to adopt his views on the matter. Some of the critics say that he draws extreme, pessimistic conclusions from the proofs of Napoleon's selfishness, which selfishness he holds to be the chief characteristic of the present times in which we are living. M. Ernest Lavisse (noted last year) continues his studies on the origin of contemporary Germany. The new volume contains the history of the youth of Frederick the Great. His pages are lively and picturesque, and can not fail to interest and instruct the reader. Following in the same line of investigation, M. Godefroy Cavaignac has written an able volume, in which he compares the internal evolution of Prussia with that of France during the period of the revolution. M. Cavaignac's contribution is well deserving of examination, especially as he draws the conclusion that in the internal development of Prussia is to be found the secret of her strength. Père Didot's "Life of Jesus Christ" met with unbounded success in France, edition after edition being issued. It has also been translated into English, and is published in two volumes (with illustrations) by D. Appleton & Co., New York. Some of the French critics treat the work rather cavalierly,

from the rationalistic standpoint, but it seems probable that it will survive all attempts to hinder its taking a permanent place in religious literature. M. V. Sardou's drama "Thermidor" has stirred up several writers to discuss the matter anew, and it is instructive to note how much heat and passion are evolved at the same time. M. H. Welchinger has brought out an interesting collection of studies on the revolution, under the title "Le Roman de Dumouriez." The book will amuse many, if it do not really benefit anybody. The Comte d'Hérissou has studied carefully certain points of contemporary history, and writes about them in his own peculiar style. Two volumes are the result, viz., "Romance of the Prince Imperial" and "Man-Hunting" (referring to Algeria and what occurred there). Public opinion seems to be that the count has told his stories well and to the point. A work entitled "Political Caricatures in France during the War, the Siege, and the Commune" is painfully suggestive of that disastrous time in France. A few of the various historical works of the year may here be noted, such as M. E. Spuller's "Parliamentary History of the Second Republic"; Vol. VI of M. Perren's "History of Florence"; "History of Vendée Angevine," by M. C. Port; "The Clergy under the Old Régime," by M. E. Méric; the conclusion of M. Wallon's "Les Représentants du Peuple en Mission et la Justice Révolutionnaire"; M. Lair's "Nicolas Fouquet"; M. V. Fournel's "Men of the Fourteenth of July"; M. Debidour's "Diplomatic History of Europe"; M. Grand-Carteret's curious study of Bismarck. Note also is properly to be made that memoirs and journals have been extensively studied, and oftentimes with excellent results. Among these are ranked highly the Duc de Broglie's published memoirs of Prince Talleyrand, although the critics complain that the memoirs have been curtailed, modified, altered, so as materially to injure their value for the purposes of the history. M. Goncourt's "Journal, 1870, 1871" does not satisfy those best qualified to judge of that grievous time of trial and shame to France, especially Paris. The correspondence of the poet Roucher, published by M. A. Guillois, under the title "Pendant la Terreur"—i. e., during the siege of Paris—is strikingly characteristic of French ideas and mode of action under certain contingencies. It is impossible to give even the names of books of this sort, some of which are of value, no doubt, but a considerable number is nearly worthless. Memoirs of various sorts are pretty much the rage now, no matter, apparently, how disgusting from a moral point of view, how frivolous, or how useless they may be. Louis XV and his abominable licentiousness, Cardinal Richelieu and his shocking shamelessness, souvenirs of kings and nobles more or less vile, or inferior men's secret memoirs—such as these are printed, and must find readers, or they would not be printed. In political studies a work of real merit has made its appearance, viz., "La Politique Française en Tunisie." To this we may add M. A. Lebon's interesting volume, "Études sur l'Allemagne Politique"; "La Vie Politique à l'Etranger," published under the superintendence of M. Lavisse, noted last year; M. L. Marillier's "Liberty of Conscience"; and M. J. Reinach's "La Poli-

tique Opportuniste." A translation of Stanley's "In Darkest Africa" has been published in Paris. The critics compare this volume (in favor of their own countryman) with Captain Trivier's travels and experience in Central Africa. A number of minor books of travel has appeared, as well as some studies in geography. Of these we name a few, such as Col. Gallieni's "Deux Campagnes au Soudan Français," M. Borelli's account of his travels in Ethiopia, M. V. Cambon's "Autour des Balkans," M. G. Thomas's "Du Danube à la Baltique," M. L. Léger's "Russe et Slaves," M. C. Diehl's "Excursions Archéologiques en Grèce." Some lively pages of M. Alex. Dumas fils are in print; M. A. Heulhard pronounces a eulogy over Rabelais; and M. Becque has brought out afresh his "Querelles Littéraires." Madame A. Barine has devoted a monograph to the author of Paul and Virginia, in which are several refreshing lights thrown upon St. Pierre's life and character. Among criticisms of artistic and literary works mention may here be made of M. L. Gouze on "L'Art Gothique," M. E. Legouvé's excellent essays on the Education of Girls, M. E. Picard's "Pentalogie Décadente," Dr. Chatelain's "La Folie de J. J. Rousseau," M. A. Sorel's "Madame de Stael," and M. Paul Ginisty's "L'Année Littéraire." Numerous volumes of verse have been produced during the year; some of these are of more than average merit, although the yield as a whole is hardly satisfactory. "Le Règne du Silence," by M. Rodenbach, is praised by the critics; the "Rêves et Impressions" of M. Ch. Nô are said to be in vivid and thrilling verse. Others are mentioned with approval, viz., "Études Antiques," by Messrs. Houbron and Daniaux; "Cendres Chaudes," by M. E. Rouvray; "Croyances," by M. L. de Chauvigny; "Dieu et Patrie," by Mlle. Rousseil; "Poèmes de Flandre," by M. A. Capon. In the domain of fiction Zola seems still to hold pre-eminent position. His latest volume, "L'Argent," is powerfully written, no doubt, but it shows too much of the author's beastly taste to be spoken of except with mingled indignation and disgust. It can be nothing but wicked perversity which leads him to outrage the feelings of all decent people by his course. M. Guy de Maupassant has brought out in his latest book, "Notre Cœur," a psychological study over which the critics are much exercised, and respecting which various opinions are expressed. M. Paul Bourget's new novel, "Un Cœur de Femme," is also of the psychological-study sort, but gives only moderate satisfaction. "Tartarin is Dead!" everybody knows now, and M. Daudet seems wise in having brought his career to an end. Possibly had he not done so, Tartarin might have killed off Daudet. M. Anatole France's "Thaïs" is not a very successful effort to rehabilitate the famous courtesan of that name in ancient days. Stories connected with the theatre and actors and actresses are numerous, but do not need to be named here. M. André Theuriet, a well-known and good writer, has published four novels, all of which are praised by the critics. M. F. Fabre's "Xavière" is said to be a new idyl of very fascinating character, and M. Jean Richepin has collected in a volume picturesque and attractive novelettes, under the title of "Truandailles." M. Henry Rabusson is a

brilliant novelist, as is shown in his last volume, "Hallali!" M. R. de Bonnières depicts a corner of the old Faubourg St. Germain in his "Le Petit Margemont," and M. A. Hermant shows his delight in psychological studies in his "Amour de Tête" and his "Cœurs à Part." In the "Derniers Rêveurs" M. Paul Perret paints, in a lively way, people who despise money and refuse to bow to Mammon. "Le Curé d'Auchelles," by Madame G. Peyrebrune, relates the struggle of a young parish priest against the fascinations of the female sex. The journalist M. Paul Fouchet has published a tasteful novel, "Monsieur Bien-Aimé," which is ironical and severe against hypocrisy and selfishness. Under the suggestive title "Les Larrons," M. H. Le Roux gives a series of painful pictures of the very lowest depths of Parisian society. An old diplomatist, M. de St. Quentin, has brought out, in form of a novel, an interesting description of contemporary Persia, containing new and useful information. Gen. Tchong-Ki-Tong (residing in Paris) has tried his hand at a novel, depicting French life and manners. The critics bestow praise upon his effort. We name a few other novels, but have not space for particulars: M. J. Normand's "Contes à Madame," M. Sutter-Laumann's "L'Histoire d'un Trente-Sous," Madame Rachilde's "Sanglante Ironie," M. P. Adam's supernatural "L'Essence du Soleil," M. J. Dargène's "Sous la Croix du Sud," M. H. Conti's "Gris et Rose," M. P. Zaccane's "Le Crime de la Rue Monge," Comte de St.-Aulaire's "La Vocation d'Angèle," M. H. Lavedan's "Nocturnes" and "Petites Fêtes." Only a small number of dramatic publications can be named as of any importance. M. Georges Duruy, in a work entitled "Ni Dieu ni Maître," has tried to prove that society can not exist without religion, but in the opinion of most critics with indifferent success. M. M. Sand's well-intended pieces are collected in "Le Théâtre des Marionnettes de Nohant." Reprints have been made of the complete dramatic works of Messrs. P. Meurice and F. Dugué, and a beautiful Provençal play, "La Reine Jeanne," has been published, M. F. Mistral being the author. The record in respect to science, philosophy, theology, and kindred topics is necessarily brief, there having been only scant attention to works of the kind during the year.

Germany.—Political changes in the new empire, consequent upon Bismarck's resignation and the reforming zeal and forwardness of the young Emperor, have had marked influence upon literature in Germany this year. Wildenbruch, one of the chief poets, has offered homage to the new lord and been decorated for his work "Der Neue Herr." A pamphlet entitled "Rembrandt als Erzieher, Von Einem Deutschen" has had a wide circulation, and has roused public opinion and public expectation as to an intellectual recuperation in the empire. Whether this is to come from the people or elsewhere is a question. The present Emperor, with more audacity than discretion, has written himself down as "the only lord in the land," and many hence expect reform to come from above, as Wildenbruch holds. Others, like the writer of the pamphlet above named, expect results to follow in the use of natural means and setting aside traditional and conventional laws and rules. "Young

Germany is quite on fire with this view. The matter at present is too unsettled to predicate anything certain in the near future. Time alone will determine which view is to prevail. Realism has made rapid progress in Germany this year, as is shown in numerous published dramas, containing a large amount of drastic power and pungency. The position of Berlin as the capital city (in the sense of Paris being the capital of France) will have much to do with the future of literature, to which it now gives direction. Munich alone retains power in the domain of art. The realistic drama and novel are in the fore-front, as is made evident by Wildenbruch's "Haubenlerche," the scene of which is laid in a modern Berlin paper mill. The critics speak of the book with much disapproval. As noted last year, dramatists of the "free stage" prefer painful, shocking subjects, such as inherited vices and physical and moral diseases, and they bring forward physiological motives instead of psychological. A man under the curse of fate can find no salvation; for him there is only the inevitable price, the catastrophe. Gerhart Hauptmann's "Friedenfest" is quoted in illustration of the fashion of designating plays as family catastrophes. H. Sudermann, who is said to be the ablest writer of this school, in his effective drama "Ehre" deals with the question of honor as between patrician and plebeian classes, but not very satisfactorily. In this writer's latest play, "Sodom's Ende," the catastrophe naturally excited much sensation, seeing that the Sodom referred to is Berlin of the present day. Critics complain, and not unreasonably, that Sudermann has here gone far beyond nature, and has substituted a pathological diagnosis for a picture of real life, and, further, that "this materialistic tendency to replace psychology by physiology is in danger of converting the action of the stage into that of a sick-room." Hauptmann's latest work, "Einsame Menschen," avoids this substitution, and brings about the catastrophe in the more regular artistic way. The same remark is true of "Schuldig," by R. Voss, author of "Eva" and "Alexandra" (noted last year). The centennial anniversary of the birthday of F. Grillparzer occurred on the 15th of January. He was one of the class of writers of fate-tragedies. Though of Viennese origin and Austrian tendencies, the centenary celebration has shown that as a dramatist he belongs to the whole German nation. H. von Kleist, the Prussophile author of the Prussian Hohenzollern drama "Prinz von Homburg," and Grillparzer, the Austrophile author of the Austrian drama "König Ottocar's Glück und Ende," are regarded as having come the nearest to the ideal of national historical drama set up by Schiller's "Wallenstein." Besides Grillparzer, the poet L. Anzengruber (died last year) deserves special mention. His works have been collected and published, with a biography, by A. Bettelheim. The critics refer to his powerful play (written in 1877) "Das Vierte Gebot" as going the round of the theatres, and as illustrating a peculiar view of the meaning and force of the fifth commandment, quite opposed to the usual teaching of the pulpits. H. Bulthaupt's "Eine Neue Welt," F. Spielhagen's "Aus Eiserner Zeit," and Oscar Blumenthal's comedy "Das Zweite Gesicht"

are spoken of as praiseworthy, if not entitled to entire approval. Comedy is not the strong point of the Germans, according to Boerne. Bauernfeld (just deceased at eighty-nine) was an exception. At a prize competition in Vienna no less than two hundred and sixty anonymous comedies were sent in, and W. von Warteneck received the prize for a play, "Der Ring des Offerdingen," which is pronounced to be "rather a patriotic occasional play than a comedy." Grillparzer's lyrical productions have been brought out in a new edition. These rank very high, and except from Goethe and Schiller, German literature can produce nothing to match them. Titus Ullrich, now a very old man, is a realist of the superior sort, and is named with approbation in this connection, as is also W. Jordan, author of "Epistelen und Vorträge." Other lyrical writers who are spoken well of are D. von Lilieneron, M. R. von Stern (a Socialist regenerator), and A. von Berger, the last being also a refined critic. On the whole, Schopenhauer's pessimism is declining in lyric poetry, yet in the writings of H. Hango it retains all its force. The last poems of the Countess Wilhelmine Wickenburg-Almásy (who died prematurely) demonstrate how much German literature owes to women. Her songs and ballads and legends of the Tyrol, in "Margaretha und Oswald," have not only a realistic tendency, but also natural freshness, with beauty of form. Another lady, also a poetess, Ilse Frapan, deserves to be ranked with the one just named. This last is further in good repute as a novelist. The "Musenalmanach" of Goethe and Schiller's time has been revived, and is fairly received. The critics say that for the present epic poetry is dead, and in its place we have the "narrative poem," or novel in verse. Max Haushofer's epic story "Die Verbannten" illustrates the statement, as does also Joseph Lauff's "Song of By-gone Days" in Cologne, with its melodramatic ending. Count Adolph F. von Schack, the clever translator of Firdusi, falls below his proper level this year. Emilie Ringseis has published a work for religious Christian people, consisting of hymns that set forth the worship of the Madonna. The leaders of the novel—i. e., Spielhagen, Ebers, Wilbrandt—have paused for the year. Gottfried Keller has died, much regretted. He was a master in the novel of educational tendencies in the style of Goethe's "Wilhelm Meister," as well as a miniature painter in the manner of Jean Paul. A young countryman of Keller's, Walter Siegfried, has brought out a novel "Tino-Moralt," and seems to bid fair to occupy worthily the older man's place. The realistic novel, the critics think, is doomed, and Theodor Fontane is vigorously working to this end, as his latest novel, "Unwiederbringlich," shows by its suggestive character drawing, witty dialogue, etc. The veteran Rudolph von Gottschall's latest book is "Steinerne Gast," a historical novel of much ability. Mlle. Lola Kirschner, a very gifted lady, has published two books, "Heil Dir, mein Oesterreich!" and "Heil Dir im Siegeskranz," both highly praised by the critics. Her Austrian fellow-countrywoman Bertha von Suttner, in her last novel, "Vae Victis!" has depicted war's horrors and outrage at this day with great power. A Prus-

sian lady, Louise von François, is author of an excellent novel, "Letzte Rottenburgerin." The historical novel is well represented by Ernst Wichert, favorably known as novelist and dramatist, in "Tileman vom Wege," and by the popular August Becker in his "Die graue Jette." The last novel of Karl Emil Franzos, "Judith Trachtenberg," may fairly be ranked in the same class. To the social novel belong Hermann Heiberg's "Drei Schwestern," and Conrad Alberti's "Das Recht auf Liebe." Short stories are popular, such as Paul Heyse's "Weihnachtsgeschichten," Ilse Frapan's "Enge Welt" and "Psyche," Hans Hopfen's "Neue Geschichten des Majors." J. J. David's stories, collected under the title of "Die Wiedergeborenen," have a touch of realism and are excellent in style and execution. Hans Hoffmann's new satirical stories, "Das Gymnasium zu Stolpenburg," and W. Raabe's "Stopfkuchen: eine See- und Mordgeschichte," display the humorous element to a large extent. In history nothing has been produced to be compared with H. von Sybel's "Geschichte der Gründung des neuen Deutschen Reichs," noted last year. A work of value, like to Ranke's "History of the Popes," has been published by Ludwig Pastor, entitled "Geschichte der Päpste der Renaissance." Ranke, though a Protestant, wrote with great fairness and impartiality. The present writer, though a Roman Catholic, is much praised as exhibiting the same qualities. Other works on history from an ecclesiastical point of view are J. Janssen's "History of the Reformation," A Baumgarten's "Leben Goethes," and F. X. Kraus's "History of Christian Art." Works by Wertheimer, Huber, Krone, and others are prepared from the Austrian outlook. In biography and memoirs Ranke's "Zur eigenen Lebens-Geschichte," edited by A. Dove, is chiefly a collection of materials. A suitable biography is yet to be written. Alfred von Arneth, historian of Maria Theresa and Prince Eugene, has brought out "Erinnerungen," which comprises the first thirty years of his life. It is said to be a worthy counterpart to Grillparzer's autobiography. Personal recollections of Alexander von Hübner, an Austrian statesman, cover the period of the revolution (1848), and are valuable as well as interesting. A third Austrian statesman and historian, Freiherr von Helfert, takes as his theme the revolution planned as early as 1815, when Italy came into Austrian hands, and carried out in 1821. The life of Karl von Hase, who gained the *sobriquet* of "the Protestant Pope" on account of his struggles in behalf of rational enlightenment and religious toleration, is appended to his collected works. J. Minor has added a second volume to his excellent biography of Schiller, and A. Bettelheim has published a life of the late dramatist Anzengruber. Several volumes of correspondence and letters have also appeared, and are noted as valuable. In philosophy and theology there is next to nothing of which to make mention here. Materials at hand do not furnish any help whereby to explain the fact, and we must leave it to the reader's judgment for himself.

Greece.—The number of books published this year in Greece has not been large, owing apparently to the fact that the weekly and monthly

periodicals as well as the daily papers absorb the larger part of what is produced in literature and science. Good evidence as to this is furnished by noting that everything written thus far about the newly discovered "Treatise on the Constitution of Athens," even emendations proposed, has appeared in the daily press. In philology the foremost production has been the long-expected "Patmian Library" of M. J. Sakellion, Keeper of the Manuscripts in the National Library. It is very valuable, containing a minute description of the 735 manuscripts in the library of the monastery on the island of Patmos and an appendix of *anecdota* derived from them. Besides this interesting work may be mentioned the "Notes, Critical and Exegetical, on Æschylus," by A. Zakas, and the "Emendations on Greek Authors," by G. Zekides. Constantine Rhados's volume is on a controverted question, "The Struggle regarding the Greek Language in France." The writer is a zealous purist, and his work well worth consulting. "The Chian Analekta" of Constantine Kanellaki holds a position about midway between philology and history. It deals with manners and folk-lore in Chios, golden bulls, seals, etc. The "Philological Meletemata" of S. Valvis contains essays, literary and æsthetic, on both old and new Greek literature. Manuel Gedeon has published two volumes on historical studies, viz., "Tables of the Patriarchs of Constantinople," in biographical form (issued in numbers), and two volumes containing "Canonical Orders, Letters, Decisions, and Statutes of the Patriarchs of Constantinople," a compilation of interest and value to students of ecclesiastical history. G. Papadopoulos has furnished a monograph, "Contributions to the History of our Customary Church Music," in which is a good deal of new matter; and Antonios Mompherratos, another production of value to students, "Right of Inheritance possessed by the Clergy and Monks in Greece and Turkey." Vol. IV of "Universal History," written by Anastasios Polyzoides (deceased), has been supplied by G. Kremos, his associate, containing the history of Greece from 1821 to the present time. The lecture of Prof. George Mistriotis, Rector of the University, on "The Causes of Greek Civilization, Ancient and Modern," and D. Eliopoulos's "Monograph on the Greek Statesman John Kolettis" (died 1847), well deserve mention here. Geography and travel are fairly represented this year. The most important works are, "The Political Geography of Cephallonia, Ancient and Modern," by A. Miliarakis, including in the volume Ithaca and the adjacent islands, and "Statistics of the Population of Crete," by N. Stavrakis; two volumes concerning the Peloponnesus, viz., "On the Other Side of the Isthmus," by S. Paganellis, and "A Journey from Patras to Tripoli," by Dr. Koryllos; also, a collection of excellent essays, by J. Balabanis, giving impressions of travel in "Asia Minor." *Belles-lettres* for the most part has been confined to the periodicals, such as "Hestia" and "The Week." A few tales have appeared separately, of which one may be named, "Nicolas Sigalos," by G. Xenopoulos. In poetry the best thing of the year, the critics say, are the posthumous verses of Aristoteles Valaoritis, which appear in a second edition of his poems, edited by his son. The lyrics in the

volume are said to be real gems. In connection with this volume as worthy of regard we may mention G. Marcora's "Poetical Works," G. Drosinini's collection of verses, and the "Rural Idyls" of Constantine Krystallis, a promising young Epirote.

Holland.—The third part of Dr. Pierson's great work "Hellas" is praised without stint by the reviewers. As was stated last year, Dr. Pierson is a writer who never tires the reader, and his criticisms on the Greek poets and their writings are marked by freshness, point, deep penetration, and an admirable entering into the spirit of Æschylus, Sophocles, Euripides, Pindar, and others of imperishable renown in ancient Greece. Dr. Kramer, in a biographical sketch of Mary Stuart, wife of William III, describes her as a pious, noble woman. The volume gives evidence of care and research, and is quite reliable. Another posthumous work of Jorissen's "Historische Studiën" has appeared, edited by Prof. Matthes. The papers on Talleyrand, Metternich, Guizot, and Peel are said to be very good. Dr. A. v. d. Linde has contributed a new volume on Servetus, in which he is very severe on John Calvin and the motives which led to his course in the matter. The critics speak in praise of a number of historical productions, such as Dr. D. C. Nyhoff's "Staatkundige Geschiedenis v. Ned"; Mr. Theall's "Korte Geschied. v. Zuid-Afrika" (1436-1835), which has been translated into English; Mr. Sillem's biography of D. v. Hogen-dorp; and Mr. F. S. A. de Clercq's "Bydr. tot de Kennis der Res. Ternate." The history of provinces and towns, as well as of morals and customs, is decidedly popular. Prof. Blok tells a good deal about Friesland's soil, trade, people, church, etc. (700-1300); Mr. Bondam and Mr. Sloet make clear the history of Guiderland; Dr. Krul has compiled a very amusing book about physicians, etc., and Dr. Sepp, a very learned one about the life of Protestant clergymen in olden times. A good account of old Dutch marriage customs is to be found in De Roever's "Van Vryen en Trouwen." Dictionaries, especially "Het Woordenboek," are making good progress. Beets's "Poëzie in Woorden" is much praised, as are also Mr. v. Hoogstraten's "Studies en Kritieken" and Dr. de Luzac's "De Ned. Sentimenteele Roman." The letters of Prof. Cobet, the distinguished Greek scholar (died last year), are excellent in tone and spirit. Notice may here be taken of the tendency, in Holland as well as in England, to associate insanity with genius, as if there was some necessary relationship between the two. This is seen in certain letters of Dekker and of Bilderdijk recently printed, and also in various modern novels tinged with like gloomy ideas, such as De Meester's "Een Huwelijk," Lapidot's "Moderne Problemen," Josephine Giese's "Gevloekt" (i. e., "Cursed"), etc. Several Indian novels have appeared. Anne Foore's "Bogoriana" (a posthumous work), Margadant's "Drie Jaren," and Jaeger's graphic sketches of soldier life in Atchin, entitled "Van Ginds," are mentioned with approval. Some good historical novels and novelettes have been published, and some excellent pieces for the stage, but do not require special mention. Lyrical verse is conspicuous, so to speak, by its absence this year. Possible exceptions are some nice poems by Priem

and Koster, a few pieces of Gorter (rather hard to be understood), and Van Eden's "Ellen," very sad, but beautiful. Critics protest against what they censure as a prevalence of morbid feelings among writers of the day. In the departments of philosophy and theology we have no record of new publications this year. This was also the case in 1890, and the outlook is not encouraging, so far as Dutch scholarship is concerned. Two deaths may here be noted, viz., Mr. de Veer and J. E. Sachse, both of excellent repute in letters.

Italy.—They who are in position to be best informed say regretfully, as the sober truth, that a state of unusual languor pervades literary life in Italy at the present time. The reading public is very small, and, as foreign rather than native books are read by the people, naturally authors have small inducement to ply their vocation. Some intellectual activity, of course, there is, but the critics declare that this is mostly devoted to a minute analysis in physical, historical, and philological science, and that there is no synthesis or adequate comprehensible result of all these researches. We give accordingly the best account in our power of the year's production. In poetry, if we may credit Eugenia Levi, in a pleasant book published in Florence recently entitled "Among our Living Poets," there are worthy of note (along with much of mediocre character) the productions of three ladies, viz., Brunamonti, Countess Lara, and Giarre Billi, and among gentlemen the publications of Neucioni, Graf, Mazzoni, Fogazzaro, and a few others. Dialect poetry also has two or three good representatives. Signor Carducci has published one new poem this year, entitled "Piedmont." It is marked by lofty style and a glowing strain of thought. It is monarchical in its spirit, and recounts the part taken by Piedmont in the renaissance of Italy. The names of several others are given as worthy of mention, viz., Guido Mazzoni, Giovanni Marradi, Guido Monaschi, G. Targioni, Tozzetti, and Camillo Checchucci. A translation from the Sanskrit of a short love poem, "Meghadûta," has been made by G. Morici, which is said to be excellently worked out. In the way of novels and romances not much has been accomplished. A. G. Barrili, a prolific writer, has published two novels, "Amori Antichi" and "Rosa di Gerico." Salvatore Farina, a good writer in past years, has brought out "Più Forte dell' Amore" and "Vivere per Amare," which are rather sharply criticised. It will suffice to give the names of some others out of a large number who have achieved moderate success, such as A. S. Novaro, Onorata Fava, Bruno Sperani, G. Verga, and A. Giacomelli. A young novelist, De Roberti, is rather anxious to rival Zola in the Frenchman's abominations, but Zola is as yet far ahead. G. d'Annunzio, in his last two novels, imitates Russian ones, and has been scolded therefor. Annie Vivanti (named last year as a poetess, introduced by Signor Carducci) has written a novel, "Marion, Artista di Caffè-Concerto." The critics censure the book as a representation of low life badly set forth. In Italian dramatic literature poverty largely prevails. There are some signs of improvement. Camillo Antona Traversi, a very fertile writer, has furnished a comedy, "Tordi e Fringuelli," which is said to be

merry and brisk, one of his best. Mario Praga, son of a poet, aims higher in his two dramas, "La Moglie Ideale" and "Le Vergini," and has met with good success. Gerolamo Rovetta, in his "Marco Spada," has gained equal success. Alessandro d'Ancona has issued two large volumes on the "Origini del Teatro Italiano." It is a work of real merit. Historical sciences have yielded almost no fruit of late. There are numerous workers, but they furnish very little for the press. All we can name now are Ferrai's "Lorenzino dei Medici e la Società Cortigiana del Cinquecento," T. Masserani's "Cesare Correnti," D. Mantovani's "Lettere Provinciali," and Luigi Rasi's "Libro degli Aneddoti." These two latter are said to treat pleasingly many and various literary and artistic questions. In other departments of history and in philosophy and religion we have nothing of moment for this year's record.

Norway.—Critical observers affirm that at present there is "a superfluity of scribblers" in Norway. Perhaps the dictum is too severe; yet, as far as the record goes, there is more of truth than poetry in it. We give the best account we can, under the circumstances, by judicious selection. Henrik Ibsen (who produced nothing last year in dramatic literature) has created a great sensation in London as well as Christiania, by his "Hedda Gabler." It carries the mark of genius with it, and has a sort of antique beauty, a feature, by the way, not seldom lost sight of by Ibsen, and a sort of culture in which he plainly takes delight. Along with his supposed naturalism, there is found to be a kernel emphatically idealistic. Like an inspired prophet, he continually is foretelling the advent of a new social gospel. Jakob Bull stands in marked contrast to Ibsen. His drama "Uden Ansvar" is meant to controvert Ibsen's theory as to heredity. The critics praise it heartily. Three of the gentler sex have tried their hands in this kind of literature, and have failed of success. Their names are Laura Kieler, Asta Graah, and Veltie Vislie. Jonas Lie's new Christmas story, "Onde Magter," is attractive and pleasant. This is more than can be said of A. Kielland's "Jakob," which is complained of as having too much of the satirist and polemic in it. Madame Amalie Skram, in her romance "S. G. Myre," gains but a modicum of praise, while her superior ability is fully acknowledged. Among novels of the year, Knut Hamsun's "Sult" is said to be a remarkable contribution to the physiology and psychology of hunger. The critics call it "an interesting phenomenon," despite its defects. Arne Garborg's contribution this year, "Kolbotnbrev og andre Skildringer," is a species of autobiography, and is much praised by the critics. Jakob Hilditsch's new collection of short stories is very good, as are also K. Janson's and R. Johnsen's similar collections. Both C. Flood and J. W. Flood have issued fresh series of sea stories. Dr. Oscar Tybring has brought out a very pretty book, "Smaa Historier og Erindringer." Sofus Aars's "Skovinteriører, Naturskildringer" is excellent in picturing the chase and animal life; as is also the painter Kittelsen's "Fra Lofoten," with illustrations. Among young writers may be named Erik Lie, son of Jonas Lie, Arne Dybfest, and Gabriel Finne.

These have done well. Works in verse are but poorly represented. Björnstjerne Björnson's "Digte og Sange" is said to be the only book of its kind worth recording. The "Samlede Skrifter" of the romantic lyrist Andreas Munch, lately deceased, is at length completed. The sixth and last volume of A. O. Vinje's "Skrifter i Utval" came out this year. Vinje (died some twenty years ago) was a sort of Norwegian Heinrich Heine, and a staunch advocate of national purism. The volume has been well received. Ernst Sars, the historian, has published Vol. IV and last of his great work "Udsigt over den Norske Historie." It was begun twenty years ago, and is a work of permanent value. Ö. Överland's illustrated "Norges Historie," Vol. IV, has appeared; another volume will complete the work. Literary history offers little of any moment this year. A collection of brief biographies has been published by J. Utheim, entitled "Otte Forfattere." L. Dietrichson has begun to publish a work dealing with the history of art; it treats of that peculiar type of Norwegian wooden architecture common in the Middle Ages, and known as *Stavkirker*. Prof. M. J. Monrad has published Vol. II of his "Æsthetik," treating of art and artists from the traditional German metaphysical point of view. Two youthful philosophers, C. A. Bugge and H. C. Hansen, have contributed to the literature of the year. The former has dealt with the morality of the theory of development, and the latter, under the title "Moral, Religion og Videnskab," has published a treatise to which had been previously awarded the Crown Prince's gold medal. A biography of Ole Bull, known throughout Europe and America as the Norwegian violinist, has been published by Oodmund Vik. Dr. S. Ibsen (son of the poet) has contributed a political treatise on "Unionem Mellem Norge og Sverige," and H. Pettersen has produced a bibliographical work, entitled "Anonymer og Pseudonymer i den Norske Literatur, 1678-1890."

Poland.—Something more than a year ago the remains of Mickiewicz, the greatest of the Polish poets, were brought from Paris and interred in the cathedral at Wawel, near Cracow. A year later, i. e., May 3, 1891, the centenary of the so-called Constitution was celebrated with much rejoicing (except in Russian Poland). The native critics speak of these occurrences as not only important, but also as having had an influence for good on the literary activity of the year. The services of the great poet were freely commented upon, and the labors of those noble men who sought to infuse new life into their country were gratefully remembered. The volumes, tracts, and pamphlets which were issued fully substantiate this statement. Henryk Siemkiewicz, eminent among Polish writers, has written a psychological romance, "Without Dogma." The book is attractive, the style masterly; but the expected effect in molding public opinion has not yet been attained. A. Mankowski, in his "Count Augustus," deals with the same theme, and with less success. The Poles do not seem to take kindly to what is felt to be an imitation of foreign writers. Madame Orzeszko treats of a profound ethical sentiment in her tale "The Worshipper of Might," and her "Fury," from an artistic point of view, is the

best thing, the critics say, she has ever produced. Marian Gawalewicz, another novelist, has secured at an early age a high position among writers of fiction in a book entitled "The Second Generation." Adolf Dygasinski has given, in his "M. André Piscalski," a truthful and original portrait of life among the nobility. The same writer was sent out to South America to investigate the condition of the Polish emigrants there, and in his "Letters from Brazil" he gives a gloomy picture of what he saw and met with. A very gifted and prolific writer, Mlle. Rodzewicz (noted last year), has published, besides "Tales" and "Silhouettes," two larger works, "The Grey Dust" and "Blue Blood." The latter is charged with being an exaggerated picture of aristocratic circles. Similar complaint is made of A. Krzyzanowski's "Two Streams," which, however, evinces genuine faith in the ideal and in sincere patriotism. Szymanski's second volume of Siberian "Sketches" is pronounced to be hardly equal to the first. Madame Kopnicka's tales "My Acquaintance" are excellent in spirit and sympathy with the weak. A few other writers are spoken of with approval, as J. Turczynski, who tells about the Hercules in East Galicia; Naganowski, who gives a glorification of "Mighty England"; and A. Krechowicki, who furnishes a story of the fourteenth century entitled "The Grey Wolf." The drama has not flourished this year. A few novelettes have met with success, such as Sewer's comedy "M. le Maréchal," Walewski's "The Grasshoppers," Koziobrodzki's "The Representative of Messrs. Müller & Co.," etc. Poetry seems to be in a more flourishing condition than the drama. There are several young aspirants for fame. Of these, Franc Nowicki has won praise for his volume of "Poems." Another young author has done real service in translating the "Lusads" of Camoens. W. Wysocki's volume "Oksana" is marked by lively feeling and good principle, and Kasprzowicz's tales of peasant life are excellent. Stefan z Opatowka has brought out "Elegies and Sonnets," and a Jew at Warsaw has published the first part of a rather queer mixture, entitled "The New Messiah." In history we note the "Heraldic Studies" of Anton Malecki, an able writer, and Prof. W. Abraham's "Organization of the Church in Poland." The "Proceedings" of the second congress of Polish historians, held at Lemberg last year, contain valuable material for historical purposes. A. Szezepanski has written a lively sketch of the national hero Kosciuszko. The first volume of the "Biography of Adam Mickiewicz," by his son, has appeared and been well received. Count Lanckoronski has given an account of a journey in Asia Minor for archaeological and ethnographical purposes, under the title of "The Cities of Pamphylia and Pisidia," and Count Joseph Potocki has narrated his experiences, such as they were, in the East, in his "Notes of a Sportsman in India." The Polish Tatra Mountains have been illustrated with pen and pencil by Witkiewicz, the painter. He is also author of a meritorious work on "Our Art and Criticism." Other subjects we must perforce pass over in silence.

Russia.—The tone of despondency among the critics in regard to literature in Russia continues much the same as was noted last year.

They hold that "the barrenness of Russian literature is merely a reflection of the emptiness of daily life" as it exists in the empire. Count Tolstoi is as much a puzzle as ever, and the majority are at a loss what to make of or do with him and his peculiar theories and practices. Needing fresh ideas and new impressions from the outer world, intelligent Russians look abroad for sources of inspiration. Tchekhoff travels into Asia, Korolenko wanders along the Volga, and Gleb Ouspenski is found in the Caucasus, Constantinople, or Siberia. They do not, however, bring from distant travels exotic pictures of nature, but only the old groans over prevalent social diseases. Tolstoi's school of quietist self-renunciation exercises a certain influence because of adopting a sort of Christian socialism, which after all will never gain any great success in Russia. The leading critics, like Mikhailovski, Shelgounoff, or Skabitchevski, either forsake their legitimate field of activity, or turn to the past and write reminiscences. Thus Mikhailovski reviews the character of John the Terrible; Shelgounoff appends to his published works "Recollections of the Past and Present"; and Skabitchevski publishes a "History of Modern Russian Literature (1848-1890)," in which the writer of memoirs becomes a historian. These publications furnish printed material for a history of the celebrated movement of the "Sixties," which one not in the inner circle of Russian literature finds it difficult to understand. "Men of the Eighties" designate the younger class of writers, and the controversy between these and the older occupants of the field offers much room for reflection on the part of the student of Russian literature. Another literary controversy has been between the liberals and the "Narodniki" or peasant worshippers. The latter seemed to be possessed with the notion that agrarian socialism is the *summum bonum* of human life, while the other party desires culture and proper use of capital. The dispute has been eager and waged with energy; but neither of the contestants appears to have satisfied any but those who believed as he believed. In *belles-lettres* Potapenko, a young writer who made his *début* ten years ago, has attained remarkable success. He has published this year three productions, and made a collection of his works in two volumes. The critics give long and careful reviews of his books, and delight to point out his admirable skill, his delicacy of touch, his keen observations, his deep feeling. Potapenko's "In Actual Service," "Common Sense," "Secretary of his Excellency," and "Never" are said to illustrate his ability to the full extent. Stanukovitch's "The First Steps" and Borboruikin's "Grown Wiser" are worthy of mention. Karonin satirizes Tolstoi and his peculiar gospel in "The Teachers of Life" and "A Borsky Colony." Count Tolstoi's influence is said to be on the wane in Russia. The poet A. Fet (Shenshin), who belongs to the conservative camp, has published two volumes, entitled "My Recollections (1848-1889)." There is said to be, along with a good deal of senile gossip, much entertaining matter in these volumes. The diary of Nikitenko, of St. Petersburg, professor and censor, is being published in a Russian periodical. The diary abounds in interesting ma-

terial for the history of Russian censorship and the ministry of public instruction for the period of the fifties and the sixties. The aged philologist Prof. Bouslayev is also writing his reminiscences, which reach back to the thirties. Note here may be made of Vengeroff's great "Critico-Biographical Dictionary," which has reached to half of the letter B. In philosophy there is nothing remarkable this year. B. N. Tchitcherin carried off the prize for the best essay on Comte's classification of the sciences. Prof. Redkin, at the age of eighty-two, has just died. He, like Tchitcherin, was an old Hegelian, and was about to finish the publication of his lectures (seven volumes already have appeared) on the history of legal philosophy. Worthy of mention here are P. Kaptarev's "History of the Soul: Outline Sketches of the History of Mind," A. Andreyevski's "Genesis of Science, its Principles and Methods," and Lessevitich's "Scientific Philosophy." Historical works of the year have been chiefly devoted to recent times. Vol. II of Bilbassoff's "History of Catherine II" is ready for publication (waiting on the censorship). Madame E. Stechepkin is bringing out interesting sketches of the life of an "Old Land-owner at Home and in the Service" during the eighteenth century. "The Archives of Prince Th. Kurakin" are considered valuable for the period of Peter the Great; Vol. I is now in course of publication. The Imperial Russian Historical Society is bringing out volumes of dispatches of foreign ambassadors to the Russian court during the eighteenth century. Senator N. P. Semenov has reached nearly the close of his work on "The Emancipation of the Peasants in the Reign of Alexander II." It is elaborate, full, painstaking, and reliable. A work has just appeared, by A. Exemplyarski, on "The Grand Dukes and Princes Appanage of Northern Russia during the Tartar Period (1238-1505)," two volumes. Ilovaiski has published Vol. III of his "History of Russia," devoted to the sixteenth century, which has received a good deal of adverse criticism. Butzinski's "Colonization of Western Siberia in the Beginning of the Seventeenth Century" and Shlyapkin's "St. Demetrius Rostoffski and his Time" (1651-1709) deserve to be named here. A new historical society has been founded, and it publishes a "Historical Review" which gives promise of well-earned success. In art and archæology has appeared Vol. III of "Russian Antiquities recorded in our Art Monuments," by Count Tolstoi and Kondakoff. The volume is regarded as a great acquisition for this department. Vol. IV and last of "Transactions of the Sixth Odessa Archæological Congress" has been published. Other volumes relating to "Eastern Antiquities," edited by M. Nikolski, have been issued; also two volumes of "Materials for the Archæology of the Caucasus." Discoveries on the Orkhon in Mongolia are noted as of special interest. Western arts have received proper attention in the "Complete Collection of the Engravings of Rembrandt," edited by Rovinski, and Vol. I of a new book, entitled "Italian Art in the Renaissance." Ethnology gets its fair share in a new periodical, "The Living Past," and in several published volumes on the subject. Folk-lore and kindred topics

attract much attention. In political economy the work of Behrendts, "The Political Economy of Sweden," Vol. I, comes down to 1808. L. V. Khodski's researches on "Land and Agriculture," two volumes, are very interesting, especially in connection with economic conditions of the Russian peasantry. A. Philippoff's work on "The Punishments and Legislation of Peter the Great in connection with his Reforms" is equally interesting. Mention may properly be made here of V. Sudeykin's book on the "State Bank" and its activity, I. I. Yanjul's "Fundamental Basis of Financial Science, the Doctrine of State Revenue," and Levitsky's "Problems and Methods of the Science of National Economy." Dril, who belongs to the anthropological school of criminal physiology, propounds in his latest work (as in his two preceding books) his theory of "Psychophysical Types in connection with Crime."

Spain.—The Royal Academy de la Lengua, which has been rather languishing of late years, seems to have waked up and applied itself vigorously to its proper vocation. The long-expected work attributed to King Alfonso X, "the Learned," as he is called, entitled "Las Cantigas de Santa Maria," has been published in two folio volumes at the expense of the Academy, and with an exhaustive preface by the Marquis de Valmar. The Spanish *literati* are not at one as regards the authorship of the book, devoted to the praise of the Madonna. The prevailing opinion among the critics is that it was compiled, like the Code of Laws and other works, by order of the King. In any event, however, the Academy deserves much credit for publishing one of the most remarkable literary monuments of the Middle Ages. The first volume of the complete works of Lope de Vega has made its appearance. The editor, Don M. M. y Peñayo, has prefixed a new and valuable life of Lope, written by Don C. A. de la Barrera, an author of good repute. The Royal Academy of History has also been very active. A third volume of the Chronicle of Catalonia has been published, relating to the famous rebellion, 1641-'60; and portions of a Latin history of Ferdinand and Isabella, by Gonzalo de Ayora. To this a learned preface has been supplied by C. F. Duro. Other original papers and contributions by academicians afford the artist and antiquary ample matter for study and examination. The collection of "Inedited Documents" has reached its ninety-ninth volume, which gives an account of Vincart's campaign in Flanders (1637) and a short chronicle of John II, of Castile, printed for the first time. The volumes preceding, from the eighty-eighth onward, are filled with matter equally interesting and important for purposes of national history. Numerous books relating to America and old Spanish colonies have been reprinted this year, a further proof of what before has been stated, that more books respecting America have been published during the last half-century than in three preceding ones put together. Besides the well-known collection "Documentos Inéditos de Ultramar" and its continuation by the Academy, a new one has been started, entitled: "Colección de Libros que tratan de America," of which two volumes have appeared, one on the conquest of Peru, by F. de Xerez, a reprint of the first edition of

Seville (1534), the other about the Amazon, by Father C. D. Acuña (1641), an equally rare volume. New papers are from the pens of well-known writers, F. Duro and D. M. Jimenez de la Espada, on points of interest. Books and pamphlets relating to America are numerous, in view of the approaching quadricentenary of the discovery of the New World by Columbus, which is to be held in Madrid in 1892. The Seville bibliophiles have lately brought to light an old work, "Historia del Nuevo Mundo," by Father Bernabé Cobo, of the order of the Jesuits (1653), of which Vol. I has been published. Provincial history and topography have received less than the usual share of attention this year. Biography, however, has made some progress. In this department we may name here a life of the first Duke of Ossuna and founder of the university, D. Pedro T. Giron; "Life and Writings of the late Don V. de los Rios," known as author of a life of Cervantes, by Luis Vidart; a life of Loyola, of little value; and "Biographical Dictionary of Catalan Writers," by Molins. The Duchess of Alba has aided in this matter by publishing letters and documents selected from the archives of her house, throwing light on national history from the fifteenth to the seventeenth century. Works on art have been scarce this year, and nothing of special note has appeared. In political sciences, besides some pamphlets, the Duke de Ripalde has published a larger work under the title "El Problema Social y las Escuelas Políticas." In bibliography several works, mostly prize essays, have been issued, such as a "Biographical and Bibliographical Dictionary of Authors, Natives of Burgos," by M. Añibarro, and "Catalogo Razonado de los Libros impresos en Madrid en el Siglo XVI." Very little is to be said of poetry, lyric and dramatic, or of light literature in general. Neither Zorrilla nor Nuñez de Arce, Campoamor, nor M. Palacios has done anything this year. The drama is languishing, and with the single exception of the two brothers Echegaray, who still struggle on, there is not a single playwright worth naming. D. José Echegaray has produced two comedies of the light sort, like the French *vaudeville*. On the other hand, novel writing seems to carry the day, and all kinds of stories, historical, moral, or satirical, are appearing, especially in the periodical press. At the same time it is only fair to state that E. P. Bazan, P. Galdós, Pereda, Picon, and others show that novel writing has much improved. A novel by a Jesuit father, entitled "Pequeñeces," that is "Trifles," has gained wide success. It is powerfully written, the critics say, by one who is a journalist of first-class reputation, and at one time a pupil, friend, and admirer of the celebrated Cecilia Bohl de Faber (pseudonym Fernan Caballero). In political ideas the book is at variance with predominant opinions just now, and Bazan and Bobadilla have held up to ridicule this violent satire on the Spanish aristocracy during Amadeo's short reign.

Sweden.—Last year we omitted Sweden from our record, owing to the fact that there were no materials at hand for giving an intelligible account of progress in the year 1890. This year we are glad to be able to say something to the purpose, although it is largely confined to one

topic. Some good novels have been written in 1891. The "Young" Swedish school has fairly risen to the necessity of the case, and has passed beyond the period of short sketches and contributions to Christmas annuals. August Strindberg, the Zola representative, is the most prominent figure in Swedish prose fiction, a man of great artistic and literary gifts, possessed of a marvellous style, firmness of touch, and quite too fond of diatribes against the gentler sex. His last book, "I Hafsbandet," "On the Island Fringe," is characteristic of the man. He has been reading Nietzsche, a German prophet, and reproduces in fiction his teacher's theory about superhuman being and its working. From the account given in reviews, the book is hardly to be pronounced either pleasing or profitable to ordinary readers. The younger men have profited by watching Strindberg's style without adopting his peculiar views as to life and conduct. Tor Hedberg's "Ett Eldprof," "A Test of Fire," is noted as a psychological study also, turning on the conflict between light and darkness, love and growing insanity in a young man of letters, pursued, as he thinks, by an implacable enemy. The story, on the whole, is painful and morbid in treatment, yet touching as a picture of the influences that are crippling intellectual life in Sweden. Another of the young masters of style is Axel Lundegard, who is much praised for conciseness and clearness, conjoined with admirable lightness of touch. His last book is entitled "La Mouche: the Story of a Death-bed," in which he tells with deep tenderness the story of the poet Heine's last days in Paris. Every student of Heine recognizes who "La Mouche" was. Great sensation has been roused by some chapters of an unfinished story, "Gösta Berlings Saga," by Selma Lagerlöf, describing in a highly imaginative way the wild, quaint life in Vermland some sixty years back. Of shorter stories, the best one is decidedly yet powerfully naturalistic, by Gustaf af Geijerstam, entitled "Fadermord," the tale of a murder of a peasant of Oland by his wife and sons. The analysis and description throughout display insight and force. Worthy of note is a good "Aftermath" of Victoria Benedictson's shorter studies. Mrs. H. Nyblom has published a collection of studies and essays, some of them decidedly charming, called "Dikt och Verklighet," "Fiction and Fact." The literary success of the year (from a financial point of view) has been won by Sigurd's "Fru Westberg's Snackorderingar," a collection of broadly humorous sketches of lower middle life. "Sigurd" is a pen-name. In other departments a few books have been published, which we here note. Viktor Rydberg has written an "Epilogue" for the Swedish translation of S. Laing's "Modern Science and Modern Thought." It is said to be an able plea for a rather novel kind of religious idealism, without antagonizing new discoveries in science. Karl af Geijerstam has somewhat to say on "Hypnotism och Religion," and D. Bergström deals with "Kommunism och Socialism." August Strindberg has published a collection of mixed essays called "Tryckt och Otryckt." A. Hedin, in his "Episode of the Necklake," has furnished a clever study in the history of the French Revolution, and K. V.

Baath, in his "Northern Life in the Olden Times," has produced a valuable as well as interesting essay. No plays of the year have been specially noteworthy. Frans Hedberg's "Härda Sinnen" has created some sensation, as dealing with realistic representation of rustic life, and K. Michaelsson's "Moln" is quite up to the reputation heretofore acquired by the author. In poetry we may note C. D. af Wirsén's "Vintergrönt" and D. Fallström's "Chrysantemum." New poets of promise are Gustaf Fröding and Per Hallström, the latter a sort of Swedish Browning.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 152,923 in 1820; 215,739 in 1830; 352,411 in 1840; 517,726 in 1850; 708,002 in 1860; 726,915 in 1870; 939,946 in 1880; and 1,118,587 in 1890. Capital, Baton Rouge.

Government.—The following were the State officers during the year: Governor, Francis T. Nicholls, Democrat; Lieutenant-Governor, James Jeffries; Secretary of State, Leonard F. Mason; Treasurer, William H. Pipes; Auditor, Ollie B. Steele; Superintendent of Public Education, William H. Jack; Attorney-General, Walter H. Rogers; Commissioner of Agriculture, Thompson J. Bird; Chief Justice of the Supreme Court, Edward Bermudez; Associate Justices, Samuel D. McEnery, Charles E. Fenner, Lynn B. Watkins, and James A. Breaux.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, as reported by the Federal census:

There were also in the State in 1890 315 Chinese, 39 Japanese, and 628 Indians.

The Lottery Amendment.—Early in January a hearing was had before Judge Buckner, of the district court at Baton Rouge, in the *mandamus* suit, *State ex rel. Morris vs. Mason*, which was brought in December, 1890, by the agents of the lottery company against the Secretary of State, to compel the publication of the proposed lottery amendment to the State Constitution. The Secretary of State had refused to publish the amendment, on the ground that it had not been legally adopted by the Legislature. On Jan. 19 the decision of Judge Buckner was rendered in favor of the defendant, from which an appeal was taken to the State Supreme Court. Arguments were heard by that tribunal on Feb. 17 and 18, and the decision was reserved.

The State Constitution requires that a proposed amendment be passed by a two-third vote of all the members in each House of the Legislature, after having been read in each House on three separate days; that such amendment, together with the yeas and nays thereon, be entered on the journal; and that the Secretary of State cause it to be published in certain newspapers, after which it shall be submitted to a vote of the people. The lottery amendment had been introduced and passed through the Legislature not in the usual form of a resolution proposing an amendment, but in the form of a bill providing a method of submitting to the people the amendment therein set forth. This bill had passed both Houses by a two-third vote, had been presented to the Governor like any other bill, had been vetoed, and had passed the House over the veto, but not the Senate. The friends of the bill claimed that, as the clause of the Constitution relating to its amendment contained no requirement that proposed amendments be submitted to the Governor for his approval, the veto in this case was nugatory, and the amendment, having once passed each House by a two-third vote, was legally before the people. The Secretary of State insisted that this clause of the Constitution should be construed with the other provisions of the instrument, and that amendments should go through the same course as other legislation. He further claimed that, even if this proposition

were not true, the measure in this case, being in the form of a bill containing various other matters beside the amendment in question, was subject to the section of the Constitution relating to the passage of bills, and must be passed over the veto. The Secretary also attacked the correctness of the printed journals of the Legislature respecting the passage of the amendment, and also claimed that it contained matters of legislative detail which could not legally be placed in the Constitution. For these reasons he declined to publish the alleged amendment. The court rendered its decision on April 27. A majority of three judges—Chief-Justice Bermudez and Justices Watkins and McEnery—decided that the amendment need not be submitted to the Governor; that having once passed each House by a two-third vote, it must be published according to law, and submitted to the people. They decided that the printed legislative journals were conclusive evidence of the facts therein stated; and that the amendment was not rendered void by any alleged legislative matter which it contained. Justices Fenner and Breauz dissented from these views.

The amendment in question provides that, during the term of twenty-five years from January, 1894, John A. Morris, his heirs and assigns, in consideration of the privilege of maintaining lotteries during that period, shall pay to the State annually the following sums: For public schools, \$350,000; for levees, \$350,000; for State charities, \$150,000; for pensions, \$50,000; for the city of New Orleans for drainage and other sanitary purposes, \$100,000; for the general fund of the State, \$250,000.

Political.—The State Supreme Court had no sooner decided that the lottery amendment must be published according to law, and submitted to a popular vote at the election of April, 1892, than the friends and opponents of that measure began serious preparation for a determined contest before the people. A full set of State officers was to be chosen at the same April election, and the lottery question was thereby complicated with the various local personal and party interests usually involved in a State election. The first skirmish in the contest was to determine whether the lottery or the anti-lottery Democrats should control their party and nominate the party candidates, a Democratic nomination being ordinarily equivalent to an election. The Democratic convention was called to meet on Dec. 16. Several months prior thereto the anti-lottery Democrats and those who were adherents of the Farmers' Alliance came to an agreement, by which they were to co-operate in securing the election of anti-lottery delegates to the convention, who would support therein a fusion ticket headed by Thomas S. Adams, President of the State Alliance, for Governor, and containing representatives of both the Alliance and the anti-lottery people as candidates for the other offices. In opposition to this ticket the lottery people and many of the regular Democrats, without regard to the lottery question, urged the nomination of a ticket headed by ex-Gov. Samuel D. McEnery, then a justice of the State Supreme Court. At the Democratic primaries a vote for the McEnery faction was generally regarded as a vote in favor of the lottery, while a vote for the

Adams faction was clearly a vote against it. As a result of these primaries, the McEnery party carried every ward in New Orleans, while many of the country parishes sent Adams delegates, contesting delegations being frequently the result. Under these circumstances, the Adams delegates decided to run no risk by entering the convention with their opponents, unless the latter would concede certain of their demands, among which was a platform declaration denouncing the lottery amendment. At a conference between the two factions on the day preceding the convention it was found that no basis of agreement could be reached, and on Dec. 16 the anti-lottery and Alliance delegates assembled in one hall at Baton Rouge, while the McEnery delegates assembled in another. The anti-lottery convention, being called to order by the chairman of the Democratic State committee, who is an opponent of the lottery, claimed to be the regular Democratic State Convention. On the other hand, when the majority of the Democratic State committee learned that their chairman had sided with their opponents, they held a meeting on the morning of Dec. 16, deposed him from office, and selected a new chairman, who called the McEnery convention to order as the Regular Democratic State Convention. The anti-lottery or Adams convention, according to the report of its committee on credentials, contained 372 of the 686 delegates necessary to form a full convention, and it was the first to complete its work, adjourning on Dec. 17. Thomas S. Adams, although chosen to head the ticket, was induced to decline the honor, and to accept the candidacy for Secretary of State. In his place, Murphy J. Foster, a pronounced anti-lottery Democrat, was selected as the candidate for Governor. The remainder of the ticket was as follows: For Lieutenant-Governor, Charles Parlange; for Treasurer, John Pickett; for Auditor, W. W. Head; for Attorney-General, Milton J. Cunningham; for Superintendent of Education, A. D. Lafargue. The platform contained the following:

The Democratic party of the State claim that, through its administration and by the observance of the party's principle, the State has been placed upon the high road of general and individual prosperity.

A single obstruction now stands in the way of the progress of this State. An amendment to the State Constitution is proposed whereby its revenue shall be largely derived from the Louisiana lottery. Such means of raising revenues are at variance with the civilization of the century, in opposition to and subversive to all Democratic principle. Demanding equal rights to all and special privilege to none, we hereby reaffirm our uncompromising hostility to the entire principle of lottery gambling as denounced on the State Democratic platform of 1883.

We denounce the proposed amendment to our State Constitution to be submitted to the vote of the people in April next as a concession to a monopoly, wholly undemocratic, and its adoption destructive of our liberties. No Democratic platform should be adopted which does not condemn and denounce all lotteries until they shall have ceased to exist in Louisiana, nor should any Democrat vote for any State, legislative, or judicial officer who is not unalterably opposed to lotteries and pledged to promote the passage of laws which will secure their suppression.

The McEnery convention, which also claimed to contain a majority of the total number of delegates entitled to seats in a Democratic con-

vention, did not complete its work till Dec. 19. The following ticket was selected: For Governor, Samuel D. McEnery; for Lieutenant-Governor, Robert C. Wichliffe; for Secretary of State, Leonard F. Mason; for Treasurer, Gabriel Montegut; for Auditor, Ollie B. Steele; for Attorney-General, Edgar W. Sutherland; for Superintendent of Public Education, J. V. Calhoun. The following is the more important part of the platform adopted:

We call the attention of the people of Louisiana, and especially of the constituencies interested, to the fact that many parishes were unrepresented in this convention, through the revolutionary acts of the delegates from those parishes who, without cause, excuse, or provocation, refused to take their seats and to participate in its deliberations, as they were appointed to do; but, on the contrary, organized an independent convention and placed in nomination a ticket which has none of the authority or regularity of a Democratic nomination with which to go before the people, and can only be classed as an independent or third party ticket.

We ask the agriculturists of this State to abide patiently their time and to assist the Democratic party in its approaching battle for that power which alone can give relief. There is no room in the political campaign approaching for a third party, and the establishment of a third party in the South can only disrupt the Democratic party and aid in the perpetuation of Republican rule.

Whereas, A large majority of the members, both pro and anti, of this convention have been instructed by their constituents to secure the submission of the revenue amendment to a primary election of white Democratic voters, to be held under proper rules and regulations at a date previous to the general election; and *Whereas*, It is impossible to provide for such settlement in the absence of, and by reason of the actions of, a number of delegates who are opposed to said amendment; therefore, be it

Resolved, That the State Central Committee be, and they are hereby, authorized, if possible, to make any and all agreements with the pro- and anti-lottery Democrats for the submission of said amendment to a primary election of white Democratic voters, at a date to be agreed to by both parties, and the State Central Committee is directed to use every honorable means to bring about a settlement of this question in accordance with the power herein conveyed.

The Republican State Convention was not held until Jan. 19, 1892. It then nominated the following ticket: For Governor, Albert H. Leonard; for Lieutenant-Governor, H. Dudley Coleman; for Secretary of State, Terence Voisin; for Treasurer, Chester B. Darrale; for Auditor, Charles A. Fontelieu; for Attorney-General, John Yost; for Superintendent of Public Education, L. A. Martinet. A long platform was adopted, placing the party clearly on the anti-lottery side. Its most important planks are as follow:

The right of every citizen to cast one free ballot in public elections, and to have that ballot duly counted, is paramount to all other issues.

We solemnly warn the people of Louisiana and the people of the United States that their liberties will be seriously threatened by the continued existence of a government in this State which usurped power by violence, and has for years maintained itself by force and fraud combined.

In the name of humanity, of justice, and of liberty, we protest against the political intimidation, perjuries, and murders which have so long disgraced the State.

We earnestly recommend that the present national law providing for a bounty on sugar, be faithfully carried out, and we trust that the Republican mem-

bers of Congress will prevent the efforts now being made by the Democratic members of that body to defeat or suspend the operation of that wise measure.

We are opposed to all monopolies and all trusts.

The revenue amendment, which has been submitted by a Democratic Legislature to the people of the State, presents questions of grave importance, involving financial, economical, and moral considerations. Fully recognizing that it is the right and the duty of every voter to determine these questions as his judgment and conscience may dictate, the Republicans of Louisiana declare that, in sympathy with the sentiment of the Federal Administration and of the Republican party of the nation, they are opposed to any measure having for its object the legalizing of any form of gambling.

Resolved, That we here declare white supremacy, as an article of party faith, to be rank political heresy, destructive of the rule of the majority.

We demand the fullest protection of the right of free speech and public discussion, without fear of peril to person or estate.

We denounce lynching as unjustifiable homicide, and demand a judicial trial of all offenders against the law.

We demand the repeal of all caste or class legislation, and particularly of the separate-car law, which is here declared a blot on our statute books and a breeder of discord and turmoil among its citizens.

Delegates to the Republican National Convention of 1892 were elected at this time, and a resolution recommending them to vote for the re-nomination of President Harrison was adopted. The election will take place in April, 1892.

LOWELL, JAMES RUSSELL, an American poet and essayist, born in Cambridge, Mass., Feb. 23, 1819; died there Aug. 12, 1891. It seems more than usually worth while to take a glance at Mr. Lowell's ancestry, for he inherited traits from each progenitor, making more apparent use than can often be traced of the varied and interesting material which it was his happy fortune to bring into an environment that was also exceptionally fortunate. The family was descended, in this country, from Percival Lowell, a merchant, who came from Bristol, England, to Roxbury, Mass., in 1639. John, son of Percival, was the earliest minister of Newburyport, where he was settled from 1726 to 1767. His son John was graduated at Harvard College in 1760, and admitted to the bar in 1762. In 1776 he represented Newburyport in the Provincial Assembly, and was an officer of militia. He removed to Boston in 1777, and was a legislator from that city in 1778. In 1780 he was a delegate to the convention that framed the Constitution of Massachusetts, serving on the committee that drafted that instrument. He secured the insertion into it of the clause "all men are born free and equal," which he believed, if accepted, would cause the legal abolition of slavery in the State. The Supreme Court upheld his position, and slavery was declared abolished. In 1772-'73 he was a member of the Continental Congress, and was appointed by that body one of three judges for the trial of appeals from courts of admiralty. In 1789 he was made United States judge of the district of Massachusetts, and in 1801 chief justice of the First Circuit, which included Maine, New Hampshire, Massachusetts, and Rhode Island. He was one of the founders of the American Academy of Arts and Sciences, and a poem or an oration was an occasional

episode of his busy life. His son John was graduated at Harvard, studied law, traveled in Europe, and returned in 1806 to devote himself to literature, especially to controversial political and religious writing. He attacked the supporters of the War of 1812 with great skill and severity. Edward Everett said of him: "He possessed colloquial powers of the highest order and a flow of unstudied eloquence never surpassed, and rarely, as with him, united with the command of an accurate, elegant, and logical pen." Among his pamphlets the following titles are suggestive: "Peace without Dishonor, War without Hope"; "Mr. Madison's War—a Dispassionate Inquiry into the Reasons alleged by Madison for declaring an Offensive and Ruinous War with Great Britain"; "Are you a Christian or a Calvinist?" He was an ardent lover of nature, and was foremost in aiding the agricultural and horticultural interests of the State. Another son of Judge John Lowell was Francis, who was graduated at Harvard College in 1793, and became a merchant in Newburyport. In 1810 he visited England, and remained for three years. On his return he introduced cotton manufacture into the United States. He was principally instrumental in having inserted into the tariff act of 1816 the clause that imposed a duty on cotton fabrics. Lowell, Mass., which he had planned, was named for him. Another son of Judge John Lowell was Charles, father of James Russell. Charles was graduated at Harvard College in 1800, and studied law, but abandoned its practice for that of theology. He spent two years in Edinburgh, studying, traveled on the Continent, and after his return was settled over the West Unitarian Church in Boston, a place which he held until his death, at the age of seventy-nine. Failing health often compelled him to seek rest and change, and he traveled extensively in Europe. He was an eloquent and fervid orator, a strong opponent of slavery, and a writer on questions of the day. He married a sister of Robert Traill Spence, of the United States navy. When Spence, at nineteen years of age, was serving under Decatur on a captured Tripolitan gunboat, she was blown up by a hot shot sent through her magazine. After the explosion, with her stern blown to pieces and under water, Spence kept on loading and firing the gun he had charge of. Finally, with his crew of eleven survivors, he ordered three cheers, and, sitting on the piece, waving his cap, he went down with the wreck. They were rescued, and he lived to repeat his valorous conduct. He was made lieutenant and master-commander in quick succession, and at the age of twenty-seven became past captain. He was commended for his manoeuvre in obstructing the British fleet off Baltimore. In 1822, as senior American naval officer in the West Indies, he issued the protest against Francisco Morales, who had threatened death to Americans on the Spanish main, which was effective in preventing outrage and maintaining the honor of the flag. Through his mother, James Russell Lowell seems to have inherited his purest imaginative strain and his sense of humor. While it almost seems, when we read, as if we could point out the special ancestor from whom he took the cue for this or that act of his

life, he was no plagiarist in humanity. His personality informs all he has said or written, so that we seem to see the expression of the eye and the attitude of body as well as mind in which he was when the pen obeyed the will. His all-pervading wit and humor, allied to pathos, are probably the qualities that occasion this emotion.

As to his mental ancestry, that, too, was of the bluest blood. The influence of this ancestry may be traced, perhaps, but here, too, he has made the result of study his own by assimilation. He is original by his own definition, given in his essay on Thoreau. "Originality consists in the power of digesting and assimilating thoughts so that they become part of our life and substance. Montaigne, for example, is one of the most original of authors, though he helped himself to ideas in every direction. But they turn to blood and coloring in his style, and give a freshness of complexion that is forever charming." Again, in his essay on Keats, he says: "Men have their intellectual ancestry, and the likeness of some one of them is forever unexpectedly flashing out in the features of a descendant, it may be after a gap of several generations. In the parliament of the present every man represents a constituency of the past."

Not only were Lowell's opportunities for study such as few boys of his time possessed, but a passionate love of books made his reading not so much study as loving intimacy with the authors who talked through them. It is the belief that such men as Lowell will read that makes such men as Shakespeare, Dante, Cervantes, Hawthorne, and Browning write. In his essay on "Some Letters of Walter Savage Landor," he gives us this picture of his early habits of study: "I was first directed to Landor's works by hearing how much store Emerson set by them. I grew acquainted with them fifty years ago in one of those arched alcoves in the old college library in Harvard Hall which so pleasantly secluded without wholly isolating the student. That foot-steps should pass across the mouth of his Aladdin's cave, or even enter it in search of treasure, so far from disturbing only deepened his sense of possession. These faint rumors of the world he had left served but as a pleasant reminder that he was the privileged denizen of another, beyond 'the flaming bounds of place and time.' There, with my book lying at ease and in the expansion of intimacy on the broad window-shelf, shifting my cell from north to south with the season, I made friendships, that have lasted me for life, with Dodsley's 'Old Plays,' with Cotton's 'Montaigne,' with Hakluyt's 'Voyages,' among others that were not in my father's library. It was the merest browsing, no doubt, as Johnson called it, but how delightful it was! All the more, I fear, because it added the stolen sweetness of truancy to that of study, for I should have been buckling to my task of the day. I do not regret that diversion of time to other than legitimate expenses, yet shall I not gravely warn my grandson to beware of doing the like? I was far from understanding all I heard in the society of my elders into which I had smuggled myself, and perhaps it was as well for me; but those who formed it condescended to me at odd moments with the tolerant com-

placency of greatness, and I did not go away empty. Landor was in many ways beyond me, but I loved the company he brought, making persons for me of what had before been futile names."

Mr. Lowell held in such abhorrence the custom, so prevalent of late, of blending the public and private affairs of men and women known to fame, that in writing of him one feels even more than usually shy of seeming to intrude upon any privacy but that which may, after all, be called the most sacred; for what is the laying bare of the soul, as Lowell in common with all critical writers constantly did, but spreading abroad to the best of one's ability a man's inmost nature? In a tribute to his friend, Dr. Oliver Wendell Holmes says:

I am thinking now not of Lowell's wonderful gifts and acquirements, but of his charming companionship. If he had any fault in that relation, it was a too generous estimate of his friends. He loved to approve anything which they had done, and may sometimes have been partial in his judgment. Yet he had the courage to warn a friend if he thought he was falling short of his own standard of excellence. In general company his talk was easy, lively, witty, good-humored, often jocular, and was capable of condescending to a pun when the temptation was strong. With all his vast reading, he was not in the habit of quoting passages of prose or verse from the authors with whom he was familiar. I speak with some hesitation, but I question whether he remembered continuous extracts as readily and surely as some of his literary contemporaries—Browning, for instance. But on all literary questions he was an encyclopædia of information. His mind was too robust to be smothered under any load of erudition. Without any of that nervous irritability which belongs to oversensitive and under-vitalized organizations, he was alive, alive all over to the shows of the outer world and the movements in the inner world of consciousness. He had an eye and an ear for the trees and flowers and birds of Elmwood; he recognized elements of beauty in the lazy Charles, which flowed by his windows, its waters now brackish and turbid from the inland streams, now salt and lucid from the ocean. Its broken and reedy banks, the monotonous expanse of its marshes were dear to his indulgent outlook. There are no gifts so munificent as those which the poet's eye bestows upon its humblest surroundings.

In regard to the personal and anecdotal manner of writing biography, Lowell says, in his essay on "Izaak Walton":

The modern biographer has become so indiscriminate, so unconscious of the relative importance of a single life to the universe, so careless of the just limits whether of human interest or endurance, so communistic in assuming that all men are entitled to an equal share of what little time there is left in the world, that many a worthy whom a paragraph from the right pen might have immortalized is suffocated in the trackless swamps of two octavos. I am inclined to apply what was said of states to men also, and call him happiest who has left fewest materials for history. It is at least doubtful whether gossip gain body by bottling. In these chattering days, when nobody who really is nobody can stir forth without the volunteer accompaniment of a brass band, when there is a certificated eye at every key-hole, and when the public informer has become so essential a minister to the general comfort that the world can not go about its business of a morning till its intellectual appetite is appeased with the latest doings and sayings of John Doe and Richard Roe, there is healing in the gentlemanlike reserves of the past, a benign sense of seclusion, a comfort such as loved hands bring to fevered brows, in the thought of one who, like Wal-

ton, has been safe for two hundred years in the impregnable stronghold of the grave. Malice domestic, treason, interviews, nothing can touch him further. The sanctities of *his* life can not be hawked about the streets or capitalized in posters as a whet to the latest edition of "The Peeping Tom." If it be the triumph of an historian to make the great highways of the olden times populous and noisy, or even vulgar with their old life again, it is nevertheless a consolation that we may still find by-paths there, dumb as those through a pine forest, sacred to meditation and to grateful thoughts.

If Mr. Lowell was fortunate in his ancestry, if his nature was formed from the blending of traits and talents that made the sure foundation of a republic of government and a republic of letters, he was also happy in the language that was to be the medium of his thoughts. It was the speech of men who had preserved their language, as they had kept their principles, pure from early times, and this had been strengthened and expanded by the necessity of using words to express the grandeur, the pathos, the tragedy, the courtliness, the imagination, the reverence, the tender affections, that naturally accompanied the settlement by men and women, exiled patriots and Christians, of a wild and picturesque country amid savages; the attempt to transfer monarchical forms and leave behind the monarchical spirit, to preserve liberty and to prevent license, to defend dignity and to show due respect, to maintain the home upon love, the church upon godly fear, the state upon a blending of honor for dignitaries and individual rights. The destiny that led them conquerors through two wars with their mother-country—one of the most powerful on the globe—to the founding of a nation that has survived the greatest civil war of modern times, and made the words and acts and *personnel* of its government and representatives respected throughout the world, made a language not only fit for the great poet or orator, but one that might go far to the production of orator or poet. The part that the growth and formation of language play in the making of a country's literature is characteristically and suggestively set forth by Lowell in his essay on Shakespeare:

Shakespeare was doubly fortunate. Saxon by the father and Norman by the mother, he was a representative Englishman. A country boy, he learned first the rough-and-ready English of his rustic mates, who knew how to make nice verbs and adjectives courtesy to their needs. Going up to London, he acquired the *lingua Aulica* precisely at the happiest moment, just as it was becoming, in the strictest sense of the word, *modern*. Shakespeare, then, found a language already to a certain extent *established*, but not yet fettered by dictionary and grammar-mongers; a versification harmonized, but which had not yet exhausted all its modulations, nor been set in the stocks by critics who deal judgment on refractory feet that will dance to Orphean measures of which their judges are insensible. What was of greater import, no arbitrary line had been drawn between high words and low; vulgar then meant simply what was common; poetry had not been alienated from the people by the establishment of an upper house of vocables, alone entitled to move in the stately ceremonials of verse and privileged from arrest, while they forever keep the promise of meaning to the ear and break it to the sense. The hot conception of the poet had no time to rove while he was debating the comparative respectability of this phrase or that; but he snatched what word his instinct prompted,

and saw no indiscretion in making a king speak as his country nurse might have taught him.

Much of the same advantage of stability, purity combined with freshness, terseness, and idiomatic strength Lowell found ready for his use when he began to wield the poetic pen. What he said of Lincoln in his "Commemorative Ode" might have been said of the language in which Lincoln spoke, and through which Lowell's praise of him found its way to the hearts of his countrymen.

Nothing of Europe here,
Or, then, of Europe fronting mornward still,
Ere any names of serf or peer
Could Nature's equal scheme deface
And thwart her genial will.

New birth of our new soil, the first American.

Mr. Lowell has set forth in characteristic fashion his knowledge and appreciation of the nature and life of which his own genius was one of the finest products. In the introduction to the "Biglow Papers" he puts into the mouth of Parson Wilbur the following description of Yankee character:

A strange hybrid, indeed, did circumstances beget, here in the New World, upon the old Puritan stock, and the earth never before saw such mystic-practicalism, such niggard-geniality, such calculating-fanaticism, such cast-iron enthusiasm, such sour-faced humor, such close-fisted generosity. Yet, after all, thin, speculative Jonathan is more like the Englishman of two centuries ago than John Bull himself is. . . . He feels more at home with Fulke Greville, Herbert of Cherburg, Quarles, George Herbert, and Browne than with his modern English cousins. He is nearer than John by at least a hundred years to Naseby, Marston Moor, Worcester, and the time when, if ever, there were true Englishmen. John Bull has suffered the idea of the invisible to be very much fattened out of him. To move John, you must make your fulcrum of solid beef and pudding; an abstract idea will do for Jonathan. It remains to speak of the Yankee dialect. Shakespeare stands less in need of a glossary to most New Englanders than to many a native of the Old Country. The English have complained of us for coining new words; many of those so stigmatized were old ones by them forgotten, and all make now an unquestioned part of the currency wherever English is spoken. Undoubtedly, we have a right to make new words, as they are needed by the fresh aspects under which life presents itself here in the New World; and, indeed, wherever a language is alive it grows.

As no writer in our country has done more than Lowell to make and keep pure the treasure of our noble tongue, it seems appropriate to dwell a little at length upon his notion of a writer's duty toward the words that are his thoughts; for, as he says, "we think in words." "The language of the people in the mouth of a scholar" was his ideal of literary excellence. In the introduction to the second series of the "Biglow Papers," he writes:

I imagined to myself such an up-country man as I had often seen at antislavery gatherings, capable of district-school English, but always instinctively falling back into the national stronghold of his homely dialect when heated to the point of self-forgetfulness. In choosing the Yankee dialect, I did not act without forethought. It had long seemed to me that the vice of American writing and speaking was a studied want of simplicity; that we were in danger of looking on our mother-tongue as a dead language,

to be sought in the grammar and dictionary rather than in the heart; and that our only chance of escape was by seeking it at its living sources, among those who were, as Scottow says of Major-General Gibbons, divinely illiterate. Our popular idiom is racy with life, vigor, and originality, bucksome (as Milton used the word) to our new occasions, and proves itself no mere graft by sending up new suckers from the old root in spite of us. That we should be all made to talk like books, is the danger by which we are threatened by the universal school-master. No language after it has faded into *diction*, none that can not suck up the feeding juices secreted for it in the rich mother-earth of common folk, can bring forth a sound and lusty book. Language is the soil of thought, and our own especially is a rich leaf-mold, the slow deposit of ages, the shed foliage of feeling, fancy, and imagination, which has suffered an earth-change that the vocal

ance. Vulgarisms are often only poetry in the egg. Properly speaking, vulgarity is in the thought, and not in the word, or in the way of pronouncing it. Modern French, the most polite of languages, is barbarously vulgar if compared with the Latin out of which it has been corrupted, or even with Italian. There is a wider gap, and one implying greater boorishness, between *ministerium* and *métier*, or *sapient* and *sachant* than between *drive* and *drove*, or *agin* and *against*.

Of course, in what I have said, I wish to be understood as keeping in mind the difference between provincialisms, properly so called, and slang. Slang is always vulgar, because it is not a natural, but an affected way of talking, and all mere tricks of speech or writing are offensive. I do not think that Mr. Biglow can fairly be charged with vulgarity, and I should have entirely failed in my design if I had not

ELMWOOD, RESIDENCE OF JAMES RUSSELL LOWELL.

forest, as Howell called it, may clothe itself anew with living green. The quality of exaggeration has often been remarked on as typical of American character, and especially of American humor. But it seems to me that a great deal of what is set down as mere extravagance is more fitly to be called intensity and picturesqueness, symptoms of the imaginative faculty in full health and strength, though producing as yet only the raw and formless material in which poetry is to work. By and by, perhaps, the world will see it fashioned into poem and picture, and Europe, which will be hard pushed for originality ere long, may have to thank us for a new sensation. The French continue to think Shakespeare exaggerated because he treated English just as our country-folk do when they speak of "a steep price" or say that they "freeze to" a thing. The first postulate of an original literature is that a people should use their language instinctively and unconsciously, as if it were a lively part of their growth and personality, not as the mere torpid boon of education or inheri-

made it appear that high and even refined sentiment may coexist with the shrewder and more comic elements of Yankee character.

A single specimen from the minute and thoughtful study in words contained in the introduction will suffice. Speaking of "illy," Lowell says: "Mr. Bartlett says it is 'a word used by writers of an inferior class, who do not seem to perceive that "ill" is itself an adverb, without the termination /y,' and quotes Dr. Messer, President of Brown University, as asking triumphantly, 'Why don't you say welly?' I should like to have Dr. Messer answer his own question. It would be truer to say that it was used by people who still remembered that *ill* was an adjective, the shortened form of *evil*, out of which Shakespeare and the translators ventured to make *evilly*. The objection to 'illy' is not an etymo-

logical one, but simply that it is contrary to good usage—a very sufficient reason. 'Ill' as an adverb was at first a vulgarism, precisely like the rustic's when he says, 'I was treated *bad*.' In concluding his brief and forcible comparison and comments, Lowell says:

I profess myself a fanatical purist, but with a hearty contempt for the speech-gilders who affect purism without any thorough, or even pedagogic, knowledge of the engendure, growth, and affinities of the noble language about whose *mésalliances* they seem to be so solicitous. Should we be nothing because somebody had contrived to be something (and that perhaps in a provincial dialect) ages ago? and to be nothing by that very attempt to be that something which they had already been, and therefore which nobody could be again, without being a bore? Is there no way left, then, I thought, of being natural, of being *naïf* which means nothing more than native, of belonging to the age and country in which you are born? The Yankee, at least, is a new phenomenon; let us try to be *that*. I should have entirely failed in my design if I had not made it appear that high, and even refined, sentiment may co-exist with the shrewd and more concise elements of Yankee character. To me the dialect was native, was spoken all about me when a boy, at a time when an Irish day-laborer was as rare as an American one now. When I write in it, it is as in a mother-tongue, and I am carried back far beyond any studies of it to long-ago noonings in my father's hay fields, and to the talk of Sam and Job over their jug of blackstrap under the shadow of the ash tree, which still dapples the grass whence they have been gone so long.

The hay fields to which he alludes lay back of the house in Cambridge in which he was born, and in which he died. It was a large frame building, standing in the midst of great elm trees, secluded from the street and over-looking the river Charles. The place was called "Elmwood," and was a historic Tory mansion when Rev. Charles Lowell bought it. It is shown in the accompanying engraving.

During his senior year Lowell's habit of browsing instead of studying cost him a rustication. The moral of lapses from text-book good-behavior would be easier to point if he had not spent that period of disgrace in Concord, Mass., where he was invited familiarly to Emerson's house, forming there the acquaintance of Thoreau, Alcott, and the coterie of men that make a notable group in American literary annals. The funny side of transcendentalism appealed at once to him, and when he was readmitted to college the class poem in which he gave his mates a chance to laugh with him was not the ideal Sunday-school punishment for evil courses, for it brought him praise even outside the sacred halls and the appreciative ears for which it was intended. After graduation, Lowell, like all his ancestors, read law, but this also probably was mixed with literary browsing, as he soon abandoned its practice, the only result being a story published in the "Boston Miscellany" entitled "My First Client." Another respect in which Lowell was exceptionally fortunate was that his first love was early, worthy, and enduring. It was given to Maria White, a gifted and beautiful New England maiden, to whom he addressed the poems that appeared in his first published volume, "A Year's Life." One of the best known of these is entitled "My Love," which contains these stanzas:

Not as all other women are
Is she that to my soul is dear;
Her glorious fancies come from far,
Beneath the silver evening star,
And yet her heart is ever near.
I love her with a love as still
As the broad river's peaceful might,
Which, by high tower and lowly mill,
Seems following its own wayward will,
And yet doth ever flow aright.
And on its full deep breast serene,
Like quiet isles my duties lie;
It flows around them and between,
And makes them fresh, and fair, and green,
Sweet homes wherein to live and die.

Not quite so well known is the one beginning:

True love is but a humble, low-born thing,
And hath its food served up in earthenware.

For love is blind but with the fleshly eye,
That so its inner sight may be more clear;
And outward shows of beauty only so
Are needful at the first, as is a hand
To guide and to uphold an infant's steps:
Fine natures need them not; their earnest look
Pierces the body's mask of thin disguise,
And beauty ever is to them revealed
Behind the unshapeliest, meanest lump of clay
With arms outstretched and eager face ablaze,
Yearning to be but understood and loved.

Several of these early poems are remarkable as showing that love not only taught him "the secret of grief," but taught him even thus early the secret that grief may be the truest teacher of love, a divine knowledge that is generally revealed only through experience. The following extract contains one of the most striking expressions of this:

My love, I have no fear that thou shouldst die;
Albeit, I ask no fairer life than this,
Whose numbering clock is still thy gentle kiss,
While Time and Peace with hands unclocked fly;
Yet care I not where in eternity
We live and love, well knowing that there is
No backward step for those who feel the bliss
Of faith as their most lofty yearnings high;
Love hath so purified my being's core
Meseems I scarcely should be startled, even,
To find, some morn, that thou hadst gone before:
Since, with thy love, this knowledge too was given,
Which each calm day doth strengthen more and
more,
That they who love are but one step from heaven.

The same spiritual exaltation, incomprehensible to those who know it not, was afterward embodied by Lowell in a sonnet written after the loss of his child:

I thought our love at full, but I did err;
Joy's wreath drooped o'er mine eyes; I could not see
That sorrow in our happy world must be
Love's deepest spokesman and interpreter;
But, as a mother feels her child first stir
Under her heart, so felt I instantly
Deep in my soul another bond to thee
Thrill with that life we saw depart from her.
O mother of our angel child! twice dear!
Death knits as well as parts, and still, I wis,
Her tender radiance shall enfold us here,
Even as the light, borne up by inward bliss,
Threads the void glooms of space without a fear
To print on farthest stars her pitying kiss.

From the time of his marriage, in 1844, Lowell's writings took a more serious tone and

definite purpose. In 1843, in connection with Robert Carter, he established "The Pioneer, a literary and critical magazine." Hawthorne, Whittier, Elizabeth Barrett, Poe, Dwight, Story, Neal, and Parsons were among the contributors, but the publishers failed in their portion of the contract, and the hopeful venture soon came to an end. In the following year Lowell brought out a second volume of verse, containing "A Legend of Brittany," and he and his wife, who was an ardent abolitionist, became regular contributors to "The Liberty Bell" and the "Anti-slavery Standard," in one or the other of which many of his poems had appeared. This second volume includes his first great poem, "The Present Crisis," inspired by the events that ended in the proclamation of war with Mexico. It is of interest to trace the sentiments and expressions in the earlier poems that found adequate utterance in this. The poet at last caught a movement and melody that alone will make poetic thought and feeling of lasting beauty and effect. The first suggestion is in this ode:

Great truths are portions of the soul of man;
Great souls are portions of eternity;
Each drop of blood that e'er through true heart ran
With lofty message ran for thee and me;
For God's law, since the starry song began,
Hath been, and still for evermore must be,
That every deed which shall outlast Time's span
Must spur the soul to be erect and free;
Slave is no word of deathless lineage sprung;
Too many noble souls have thought and died,
Too many mighty poets lived and sung,
And our good Saxon, from lips purified
With martyr fire, throughout the world hath rung
Too long to have God's holy cause denied.

The sentiments contained in the sonnets to Wendell Phillips and Joshua R. Giddings, though apt, are too familiar to need repetition. The following lines from "L'Envoi" are better: Who speaks the truth stabs falsehood to the heart, And his mere word makes despots tremble more Than ever Brutus with his dagger could.

Spirit supreme of Freedom! not for this
Did great Columbus tame his eagle soul
To jostle with the daws that peck at courts;
Not for this, friendless, on an unknown sea,
Coping with mad waves and more mutinous spirits,
Battled he with the dreadful ache at heart
Which tempts, with devilish subtleties of doubt,
The hermit of that loneliest solitude,
The silent desert of a great new thought,
The high evangel to our country granted
Could make apostles, yea, with tongues of fire,
Of hearts half darkened back again to clay!
'Tis the soul only that is national,
And he who pays true loyalty to that
Alone can claim the wreath of patriotism.

In the "Capture of Fugitive Slaves near Washington" the same measure is used as in "The Present Crisis." Here are four stanzas: Though we break our fathers' promise, we have nobler duties first;
The traitor to humanity is the traitor most accursed;
Man is more than constitutions; better rot beneath the sod
Than be true to church and state while we are doubly false to God!
Put golden padlocks on Truth's lips, be callous if ye will,
From soul to soul, o'er all the world, leaps one electric thrill.

But if before his duty man with listless spirit stands,
Ere long the Great Avenger takes the work from out our hands.

"The Present Crisis" is one of the poems that stand forever as inspirers of lofty sentiment and noble action. Such truth and melody apply to more wrongs than the one that inspired them. The following are three stanzas from it:

When a deed is done for freedom through the broad
earth's aching breast
Runs a thrill of joy prophetic, trembling on from east
to west,
And the slave, where'er he cowers, feels the soul
within him climb
To the awful verge of manhood, as the energy sub-
lime
Of a century bursts full blossomed on the thorny
stem of Time.

Careless seems the Great Avenger; history's pages
but record
One death grapple in the darkness 'twixt old systems
and the Word;
Truth forever on the scaffold, Wrong forever on the
throne—
Yet that scaffold sways the future, and behind the
dim unknown
Standeth God within the shadow keeping watch
above his own.

For Humanity sweeps onward; where to-day the
martyr stands,
On the morrow crouches Judas with the silver in his
hands;
Far in front the cross stands ready and the crackling
fagots burn,
While the hooting mob of yesterday in silent awe
return
To glean up the scattered ashes into History's golden
urn.

The next notable poem in the volume is "Extreme Unction." It is the broken utterance of a dying man, half to the priest, who has come to offer him spiritual consolation, and half to his own too conscious soul. The evolution of imaginative thought on this theme can be traced much as in the case of "The Present Crisis." "Extreme Unction" opens with the lines:

Go! leave me, priest, my soul would be
Alone with the consoler, Death;
Far sadder eyes than thine will see
This crumbling clay yield up its breath;
These shriveled hands have deeper stains
Than holy oil can cleanse away,
Hands that have plucked the world's coarse
gains,
As erst they plucked the flowers of May.

And continues:

Men think it is an awful sight
To see a soul just set adrift
On that drear voyage from whose night
The ominous shadows never lift;
But 'tis more awful to behold
A helpless infant newly born,
Whose little hands unconscious hold
The keys of darkness and of morn.

This volume contains "The Changeling," "Longing," and the poem perhaps most popular of all that Lowell has written, "The Vision of Sir Launfal." The first two are but rhymed prose, and the last is little better than that, save for the opening address to the day in June, in which, once more, the poet has put into melodious rhyme the deep love for nature that found half expression time and again. Lowell is an

artist whose studies can be seen and whose completed poems are compositions. As a tree here, a rock there, and a cloud effect from another sketch are made into many forms, so his thought and feeling are set in different moods and measures, until each finds its happiest expression. Certainly the "Day in June" we have all sung in our hearts on a blissful summer's day, and said, "It is enough." The whole poem is said to have been composed in about forty-eight hours of almost continuous work.

In June, 1846, appeared in the "Boston Courier" the first installment of the famous "Biglow Papers." These are poems put into the mouth of a Yankee farmer, whose work is somewhat edited and freely commented upon by an imaginary New England parson, and of a New England countryman who went to the seat of war. Dr. Holmes, in an article published since Lowell's death, says: "In the study of character, especially as he observed it in New England, and of dialect as one form of its expression, he was as accurate as if the preservation of those traits and idioms had been left to him as their sole depository. His 'Yankee Idyls' are as true to the native talk of the rustics of his early remembrance as Bonny Doone and Auld Lang Syne to the language of the Scotch peasantry." Mr. Lowell says of the origin of these papers:

Thinking the Mexican War, as I think it still, a national crime committed in behoof of slavery, our common sin, and wishing to put the feeling of those who thought as I did in a way that would tell, I imagined myself such an up-country man as I had often seen at antislavery gatherings. When I began to carry out my conception, and to write in my assumed character, I found myself in a strait between two perils. On the one hand, I was in danger of being carried beyond the limit of my own opinions, or, at least, of that temper with which every man should speak his mind in print; and, on the other hand, I feared the risk of seeming to vulgarize a deep and sacred conviction. I needed on occasion to rise above the level of mere *patois*, and for this purpose conceived the Rev. Mr. Wilbur, who should express the more cautious element of the New England character and its pedantry, as Mr. Biglow should serve for its homely common sense, vivified and heated by conscience. Finding soon after that I needed some one as a mouth-piece of the mere drollery, for I conceive that true humor is never divorced from moral conviction, I invented Mr. Sawin for the clown of my little puppet show. I meant to embody in him that half-conscious *unmorality* which I had noticed as the recoil in gross natures from a puritanism that still strove to keep in its creed the intense savor which had long gone out of its faith and life. In the three I thought I should find room enough to express, as it was my plan to do, the popular feeling and opinion of the time.

In view of the instant and great success of the venture, the author's account of his relation to that success is interesting:

Very far from being a popular author under my own name—so far, indeed, as to be almost unread—I found the verses of my pseudonym copied everywhere; I saw them pinned up in work-shops; I heard them quoted and their authorship debated; I once even, when rumor had at length caught up my name in one of its eddies, had the satisfaction of hearing it demonstrated, in the pauses of a concert, that I was utterly incompetent to have written anything of the kind.

Again he says:

If I put on the cap and bells and made myself one of the court fools of King Demos, it was less to make

his majesty laugh than to win a passage to his royal ears for certain serious things which I had deeply at heart. I say this because there is no imputation that could be more galling to any man's self-respect than that of being a mere jester. I endeavored, by generalizing my satire, to give it what value I could beyond the passing moment and the immediate application. How far I have succeeded I can not tell, but I have had better luck than I ever looked for in seeing my verses survive to pass beyond their nonage.

It is pleasant to remember that Mr. Lowell lived long enough to realize that his countrymen not only understood him as he would wish to have been understood, but that his work had become an American classic whose value will increase with time, and whose delight is fresh at every perusal. In the Rev. Homer Wilbur's notes to the first installment of Hosea Biglow's contributions appeared the first draft of "The Courtin'," in regard to which Mr. Lowell says: "The only attempt I had ever made at anything like a pastoral (if that may be called an attempt which was the result almost of pure accident) was in 'The Courtin'.' While the introduction to the first series was going through the press I received word from the printer that there was a blank page left, which must be filled. I sat down at once and improvised another fictitious 'notice of the press,' in which, because verse would fill up space more cheaply than prose, I inserted an extract from a supposed ballad of Mr. Biglow. I kept no copy of it, and the printer, as directed, cut it off when the gap was filled. Presently I began to receive letters asking for the rest of it, sometimes for the *balance* of it. I had none, but to answer such demands I patched a conclusion upon it in a later addition. Afterward, being asked to write it out as an autograph at the Baltimore Sanitary Commission Fair, I added other verses, into some of which I infused a little more sentiment in a homely way, and after a fashion completed it by sketching in the characters and making a connected story. Most likely I have spoiled it." Here is an extract from "The Courtin'":

God makes sech nights, all white an' still
Fur'z you can look or listen,
Moonshine an' snow on field an' hill,
All silence an' all glisten.

Zekle crep' up quite unbeknown
An' peeked in thru the winder,
An' there sot Huldy all alone,
'ith no one nigh to hender.

The very room, coz she was in,
Seemed warm from floor to ceilin',
An' she looked full as rosy ag'in
Ez the apples she was peelin'.

'Twas kin' o' kingdom-come to look
On sech a blessed cretur,
A dogrose blushin' to a brook
Ain't modester nor sweeter.

He was six foot o' man A 1,
Clear grit and human natur',
None couldn't quicker pitch a ton
Nor drow a furrer straighter.

He'd sparked it with full twenty gals,
Hed squired 'em, danced 'em, druv 'em,
Fust this one, an' then thet, by spells—
All is, he couldn't love 'em.

But long o' her his veins 'ould run
All crinkly like curled maple,
The side she breshed felt full o' sun
Ez a south slope in Ap'ril.

She thought no v'ice hed sech a swing
 Ez his'n in the choir;
 My! when he made Ole Hunderd ring,
 She *knowed* the Lord was nigher.

She heered a foot, an' knowed it tu,
 A-raspin' on the scraper—
 All ways to once her feelins' flow
 Like sparks in burnt-up paper.

He kin' o' p'itered on the mat,
 Some doubtfe o' the sekle,
 His heart kep' goin' pity-pat,
 But her'n went pity-Zekle.

An' yit she gin her cheer a jerk
 Ez though she wished him furdur,
 An' on her apples kep' to work,
 Parin' away like murder.

He stood a spell on one foot fust,
 Then stood a spell on t'other,
 An' on which one he felt the wust
 He couldn't ha' told ye nuther.

Says he, "I'd better call agin";
 Says she, "Think likely, niister"
 Thet last wud pricked him like a pin,
 An'—wal, he up an' kist her.

When ma bimeby upon 'em slips,
 Huldy sot pale az ashes,
 All kin' o' smily roun' the lips
 An' teary roun' the lashes.

These stanzas are from the first communication from Hosea Biglow :

Ez fer war, I call it murder—
 There you hev it plain an' flat;
 I don't want to go no furdur
 Than my Testymet fer that;
 God has said so plump and fairly,
 It's as long as it is broad,
 An' you've gut to git up airly
 Ef you want to take in God.

'Tain't your eppylets an' feathers
 Make the thing a grain more right;
 'Tain't a follerin' your bell-wethers
 Will excuse ye in his sight;
 Ef you take a sword an' dror it,
 An' go stick a feller thru,
 Gov'ment ain't to answer for it,
 God 'll send the bill to you.

In regard to the lines that close these two stanzas, Mr Lowell says in answer to a criticism that they were profane: "In the first place, I was writing under an assumed character, and must talk as a person would whose mouth-piece I made myself. Will any one familiar with the New England countryman venture to tell me that he does *not* speak of sacred things familiarly? that Biblical allusions (allusions, that is, to the single book with whose language, from his church-going habits, he is intimate) are not frequent on his lips? If so, he can not have pursued his studies of the character on so many long-ago muster fields and cattle shows as I. But I scorn any such line of defense, and will confess at once that one of the things I am proud of in my countrymen is that they do not put their Maker away far from them, or interpret the fear of God into being afraid of him." Bird-of-freedom Sawin writes from the seat of war to Hosea:

This kind o' sogerin' ain't a mite like our October trainin',
 A chap could clear right out from there ef 't only looked like rainin',

An' th' cunnies, tu, could kiver up their shappoes
 with bandanners,
 An' send the insines skootin' to the bar-room with
 their banners
 (Fear o' gittin' on 'em spotted), an' a feller could cry
 quarter
 Ef he fired away his rain-rod arter too much rum an'
 water.

Afore I come away from hum I had a strong persuasion
 That Mexicans worn't human beans—an ourang-out-ang nation;
 I'd an idee thet they were built arter the darkie fashion all,
 An' kicken colored folks about, you know, 's a kind o' national;
 But wen I joined I worn't so wise as that air queen o' Sheby,
 Fer, come to look at 'em, they ain't much diff'rent from wut we be,
 An' here we air a-scrugin' 'em out o' their own dominions,
 A-shelterin' 'em, es Caleb sez, under our eagle's pinions,
 Wich means to take a feller up jest by the slack o' 's trowaes
 An' walk him Spanish clean right out o' all his homes an' houses;
 Wal, it does seem a curus way, but then hooraw fer Jackson!
 It must be right, fer Caleb sez it's reg'lar Anglo-Saxon.

Turning his attention to home matters, Mr. Biglow wrote as follows in regard to a State political canvass:

We were gittin' on nicely up here to our village,
 With good old ideas o' wut's right an' wut ain't,
 We kin o' thought Christ went agin war an' pillage,
 An' that eppylets worn't the best mark of a saint;

But John P.
 Robinson he

Sez this kind o' thing's an exploded idee.

Parson Wilbur sez he never heerd in his life
 Thet th' apostles rigged out in their swaller-tail coats,

An' marched round in front of a drum an' a fife,
 To git some on 'em office, an' more on 'em votes.

But John P.
 Robinson he

Sez they didn't know eveythin' down in Judee.

Mr. Lowell's first prose writings were collected under the title of "Conversations with the Poets," and they formed the basis of many of the critical lectures that he delivered before the Lowell Institute in 1854-'55, and at Harvard during the professorship of Literature and Belles-Lettres, to which he was appointed on the resignation of Mr. Longfellow. Most of them appear in revised forms, in the "Riverside Edition," but of some he writes: "The dates attached were those of publication, but the bulk of the material was written many years earlier. I have refrained from modifying what was written by one—I know not whether to say so much older or so much younger than I—but at any rate different in some important respects, and this, partly from deference to him, partly from distrust of myself." The earliest volume of the present series contains the "Moosehead Journal," "Cambridge Thirty Years ago," "Leaves from my Journal in Italy and elsewhere," "Keats," "Library of Old Authors," "Emerson the Lecturer," and "Thoreau." The quaint, delicate humor,

the wisdom, the good sense that pervade these essays, never lose their charm. Lowell's prose is more flowing, more simple, and more stately in its simplicity, than is his poetry. One loves to be alone with his books, because they are companions of the most genial sort, or in company with them that others may share what is so intensified by sympathy. They are the kind of literature that one finds himself reading aloud all alone, that he may make the ear happy as well as the eye. We forget that we are reading, until the smile on our lips has turned to a laugh and recalls us to our surroundings. Lowell is pre-eminently quotable, without seeming epigrammatic in the sense in which Emerson is. Nearly every sentence has a finished thought, but the connection is so easy and so complete that the first impression is that the thought needs its setting.

His appreciation of Yankee character, and humorous setting forth of it, is as delightful in prose as in verse. Two or three extracts from "A Moosehead Journal," and "Cambridge Thirty Years ago," are at once illustrations of the author's perception and of his style:

Nineteen years ago I was walking through the Franconia Notch, and stopped to chat with a hermit, who fed with gradual logs the unwearied teeth of a saw mill. As the strident steel slit off the *slabs* of the logs, so did the less willing machine of talk, acquiring a steadier up-and-down motion, pare away that outward bark of conversation which protects the core, and which, like other bark, has naturally most to do with the weather, the season, and the heat of the day. At length I asked him the best point of view for the Old Man of the Mountain.

"Dunno—never see it."

Too young and too happy either to feel or to affect the Horatian indifference, I was sincerely astonished, and I expressed it. The log-compelling man attempted no justification, but after a little asked:

"Come from Baws'n?"

"Yes," with peninsular pride.

"Goodle to see in the vicinity o' Baws'n."

"Oh, yes!" I said; and I thought, see Boston and die! See the State Houses, old and new, the caterpillar wooden bridges crawling with innumerable legs across the flats of the Charles; see the Common—largest park, doubtless, in the world—with its files of trees planted as if by a drill-sergeant, and then for your *nunc dimittis*.

"I should like 'awl, I *should* like to stan' on Bunker Hill. You've been there offen, likely?"

"N-o-o," unwillingly, seeing the little end of the horn in clear vision at the terminus of this Socratic perspective.

"'Awl, my young frien', you've larned neow that wut a man *kin* see any day for nawthin', children half-price, he never *doos* see. Nawthin' pay, nawthin' vally."

As I walked on, I said to myself: "There is one exception, wise hermit. It is just these *gratis* pictures which the poet puts in his show-box. The divine faculty is to see what everybody can look at."

Again from "A Moosehead Journal":

Uncle Zeb was a good specimen of this palaeozoic class, extinct among us for the most part, or surviving, like the dodo, in the Botany Bays of society. If talk seemed to be flagging, our uncle would put the heel of one boot upon the toe of the other, to bring it within point-blank range, and say, "Wahl, I stump the devil himself to make that 'ere boot hurt *my* foot," leaving us in doubt whether it were the virtue of the foot or its case which set at naught the wiles of the adversary.

This characteristic bit of insight of another sort is also taken from "A Moosehead Journal":

Practical application is the only mordant which will set things in the memory. Study, without it, is gymnastics and not work, which alone will get intellectual bread. One learns more metaphysics from a single temptation than from all the philosophers. It is curious, though, how tyrannical the habit of reading is, and what shifts we make to escape thinking. There is no bore we dread being left alone with so much as our own minds. I have seen a sensible man study a stale newspaper in a country tavern, and husband it as he would an old shoe on a raft after shipwreck. Why not try a bit of hibernation? There are few brains that would not be better for living on their own fat a little while. With these reflections, I, notwithstanding, spent the afternoon over my report. If our own experience is of so little use to us, what a dolt is he who recommends to man or nations the experience of others.

From the enchanting picture of "Cambridge Thirty Years ago" is the following:

It is more often true that a man who could scarce be induced to expose his unclothed body even to a village of prairie dogs will complacently display a mind as naked as the day it was born, without so much as a fig-leaf of acquirement on it, in every gallery of Europe. If not with a robe dyed in the Tyrian purple of imaginative culture, if not with the close-fitting, work-a-day dress of social or business training—at least, my dear Storg, one might provide himself with the merest waist-clout of modesty.

One can fancy his quiet glee as he wrote in "Cambridge Thirty Years ago," of a joke repeated by each incoming college class, upon a deacon who "kept store" in the village:

Enter A. and asks gravely, "Have you any sour apples, deacon?"

"Well, no, I haven't any just now that are exactly sour; but there's the bell-flower apple, and folks that like a sour apple generally like that." Exit A.

Enter B. "Have you any sweet apples, deacon?"

"Well, no, I haven't any just now that are exactly sweet; but there's the bell-flower apple, and folks that like a sweet apple generally like that."

In "Italy," he says:

Coming from a country where everything seems shifting like a quicksand; where men shed their homes as snakes their skins; where you may meet a three-story house, or even a church, on the highway, bitten by the universal gad-fly of bettering its position; where we have known a tree to be cut down merely because "it had got to be so old," the sense of permanence, unchangeableness, and repose which Italy gives us is delightful.

This is a quotation from the essay on Keats:

One can not help contrasting Keats with Wordsworth—the one altogether poet, the other essentially a Wordsworth, with the poetic faculty added; the one shifting from form to form and from style to style, and pouring his hot, throbbing life into every mold; the other remaining always the individual, producing works, and not so much living in his poems as memorially recording his life in them. When Wordsworth alludes to the foolish criticisms on his writings, he speaks serenely and generously of Wordsworth, the poet, as if he were an unbiased third person, who takes up the argument merely in the interest of literature. He towers with a bald egotism which is quite above and beyond selfishness. Poetry was his employment; it was Keats's very existence, and he felt the rough treatment of his verses as if it had been the wounding of a limb. To Wordsworth composing was a healthy exercise; his slow pulse and imperturbable self-trust gave him assurance of

life so long that he could wait; and when we read his poems we should never suspect the existence in him of any sense but that of observation, as if Wordsworth, the poet, were a half-mad land-surveyor, accompanied by Mr. Wordsworth the distributor of stamps, as a kind of keeper. But every one of Keats's poems was a sacrifice of vitality; a virtue went away from him into every one of them; even yet, as we turn the leaves, they seem to warm and thrill our fingers with the flush of his fine senses and the flutter of his electrical nerves, and we do not wonder he felt that what he did was to be done swiftly. The faults of Keats's poetry are obvious enough; but it should be remembered that he died at twenty-five, and that he offends by superabundance and not poverty. It is only by the rich that the costly plainness which at once satisfies the taste and the imagination is attainable.

In selecting some passages from the critical essays we have the double advantage of learning what Lowell thought of the men he criticised and in what manner he told his thinkings. It has been said that although Lowell's criticisms were charming as literature, the reader did not know his opinion of the authors. We do not agree to this; but Lowell seems to talk of men more in the manner in which he would have talked to them than any writer we can recall. Their personalities seem present while he makes the genial, sympathetic *exposé* of their doings and undoings. His manner of dealing with them suggests that the province of criticism in the broadest sense is analysis rather than conclusion. He takes criticism out of the field of curiosity into that of imagination. Here are a few sentences from "Emerson as a Lecturer":

His eye for a fine telling phrase that will carry true is like that of a backwoodsman for a rifle; and he will dredge you up a choice word from the mud of Cotton Mather himself. A diction at once so rich and so homely as his I know not where to match in these days of writing by the page; it is like homespun cloth of gold. The many can not miss his meaning, and only the few can find it. It is the open secret of all true genius. What an antiseptic is a pure life! At sixty-five (or two years beyond his grand climacteric, as he would prefer to call it) he has that privilege of soul which abolishes the calendar and presents him to us always the unwasted contemporary of his own prime. . . . We do not go to hear what Emerson says so much as to hear Emerson. . . . The first lecture, to be sure, was more disjointed even than common. It was as if, after vainly trying to get his paragraphs into sequence and order, he had at last tried the desperate expedient of shuffling them. It was chaos come again, but it was a chaos full of shooting stars, a jumble of creative forces. . . . The vice of Emerson's criticism seems to be that, while no man is so sensitive to what is poetical, few men are less sensible than he of what makes a poem. He values the solid meaning of thought above the subtler meaning of style. . . . But would my picture be complete if I forgot that ample and vegeate countenance of Mr. R—, of W—, how, from its regular post at the corner of the front bench, it turned in ruddy triumph to the profaner audience as if he were the inexpressibly appointed fugleman of appreciation! I was reminded of him by those hearty cherubs in Titian's "Assumption" that look at you as who should say, "Did you ever see a Madonna like that? Did you ever behold one hundred and fifty pounds of womanhood mount heavenward before like a rocket?" . . . Emerson awakened us, saved us from the body of this death. Did they say he was disconnected? So were the stars, that seemed larger to our eyes, still keen with that excitement as we walked homeward with prouder stride over the creaking snow. And were they not knit together by a higher

logic than our mere sense could master? Were we enthusiasts? I hope and believe we were, and I am thankful to the man who made us worth something for once in our lives. If asked what was left, what we carried home, we should not have been careful for an answer. It would have been enough if we had said that something beautiful had passed that way. . . . I have heard some great speakers and some accomplished orators, but never any that so moved and persuaded men as he. There is a kind of undertow in that rich baritone of his that sweeps our minds from their foothold into deeper waters with a drift we can not and would not resist.

In the opening passage of his essay on "Thoreau," Lowell gives a passing glance at transcendentalism, some sentences from which are here given:

The nameless eagle of the tree Yggdrasil was about to sit at last, and wild-eyed enthusiasts rushed from all sides, each eager to thrust under the mystic bird that chalk egg from which the new and fairer creation was to be hatched in due time. Bran had its prophets, and the presartorial simplicity of Adam its martyrs, tailored impromptu from the tar-pot by incensed neighbors and sent forth to illustrate the feathered Mercury as defined by Webster and Worcester. Some had an assurance of instant millennium so soon as hooks and eyes should be substituted for buttons. Communities were established where everything was to be common but common sense. The belated gift of tongues, as among the Fifth-Monarchy men, spread like a contagion, rendering its victims incomprehensible to all Christian men; whether equally so to the most distant possible heathen or not was unexperimanted, though many would have subscribed liberally that a fair trial might be made. It was the Pentecost of Shinar. Many foreign revolutionists out of work added to the general misunderstanding their contribution of broken English in every most ingenious form of fracture. All stood ready at a moment's notice to reform everything but themselves.

Of Thoreau he says:

As we walk down Park Street our eye is caught by Dr. Winship's dumb-bells, one of which bears an inscription testifying that it is the heaviest ever put at arm's length by any athlete; and in reading Thoreau we can not help feeling as if he sometimes invited our attention to a particular sophism or paradox as the biggest yet maintained by any single writer. The radical vice of his theory of life was that he confounded physical with spiritual remoteness from men. A man is far enough withdrawn from his fellows if he keep himself clear of their weaknesses. He is not so truly withdrawn as exiled if he refuse to share their strength.

From 1845 to 1851 Mr. Lowell contributed many reviews and poems to the "Dial," the "Democratic Review," and the "Massachusetts Quarterly Review." In 1851 he went abroad with his wife. They traveled in England, France, and Switzerland, and resided in Italy for some time. Here Mr. Lowell made the study of Dante that revealed that author to many of his countrymen, and enriched his works with many studies and essays on Italian art and literature. Although used by him in his succeeding professorship and not published until much later, these essays belong to this period of his intellectual life, and extracts are in place here:

As a contribution to the physiology of genius no other book is to be compared with the "Vita Nuova." It is more important to the understanding of Dante as a poet than any other of his works. It shows him (and that in the midst of affairs demanding practical ability and presence of mind) capable of a depth of

contemplative abstraction equaling that of a Soofi who has passed the fourth step of initiation. It enables us in some sort to see how, from being the slave of his imaginative faculty, he rose by self-culture and force of will to that mastery of it which is art.

Milton's angels are not to be compared with Dante's, at once real and supernatural; and the Deity of Milton is a Calvinistic Zeus, while nothing in all poetry approaches the imaginative grandeur of Dante's vision of God at the conclusion of the "Paradiso." . . . The range of Dante's influence is no less remarkable than its intensity. . . . Almost all other poets have their seasons, but Dante penetrates to the moral core of those who once fairly come within his sphere and possesses them wholly. His readers turn students, his students zealots, and what was a taste becomes a religion. The homeless exile finds a home in thousands of grateful hearts.

We may admit, with proper limitations, the modern distinction between artist and moralist. With the one form is all in all; with the other tendency. . . . The whole range of perception and thought is valuable to the one, as it will minister to imagination, to the other only as it is available for argument. . . . The results of the moralist pass into the intellectual atmosphere of mankind, it matters little by what mode of conveyance. But where, as in Dante, the religious sentiment and the imagination are both organic, something interfused with the whole being of the man, so that they work in kindly sympathy, the moral will insensibly suffuse itself with beauty as a cloud with light.

To read Lowell's exposition of Dante's character and works is to become possessed with a desire to see in him and them all that Lowell saw. The sympathetic and the practical unfolding of the poet's nature and writings go hand in hand so invitingly that to join the select spiritual and intellectual little company seems like a necessity to those who would know the best, and to fail of it a loss that no other study can repay.

Mr. and Mrs. Lowell came home in 1852, and in October, 1853, Mr. Lowell suffered the bitterest sorrow of his life, in the death of his beautiful, gifted, and devoted wife. Although an invalid for years, she had been his inspiration and his sympathizing critic. She had written a little volume of verses, which was printed privately after her death. Two of her poems—"The Morning Glory" and "The Alpine Shepherd"—became favorites, and still find a place in most American anthologies. In "The Wind-Harp" he has paid one of many tributes to her loveliness, and recorded his own sorrow. The first two stanzas read:

I treasure in secret some long, fine hair
Of tenderest brown, but so inwardly golden
I half used to fancy the sunshine there,
So shy, so shifting, so waywardly rare,
Was only caught for a moment and holden
While I could say *Dearest!* and kiss it, and then
In pity let go to the summer again.

I twisted this magic in gossamer strings
Over a wind-harp's Delphian hollow;
Then called to the idle breeze that swings
All day in the pine-tops, and clings, and sings
Mid the musical leaves, and said, "Oh, follow
The will of those tears that deepen my words,
And fly to my window to waken these chords."

Much better known is "Auf Wiedersehen," with its beautiful palinode. It is difficult to do it justice in an extract, and still more difficult

to omit so essential a part of his thoughts and words:

The little gate was reached at last,
Half hid in lilacs down the lane;
She pushed it wide, and, as she past,
A wistful look she backward cast,
And said—"Auf wiedersehen!"

The lamp's clear gleam flits up the stair;
I linger in delicious pain;
Ah, in that chamber, whose rich air
To breathe in thought I scarcely dare,
Thinks she—"Auf wiedersehen!"

Sweet piece of bashful maiden art!
The English words had seemed too faint,
But these—they drew us heart to heart,
Yet held us tenderly apart;
She said, "Auf wiedersehen!"

PALINODE.

Still thirteen years—'tis autumn now
On field and hill, in heart and brain;
The naked trees at evening sough;
The leaf to the forsaken bough
Sighs not—"Auf wiedersehen!"

The loath gate swings with rusty creak;
Once, parting there, we played at pain;
There came a parting, when the weak
And fading lips essayed to speak
Vainly—"Auf wiedersehen!"

Somewhere is comfort, somewhere faith,
Though thou in outer dark remain;
One sweet sad voice ennobles death,
And still, for eighteen centuries saith
Softly—"Auf wiedersehen!"

We should not have the complete picture of this deepest Lowell unless we recalled the Puritan triumph note of the lover's ode and contrasted it with these poems, or more particularly with two others, "After the Burial" and "The Dead House." In that Yankee character which he himself had depicted such faith and exaltation were the complement of such despair and suffering. In "The Dead House," he says:

Unaltered! Alas for the sameness
That makes the change but more!
'Tis a dead man I see in the mirrors,
'Tis his tread that chills the floor!

To learn such a simple lesson,
Need I go to Paris and Rome,
That the many make the household,
But only one the home?

'Twas just a womanly presence,
An influence unexpressed,
But a rose she had worn on my grave-sod
Were more than long life with the rest!

'Twas a smile, 'twas a garment's rustle,
'Twas nothing that I can phrase,
But the whole dumb dwelling grew conscious
And put on her looks and ways.

Were it mine I would close the shutters,
Like lids when the life is fled,
And the funeral fire should mind it,
This corpse of a home that is dead.

Still stronger are the expressions in "After the Burial":

Yes, faith is a goodly anchor;
When skies are sweet as a psalm,
At the bows it lolls so stalwart,
In its bluff, broad-shouldered calm.

And when over breakers to leeward
The tattered surges are hurled,
It may keep our head to the tempest,
With its grip on the base of the world.

But, after the shipwreck, tell me,
What help in its iron thaws,
Still true to the broken hawser,
Deep down amid sea-weed and ooze?

In the breaking gulfs of sorrow,
When the helpless feet stretch out
And find in the depths of darkness
No footing so solid as doubt,

Then better one spar of memory,
One broken plank of the past,
That our human heart may cling to,
Though hopeless of shore at last!

To the spirit its splendid conjectures,
To the flesh its sweet despair,
Its tears o'er the thin-worn locket,
With its anguish of deathless hair!

Immortal! I feel it and know it,
Who doubts it of such as she?
But that is the pang's very secret—
Immortal away from me.

There's a narrow ridge in the grave-yard
Would scarce stay a child in its race,
But to me and my thought it is wider
Than the star-sown vague of space.

Console if you will. I can bear it—
'Tis a well-meant alms of breath—
But not all the preaching since Adam
Has made death other than death.

It is pagan; but wait till you feel it—
That jar of our earth, that dull shock
When the plowshare of deeper passion
Tears down to our primitive rock.

Two other phases of suffering have found utterance in "The Darkened Mind," "The First Snow-fall," and "Threnodia." The first alluded to the insanity of his unusually keen-witted and joyous-hearted mother, the others to the death of his children. Longfellow's poem "The Two Angels" was drawn forth by the fact that one of Longfellow's children was born the night that Mrs. Lowell died.

The volume that contains these poems has two other notable ones, "Pictures from Appledore" and the "Ode to Happiness." A long-lined, somewhat heavy movement has hindered these (or at least the former) from becoming the favorites which their beauty of thought and imagination would make them. "Appledore" is difficult to select from, but this will perhaps present it best of any extract:

A common island, you will say;
But stay a moment: only climb
Up to the highest rock of the isle,
Stand there alone for a little while,
And with gentle approaches it grows sublime
Dilating slowly as you win
A sense from the silence to take it in.
So wide the loneliness, so lucid the air,
The granite beneath you so lucidly bare,
You well might think you were looking down
From some sky-silenced mountain's crown,
Whose waist-belt of pines is wont to tear
Locks of wool from the topmost cloud.
Only be sure you go alone,
For Grandeur is in accessibly proud,
And never yet has backward thrown
Her veil to feed the stare of a crowd;
To more than one has never shown
That awful front, nor is it fit
That she, Cothurnus-shod, stand bowed
Until the self-approving pit
Enjoy the gust of its own wit
In babbling plaudits cheaply loud;
She hides her mountains and her sea
From the harriers of scenery,

Who hunt down sunsets, and huddle and bay,
Mouthing and mumbling the dying day.

To quote the beautiful lines of the "Ode to Happiness" would be to quote them all. The best that can be done in these limits is to give single lines or expressions:

And passed from eager hand to hand
The onward-dancing torch of life!

Thou first revealst to us thy face
Turned o'er the shoulder's parting grace,
A moment glimpsed, then seen no more—
Thou whose swift foot-steps we can trace
Away from every mortal door.

Nymph of the unreturning feet.

Souls that with long upward beat
Have won an undisturbed retreat.

—the cliff
That o'er the abrupt gorge holds its breath
Where the frail hair's-breadth of an if
Is all that sunders life and death.

Unhistoried as smokes that rise
From happy hearths and sight elude
In kindred blue of morning skies.

Yet there is one who seems to be
Thine elder sister, in whose eyes
A faint, far northern light will rise.

I am she
Whom the gods love, Tranquillity;
That other whom you seek forlorn
Half earthly was; but I am born
Of the immortals, and our race
Wears still some sadness on its face.

For a taste of a totally different quality, we turn to "Without and Within":

My coachman, in the moonlight there,
Looks through the side-light of the door;
I hear him with his brethren swear,
As I could do—but only more.

Flattening his nose against the pane,
He envies me my brilliant lot,
Breathes on his aching fists in vain,
And dooms me to a place more hot.

Meanwhile I only curse the bore
Of hunting still the same old eon,
And envy him, outside the door,
In golden quiet of the moon.

The winter wind is not so cold
As the bright smile he sees me win,
Nor the host's oldest wine so old
As our poor gabble sour and thin.

Oh, could he have my share of din,
And I his quiet! past a doubt
'Twould still be one man bored within,
And just another bored without.

In January, 1855, Mr. Longfellow resigned his professorship in Harvard College, and Mr. Lowell was elected to take his place. He did not enter upon it immediately, but spent two years abroad, continuing studies in Italian, French, and Spanish, devoting himself especially to old French and Provençal poetry, in which he became one of the highest authorities. On his return, he assumed the chair of Belles Lettres.

The "Atlantic Monthly" was founded in this year, 1857, and Lowell became its first editor; Holmes, Longfellow, and Emerson being, with him, the projectors of the enterprise, which was planned at meetings of the quartet in Emerson's cheery study in Concord. In 1863 he became

joint editor, with Charles Eliot Norton, of the "North American Review," a connection which lasted until 1872. In these periodicals appeared the "Moosehead Journal," "Cambridge Thirty Years ago," "Notes of Travel," and the fragment "Fitz Adam's Story."

Meantime the political events that preceded and led up to the civil war were of the keenest interest to him, and, in order to throw the weight of his influence on the side of the Union, he brought Hosea Biglow and Parson Wilbur again upon the stage, their utterances being given to the world in the pages of the "Atlantic Monthly." In his introduction to the new poems of Hosea Biglow, Parson Wilbur says: "I write by express desire of Mr. Biglow himself, whose entire winter leisure is occupied, as he assures me, in answering demands for autographs, a labor exacting enough in itself, and egregiously so to him, who, being no ready penman, can not sign so much as his name without strange contortions of the face (the nose even being essential to complete success) and painfully suppressed Saint-Vitus's dance of every muscle of the body." Mr. Wilbur introduces a letter from Mr. Biglow's friend, Mr. Sawin, who had settled in Virginia after the Mexican War. It opens:

It's some consid'ble of a spell sence I hain't writ no letters,
An' ther's gret changes hez took place in all polit'-
cle matters;
Some canderdates air dead an' gone, an' some hez ben
defeated,
Which 'mounts to pooty much the same; fer it's ben
proved repeated
A betch o' bread thet hain't riz once ain't goin' to
rise agin,
An' it's jest money throwed away to put the emptin's
in:
But thet's wut folks won't never larn; they dunno how
to go,
Arter you want their room, no more'n a bullet-headed
beau;
Ther's ollers chaps a-hangin' roun' thet can't see pea-
time's past,
Mis'ble as roosters in a rain, heads down an' tails
half-mast;
It ain't disgraceful bein' beat, when a holl nation
doos it,
But chance is like an amberill—it don't take twice to
lose it.

His description of matters down South is followed the next month by the famous "Yankee Idyl," "Mason and Slidell." The "Idyl" is introduced by a long rhymed dialogue between Bunker Hill Monument and Concord Bridge, which brims over with wit. In the course of it, the monument remarks:

"Ef we're a-goin' to prove we *be* growd-up,
'Twun't be by barkin' like a tarrier pup,
But turnin' to an' makin' things ez good
Ez wut we're allers braggin' that we could;
We're boun' to be good friends, and so we'd oughter,
In spite of all the fools both sides the water."

The bridge replies:

"I b'lieve thet's so; but harken in your ear,
I'm older'n you—Peace won't keep house with Fear.
Ef you want peace, the thing you've gut to du
Is jes' to show you're up to fightin', tu.
I recollect how sailors' rights was won,
Yard locked in yard, hot gun-lip kissin' gun.

Why, afore thet John Bull sot up thet he
Hed gut a kind o' mortgage on the sea;
You'd thought he held by grand'ther Adam's will,
An' ef you knuckle down, he'll think so still."

Some stanzas of the "Idyl" read as follows:

Ef I turn mad dogs loose, John,
On *your* front-parlor stairs,
Would it jest meet your views, John,
To wait an' sue their heirs?
Ole Uncle S. sez he, "I guess
I on'y guess," sez he,
'Thet ef Vattel on *his* toes fell,
'Twould kind o' rile J. B.,
Ez wal ez you an' me!

Who made the law thet hurts, John,
Heads I win—*ditto* tails?
"J. B." was on his shirts, John,
Unless my memory fails.
Ole Uncle S. sez he, "I guess,
(I'm good at thet)," sez he,
'Thet sauce for goose ain't *jest* the juice
For ganders with J. B.,
No more'n with you or me!"

We own the ocean, tu, John,
You musn't take it hard,
Ef we can't think with you, John,
It's jest your own back yard.
Ole Uncle S. sez he, "I guess,
Ef *thet's* his claim," sez he,
'Thet fencin' stuff 'll cost enough
To bust up friend J. B.,
Ez wal ez you an' me!"

An argument that was put forward in sober
earnest by many is put in the following fashion
by Mr. Sawin in a letter to Hosea Biglow:

Warn't it more profit'able to bring your raw material
thru
Where you can work it into grace an' into cotton tu,
Than sendin' missionaries out where fevers might
defeat 'em,
An' ef the butcher didn't call, their p'rishioners
might eat 'em?

The next installment closes with the follow-
ing lines:

I—but, gen'lemen, here's a dispatch jes come in,
Which shows thet the tide's begun turnin' agin'—
Great Confedrit success! Cl'umbus evacoated!
I mus' run down an' hev the thing properly stated,
An' show wut a triumph it is, an' how lucky
To fin'ly git red o' thet cussed Kentucky,
An' how, sence Fort Donelson, winnin' the day
Consists in triumphantly gittin' away.

Perhaps one of the best-known extracts is
from the passage from Hosea Biglow, which be-
gins thus:

Once git a smell o' musk into a draw,
An' it clings hold like precedents in law;
Your gra'ma'am put it there—when, goodness
knows—

To jes, this-worldify her Sunday-clo'es;
But the old chist wun't sarve her gran'son's wife.
(For, 'thout new furnitoor, wut good in life?)
An' so ole clawfoot, from the preinks dread
O' the spare chamber, shrinks into the shed,
Where, dim with dust, it fust or last subsides
To holdin' seeds an' fifty things besides;
'But better days stiek fast in heart an' husk,
An' all you keep in't gits a scent o' musk.

Jes so with poets: wut they've airly read
Gits kind o' worked into their heart an' head,
So's't they can't seem to write but jest on sheers
With furrin' countries or played-out ideers,
Nor hev a feelin' ef it doesn't smack
O' wut some critter chose to feel 'way back.

Then follows the famous description of spring in New England, and then more of that sharp, witty satire which probably had more influence in setting things in the right light for the New England mind than the gravest sermons or editorials.

It was not with poetical satire alone that Mr. Lowell attacked slavery and upheld the national cause in the final crash of war. Elegant writings in prose came from his pen, while the subjects they discussed were of burning interest. The fire and zeal of Garrison without his intemperance and disloyalty, the eloquence of Wendell Phillips with far more depth of thought and scholarship, were what he showed, as contrasted with these two constant friends and coworkers, in those days. An article on "The American Tract Society," written in 1858, shows how wide a range his mental eye took in. He writes:

If the pious men who founded the American Tract Society had been told that within forty years they would be watchful of their publications, lest, by inadvertence, anything disrespectful might be spoken of the African slave trade; that they would consider it an ample equivalent for compulsory dumbness on the vices of slavery that their colporteurs could awaken the minds of Southern brethren to the horrors of St. Bartholomew; that they would hold their peace about the body of Cuffee dancing to the music of the cart-whip, provided only they could save the soul of Sambo alive by presenting him a pamphlet, which he could not read, on the depravity of the double-shuffle; that they would consent to be fellow-members in the Tract Society with him who sold their fellow-members in Christ on the auction-block, if he agreed with them in condemning transubstantiation (and it would not be difficult for a gentleman who ignored the real presence of God in his brother man to deny it in the sacramental wafer)—if those excellent men had been told this, they would have shrunk in horror, and exclaimed: "Are thy servants dogs, that they should do these things?" Yet this is precisely the present position of the society. . . . The only line which Christ drew is that which parts the sheep from the goats, that great horizon line of the moral nature of man, which is the boundary between light and darkness. The society, by yielding (as they have done in 1858) to what are pleasantly called the "objections" of the South (objections of so forcible a nature that we are told the colporteurs were "forced to flee"), virtually exclude the black man, if born to the southward of a certain arbitrary line, from the operation of God's providence.

What claim has slavery to immunity from discussion? We are told that discussion is dangerous. Dangerous to what? Truth invites it, courts the point of the Ithuriel spear whose touch can but reveal more clearly the grace and grandeur of her angelic proportions.

In his article on the then pending election, which placed Mr. Lincoln in the presidency, Mr. Lowell said:

The truth is that revolutionary ideas are promoted not by any unthinking hostility to the *rights* of property, but to a well-founded jealousy of its usurpations; and it is privilege, and not property, that is perplexed with fear of change.

In an article entitled "E Pluribus Unum" he wrote:

If secession be a right, then the moment of its exercise is wholly optional with those possessing it. Suppose on the eve of a war with England Michigan should vote herself out of the Union and declare herself annexed to Canada, what kind of a reception would her commissioners be likely to meet in Wash-

ington? . . . Is the only result of our admitting a territory on Monday to be the giving it a right to steal itself and go out again on Tuesday? . . . We shall need something like a fugitive slave law for runaway republics, and must get a provision inserted in our treaties with foreign powers, that they shall help us catch any delinquent who may take refuge with them.

It has sometimes been questioned just what Lowell meant when, in the "Commemoration Ode," he speaks of President Lincoln as the "first American." The commentary on it may perhaps be found in his article on Lincoln, written in 1864:

People of more sensitive organizations may be shocked, but we are glad that in this our true war of independence, which is to free us forever from the Old World, we have had at the head of our affairs a man whom America made, as God made Adam, out of the very earth—unancestried, unprivileged, unknown—to show us how much truth, how much magnanimity, and how much state craft await the call of opportunity in simple manhood when it believes in the justice of God and the worth of man.

In the same article he thus describes a statesman:

The course of a great statesman resembles that of navigable rivers, avoiding immovable obstacles with noble bends of concession, seeking the broad levels of opinion on which men soonest settle and longest dwell; following and marking the almost imperceptible slopes of national tendency, yet always aiming at direct advances, always recruited from sources nearer heaven, and sometimes bursting open paths of progress and fruitful human commerce through what seem the eternal barriers of both. It is loyalty to great ends, even though forced to combine the small and opposing motives of selfish men to accomplish them; it is the anchored cling to solid principles of duty and action, which knows how to swing with the tide, but is never carried away by it, that we demand in public men.

Mr. Lowell took an active interest in public affairs, writing much on reconstruction and kindred themes, and meantime his muse was not silent. "The Washers of the Shroud," written in 1861, was a lament for relatives and friends who were with the Army of the Potomac. One stanza runs:

Tears may be ours, but proud, for those who win
Death's royal purple in the foeman's lines;
Peace, too, brings tears; and 'mid the battle-din
The wiser ear some text of God divines,
For the sheathed blade may rust with darker sin.

"Memoriae Positum," written in memory of Col. Robert G. Shaw, killed at Fort Wagner in 1863, is a paean of sorrow, a preliminary study for the magnificent "Commemoration Ode." One stanza reads:

We bide our chance,
Unhappy, and make terms with Fate
A little more to let us wait;
He leads for aye the advance,
Hopes forlorn—hopes that plant the desperate good
For nobler earths and days of manlier mood;
Our wall of circumstance
Cleared at a bound, he flashes o'er the fight,
A saintly shape of fame, to cheer the right
And steel each wavering glance.

The noblest elegiac poem ever produced in our country is the "Commemoration Ode," written by Lowell, and recited by him at the memorial exercises held at Harvard College, in 1865, as a

tribute to the dead and the living among her graduates and students who had gone forth to the war. Other famous elegies in the English language are, of general ones, Gray's "Elegy in a Country Churchyard" and Bryant's "Thanatopsis"; of personal ones, Milton's "Lycidas," Shelley's "Adonais," and Tennyson's "In Memoriam" and "Ode on Wellington." None of these, taken as a whole, outranks Lowell's. Some are more musical in parts, but not one is more musical in all parts, not one grander in thought, tenderer in feeling, more moving in pathos, and certainly not one can compare with it in nobility of theme. One stanza of it reads:

Many loved Truth, and lavished life's best oil
Amid the dust of books to find her,
Content at last, for guerdon of their toil,
With the east mantle she hath left behind her.
Many in sad fate sought for her,
Many with crossed hands sighed for her;
But these, our brothers, fought for her,
At life's dear peril wrought for her,
So loved her that they died for her,
Tasting the raptured fleetness
Of her divine completeness.

The closing stanza reads:

Bow down, dear Land, for thou hast found release!
Thy God, in these distempered days,
Hath taught thee the sure wisdom of his ways,
And through thine enemies hath wrought thy peace.
Bow down in prayer and praise!
No poorest in thy borders but may now
Lift to the juster skies a man's enfranchised brow.
O Beautiful! my Country! ours once more!
Smoothing thy gold of war-disheveled hair
O'er such sweet brows as never other wore,
And letting thy set lips,
Freed from wrath's pale eclipse,
The rosy edges of their smile lay bare,
What words divine of lover or of poet
Could tell our love and make thee know it,
Among the nations bright beyond compare?
What were our lives without thee?
What all our lives to save thee?
We reckon not what we gave thee;
We will not dare to doubt thee,
But ask whatever else, and we will dare!

"The Cathedral" was written in 1869. It has the long-lined monotony which is the one drawback to Lowell's verse, but it is the master's work. The following lines represent it fairly:

Man can not be God's outlaw if he would,
Nor so abscond him in the caves of sense
But Nature still shall search some crevice out
With messages of splendor from that source
Which, dive he, soar he, baffles still and hures.
This life were brutish did we not sometimes
Have intimation clear of wider scope,
Hints of occasion infinite, to keep
The soul alert with noble discontent
And onward yearnings of unstilled desire;
Fruitless, except we now and then divined
A mystery of purpose gleaming through
The secular confusions of the world,
Whose will we darkly accomplish, doing ours.
No man can think nor in himself perceive,
Sometimes at waking, in the street sometimes,
Or on the hillside, always unforwarned,
A grace of being, finer than himself,
That beckons and is gone—a larger life
Upon his own impinging, with swift glimpse
Of spacious circles luminous with mind,
To which the ethereal substance of his own
Seems but gross cloud to make that visible,
Touched to a sudden glory round the edge.

Who that hath known these visitations fleet
Would strive to make them trite and ritual?
I, that still pray at morning and at eve,
Loving those roots that feed us from the past,
And prizing more than Plato things I learned
At that best Academe, a mother's knee,
Thrice in my life, perhaps, have truly prayed,
Thrice, stirred below my conscious self, have felt
That perfect disenchantment which is God;
Nor know I which to hold worst enemy,
Him who on speculation's windy waste
Would turn me loose, stript of the raiment warm
By faith contrived against our nakedness,
Or him who, cruel-kind, would fain obscure,
With pictured saints and paraphrase of God,
The soul's east window of divine surprise.

This poem is Lowell's contribution to the religious controversies of his day, and it suggests a quality in his work, both in verse and prose. His life history and thought can be traced through his writings to an unusual degree. Whether he writes directly of principles or directly of particular men, the discussions are always really of ideas, and his own reach and progress of conviction can be traced.

In this year (1869) Lowell wrote also two characteristic essays, one of which, "On a Certain Condescension in Foreigners," is perhaps the most popular of his writings. The other is "My Garden Acquaintance," which embodies his love for nature in his own quaint fashion. In closing it, he writes:

There is something inexpressibly dear to me in these old friendships of a lifetime. There is scarce a tree of mine but has had, at some time or other, a happy homestead among its boughs, and to which I can not say:

"Many light hearts and wings,
Which now be dead, lodged in thy living bowers."

My walk under the pines would lose half its summer charm were I to miss that shy anchorite, the Wilson's thrush, nor hear in haying time the metallic ring of his song that justifies his rustic name of *scythe-whet*. I protect my game as jealously as an English squire. If anybody had oologized a certain cuckoo's nest I know of, it would have left me a sore place in my mind for weeks. . . . I would not if I could convert them from their pretty pagan ways.

In the opening of the other essay there is a lovely picture of twilight quiet and the charm of association:

All things combined in a result as near absolute peace as can be hoped for by a man who knows that there is a writ out against him in the hands of the printer's devil. . . . I love old ways, and the path I was walking felt kindly to the feet it had known for almost fifty years. . . . How many times I had lingered to study the shadows of the leaves mezzotinted upon the turf that edged it by the moon, of the bare boughs etched with a touch beyond Rembrandt by the same unconscious artist on the smooth page of snow. . . . "Blessed old fields!" I was just exclaiming to myself, when I was interrupted by a voice which asked me in German whether I was the Herr Professor, Doctor, so and so?

One feels so intimately assured that one is made up in part of shreds and leavings of the past, in part of the interpolations of other people, that an honest man would be slow in saying *yes* to such a question. I had begun life with the theory of giving something to every beggar that came along. . . . I was but too conscious of a vagrant fiber in myself which often thrilled me in my solitary walks with a temptation to wander on into infinite space. . . . For seven years I helped maintain one heroic man on an imaginary

journey to Portland—as fine an example as I have ever known of hopeless loyalty to an ideal. I assisted another so long in a fruitless attempt to reach Meek-lonburg-Schwerin that at last we grinned in each other's faces when we met like a couple of augurs. . . . I could not help associating the apparition of my new friend with this series of otherwise unaccountable phenomena. I accordingly made up my mind to deny the debt. . . . He took a high tone with me at once. . . . He even brought down his proud stomach so far as to join himself to me for the rest of my homeward walk, that he might give me his views of the American people.

But whatever we might do or leave undone, we were not genteel. . . . Though we should boast that we were the Great West until we were black in the face, it would not bring us an inch nearer to the world's west end. . . . In short, we were vulgar. . . . "How am I vulgar?" asks the culprit shrinkingly. "Because thou art not like unto us," answers Lucifer, Son of the Morning.

So long as we continue to be the most common-schooled and the least cultivated of people in the world, I suppose we must consent to endure this condescending manner of foreigners toward us. They can never appreciate the immense amount of silent work that has been done here, making this continent slowly fit for the abode of man. A great place in history can only be achieved by competitive examinations—nay, by a long course of them. . . . The common blood, and still more the common language, are fatal instruments of misapprehension. Let them give up trying to understand us.

From the essay on *Chaucer*, written in 1870, we take the following characteristic sentence:

Modern imaginative literature has become so self-conscious, and therefore so melancholy, that art, which should be "the world's sweet inn," whither we repair for refreshment and repose, has become rather a watering-place, where one's own private touch of liver complaint is exasperated by the affluence of other sufferers whose talk is a narrative of morbid symptoms. Poets have forgotten that the first lesson of literature, no less than of life, is the learning how to burn your own smoke; that the way to be original is to be healthy; that the fresh color, so delightful in all good writing, is won by escaping from the fixed air of self into the brisk atmosphere of universal sentiments, and that to make the common marvelous, as if it were a revelation, is the test of genius.

The following passage from his essay on *Pope*, written in 1871, suggests another phase in his intellectual development:

I confess that I come to the treatment of Pope with diffidence. I was brought up in the old superstition that he was the greatest poet that ever lived; and when I came to find that I had instincts of my own, and my mind was brought in contact with the apostles of a more esoteric doctrine of poetry, I felt that ardent desire for smashing the idols I had been brought up to worship, without any regard to their artistic beauty, which characterizes youthful zeal. What was it to me that Pope was called a master of style? I felt, as Addison says in his "Freeholder," when answering an argument in favor of the Pretender, because he could speak English and George I could not, that I "did not wish to be tyrannized over in the best English that ever was spoken." The young demand thoughts that find an echo in their real and not their acquired nature, and care very little about the dress they are put in. It is later that we learn to like the conventional, as we do olives. There was a time when I could not read Pope, but disliked him on principle. . . . I have since read over every line that Pope ever wrote, and every letter written by or to him, and that more than once. If I have not come to the conclusion that he is the greatest of poets, I believe that I am at least in a condition to allow him every merit that is fairly his.

If every literary American could say something like this with truth, we should soon cease to be the "most common-schooled and the least cultivated of people." In 1872 Mr. Lowell visited Europe, with his second wife, Miss Frances Dunlap, of Portland, Me, whom he had married in 1857. On his return the "Centennial" celebrations of 1875-'76 appealed to his patriotism and local sympathy, and he wrote several odes, two of which were read by him at Concord and under the old elm at Cambridge; but they have none of the fire and moving power of the "Commemoration Ode." In 1876 Mr. Lowell was a presidential elector on the Republican ticket, and in the following year he was appointed United States minister at Madrid. Washington Irving had held this office in 1842-'46. In 1880 he was transferred to the court of St. James. Here a representative American found opportunity to maintain the simple dignity of his country, and he did it to that country's credit and to his own great satisfaction. There were no diplomatic questions to be argued; and if in the round of social successes his countrymen sometimes felt that he became more English than the Englishmen themselves, they did not lose their admiration of him. He may be judged by his own written words, for, in addition to constant calls for after-dinner and off-hand speeches, he was invited to deliver addresses on many public occasions. One of the most delightful and original of his essays is that upon "Don Quixote," the notes for which were read at the Working Men's College, in London. By reading one paragraph an opinion may be formed of his judgment of the purpose of a book which he considered the work of one of the five greatest authors of the world:

There is a moral in "Don Quixote," and a very profound one, whether Cervantes put it there or not, and it is this: that whoever quarrels with the nature of things, wittingly or unwittingly, is certain to get the worst of it. The great difficulty lies in finding out what the nature of things really and perdurably is, and the great wisdom, after we have made this discovery, or persuaded ourselves that we have made it, is in accommodating our lives and actions to it as best we may or can. And yet, though all this be true, there is another and deeper moral in the book than this. The pathos which underlies its seeming farcical turmoil, the tears which sometimes tremble under our lids after its most poignant touches of humor, the sympathy with its hero, which survives all his most ludicrous defeats and humiliations, and is only deepened by them, the feeling that he is, after all, the one noble and heroic figure in a world incapable of comprehending him, and to whose inhabitants he is distorted and caricatured by the crooked panes in those windows of custom and convention through which they see him—all this seems to hint that only he who has the imagination to conceive, and the courage to attempt a trial of strength with what foists itself on our senses as the order of nature for the time being, can achieve great results or kindle the co-operative and efficient enthusiasm of his fellow-men.

In Exeter Hall, in 1881, at a meeting held in memory of President Garfield, Mr. Lowell said:

This is no place for the turnings and windings of dexterous rhetoric. In the presence of that death scene, so homely, so human, so august in its unostentatious heroism, the commonplaces of ordinary eulogy stammer with the sudden shame of their own ineptitude. . . . Let us thank God and take courage when

we reflect that it was through the manliness, the patience, the religious fortitude of the splendid victim that the tie of human brotherhood was thrilled to a consciousness of its sacred function. . . . The emulation of examples like his makes nations great, and keeps them so. The soil out of which such men as he are made is good to be born on, good to live on, good to die for and to be buried in.

In the same year, in a speech at the meeting in Westminster Abbey in commemoration of Dean Stanley, he said:

I feel especially happy, because it seems to me that my presence here is an augury of that day, which may be distant, but which I believe will surely come, when the character and services of every eminent man of the British race in every land, under whatever distant skies he may have been born, shall be the common possession and the common inheritance, and the common pride of every branch which is sprung from our ancestral stem.

In an address, entitled "Democracy," delivered on the occasion of assuming the presidency of the Birmingham and Midland Institute, in 1884, he said:

I have hinted that what people are afraid of in democracy is less the thing itself than what they conceive to be its necessary adjuncts and consequences. It is supposed to reduce all mankind to a dead level of mediocrity in character and culture: to vulgarize men's conceptions of life, and therefore their code of morals, manners, and conduct; to endanger the rights of property and possession. But I believe that the real gravamen of the charge lies in the habit it has of making itself generally disagreeable by asking the powers that be, at the most inconvenient moment, whether they are the powers that ought to be. If the powers that be are in a condition to give a satisfactory answer to this inevitable question, they need feel in no way discomfited by it. . . . An appeal to the reason of the people has never been known to fail in the long run. . . . There is more rough-and-tumble in the American democracy than is altogether agreeable to people of sensitive nerves and refined habits, and the people take their political duties lightly and laughingly, as is, perhaps, neither unnatural nor unbecoming in a young giant. Democracies can no more jump away from their own shadows than the rest of us can. . . . But democracies have likewise their finer instincts. . . . Institutions that could bear and breed such men as Lincoln and Emerson had surely more energy for good. No, amid all the fruitless turmoil and miscarriage of the world, if there be one thing steadfast and of favorable omen, one thing to make optimism distrust its own obscure distrust, it is the noted instinct in men to admire what is better and more beautiful than themselves.

Of great interest is the address, read before the Edinburgh Philosophical Society, on Shakespeare's Richard III. In the opening paragraph Mr. Lowell says:

Horace Walpole wrote "Historic Doubts" concerning the monarch himself, and I shall take leave to express some about the authorship of the drama that bears his name. . . . There are three special considerations, three eminent and singular qualities of Shakespeare, which more than all, or anything else, I think, set him in a different category from his contemporaries; and it is these that I would apply as tests. The first . . . is his incomparable force and delicacy of poetic expression. . . . One of the surest of these detective clews is this continual cropping-up of philosophical or metaphysical thought in the midst of picturesque imagery or passionate emotion, as if born of the very ecstasy of the language in which it is uttered. The second characteristic, of which I should expect to see some adumbration, at

least . . . would be humor. . . . I mean in the power of pervading a character with humor, creating it out of humor, so to speak, and yet never overstepping the limits of nature or coarsening into caricature. A third characteristic of Shakespeare is eloquence, . . . an eloquence of impassioned thought finding vent in vivid imagery. Of each and all of these we find less in "Richard III," as it appears to me, than in any other of his plays of equal pretension. . . . It seems to me that an examination of "Richard III" plainly indicates that it is a play which Shakespeare adapted to the stage, making additions, sometimes longer and sometimes shorter, and that, toward the end, either growing weary of his work or pressed for time, he left the older author, whoever he was, pretty well to himself.

Mr. Lowell delivered noteworthy addresses on the unveiling of a bust of Coleridge, on the unveiling of a bust of Fielding, on being made President of the Wordsworth Society, and on the dedication of a library in Chelsea. His wife had become an invalid, and in February, 1885, she died. In the same year he was recalled from the mission by President Cleveland. He had been honored with the degree of D. C. L. by the University of Oxford, and that of LL. D. by Cambridge, and he was elected rector of the University of St. Andrews. After his return he resumed his lectures at Harvard. His home was with his only child, Mrs. Edward Burnett, at Southborough, Mass. His feelings when he returned to his country can be read in the postscript to some lines written to his life-long friend, George William Curtis:

Home am I come: not, as I hoped might be,
To the old haunts, too full of ghosts for me,
But to the olden dreams that time endears,
And the loved books that younger grow with years;
To country rambles, timing with my tread
Some happier verse that carols in my head,
Yet all with sense of something vainly mist,
Of something lost, but when I never visit.
How empty seems to me the populous street,
One figure gone I daily loved to meet,
The clear, sweet singer with the crown of snow
Not whiter than the thoughts that housed below!
And, ah, what absence feel I at my side,
Like Dante when he missed his laureled guide,
What sense of diminution in the air
Once so inspiring, Emerson not there!
But life is sweet, though all that makes it sweet
Lessen like sound of friends' departing feet,
And death is beautiful as feet of friend
Coming with welcome at our journey's end;
For me Fate gave, whate'er she else denied,
A nature sloping to the southern side;
I thank her for it, though when clouds arise
Such natures double-darken gloomy skies.
I muse upon the margin of the sea,
Our common pathway to the new To Be,
Watching the sails that lessen more and more,
Of good and beautiful embarked before;
With bits of wreck I patch the boat shall bear
Me to that unexhausted Otherwhere,
Whose friendly-peopled shore I sometimes see,
By soft mirage uplifted, beckon me,
Nor sadly hear, as lower sinks the sun,
My moorings to the past snap one by one.

Mr. Lowell's first public address after his return was delivered at Harvard College, on the two hundred and fiftieth anniversary of its founding. It is an especially interesting utterance to those who would study and follow the mental and spiritual life of our American poet. It reveals his love of letters, his attainments in them, his patriotism, his love of the institutions and

influences in which he was reared, his conservatism, his pugnacity, his plain speaking, his tenderness, his refinement, the breadth of thought resulting from foreign residence and success, his modesty, his hopefulness, his pessimism, his elegance and ease of diction—all, in fact, that went

year but as a single grain of the sand in Time's hour-glass and the inscriptions of Egypt and Assyria modern as yesterday's newspaper. Fancy flutters over these vague wastes like a butterfly blown out to sea and finds no foothold. It is true that, if we may put as much faith in heredity as seems reasonable to many of us, we are all in some transcendental sense

The dancing bear.

Far over Elf-land poets stretch their way
And win their dearest crowns beyond the goal
Of their own conscious purpose; they control
With gossamer threads wideflown our fancy's play
And so our action: on my walk today
A wallowing bear begged clumsily his toll
When straight a vision rose of Atla Troll,
And scenes ideal witched mine eyes away.
Merci, Monsieur! the astonished bear-ward cried,
Grateful for thine his hope to me, the slave,
Of partial memory, seeing at his side
A bear immortal; the ~~was~~ glad sole I gave
Was none of mine; poor Heine o'er the wide
Atlantic water reached it from his grave.

11th June, 1875.

FAC-SIMILE OF A SONNET BY JAMES RUSSELL LOWELL.

to make up the personality whose influence is not to die with his departure. In discussing at his opening, the curious blending of disrespect and reverence for old things that characterizes the American of to-day, he says:

If the tablets unearched and deciphered by geology have forced us to push back incalculably the birthday of man, they have in like proportion impover-

ished his recorded annals, making even the Platonic the coevals of primitive man, and Pythagoras may well have been present in Euphorvus at the siege of Troy. . . . Even the landscape sometimes bewitches us by this glamour of the past, and the green pastures and golden slopes of England are sweeter both to the outward and to the inward eye that the hand of man has immemorially cared for and caressed them. . . . I never felt the working of this spell so acutely as in

those gray seclusions of the college quadrangles and cloisters at Oxford and Cambridge, conscious with venerable associations, and whose very stones seemed happier for being there. . . . Are we to suppose that these memories were less dear and gracious to the Puritan scholars at whose instigation this college was founded than to that other Puritan who sang the dim religious light, the long-drawn aisles and fretted vaults which these memories recalled? . . . The pitiful contrast which they must have felt between the carved sanctuaries of learning they had left behind and the watted fold they were rearing here on the edge of the wilderness is to me more than tenderly—it is almost sublimely—pathetic. . . . We come back hither from the experiences of a richer life, as the son who has prospered returns to the household of his youth, to find in its very homeliness a pulse, if not of deeper, certainly of fonder emotion than any splendor could stir. "Dear old mother," we say, "how charming you are in your plain cap and the drab silk that has been turned again since we saw you! You were constantly forced to remind us that you could not give us this and that which some other boys had, but your discipline and diet were wholesome, and you sent us forth into the world with the sound constitutions and healthy appetites that are bred of simple fare." . . . Our Puritan ancestors have been misrepresented and maligned by persons without imagination enough to make themselves contemporary with, and therefore able to understand the men whose memories they strive to blacken. . . . They were the coevals of a generation which passed on in scarcely diminished radiance the torch of life kindled in great Eliza's golden days. Out of the new learning, the new ferment alike religious and national, and the new discoveries with their suggestion of boundless possibility, the alembic of that age had distilled a potent elixir, either inspiring or intoxicating, as the mind that imbibed it was strong or weak. Are we to suppose that the lips of the founders of New England alone were unwetted by a drop of that stimulating draught?—that Milton was the only Puritan that had read Shakespeare and Ben Jonson and Beaumont and Fletcher? I do not believe it, whoever may. . . . I hope, then, that the day will come when a competent professor may lecture here also for three years on the first three vowels of the Romance alphabet and find fit audience, though few. I hope the day may never come when the weightier matters of a language, namely, such parts of its literature as have overcome death by reason of their wisdom and of the beauty in which it is incarnated, . . . are not predominant in the teaching given here. . . . Give us science, too, but give us, first of all and last of all, the science that ennobles life and makes it generous. . . . There is some danger that the elective system may be pushed too far and too fast. . . . We are comforted by being told that in this we are only complying with the spirit of the age, which may be, after all, only a finer name for the mischievous goblin known to our forefathers as Puck. I have seen several spirits of the age in my time of very different voices and summoning in very different directions, but unanimous in their propensity to land us in the mire at last. . . . I know that I am approaching treacherous ashes which cover burning coals, but I must on. . . . One of the arguments against the compulsory study of Greek—namely, that it is wiser to give our time to modern languages and modern history than to dead languages and ancient history—involves, I think, a verbal fallacy. . . . Men are ephemeral or evanescent, but whatever page the authentic soul of man has touched with her immortalizing finger, no matter how long ago, is still young and fair as it was to the world's gray fathers. Oblivion looks in the face of the Grecian muse only to forget her errand. . . . But we must not be impatient; it is a far cry from the dwellers in caves to even such civilization as we have achieved. I am conscious that life has been trying to civilize me for now nearly seventy years with what seems to me very inadequate results. We can not afford to wait, but

the race can. . . . Let our aim be, as hitherto, to give a good, all-around education, fitted to cope with as many exigencies of the day as possible. . . . Let it be our hope to make a gentleman of every youth who is put under our charge; not a conventional gentleman, but a man of culture, a man of intellectual resource, a man of public spirit, a man of refinement, with that good taste which is the conscience of the mind, and that conscience which is the good taste of the soul.

In the following year (1887) Mr. Lowell addressed the Tariff Reform League, of Boston, and in the course of his remarks he said:

If, in a free commonwealth, government by party be a necessary expedient, it is also a necessary evil, an evil chiefly in this, that it enables men—nay, even forces them—to postpone interests of prime import and consequence to secondary and ephemeral, often to personal interests, and not only so, but to confound one with the other. . . . I do not believe that there is a man at this table who for the last twenty years has been able to embody his honest opinion, or even a fraction of it, in his vote. During all those years no thoughtful man has been able to see any other difference between the two great parties which stood between him and the reforms he deemed essential to the well-being of his country than that the one was *in* and wished to stay there, and the other was *out* and *didn't* wish to stay there. . . . Each had an abundance of aces in its sleeve, and each was divided on the two great questions of vital interest to the country—the tariff and finance.

In an address entitled "The Independent in Politics," read before the Reform Club of New York, in 1888, are the following expressions:

When I say that I make no distinctions between the two parties, I must be allowed to make one exception. I mean the attempt by a portion of the Republicans to utilize passions which every true lover of his country should do his best to allay, by provoking into virulence again the happily quiescent animosities of our civil war. In saying this, I do not forget that the Democratic party was quite as efficient in bringing that war upon us as the seceding States themselves. Nor do I forget that it was by the same sacrifice of general and permanent interests to the demands of immediate partisan advantage, which is the besetting temptation of all parties. Let by-gones be by-gones. Yet I may say in passing that there was something profoundly comic in the spectacle of a great party, with an heroic past behind it, stating that its policy would be to prevent some unknown villains from doing something very wicked, more than twenty years ago. . . . If the politicians must look after the parties, there should be somebody to look after the politicians; somebody to ask disagreeable questions and to utter uncomfortable truths; somebody to make sure, if possible, before election, not only what, but whom, the candidate, if elected, is going to represent.

After going more into detail, he sums up thus:

But the tendency of excessive protection which thoughtful men dread most is that it stimulates an unhealthy home competition, leading to overproduction and to the disasters which are its tainted offspring; that it fosters overpopulation, and thus of the most helpless class when thrown out of employment; that it engenders smuggling, false invoices, and other demoralizing practices; that the principle which is its root is the root also of rings and syndicates and trusts, and all other such conspiracies for the artificial raising of profits in the interests of classes and minorities. I confess I can not take a cheerful view of the future of that New England I love so well, when her leading industries shall be gradually drawn to the South, as they infallibly will be, by the greater cheapness of labor there.

There are few themes of vital interest on which Lowell has not spoken, in prose or in verse. We have quoted his utterances on love, patriotism, sorrow, slavery, education and culture, nature, religion, politics, and free trade. Of socialism, science, and faith he treats in the preface to a book entitled "The Progress of the World."

All well-meaning and humane men sympathize with the aims of Lasalle and Karl Marx. All thoughtful men see well-founded and insuperable difficulties in the way of their accomplishment. . . . We have already observed a movement toward the introduction of socialistic theories into both state and national legislation; though if history teach anything it teaches that the true function of government is the prevention and remedy of evils so far only as these depend on causes within the reach of law, and that it has lost any proper conception of its duty when it becomes a distributor of alms.

Of science, he says :

I can not share their fears who are made unhappy by the foreboding that Science is in some unexplained way to take from us our sense of spiritual things. What she may do is to forbid our vulgarizing them by materialistic conceptions of their nature; and in this she will be serving the best interests of truth and of mankind also. . . . Give to Science her undisputed prerogative in the realm of matter, and she must become, whether she will or no, the tributary of Faith. . . . Should the doctrines of natural selection, survival of the fittest, and heredity be accepted as laws of nature, they must profoundly modify the thought of men, and, consequently, their action. But we should remember that it is the privilege and distinction of man to mitigate natural laws, and to make them his partners if he can not make them his servants.

In 1889 Mr. Lowell responded to the toast "Our Literature," at a banquet given in New York in commemoration of the hundredth anniversary of Washington's inauguration. He said, in part :

Scarcely had we become a nation when the only part of the Old World whose language we understood began to ask, in various tones of despondency, where was our literature. We could not improvise Virgils and Miltons, though we made an obliging effort to do it. Failing in this, we thought the question partly unfair and wholly disagreeable. And, indeed, it had never been put to several nations far older than we, and to which a *vates sacer* had been longer wanting. But, perhaps, it was not altogether so ill-natured as it seemed, for, after all, a nation without a literature is imperfectly represented in the parliament of mankind. It implied, therefore, in our case the obligation of an illustrious blood. . . . I admire our energy, our enterprise, our inventiveness, our multiplicity of resource—no man more; but it is by less visibly remunerative virtues, I persist in thinking, that nations chiefly live and feel the higher meaning of their lives. Prosperous we may be in other ways, contented with more specious successes, but that nation is a mere horde supplying figures to the census which does not acknowledge a truer prosperity and a richer contentment in the things of the mind. Railways and telegraphs reckoned by the thousand miles are excellent things in their way, but I doubt whether it be of their poles and sleepers that the rounds are made of that ladder by which men or nations scale the cliffs whose inspiring obstacle interposes itself between them and the fulfillment of their highest purpose and function. The literature of a people should be the record of its joys and sorrows, its aspirations and its short-comings, its wisdom and its folly, the confidant of its soul. We can not say that our own as yet suffices us; but I believe that he who stands

a hundred years hence where I am standing now, conscious that he speaks to the most powerful and prosperous community ever devised or developed by man, will speak of our literature with the assurance of one who beholds what we hope for and aspire after become a reality and a possession forever.

The closing passages of this speech, among his last public utterances, strikingly characterized his own literature, which is, indeed, the record of his joys and sorrows, his aspirations and his short-comings, his wisdom and his folly, the confidant of his soul; and to his countrymen that literature will become a reality and a possession forever.

The following is a complete list of Mr. Lowell's publications: "Class Poem" (Boston, 1838); "A Year's Life" (1841); "Poems" (Cambridge, 1844); "The Vision of Sir Launfal" (Boston, 1845; second edition, 1848, and included in "Vest-pocket Series"); "Conversations on some of the Old Poets" (1845); "Poems" (1848); "The Biglow Papers" (1848); "A Fable for Critics" (1848); "Poems" (2 vols., 1849); "Life of Keats," prefacing an edition of his works (1854); "Poems" (2 vols., 1854) "Poetical Works" (2 vols., 1858); "Mason and Slidell, a Yankee Idyl" (1862); "Fireside Travels" (1864); "The President's Policy" (1864); "Ode recited at the Commemoration of the Living and Dead Soldiers of Harvard University," 21 July, 1865; "The Biglow Papers," second series (1867); "Under the Willows, and other Poems" (1869); "Among my Books" (1870); "The Courtin'" (1874); "Three Memorial Poems" (1876); "Among my Books," second series (1876); and "Democracy, and other addresses" (1887). A new uniform edition of his works (four volumes of poetry and seven of prose) was issued in 1891, to which another volume will probably be added in 1892. Charles Eliot Norton is his literary executor and will write his life. Mr. Lowell's works did not circulate very largely during his lifetime, but for some years there has been a steady increase in their sale. At the public libraries, in the calls for American poets he is surpassed only by Longfellow. Early in 1892 a movement was begun in England for the erection of a testimonial to him in Westminster Abbey.

LUTHERANS. The following is a summary of the statistics of the Evangelical Lutheran Church in America for the year 1891, as they are given in the "Church Almanac," and may be regarded as approximately correct: The Church numbers 61 synods, 4,861 clergymen, 8,232 congregations, and 1,185,116 communicant members, 2,790 parochial schools with 2,454 teachers and 111,777 pupils, 3,748 Sunday schools with 39,183 officers and teachers and 358,178 pupils. The institutions of learning number 24 theological seminaries, having property valued at \$960,800, endowment amounting to \$475,686 (8 having no endowment, but depending for their income on annual gifts of individuals and congregations, and 4 reporting their endowment under the head of colleges or academies), having 66,850 volumes in their libraries, employing 85 professors, and having 900 students; 30 colleges, having property valued at \$1,884,000, endowment amounting to \$721,526 (15 reporting no endowment), 127,600 volumes in their libraries, employing 236 professors and instructors, having 4,086 stu-

dents, of whom 953 have the ministry in view; 35 academies, having property valued at \$482,000, only two reporting endowment amounting to \$20,100, having 10,055 volumes in their libraries, employing 140 instructors, and having 3,431 pupils, of whom 411 have the ministry in view; 12 ladies' seminaries, having property valued at \$252,500, one reporting endowment amounting to \$3,500, having 9,025 volumes in their libraries, employing 92 instructors, and having 893 pupils; making a total of 101 institutions of learning, with property valued at \$3,579,300, endowment amounting to \$1,220,822, volumes in libraries 213,530, professors and instructors 553, and 9,300 students, of whom about 1,000 are women and 2,254 are preparing for the ministry. Besides the institutions already mentioned, there are 34 orphans' homes, having property valued at \$738,828, endowment amounting to \$107,717, and 1,591 inmates; and 38 homes for the aged, homes for deaconesses, hospitals, etc., having property valued at \$1,220,000, 2 of which have endowment funds amounting to \$14,000, the rest are supported by free-will offerings. There are published 137 church periodicals, of which 44 are in English, 53 in German, 16 in Swedish, 13 in Norwegian, 4 in Danish, 3 in Icelandic, 3 in Finnish, and 1 in French.

The Lutheran Church in America, although divided into 4 general bodies and 13 independent synods, has one standard confession, the Augsburg Confession of 1530, which all the district synods and general bodies accept, and it is in so far a united church. But as the general bodies carry on their affairs independently, they are here treated separately.

General Synod.—This is the oldest general body, having been organized in 1821, and is composed almost entirely of English synods and congregations. The thirty-fifth biennial convention of the General Synod of the Evangelical Lutheran Church in the United States of America was held in Zion's Church, Lebanon, Pa., May 20-29, 1891. The opening sermon was delivered by the retiring president, the Rev. Henry W. McKnight, D. D., President of Pennsylvania College, Gettysburg, Pa. After the formal organization of the convention, the Rev. Jacob A. Clutz, D. D., President of Midland College, Atchison, Kan., was elected president. Twenty-seven synods were represented in this convention, with 101 clerical and 90 lay delegates. Four new synods were received into connection with this general body: California Synod, Rocky Mountain Synod, German Synod of Nebraska, and German Synod of California. These were all organized during the current year, on territory formerly occupied by other synods in connection with the same general body.

Much of the time of the convention was devoted to consideration of the reports of the various boards and action on these reports. Following is a summary of the operations of this body. The report of the Board of Foreign Missions was very encouraging. The receipts during the past two years were \$97,453.92. Legacies were received amounting to \$7,544.25; contributions from Sunday schools, \$12,145.31; from the woman's missionary societies, \$17,363.30. The entire amount that passed through the treasurer's hands was \$112,645.21. The expenditures

were \$100,127.54. The work in India is making encouraging progress. The Woman's Missionary Society sent out 3 additional missionaries, the Rev. and Mrs. John Aberly and Miss Amy L. Sadtler. The Rev. Dr. Lemon L. Uhl, after a few years' sojourn and study in the United States, returned to India. During his stay in this country he collected \$18,000 for the Watts Memorial College at Guntur, India. The following is an exhibit of the general status of the mission: 4 missionaries, 2 native pastors, 5 sub-pastors, 19 catechists, 100 sub-catechists, 48 helpers, 6 Bible and tract colporteurs, 371 villages containing native Christians, 2 churches, 135 prayer houses, 6 mission bungalows, 1 printing press and book bindery, 1 free reading room and book depot, 13,566 baptized Christians, 7,952 communicants, 227 Sunday schools with 8,737 pupils, 196 elementary schools with 203 teachers and 3,263 pupils, 2 boarding schools with 125 pupils and Watts Memorial College, the Rev. Luther B. Wolf, president, 28 teachers and 655 students, including Christians, Hindus, and Mohammedans. There are 4 women engaged in zenana work with 4 European and Eurasian assistants and 10 native Bible teachers; 14 zenanas in which instruction is given, with 25 pupils in these; 21 schools, including high-caste Hindu, Mohammedan industrial, and boarding schools, with 79 teachers, 892 pupils, of whom 711 are high-caste Hindus, 128 Mohammedans, and 53 Christians; Bible classes 4, pupils 60, Sunday schools 6 with 300 pupils. The mission in Africa met with some reverses on account of sickness and death among the missionaries and native Christians. A lay missionary, George P. Gall, of Philadelphia, entered upon his labors in the latter part of 1890. Miss Emily Beekin has also been sent out to Africa and is supported by the Woman's Missionary Society. The force of missionaries consists of the Rev. and Mrs. David A. Day and the Rev. David Davidson, a native ordained pastor, besides the two already mentioned, and several young men who have been trained in the mission. The total membership of the mission is 159, of whom 130 are communicants. The Sunday school has 214 pupils. The industrial department of this mission is a most encouraging feature. The members of the mission are all trained to work. The cultivation of coffee, eddoes, sweet potatoes, and cassava are the chief industries of the native Christians. Concerning the work in Africa, the report of the board says: "One community of about 1,500 souls, presided over by a native Christian chief, may be fairly classed as half-civilized. The predatory excursion against these people last year resulted in their organizing a local government, subject to the Republic of Liberia, which will greatly unify and strengthen them. Under the influence of the mission, hundreds of half-civilized people are gradually abandoning their roving habits, and are settling down to agricultural pursuits." The board asked for \$35,000 per annum from the district synods, to carry on their labors in India and Africa. The following action was taken with reference to the distraction and opposition which the India mission has been called upon to suffer:

Whereas, It appears that much time and effort are still required on the part of our missionaries in India

to prevent the spoliation of our congregations by native agents who are in the employ of missionaries sent out to the South Krishna District by the American Baptist Missionary Union; and

Whereas, In 1889, 186 of our members were reported as having gone to other missions, and 459 in 1890, making a total of 645, nearly all joining the Baptists, not because they were convinced that immersion and other Baptist peculiarities were preferable to Lutheran doctrines and practices, but from various motives, such as caste influences, partisan animosity intensified by dismissed teachers, the prospects of temporal help, dislike of the strict administration of our mission, etc.; and

Whereas, One of the methods of procedure is for the native Baptist pastor or catechist to employ one of the more intelligent members of a Lutheran congregation as an agent of the Baptist mission, who, instead of going out into the heathen community to gain converts to Christianity, goes to work among the members of his former church and endeavors to win them over to the Baptist mission; and

Whereas, Another method is for the native Baptist agent to concentrate his efforts on winning over the trustees of property held by the Lutheran congregation, and then instituting legal proceedings for the transfer of the school or prayer house, together with the ground on which they are located, from the Lutheran to the Baptist mission; and

Whereas, Much injury has also been done by the Baptists in receiving into their mission persons who were under discipline in ours, thus making it very difficult for our missionaries to exercise discipline over their people; and

Whereas, It is not claimed that these unfraternal and, indeed, un-Christian methods of work have been employed directly by any of the American Baptist missionaries, three of whom are at present located in our field, but it is a notorious fact that the native agents who are employed and paid by them have been using these and other equally improper methods of gaining proselytes; and

Whereas, A charitable view of the case might lead us to suppose that those native Baptist agents had been acting without the knowledge or sanction of those over them in authority, were it not for the fact that during the past year a number of letters have been addressed to one of the Baptist missionaries, calling his attention to the methods employed by his agents, and courteously but earnestly protesting against them; and

Whereas, In a number of cases in which our missionaries protested against the reception of some of their runaway boarders and disciplined teachers by their Baptist co-workers, the request was unheeded and their communications not even received the courtesy of a reply; therefore be it

Resolved, By the General Synod of the Evangelical Lutheran Church in the United States of America, in convention assembled, that we hereby enter our solemn protest against the continuance of the practices referred to, and with this statement of the interference and proselytism complained of, submit the facts to the moral sense of the Christian world for judgment.

The report of the Board of Home Missions showed that the receipts for the past two years amounted to \$75,974.26, to which is to be added a balance on hand of \$1,075.99. Of the amount received, \$11,557.55 were from legacies, the Woman's Society contributed \$7,437.50, and the Sunday schools \$11,500. The report shows an increase in contributions over the previous two years of \$8,798.63. The board has had 135 missions on its funds, an increase of 21. There were added 36 new mission congregations and 36 new churches purchased or erected. In these 135 missions 151 missionaries were employed, who

report 5,385 new members; their benevolent contributions amounted to \$13,591.81, while the total contributions by missions for salary, local expenses, and benevolence aggregate \$265,275.84. During the same period 18 missions became self-sustaining. The missions under the care of the board during the past two years were located as follows: California, 5; Colorado, 4; Connecticut, 1; District of Columbia, 2; Illinois, 9; Indiana, 5; Iowa, 7; Kansas, 17; Maryland, 9; Missouri, 1; Nebraska, 19; New Jersey, 1; New Mexico, 1; New York, 8; Ohio, 15; Pennsylvania, 28; Tennessee, 1; Wisconsin, 2. Of these, 120 are English, 10 German, 2 Scandinavian, and 3 English and German.

The Board of Church Extension reported receipts amounting to \$79,855.18, legacies amounting to \$10,806.70, and contributions from the Woman's Missionary Society aggregating \$2,475.30. Loans and donations were made to 81 congregations, amounting to \$38,453.61. Fifty-eight lots were secured in important towns and cities, valued at \$20,000. The Western secretary, the Rev. John N. Lenker, visited 326 places in the interest of the work of the board, secured 42 lots for churches, and in 16 congregations aided in starting subscriptions for new churches, this making a total of 97 congregations practically aided by the board. The treasurer reported the assets as \$200,619.66.

The Board of Education reported the institutions under its care—Midland College, Atchison, Kan., and Carthage College, Carthage, Ill.—as prosperous, the assets of the former being \$69,266 and of the latter \$57,156.43. The board also reported that a wealthy member of the Lutheran Church, Augustus Kountze, had offered to give a tract of land in Omaha, Neb., valued at \$100,000, and \$50,000 in cash, for the establishment of a theological seminary in that place, provided the congregations of the General Synod would within the next two years give an additional \$150,000 for the proper equipment of the institution. This offer was gratefully accepted by the general body at this convention, and the board was authorized to make the effort to secure the amount. During one of the sessions of the convention pledges of contributions were received amounting to \$20,710 for the new seminary. In addition, \$5,000 were subscribed for the liquidation of the debt on the Chicago German Theological Seminary.

The report of the Publication Society showed its assets to be \$66,855.68. Its sales for the past two years amounted to \$141,940.98. Its donations to the various boards of the body aggregated \$8,500. Nine new books were published, 19 new books or new editions were issued for their respective authors, 17 new editions of its own publications were issued, and the periodicals of the society for the month of May numbered 229,600 copies.

The Board of Deaconesses presented its first report. The object of this board is to establish deaconess houses, in which women shall be trained for all kinds of lay work—such as hospital work, care of the sick in their own homes, day nurseries, parish visiting, infant schools, etc. The board proposes to send eight or ten women to Kaiserswerth, the mother-house of all similar institutions in the world, where they will

receive a thorough training and be qualified to establish such institutions in this country. This plan of the board was approved by the general body, and authority was given, as far as its means allow, to provide for the establishment of a deaconess house, where the work may be carried on as soon as the probationers return from Germany.

In connection with the report of the Hymn-book Publishing Committee, it appeared that there was a division of sentiment in the 27 district synods of the general body with reference to the common service adopted at a former convention. After a protracted discussion, it was decided to let the forms of both services appear in the Book of Worship, so that congregations may use the one they prefer. The committee also reported the German copy of the service ready for publication; and that, with the committees of the General Council, the United Synod of the South, and the Joint Synod of Ohio, they had made a translation of the Latin edition of the Augsburg Confession; and that as soon as the translation of the German *editio princeps* could be finished the two translations, in parallel columns, would be furnished to the general bodies for acceptance and their disposition. The report of the committee on "A Development of Luther's Small Catechism" led to a protracted discussion on the merits of the proposed work and its doctrinal position. The matter was disposed of by adoption of the following declaration: "That in the preparation and issue of this development of the Small Catechism, should it be finally adopted, it is by no means the intention of the General Synod that it shall in any way change or modify the present doctrinal position of this body."

During one of the sessions of this convention the announcement was officially made that Mrs. Sarah Utermehle, a member of the Church of the Reformation, Washington, D. C., had given 27 acres within the limits of the city to found a "National Lutheran Home for the Aged." The property is valued at \$30,000, and is deeded to an incorporated board of trustees. The conditions are that a building shall be begun within two years, and be completed within five years. Hon. Frank W. Howbert, of Colorado Springs, Col., has given ten acres in the Garden of the Gods as a site for an "Invalid Lutheran Ministers' Home," on condition that within two years a suitable building be erected on it, at a cost of not less than \$5,000. Both of these gifts were accepted.

With reference to the observance of the Church year in the Sunday-school lessons, the following was put on record:

In accordance with the recommendation of the General Synod that the chief festivals of the Church be appropriately observed in our congregations, and by inference in our Sunday schools, we are happy to note a more general observance of these festival days. In most instances in our schools, so far as your committee could learn, the regular lesson of the International course is either laid aside or made to inculcate the lesson of the day. Your committee need not inform the General Synod that the sentiment is growing rapidly in all our Protestant churches that the leading Christian festivals should be observed. Representative men in all denominations have petitioned the committee on the International Sunday-school Lessons "to recognize not the whole Christian year,

but a few of its leading landmarks," urging them "to recognize at least Christmas, Easter, and Whitsunday, by the appointment of lessons appropriate to these seasons." In the judgment of your committee, it would not be wise at such a juncture to take any step in our General Synod that would retard this growing sentiment. Just when all our Protestant pulpits are seeing the propriety of using Christmas themes at Christmas seasons, and Resurrection themes at Easter, it would be impolitic to adopt any measures looking to a separation from the great Protestant communions.

When the matter of co-operation with other bodies for a religious exhibit at the Columbian Exposition was presented, the following resolutions were adopted:

Whereas, The General Synod has heard with pleasure that the Evangelical Alliance, in co-operation with the various evangelical bodies of this country, proposes to indicate in a fitting way at the Columbian Exposition the religious progress of the nation; therefore,

Resolved, That we cordially indorse this movement, and invite the hearty co-operation and support of our churches.

At a subsequent session the directors of the Publication Society were instructed to arrange for a proper exhibit of the work of the body, as they may deem best. A resolution strongly opposing the proposition to open the Exposition on Sundays was adopted.

Resolutions strongly condemning the practice of other Protestant denominations in "sending missionaries among Lutheran people in Europe under the name of foreign-mission work, and spending scores of thousands of dollars annually simply to transfer these Christians from one evangelical Church to another, while hundreds of millions of heathen are still without the knowledge of the saving gospel of Christ," were adopted.

Following are the general statistics of this body: 27 district synods, 1,005 ministers, 1,448 congregations, and 154,540 communicant members; 16 parochial schools, 3 teachers, and 585 pupils; 1,367 Sunday schools, 19,526 officers and teachers, and 153,708 scholars; 5 theological seminaries; 4 colleges; 2 academies; and 2 orphans' homes. The thirty-sixth convention of the body will be held in Canton, Ohio, beginning May 24, 1893.

General Council.—This body, organized in 1867 and consisting of English, German, and Swedish pastors and congregations, held its twenty-third convention in the Church of the Holy Trinity, Buffalo, N. Y., Oct. 14-20, 1891. This is one of the largest bodies of the Lutheran Church in America, representing, according to the latest statistics, 9 district synods (one synod not yet in organic connection with it), 979 ministers, 1,631 congregations, and 283,834 communicant members; maintaining 410 parochial schools, 392 teachers, and 18,779 pupils; 1,306 Sunday schools, 14,866 officers and teachers, and 162,179 scholars. Its membership is scattered through nearly all the States and Territories and the Dominion of Canada. It has 3 theological seminaries, 7 colleges, 5 academies, one school for girls, and ladies' departments in 5 of the colleges, and 24 orphans' homes, deaconess institutions, hospitals, and immigrant missions.

The opening sermon was delivered by the Rev.

Joseph A. Seiss, D. D., LL. D., pastor of the Church of the Holy Communion, Philadelphia. The district synods were represented by 50 clerical and 46 lay delegates. After the formal organization of the convention, the Rev. Gottlob F. Krotel, D. D., LL. D., of New York city, was re-elected president.

The Church Book Committee presented the completed new edition of the Church Book. It includes, besides the liturgical services, the orders for ministerial acts, which, after being printed in provisional form, were carefully revised and approved for publication. In the preparation of this book with the common service various additions not comprised in that service were found necessary. The number of psalms has been largely increased, and additional canticles have been inserted. It was also deemed desirable to append to the English Church Book a limited number of additional hymns. A sub-committee has been co-operating with committees of the United Synod of the South, the General Synod, and the Joint Synod of Ohio, in the preparation of a new English translation of the Augsburg Confession and Luther's Small Catechism. Much work was done by individual members of the committee, so that in the new English Church Book of the General Council could be included a new translation of the Augsburg Confession, made from the Latin *editio princeps* of 1530, and based on Richard Taverner's English translation of 1536. To enable the committee to complete its work, the Council authorized a new translation, from the German *editio princeps*, of the Augsburg Confession (Melancthon had prepared two copies of the Confession, in German and Latin, for presentation to the Emperor; hence both are of equal authority as confessional writings), which is to be printed with the translation from the Latin in parallel columns.

In close connection with the work of the Church Book Committee is that of the Committee on Sunday-school Work. The Council years ago authorized its own series of lessons for Sunday schools, based on the Church year. The committee reported that the lessons authorized by the Council were regularly published, prepared for publication by members of the committee, aided in special departments by the Rev. William Wackernagel, D. D., and the Rev. Solomon E. Ochsenford, and that they were issued in the "Church Lesson Leaf" and the "Helper," together with a supplemental leaf for the fifth Sundays of the months; and that these leaves were published, as heretofore, by the Lutheran Book Store, Philadelphia. The committee was instructed to continue its work.

The Board of Foreign Missions presented its report through the secretary, the Rev. William Ashmead Schneffer, of Philadelphia. The missionary operations are carried on in the Madras Presidency of India, with Rajahmundry, Samulcotta, Tallapudi, Dowlaishwaram, and Bhimawaram as centers. Following are the latest statistics: 5 ordained missionaries, 5 wives of missionaries also actively engaged in various departments of the mission, 2 zenana workers, 2 native pastors, 89 teachers and catechists, 6 districts, 127 villages, 3,056 baptized members, 978 communicants, and 1,473 pupils in the various schools.

The name of the boarding school has been changed to that of seminary, and the standard of scholarship has been advanced. This school consists of both day and boarding pupils. Here are found the more advanced scholars, and those who desire to become teachers are here prepared. On March 4, 1891, 21 young men were graduated at the seminary. In 1890 a zenana mission was begun, and Miss Agnes I. Schade, of Water Cure, Pa., and Miss Kate S. Sadtler, of Baltimore, Md., were sent out to India to carry on this branch of mission work. During 1891 the Rev. and Mrs. Calvin F. Kuder were sent out. Rev. Kuder is to take charge of the mission schools, in place of the Rev. Pohl, of the Brecklum mission, who had been loaned to this mission until a superintendent of the schools could be secured. The receipts of the board for the past two years amounted to \$25,351.60, and from the treasurer of the "Missionsbote" were received \$1,606.10. The expenditures amounted to \$29,978.63. The work of missions was again commended to the attention of the churches.

The work of home missions is carried on by the district synods within their respective territories and by three general mission boards, English, German, and Swedish, on territory beyond the bounds of the synods. The following is a summary of the general and local work for two years: 262 missionaries, 462 churches and stations, 33,917 communicant members in mission congregations, and contributions amounting to \$123,053. The English board has missions in Boston, Mass., Newark, N. J., Cleveland and Toledo, Ohio, Decatur, Ill., Milwaukee, Wis., Duluth, Red Wing, Minneapolis, and St. Paul, Minn., Fargo, N. Dak., Salt Lake City, Utah, Portland, Ore., and Tacoma and Seattle, Wash. The German board has numerous missions in the provinces of Manitoba, Assiniboia, and Alberta, Canada, and in Kentucky and Alabama. The Swedish board carries on missionary operations among its countrymen in nearly every State and Territory, the latter board spending annually more than \$15,000 for this work. The educational work of this body has received a new impulse by the opening of a new theological seminary in Chicago, with property that is valued at \$50,000.

The superintendent of the Lutheran Emigrant House in New York city reported for one year the reception and entertainment of 12,144 immigrants. The receipts for this work amounted to \$16,270.75, and the expenditures to \$14,800.20, both items being for one year. The property of this mission is valued at \$100,000, and the mission is free of debt.

The English Synod of the Northwest, organized in 1891, was accorded representation, but action on its reception was deferred until the next convention.

The General Council put itself on record as opposed to the opening of the Columbian Exposition on Sundays.

The twenty-fourth convention of the Council will be held in Fort Wayne, Ind., in 1892.

Synodical Conference.—This general body, organized in 1872, and consisting almost exclusively of German pastors and congregations, held no convention in 1891. Following is a summary of the latest statistics: It consists of 4 synods.

1,368 ministers, 2,002 congregations, and 399,309 communicant members; 1,472 parochial schools, 1,306 teachers, and 80,981 pupils: 183 Sunday schools and about 20,000 pupils, though the latter figures are far from being correct. There are maintained 4 theological seminaries, 6 colleges, 6 academies, and 13 orphans' homes, hospitals, etc. This body is engaged in missionary operations among the freedmen of the South, having congregations and schools in Arkansas, Louisiana, Virginia, and Illinois, 7 stations with 604 members, and 6 schools with 631 pupils. Missionary operations are also carried on among the Jews in this country. Following are the latest statistics of home missions for one year: 200 missionaries, 703 churches and stations, 36,800 communicant members in missions, and receipts for this work amounting to \$81,500.24.

United Synod.—This body, organized in 1886 and consisting of English synods, held no convention in 1891. It is composed of 8 district synods, 201 ministers, 396 congregations, and 36,189 communicant members; 312 Sunday schools, 2,658 officers and teachers, and 22,977 scholars. On its territory are the following institutions: 1 theological seminary, 5 colleges, 8 academies, 8 ladies' seminaries, and 2 orphans' homes. Its home missionary operations are summarized in the following figures: 11 missionaries, 15 churches and stations, 1,500 communicant members in missions, and contributions amounting to \$4,000. During the year this body sent out its first foreign missionary to establish a mission station in Japan.

The ever-increasing number of Lutheran immigrants and the rapid anglicizing of these foreigners and their descendants lays heavy responsibilities upon the Church in this country, and the resources of the Lutheran Church are strained to their utmost. New congregations are being organized all over the country, at the rate of about one for each day in the year, and more could be organized if the Church had command of the necessary men and means. So much of this work is carried on by individual congregations, conferences, and district synods, that it is impossible to obtain accurate statistics of the results. The following is an approximately correct summary of the statistics for the two past years: 818 missionaries, 2,353 churches and stations, 114,754 communicant members in mission congregations, and \$364,527.14 contributed by the churches for this work.

LYTTON, EDWARD ROBERT BULWER, Earl of, an English poet and diplomatist, born in England, Nov. 8, 1831; died in Paris, France, Nov. 24, 1891. He was the only son of Edward Lytton Bulwer, the famous novelist. The son was educated at Harrow and by private tutors, finishing his course of study at the University of Bonn, Germany, where he devoted himself especially to modern languages. He was but seventeen years old when he became private secretary to his uncle, Sir Henry Bulwer, who was British minister at Washington. In 1852 he was transferred as *attaché* to Florence, Italy, and in 1854 was removed to the embassy at Paris. While here he published his first work, "Clytemnestra, the Earl's Return, the Artist, and other Poems," under the pen-name of "Owen Meredith." "Clytemnestra" is a

long dramatic poem, and, in connection with the others, was well received by the critics, though it made no general reputation for the

EDWARD ROBERT BULWER LYTTON.

author with the unknown name. This little volume contained one of the most charming of his poems, that entitled "Good-night in the Porch," which shows the melodious versification of which he became master:

A little longer in the light, love, let me be. The air is warm.

I hear the cuckoo's last good-night float from the copse below the farm.

A little longer, sister, sweet, your hand in mine on this old seat.

In yon red gable, which the rose creeps round and o'er, your casement shines

Against the yellow west, o'er those forlorn and solitary pines.

The long, long day is nearly done. How silent all the place has grown!

Yes, sad indeed it seems, each night—and sadder, dear, for your sweet sake!

To watch the last, low lingering light, and know not where the morn may break.

To-night we sit together here. To-morrow night will come—ah, where?

And there's my epic—I began when life seemed long, though longer art—

And all the glorious deeds of man made golden riot in my heart.

Eight books—it will not number nine! I die before my heroine.

Sister! they say that drowning men in one wild moment can recall

Their whole life long, and feel again the pain—the bliss—that thronged it all;

Last night those phantoms of the past again came crowding round me fast.

Once more the garden where she walked on summer eves to tend her flowers,

Once more the lawn where first we talked of future years in twilight hours,

Arose; once more she seemed to pass before me in the waving grass.

So lovely, so beloved! Oh, fair as though that sun
had never set
Which staid upon her golden hair, in dreams I seem
to see her yet!
To see her in that old green place—the same hush,
smiling, cruel face!

A little older, love, than you are now; and I was
then a boy;
And wild and wayward-hearted, too; to her my pas-
sion was a toy,
Soon broken! ah, a foolish thing—a butterfly with
crumpled wing!

A life's libation lifted up, from her proud lip she
dash'd untasted;
There trampled lay love's costly cup, and in the dust
the wine was wasted.
She knew I could not pour such wine again at any
other shrine.

I thought I held in my hot hand my life crusht up;
I could have tost
The crumpled riddle from me, and laugh'd loud to
think what I had lost.

A bitter strength was in my mind; like Samson
when she scorned him—blind,

And casting reckless arms about the props of life to
hug them down—
A madman with his eyes put out; but all my anger
was my own.

I spared the worm upon my walk; I left the white
rose on its stalk.

One handful of their buoyant chaff exceeds our
hoards of careful grain;
Because their love breaks through their laugh, while
ours is fraught with tender pain.
The world, that knows itself too sad, is proud to
keep some faces glad.

Forgive me, Lord, if overmuch I loved that form
thou mad'st so fair;
I know that thou didst make her such; and fair but
as the flowers were—
Thy work: her beauty was but Thine; the human
less than the divine.

Oh, to be where the meanest mind is more than
Shakespeare! where one look
Shows more than here the wise can find, though toil-
ing slow from book to book!
Where life is knowledge, love is sure, and hope's
brief promise made secure.

In 1856 Lytton was promoted to be paid *attaché* at the Hague. Two years afterward he was appointed paid *attaché* at St. Petersburg, and two months later was sent in the same capacity to Constantinople. In 1859 he was transferred to Vienna. While there he was acting consul-general at Belgrade, and was also employed on a special mission to keep peace between the Turks and the Servians, after the Turkish bombardment of the Servian capital. In 1861 he published, anonymously, a poem written in collaboration with Hon. Julian Fane, called "Tannhäuser, or the Battle of the Bards." The names applied were "Edward Trevor" and "Neville Temple."

As a result of his studies during this residence, he also published a little volume of translations, or rather paraphrases, from the Servian language, entitled "Serbski Pesme." In the "Introduction" he says:

In the following poems no attempt has been made at accurate verbal translation from the original lan-

guage. They can not, indeed, be called translations in the strict sense of the word. What they are, let the reader decide. What they are meant to be is nothing more than a rude medium through which to convey to other minds something of the impression made upon my own by the poetry of a people among whom literature is yet unborn; who in the nineteenth century retain, with the traditions, many also of the habits and customs of a barbarous age; and whose social life represents the struggle of centuries to maintain, under the code of Mahomet, the creed of Christ. It is, indeed, this strange intermixture of Mahometan with Christian association which gives to the poetry of the Serbs its most striking characteristic. It is the sword of a Crusader in the scabbard of a Turk. That, however, which mainly distinguishes this from all other contemporary poetry with which I am acquainted is the evidence borne on the face of it of an origin, not in the heads of the few, but in the hearts of all. This is a poetry of which the People is the Poet.

The opening poem is a long ballad, "The Battle of Kossovo." One of the lyrics denominated by Lord Lytton "Popular or Domestic" is called "Love and Sleep," and runs:

I walkt the high and hollow wood, from dawn to
even-dew,
The wild-eyed wood stared on me, and unclaspt, and
let me through,
Where mountain pines, like great black birds, stood
percht against the blue.

Not a whisper heaved the woven roof of those warm
trees;
All the little leaves lay flat, unmoved of bird or
breeze;
Day was losing light all round, by indolent degrees.
Underneath the brooding branches, all in holy shade,
Unseen hands of mountain things a mossy couch had
made;
There asleep among pale flowers my beloved was
laid.

Slipping down, a sunbeam bathed her brows with
bounteous gold,
Unmoved upon her maiden breast her heavy hair
was rolled,
Her smile was silent as the smile on corpses three
hours old.

"O God!" I thought, "if this be death, that makes
not sound or stir!"
My heart stood still with tender awe, I dared not
waken her,
But to the dear God, in the sky, this prayer I did
prefer:

"Grant, dear Lord, in the blessed sky, a warm wind
from the sea,
To shake a leaf down on my love, from yonder leafy
tree;
That she may open her sweet eyes, and haply look on
me."

The dear God, from the distant sea, a little wind re-
least,
It shook a leaflet from the tree, and laid it on her
breast.
Her sweet eyes oped and looked on me. How can I
tell the rest!

He remained four years in Vienna, being promoted from first paid *attaché* to second secretary of legation. During this time he issued a volume of poems, entitled "The Wanderer," the pieces being grouped under the title of the country in which they were written: "In Italy," "In France," "In England," "In Holland." The "Prologue" is one of his most characteristic

productions. The following is the beginning of it:

Sweet are the rosy memories of the lips,
That first kissed ours, albeit they kiss no more:
Sweet is the sight of sunset-sailing ships,
Although they leave us on a lonely shore:
Sweet are familiar songs, though Music dips
Her hollow shell in Thought's forlornest wells:
And sweet, though sad, the sound of midnight bells,
When the op'd casement with the night-rain drips.
There is a pleasure which is born of pain:
The grave of all things hath its violet.
Else why, through days which never come again,
Roams Hope with that strange longing, like Regret?
Why put the posy in the cold dead hand?
Why plant the rose above the lonely grave?
Why bring the corpse across the salt sea-wave?
Why deem the dead more near in native land?
Thy name hath been a silence in my life
So long, it falters upon language now,
O more to me than sister or than wife
Once . . . and now—nothing! It is hard to know
That such things have been, and are not, and yet
Life loiters, keeps a pulse at even measure,
And goes upon its business and its pleasure,
And knows not all the depths of its regret.

The following is the first stanza of one of the poems in the section "In France," which is entitled "Progress":

When Liberty lives loud on every lip,
But Freedom moans,
Trampled by Nations whose faint foot-falls slip
Round bloody thrones;
When, here and there, in dungeon and in thrall,
Or exile pale,
Like torches dying at a funeral,
Brave natures fail;
When Truth, the armed archangel, stretches wide
God's tromp in vain,
And the world, drowsing, turns upon its side
To drowse again;
O Man, whose course hath called itself sublime
Since it began,
What art thou in such dying age of time,
As man to man!

In an entirely different vein, but belonging to the same period, is the poem "Astarte":

When the latest strife is lost, and all is done with,
Ere we slumber in the spirit and the brain,
We drowse back, in dreams, to days that life begun
with,
And their tender light returns to us again.

I have cast away the tangle and the torment
Of the cords that bound my life up in a mesh:
And the pulse begins to throb that long lay dormant
'Neath their pressure; and the old wounds bleed
afresh.

And again she comes, with all her silent graces,
The lost woman of my youth, yet unpossessed:
And her cold face so unlike the other faces
Of the women whose dead lips I since have prest.

I remember to have murmured, morn and even,
"Though the Earth dispart these Earthlies, face
from face,
Yet the Heavenlies shall surely join in Heaven,
For the spirit hath no bonds in time or space.

"Where it listeth, there it bloweth; all existence
Is its region; and it houseth, where it will.
I shall feel her through immeasurable distance,
And grow nearer and be gathered to her still."

Earth's old sins press fast behind me, weakly wailing:

Faint before me fleets the good I have not done:
And my search for her may still be unavailing
'Mid the spirits that are passed beyond the sun.

Many of Lord Lytton's poems bear evidence of religious fervor and longing. Among those in this volume is one on the Scripture passage, "Ye seek Jesus of Nazareth which was crucified: he is risen; he is not here":

If Jesus came to earth again,
And walked, and talked, in field, and street,
Who would not lay his human pain
Low at those heavenly feet?

And leave the loom, and leave the lute,
And leave the volume on the shelf,
To follow him, unquestioning, mute,
If 'twere the Lord himself?

How many a brow with care o'erworn,
How many a heart with grief o'erladen,
How many a youth with love forlorn,
How many a mourning maiden,

Would leave the baffling earthly prize
Which fails the earthly, weak endeavor,
To gaze into those holy eyes,
And drink content forever!

The last book of "The Wanderer," called "Palingenesis," opens thus:

My Saviour, dare I come to thee,
Who let the little children come?
But I? . . . my soul is faint in me!
I come from wandering to and fro
This weary world. There still his round
The Accuser goes: but thee I found
Not anywhere. Both joy and woe
Have passed me by. I am too weak
To grieve or smile. And yet I know
That tears lie deep in all I do.
The homeless that are sick for home
Are not so wretched. Ere it break,
Receive my heart; and for the sake,
Not of my sorrows, but of thine,
Bend down thy holy eyes on mine,
Which are too full of misery.

The next year he published, still under his pen-name of Owen Meredith, "Lucile," a novel in verse. The dedication to his father explains his feeling about the poem:

I dedicate to you a work, which is submitted to the public with a diffidence and hesitation proportioned to the novelty of the effort it represents. For in this poem I have abandoned those forms of verse with which I had most familiarized my thoughts, and have endeavored to follow a path on which I could discover no footprints before me, either to guide or to warn.

There is a moment of profound discouragement which succeeds to prolonged effort; when, the labor which has become a habit having ceased, we miss the sustaining sense of its championship, and stand, with a feeling of strangeness and embarrassment, before the abrupt and naked result. As regards myself, in the present instance, the force of all such sensations is increased by the circumstances to which I have referred. And in this moment of discouragement and doubt my heart instinctively turns to you, from whom it has so often sought, from whom it has never failed to receive, support.

Feelings only such as those with which, in days when there existed for me no critic less gentle than yourself, I brought to you my childish manuscripts—feelings only such as those which have, in later years, associated with your heart all that has moved or occupied my own—lead me once more to seek assurance

from the grasp of that hand which has hitherto been my guide and comfort through the life I owe to you.

And as in childhood, when existence had no toil beyond the day's simple lesson, no ambition beyond the neighboring approval of the night, I brought to you the morning's task for the evening's sanction, so now I bring to you the self-appointed task-work of maturer years; less confident indeed of your approval, but not less confident of your love; and anxious only to realize your presence between myself and the public, and to mingle with those severer voices to whose final sentence I submit my work the beloved and gracious accents of your own.

From many fine philosophical passages in the poem we select two:

O source of the holiest joys we inherit,
O Sorrow, thou solemn, invisible spirit!
Ill fares it with man when, through life's desert sand,
Grown impatient too soon for the long-promised land,
He turns from the worship of thee, as thou art,
An expressless and imageless truth in the heart,
And takes of the jewels of Egypt, the pelf
And the gold of the godless, to make to himself
A gaudy, idolatrous image of thee,
And then bows to the sound of the cymbal the knee.

The sorrows we make to ourselves are false gods:
Like the prophets of Baal, our bosoms with rods
We may smite, we may gash at our hearts till they bleed,
But these idols are blind, deaf, and dumb to our need.
The land is athirst, and cries out! . . . 'tis in vain;
The great blessing of Heaven descends not in rain.

Through all symbols I search for her sweetness—in vain!

Judge her love by her life. For our life is but love
In act. Pure was hers: and the dear God above,
Who knows what his creatures have need of for life,
And whose love includes all loves, through much patient strife
Led her soul into peace. Love, though love may be given

In vain, is yet lovely. Her own native heaven
More clearly she mirrored, as life's troubled dream
Wore away; and love sighed into rest, like a stream
That breaks its heart over wild rocks toward the shore

Of the great sea which hushes it up evermore
With its little wild wailing. No stream from its source
Flows seaward, how lonely soever its course,
But what some land is gladdened. No star ever rose
And set, without influence somewhere. Who knows
What earth needs from earth's lowest creature? No life

Can be pure in its purpose and strong in its strife
And all life not be purer and stronger thereby.
The spirits of just men made perfect on high,
The army of martyrs who stand by the Throne
And gaze into the Face that makes glorious their own,
Know this, surely, at last. Honest love, honest sorrow,

Honest work for the day, honest hope for the morrow—
Are these worth nothing more than the hand they make weary,
The heart they have saddened, the life they leave dreary?

Hush! the sevenfold heavens to the voice of the Spirit
Echo: He that o'ercometh shall all things inherit.

In January, 1863, he was transferred to Copenhagen as secretary of legation, where he was also *chargé d'affaires*, and in 1864 he was sent in the same capacity to Athens. In October of that year he married Edith, second daughter of Hon. Edward Villiers, and niece of the Earl of Clarendon. As if to complete the round of foreign courts, Lord Lytton was again transferred, this

time to Lisbon, and here he again served as *chargé d'affaires*. He successfully concluded the negotiation of a commercial treaty between Great Britain and Portugal, and, in 1868, was transferred to Madrid. In 1863 he had published his only work in prose, a novel entitled "The Ring of Amasis." In 1869 he was promoted to the secretaryship of legation at Vienna, again serving as *chargé d'affaires*. At this time he published "Orval, or the Fool of Time," a dramatic poem paraphrased from the Polish, and founded on the "undivine comedy" of Count N. A. Z. Krasinski, "Nie-boska Komedya"; the volume also contained imitations and paraphrases in verse from Greek, Latin, Italian, and Danish literature. Another transference, in 1872, was to Paris, as secretary of embassy. He was often left in entire charge serving as minister plenipotentiary. While there he succeeded to the title, as second Baron Lytton, on the death of his father, in 1873. He declined the governorship of Madras, and was then appointed Her Majesty's minister at Lisbon in 1874. While there he published a volume of poems, entitled "Fables in Song," and a memorial of his father, called, "Speeches of Edward, Lord Lytton, with some of his Political Writings, hitherto unpublished, and a Prefatory Memoir by his Son." In 1876 he was appointed Viceroy of India, and in 1877 he presided at the ceremonies held on the plains of Delhi, at the proclamation of Queen Victoria as Empress of India. In the same year he was honored with the Grand Cross of the civil division of the Order of the Bath. Lady Lytton was one of a small number who were given the Order of the Imperial Crown of India, and their eldest son, Victor Alexander George Robert, at the Queen's suggestion, was made her godson. In 1880 Lord Lytton was created Earl of Lytton and Viscount Knebworth. In the same year he offered his resignation as Viceroy of India.

He was afterward minister to France. In 1881 appeared "Julian Fane, a Memoir," written to commemorate his deceased friend, who had been his collaborator in "Tannhäuser" and other literary work. In 1883 appeared in two volumes "The Life, Letters, and Literary Remains of Edward Bulwer, Lord Lytton," and in 1885 "Glen-averil," a poem in two volumes. In 1887 appeared "After Paradise, or Legends of Exile." The following extract is from "The Apple of Life," one of his finest poems:

He mused, as he went, "Life is good:
But not life in itself. It is well while the wine-cup
is hot in the blood,
And a man goeth whither he listeth, and doeth the
thing that he will,
And liveth his life as he lusteth, and taketh in freedom
his fill
Of the pleasure that pleaseth his humor, and feareth
no snare by the way.
Shall I care to be loved by a queen, if my pride with
my freedom I pay?
Better far is a handful of quiet than both hands,
though filled to o'erflow
With pride, in vexation of spirit. And sweeter the
roses that blow
From the wild seeds the wind, where he wanders,
with heedless beneficence flings,
Than those that are guarded by dragons to brighten
the gardens of kings.
Let a man take his chance, and be happy. The hurt
by the hunter pursued,

That far from the herd on the hill-top bounds swift
 through the blue solitude,
 Is more to be envied, though death with his dart fol-
 low fast to destroy,
 Than the tame beast that, pent in the paddock, tastes
 neither the danger nor joy
 Of the mountain, and all its surprises. The main
 thing is, not to live *long*,
 But to *live*. Better moments of rapture soon ended
 than ages of wrong.
 Life's feast is best spiced by the flavor of death in it.
 Just the one chance
 To lose it to-morrow the life that a man lives to-day
 doth enhance.
 The may-be for me, not the must-be! Best flourish
 while flourish the flowers,
 And fall ere the frost falls. The dead, do they rest or
 arise with new powers?
 Either way, well for them. Mine, meanwhile, be the
 cup of life's fullness to-night.
 And to-morrow . . . Well, time to consider" (he felt
 at the fruit). "What delight
 Of his birthright had Esau, when hungry? To-day
 with its pottage is sweet.
 For a man can not feed and be full on the faith of to-
 morrow's baked meat."

Among minor poems is the following typical
 one, entitled "Changes":

Whom first we love, you know, we seldom wed.
 Time rules us all. And life, indeed, is not
 The thing we planned it out ere hope was dead.
 And then, we women can not choose our lot.

Much must be borne which it is hard to bear:
 Much given away which it were sweet to keep.
 God help us all! who need, indeed, his care.
 And yet, I know, the Shepherd loves his sheep.

My little boy begins to babble now
 Upon my knee his earliest infant prayer.
 He has his father's eager eyes, I know.
 And, they say, too, his mother's sunny hair.

But when he sleeps and smiles upon my knee,
 And I can feel his light breath come and go,
 I think of one (Heaven help and pity me!)
 Who loved me, and whom I loved, long ago,—

Who might have been . . . ah, what I dare not think!
 We all are changed. God judges for us best.
 God help us do our duty, and not shrink,
 And trust in Heaven humbly for the rest.

But blame us women not, if some appear
 Too cold at times; and some too gay and light.
 Some griefs gnaw deep. Some woes are hard to bear.
 Who knows the past? and who can judge us right?
 Ah, were we judged by what we might have been,
 And not by what we are, too apt to fall!
 My little child—he sleeps and smiles between
 These thoughts and me. In heaven we shall know all!

Owen Meredith has been severely criticised as
 a plagiarist, and there is some show of truth in
 the charge. The plot of his "Lucile" is bor-
 rowed from a novel of George Sand's. The
 striking likeness between his "Bird at Sunset"
 and Bryant's "To a Waterfowl" has been point-
 ed out many times, but few of the critics appear
 to have noticed the fact that Lytton's is by far
 the finer poem. Martha Walker Cook, who
 translated Krasinski's "Undivine Comedy" (Phil-
 adelphia, 1875), accused Lytton of knowing far
 more than he acknowledged of this poem, and of
 borrowing very largely from it in his "Orval."
 In the preface to that poem he had said that he
 had never seen the Polish work, did not even
 know the name of its author, and had simply
 used an analysis of it which he found in the
 "Revue des Deux Mondes." Whatever may be the
 truth of all these indictments, it is certain that,
 when every deduction has been made for them,
 the unquestionably original work that is still
 left gives him very high rank as a poet. Among
 his English contemporaries, Browning and Ten-
 nyson alone surpassed him.

Lord Lytton died in Paris, where his funeral
 was attended with great ceremony, 3,500 troops
 being detailed by the French Government as
 escort. His wife and five children—two sons and
 three daughters—survive him. In England the
 service was attended with every mark of con-
 sideration.

M

MACDONALD, SIR JOHN ALEXANDER,
 a Canadian statesman, born in Glasgow, Scot-
 land, Jan. 11, 1815; died in Ottawa, Canada,
 June 6, 1891. He was the eldest son of Hugh
 Macdonald, of Kingston, Ontario, formerly of
 Sutherlandshire, Scotland, and was educated at
 the Grammar School, Kingston. He married
 (first) Isabella, daughter of Alexander Clark, of
 Dalnavert, Inverness-shire, Scotland (she died
 in 1856), and (second, in 1867) Susan Agnes,
 daughter of T. J. Bernard, a member of Her Maj-
 esty's Privy Council for the Island of Jamaica.
 He studied law with George Mackenzie, was
 called to the bar of Upper Canada in 1836, and
 was appointed Queen's counsel in 1846. He was
 a bencher *ex officio* of the Law Society of On-
 tario. He entered parliamentary life in Novem-
 ber, 1844, when he became member of the Cana-
 dian Assembly for Kingston, which constituency
 he represented uninterruptedly until the union
 of the provinces in 1867. He was returned for
 the same seat for the Commons of the Dominion
 of Canada at the general election of 1867, in 1872,

and in 1874; was unseated on petition, Nov. 21,
 1874; re-elected, Dec. 29, 1874; contested the
 city of Kingston in 1878, when he was defeated;
 but immediately afterward was elected by accla-
 mation for Marquette, Manitoba, which seat he
 vacated on acceptance of office as Premier and
 Minister of the Interior, Oct. 17, 1878. He was
 then elected for Victoria, British Columbia; was
 elected for Carlton and Lennox in 1882 (double
 return), and decided to sit for the former con-
 stituency; was elected for Carlton and Kingston
 in 1887, decided to sit for the latter, and was re-
 elected for Kingston in 1891.

He became a member of the Executive Coun-
 cil (Cabinet) of Canada, on May 11, 1847, and so
 continued until March 10, 1848 (in the adminis-
 tration of the Hon. W. Morris); from Sept. 11,
 1854, to July 29, 1858, in the McNab-Morin, the
 Taché-Macdonald, and the Macdonald-Cartier
 administrations; from Aug. 6, in the latter year,
 to May 23, 1862, in the Cartier-Macdonald ad-
 ministration; and from March 30, 1864, until the
 union, in the Taché-Macdonald and the Belleau-

Macdonald administrations. He was Receiver General from May 21 to Dec. 7, 1847; Commissioner of Crown Lands from the latter date to March 10, 1848; Attorney-General for Upper Canada from Sept. 11, 1854, to July 29, 1858, when as Prime Minister he and his Cabinet resigned, having been defeated on the seat-of-government question. He returned to office the same year as Postmaster-General, but he resigned on the following day, on his reappointment as Attorney-General, U. C., which office he held until the defeat of the Administration on the Militia bill, May, 1862, when he and his colleagues retired from office. He led the opposition in the Assembly until the defeat of the Sandfield Macdonald-Dorion ministry, when the Taché-Macdonald Government was formed, March 30, 1864, and he returned to his old office of Attorney-General, and was Government leader in the Assembly from that time until the union of the provinces, 1867. He held the office of Minister of Militia Affairs jointly with that of Attorney-General from January to May, 1862, and from August, 1865, until the union. He was requested to take the place of Sir E. P. Taché as Prime Minister on the death of that gentleman in 1865, but waived his claim in favor of Sir N. F. Bellean. He was a delegate to England and other countries on public business on many occasions; was a delegate to the conference in Charlotte-town in 1864, which had been convened for the purpose of effecting a union of the maritime provinces; also to that which succeeded, in Quebec, the same year, to arrange a basis of union of all the British North American colonies; and was chairman of the London Colonial Conference in 1866-'67, when the act of union known as the "British North American act" was passed by the Imperial Parliament. On July 1, 1867, when the new Constitution came into force, he was called upon to form the first Government for the new Dominion, was sworn of the Privy Council, and was appointed Minister of Justice and Attorney-General of Canada, an office which he filled until he and his ministry resigned on the Pacific Railway charges, Nov. 6, 1873. On the resignation of the Mackenzie administration, October, 1878, he formed the Government that he continued to lead until the day of his death, in which he at first took the portfolio of Minister of the Interior. He resigned this office and became President of the Council and Superintendent of Indian Affairs on Oct. 17, 1883. He resigned these portfolios Nov. 28, 1889, and became Minister of Railways and Canals, which office he held until he died.

Although, in his public career, the name of Sir John sometimes appears as that of an official subaltern, it is noteworthy that from first to last he was the actual Premier and the inspiring and controlling genius in every ministry in which he held a portfolio, and for over forty years he was virtually ruler of Canada. In 1871 Sir John was appointed one of Her Majesty's joint high commissioners and plenipotentiaries, together with Earl de Grey, Sir Stafford Northcote (afterward Marquis of Ripon), Sir Edward Thornton, and Right Hon. Montague Bernard, to act in connection with five commissioners named by the President of the United States for the settlement of the Alabama claims and of matters in dispute be-

tween Great Britain and the United States, the labors of which commission resulted in the Treaty of Washington. The following are among the principal measures that have been carried through Parliament by him: Secularization of the clergy reserves; abolition of the seigniorial tenures; improvement of the criminal law; promotion of public instruction; consolidation of the statutes; extension of the municipal system; reorganization of the militia; settlement of the seat-of-government question; establishment of direct steam mail communication with Europe; establishment of additional penitentiaries, criminal lunatic asylums, and reformatory prisons, and providing for the inspection thereof; providing for the internal economy of the House of Commons; reorganization of the civil service on a permanent basis; construction of the Intercolonial Railway; enlargement of the canals; enactment of a stringent election law; ratification of the Washington Treaty; confederation of British North America and extension and consolidation of the Dominion. He also, while leader of the Opposition, on several occasions manfully gave his ministerial opponents the benefit of his ability and long experience in perfecting several of their most important measures, notably the Insolvent act and the act constituting the Supreme Court of the Dominion. During the summer of 1880, in company with the Ministers of Railways and Agriculture, he visited England and arranged the contract for the construction of the Canadian Pacific Railway, to which Parliament gave effect. He attended the conference held in London on Nov. 18, 1884, at which the Imperial Federation League was formed, and he moved the appointment of a general committee to conduct its affairs. He was a D. C. L. of Oxford University, also of Queen's University, Kingston, and McGill College, Montreal, and Trinity College, Toronto.

Sir John A. Macdonald has been compared with Sir Robert Walpole and Lord Beaconsfield, but with scant justice to the former. In the completeness, length, and durability of his success as a statesman he has had no predecessor in the history of constitutional government. His prestige was the growth of half a century, and at least three generations of Conservatives had grown up trained to believe in him. He had overcome all his political foes, and again and again led his party to victory. No leader ever surpassed him in inspiring affection among his followers. The love for him of those who knew him well was filial, and unfairness, cruelty, ingratitude were unable to shake their attachment. Yet he was personally liked by his political opponents almost to a man, and at the last many a life-long political foe sobbed as he passed by the remains of the great chieftain. His very mistakes were taken as strokes of genius; and the sinister means, soothing to the envy of the mass, to which he at times resorted, came to be regarded as the necessary adjuncts of statesmanship. From his failings his virtues, in the "general censure," took no corruption. Sir John was created a Knight Commander of the Bath (civil) in July, 1867, and a Knight Grand Cross of the Bath in November, 1884; also a Knight Grand Cross of the Royal Order of *Isabel la Católica* (of Spain) in January, 1872. He was nominated a member of

Her Majesty's Most Honorable Privy Council in July, 1872, and sworn in August, 1879. Since his decease, his widow has been created a baroness in her own right. This is, with one exception, the first instance of a colonial peer, or peeress, being created by the British sovereign. The exception was Lord Mount Stephen, ex-President of the Canadian Pacific Railway Company. A steel-plate portrait of Sir John was published in the "Annual Cyclopædia" for 1882.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census, was 298,269 in 1820; 399,455 in 1830; 501,793 in 1840; 583,169 in 1850; 628,279 in 1860; 626,915 in 1870; 648,936 in 1880; and 661,086 in 1890. Capital, Augusta.

Government.—The following were the State officers during the year: Governor, Edwin C. Burleigh, Republican; Secretary of State, Nicholas Fessenden; Treasurer, George L. Beal; Attorney-General, Charles E. Littlefield; Commissioner of Industrial and Labor Statistics, Samuel W. Matthews; Superintendent of Common Schools, Nelson A. Luce; Railroad Commissioners, Asa W. Wildes, Roscoe L. Bowers, and David M. Mortland; Board of State Assessors, chosen by the State Legislature in April, Frank Gilman, Otis Hayford, and B. F. Chadbourne; Chief Justice of the Supreme Court, John A. Peters; Associate Justices, Charles W. Walton, William W. Virgin, Artemas Libbey, Lucilius A. Emery, Enoch Foster, Thomas H. Haskell, and William P. Whitehouse.

Finances.—The treasury statement for 1890 is as follows: Cash on hand Jan. 1, 1890, \$62,678.41; receipts during the year, \$1,495,367.03; expenditures, \$1,382,579.27; cash balance on Dec. 31, 1890, \$175,466.17. During 1890 a temporary loan of \$300,000 was negotiated, as authorized by chapter ccxvi of the Resolves of 1889, it being found that the receipts would not meet the expenditures, owing to the extraordinary appropriations made by the Legislature of 1889. Of this loan, \$250,000 was negotiated with the German Savings Bank in New York and \$50,000 with the German Savings Bank of Brooklyn, both loans bearing interest at 4 per cent. per annum, payable semi-annually. There is, in addition to this temporary debt, a permanent bonded debt of \$2,602,300.

For 1891 the estimated receipts of the State treasury were \$1,266,298.17, and the estimated expenditures \$1,457,303.85. The State tax rate is 2-25 mills on the dollar.

Valuations.—The first report of the Board of State Assessors, created this year by act of the Legislature, shows the total valuation of property, as fixed by the local assessors, to be \$260,716,167.

Savings Banks.—At the close of 1891 there were 53 savings banks in the State, having deposits amounting to \$50,278,452.44, a gain during the year of \$2,497,285.54. The total number of depositors was 146,668, a gain of 6,147.

Twelve trust and banking companies are transacting business in the State, with a capital stock of \$1,008,900. They have deposits amounting to \$2,516,143.38, an increase of \$390,112.09; and total assets of \$4,279,477.44, a gain of \$649,581.67. The loan associations show a total of

6,710 shareholders, and total assets of \$1,032,301.53, an increase in the past year of \$399,242.22.

Legislative Session.—The sixty-fifth Legislature convened on Jan. 7 and adjourned on April 3. An important result of the session was the passage of an Australian ballot law which applies to all elections after Sept. 1, 1892. The official ballots to be used under this act shall be printed at the expense of the State, except in municipal elections, when the expense shall be borne by the city. Candidates for office may be nominated by a convention or caucus of any political party that polled at least 1 per cent. of the total vote cast in the last gubernatorial election in the State or in the district for which they are to be elected, or by nomination papers duly signed by at least 1,000 voters, if the candidate is to be voted for through the State at large, or by at least 1 for every 100 persons voting at the last gubernatorial election within the district for which the nomination is made, in case of other candidates, provided that the number of signers shall not be fewer than 25. Such nomination papers shall be filed with the city clerk, if the candidate seeks a municipal office; in other cases, with the Secretary of State. Each candidate must signify in writing his acceptance of the nomination. The names of candidates nominated by any party shall be grouped together upon the ballot, headed by the name of the party. A blank space shall be left after the names of candidates for each office, in which the voter may write other names for whom he desires to vote, and questions submitted to the people shall be printed below the list of candidates. Each ballot shall be not less than 4 inches wide and not less than 6 inches long, and shall be so folded in marked creases that the width and length shall be uniform. On the back and outside shall be printed the words, "Official ballot for," followed by the designation of the polling place for which the ballot is prepared, the date of the election, and a *fac simile* of the signature of the Secretary of State or the city clerk preparing the ballots. Cards of instruction and specimen ballots on tinted paper shall be printed for the guidance of voters. Lists of candidates nominated shall be published prior to the election. The municipal officers in each city, town, or plantation shall cause the polling places therein to be provided with voting shelves or compartments in which voters may mark their ballots screened from observation. The voter shall prepare his ballot secretly at the voting shelf or compartment by marking a cross opposite the name of the candidate for whom he wishes to vote, writing in any name if he wishes, or he may place his cross opposite the name of a party or political designation, and he shall then be deemed to have voted for all the candidates of that party or designation grouped thereunder. He shall fold his prepared ballot as it was when he received it, and deposit it forthwith.

To avoid any question respecting the scope of the prohibitory law growing out of the "original-package" decision of the United States Supreme Court and the passage of the Wilson bill by Congress, an act was passed declaring that the statutes in force respecting intoxicating liquors shall be "made to apply to all intoxicating liquors imported in the original package."

Amendments were made to these statutes by which the penalty for importing liquors into the State, or transporting them from place to place therein, was increased to \$500 and one year's imprisonment in case of persons, and to \$500 in case of corporations. In all cases the knowledge of any servant shall be the knowledge of the corporation. Officers may search the persons as well as the premises of people complained of, and if any fluids are poured out or otherwise destroyed by such people to prevent their seizure, such fluids shall be deemed to be intoxicating liquors. County attorneys, as well as sheriffs, are directed to inquire into any violation of these laws coming to their notice, and to institute proceedings thereunder.

The report of the State Valuation Commission, created by the Legislature of 1889, was received at this session, and adopted as the valuation of the State for purposes of taxation. It presents a total valuation of \$309,096,041.

Another act creates a Board of State Assessors, consisting of three members chosen by the Legislature, and, except in case of the first members, holding office for six years. This board is required to perform all duties now required by law to be done by the Governor and Council relative to the assessment and taxation of railroad corporations and associations, and all corporations, companies, and persons doing telegraph, telephone, and express business within the State, and shall assess all taxes upon corporate franchises. Such board shall equalize the State tax among the several towns and unorganized townships, shall fix the valuation of real and personal estate on which the State and county taxes are to be levied, and shall perform the duties heretofore devolving upon the Legislature in apportioning State taxes among the towns. The board shall hold sessions in every county at least once in two years, for the purpose of securing information for its work, and shall file with the Secretary of State biennially a State valuation as fixed by it. This valuation shall be the basis for apportioning the State and county taxes. The board shall equalize and adjust the assessment list of each town by adding to or deducting from it such amount as will make it equal to its full market value.

On the basis of the census of 1890 the State was redistricted for members of Congress as follows:

First District, York and Cumberland Counties.

Second District, Oxford, Franklin, Androscoggin, Sagadahoc, Knox, and Lincoln.

Third District, Kennebec, Somerset, Waldo, and Hancock.

Fourth District, Penobscot, Piscataquis, Aroostook, and Washington.

The State was also redistricted for members of the State Senate and House of Representatives.

A board of World's Fair managers was established, with authority to represent the State and procure a proper exhibit of her industries and resources and history at the World's Columbian Exposition, for that purpose having power to appoint an executive commissioner and to fix his salary. The sum of \$40,000 was appropriated to carry out the provisions of the act.

An act for the protection of forests requires every railroad company whose road passes

through forest or waste land to remove or destroy each year all inflammable material on its right of way, and to equip its locomotives with fire and spark arresters. Train officers who discover fences or woods along the track to be on fire must report the fact at the next stopping place which is a telegraph station. Hunters in any woodland are required to use non-combustible wads in loading their fire-arms, and persons building camp-fires in or near any woods shall not abandon them until they are totally extinguished. The selectmen of each town are made *ex officio* forest fire wardens, with authority to summon all necessary help in extinguishing forest fires in their town. The county commissioner shall appoint fire wardens for all unorganized places. The State land agent is made a State forest commissioner, whose duty it shall be to collect and classify statistics relating to the forests of the State. The commissioner shall also take measures for awakening an interest in forestry in the public schools, academies, and colleges, and for imparting elementary instruction upon the subject.

Two amendments to the State Constitution were proposed for submission to the people in September, 1892—the first amending section 3, Article VII, so that the Governor, and not the Legislature in joint convention, shall have the appointment of the adjutant-general and quartermaster-general; the second adding the following educational provision:

No person shall have the right to vote, or be eligible to office under the Constitution of this State, who shall not be able to read the constitution in the English language and write his name; provided, however, that the provision of this amendment shall not apply to any person prevented by a physical disability from complying with its requisitions, nor to any person who now has the right to vote, nor to any person who shall be sixty years of age or upward at the time this amendment shall take effect.

Other acts of the session were as follow:

Making the first Monday in September, known as Labor Day, a legal holiday.

Requiring all teachers in the public schools to devote not less than ten minutes each week to the instruction of children in the principles of kindness to birds and animals.

Permitting administration to be granted on the estate of intestate persons more than twenty years after their decease.

Requiring instructors in the public schools to be examined in the elements of natural science as applied to agriculture.

Establishing a board of registration in the cities of the State.

Establishing a State board of dental examiners.

Appropriating \$24,500 for a new building and for other improvements at the State Agricultural College.

Appropriating \$65,000 for pensions to invalid soldiers and their dependents during 1891 and 1892.

To punish fraud at agricultural fairs.

Making an assignment of wages invalid against the employer unless he has actual notice of it.

Requiring all loan and building associations to be incorporated.

To protect the rights of minority stock-holders, and to provide a method by which the value of their shares shall be judicially determined, in cases where the majority shall have voted to lease, sell, or consolidate the franchise of the corporation.

Providing that fraternal beneficiary associations may be licensed to do business within the State by the Insurance Commissioner.

Providing that mortgages may be foreclosed by suit in equity, in addition to the other modes prescribed by law.

Revising the game laws.

To provide for the registration of vital statistics.

Giving a right of action for injuries causing death.

The widow, children, or heirs may recover not over \$5,000.

To prohibit discrimination in life or endowment insurance policies.

Education.—The following common-school statistics cover the school year 1889-'90: Children of school age, 211,547; number attending school, 139,676; average daily attendance, 98,364; average school year, twenty-two weeks two days; teachers employed, 7,517; average monthly wages, male teachers, \$34.40; average monthly wages, female teachers, \$17.60; number of towns and plantations having town system, 127; number of school districts, 3,305; number of school-houses, 4,354; built during the year, 62; cost of new buildings, \$176,252; value of school property, \$3,455,965; expenditures for the year, \$1,327,553.

In comparison with the figures for the year preceding, there was a decrease of 517 in the number of children of school age, of 3,437 in the number attending, of 278 in the average daily attendance, and of 32 in the number of teachers. The marked decrease in the number attending school is in part offset by the increase in attendance upon the free high schools, which were maintained during the year in 210 towns and cities. In these schools 15,299 pupils were registered, an increase of 399.

At the three normal schools the average number of pupils during the year was as follows: At Framingham, 120; at Castine, 100; at Gorham, 109. There were 77 pupils in the Madawaska Training School during the year.

Railroads.—On June 30 there were 1,382 miles of railroad in operation in the State. The gross earnings of railroads for the year ending on that day was \$7,012,778.92; the number of passengers carried, 5,502,646; and the number of tons of freight, 10,389,420. There were 51 miles of street railroad in the State.

MANITOBA. About the beginning of the present century Thomas Hamilton-Douglas, the fifth Earl of Selkirk, gave much attention to the subject of emigration, especially from Scotland. He established a colony in Prince Edward Island, of which he had become a grantee, and then conceived the bolder design of planting a colony of Scotch Highlanders and islanders within the territory of the Hudson Bay Company, of which company he is believed to have been an associate. Still, this project was the earl's private venture, in which the company had no part. It was found necessary not only to obtain from the Hudson Bay Company their title to a tract of land for the proposed settlement, but to obtain from the aborigines their title, which they were not yet aware of having conveyed to the King of England, the Hudson Bay Company, or anybody else. So the Indians were made content, at least for the time. There is a tradition that the concession from the Indians to the Earl of Selkirk, or to the Hudson Bay Company, to be transferred to him, was of "as much land as could be seen under a horse's belly." This description is rather vague, but in that level prairie

country it is very comprehensive. It seems to have been held to mean the country all about the point of junction of the Assiniboine with the Red river; and the settlement was to be called Assiniboia, but it became more commonly known as "Lord Selkirk's Settlement." The first arrival of immigrants was in 1813, and was under the direction of Lord Selkirk's agent, Mr. Miles McDonald. These settlers came from the Scottish Highlands by what was then the usual route, *via* Hudson Bay and York Factory, up Hayes and Hill rivers, and by Lake Winnipeg to Red river, a most formidable journey even for Scottish Highlanders. It is said that the first fort was erected at Pembina, on Red river, just south of what is now known as the United States boundary line. It was called "Fort Daer." The name Daer gave the courtesy title to the heir of the Earldom of Selkirk. However this may be, the site eventually fixed upon for the new settlement was on the west side of Red river, about 5 miles below, or northward of, the mouth of the Assiniboine. In 1814 the new settlers amounted to 200. This little colony was the nucleus of the province of Manitoba.

Lord Selkirk, in 1816, caused a fort to be built, and called it Fort Douglas; the name survives in Point Douglas, in the northern part of the present city of Winnipeg. The early histories of all the older colonies on this continent present harrowing pictures of hardship and suffering; but it is doubtful if any of them passed through a more trying ordeal than did the early settlers of Assiniboia. Planted in the very heart of the continent, they saw, in their isolation, that they stood upon a fertile spot; but it might be only an oasis, for aught they knew; for all beyond the horizon of their vision was an unknown wilderness. The Northwest Company, long the fierce rivals of the Hudson Bay Company in the fur trade, regarded the new settlement as being under the protection of the latter, if not really the work of that association, projected in order to obtain a firmer foothold upon the great surrounding territory. As early as 1804 the former company had established a post called Fort Gibraltar, in the immediate vicinity of the spot now occupied by this colony; and they assumed that the settlement was a trespass upon their rights. The Indians, encouraged by this example, treated the newcomers with open hostility. At the same time even the people of the Hudson Bay Company seemed to look with anything but a favorable eye upon the little agricultural colony. Amid the frequent plots and squabbles of the rival companies these unfortunate settlers became objects of suspicion to both. More than once the whole colony, in dread or despair, took flight in a body, and made their way to Pembina, but were induced to return to the place of their earlier abode.

In 1816 the Earl of Selkirk visited this his pet colony, and found it, in a great measure, broken up. The task of setting matters right he found to be most formidable. What with the Indians and the Highlanders and the Hudson Bay people and the Northwesters, he was involved in a perplexing chaos. The French-Indian *Metis*, or *Bois-brûlé*, with others ready for such frays, had been let loose upon the settlement; its mills and many of its houses and barns had been burned,

and the place seemed all but ruined. At length the earl managed to reorganize his little colony, and left it with improved prospects. Then the place was called Kildonan, for a place near Helmsdale, Sutherlandshire, Scotland. In 1817 Lord Selkirk made a settlement of German De

under the name of the "Hudson Bay Company," but there were other sources of misery. The Red river and the Assiniboine were subject to floods in spring, and at times they spread over the whole country, especially around their point of junction. Houses, barns, cattle, sometimes even

CITY HALL, WINNIPEG. (FROM A PHOTOGRAPH BY MRS. R. E. CARR.)

Meuron soldiers on the eastern bank of Red river, in what is now known as St. Boniface.

In 1821 one cause of the misery of the colonists was removed in a great measure through the amalgamation of the two rival fur companies,

human beings, were swept away to Lake Winnipeg. On the Western side of Red river, about 12 miles below the mouth of the Assiniboine, rises from the level of the prairie a singular elevation, which is dignified by the name of "Stony Mount-

ain." Had it not been for this eminence, the history of at least the first settlement on Red river would have been short and tragic. There Nature had provided for the unfortunate people an asylum against the fury of the floods, and there they waited until the subsidence of the waters enabled them to return to their desolated homes and begin anew the struggle of life. With experience, the inhabitants learned to prepare, to some extent, for these floods. The catastrophe was regarded as an annual probability. Owing mainly to engineering provisions connected with railway works, these inundations are not likely to recur.

These Selkirk settlers found themselves afflicted from time to time by a plague of locusts or grasshoppers, which swept northward into the Red river and Assiniboine settlements in immense clouds and devoured every green thing before them. On each of these occasions the agricultural crops were almost entirely consumed, and the people were driven to the verge of starvation. There were years in which actual famine was only averted through charitable aid from abroad.

The Earl of Selkirk died in 1820, and in 1835 all his claims upon the Red river were by his legal representatives transferred to the Hudson Bay Company. The population of the somewhat scattered settlement was then estimated at 5,000. This comprised a motley of Scottish Highlanders and their thoroughbred descendants, French half-breeds (otherwise called *Metis*, or *Bnis-brulé*), English half-breeds, and officials of the Hudson Bay Company. The latter class had now come to regard the Selkirk or Fort Garry settlement as the capital of their domains, and the whole colony a dependency of the Hudson Bay Company itself. Fort Garry had been built in 1821, concurrently with the amalgamation of the two fur companies. This, known as "the old Fort," was replaced in 1835 by the more capacious and substantial and not unpicturesque New Fort Garry, on the north bank of the Assiniboine, only a few rods above the point of its junction with the Red river. This, in its turn, was razed, in 1882, to make way for the requirements of a growing city.

About the time that the settlement had completed its fourth decade people in the eastern provinces of British North America began to make inquiries about this great and almost unknown region. Expeditions were sent out by them to spy out the land, and enterprise and curiosity sent many private explorers upon the same track. It was soon made known to all that the Hudson Bay territories comprised industrial resources of enormous value, especially for agriculture and mining—that, in short, within themselves they embraced the elements of an empire. The Dominion of Canada was founded in 1867, and one of the earliest resolves of its government was, that the Hudson Bay Company "must go," or agree to some reasonable arrangement for surrendering the soil of this vast territory. In 1869 the Hudson Bay Company sold out all their territorial right and claim to the British Government, acting for Canada, for the sum of £300,000 and certain land reservations; and Canada paid that money and entered into possession. The population of the whole territory was then esti-

mated at 12,000, but this must have been exclusive of the Indians.

As it now turned out, the French half-breeds had arrived at the conclusion that this large portion of the world was made solely for them; and in this same year (1869) they, under the inspiration and leadership of Louis Riel, raised a rebellion, put forth manifestoes, and indulged in all the demonstrations usual on such occasions. "Riel's second rebellion," in 1885, was a natural sequel of the first. Its main interest was excited by the promptness and spirit with which the Canadians of every province, from Nova Scotia to British Columbia, sprang to meet the occasion, while yet unaware of the magnitude of the defection. (See "Annual Cyclopædia" for 1885, page 124).

Description and Recent Progress.—

The area of Manitoba, as finally determined, is 123,200 square miles. Its progress in population and industrial pursuits in 1881-'82 were phenomenal. In 1871 the village about Fort Garry contained 241 souls. This number had so far increased

within the two ensuing years that in 1873 it was deemed advisable to have the place incorporated as a city, under the name of Winnipeg. In 1881 the census return gave the population of the young city as 7,985. In the spring of 1882 it was over 25,000, and the railway trains were bringing population into the province at the rate of over 1,000 a day; and to facilitate this movement the Canadian Pacific Railway Company's employes were laying down rails on their now celebrated line at a rate of speed which had no precedent. By the census of 1891 the population of the province amounted to 154,442, and that of Winnipeg to 25,642.

Legislation.—On Feb. 26, 1891, the fourth session of the seventh Legislature of the province was opened at Winnipeg (after the election of Samuel Jacob Jackson, Speaker, *vice* Hon. William Winram, deceased) by His Honor John Christian Schultz, with the following speech:

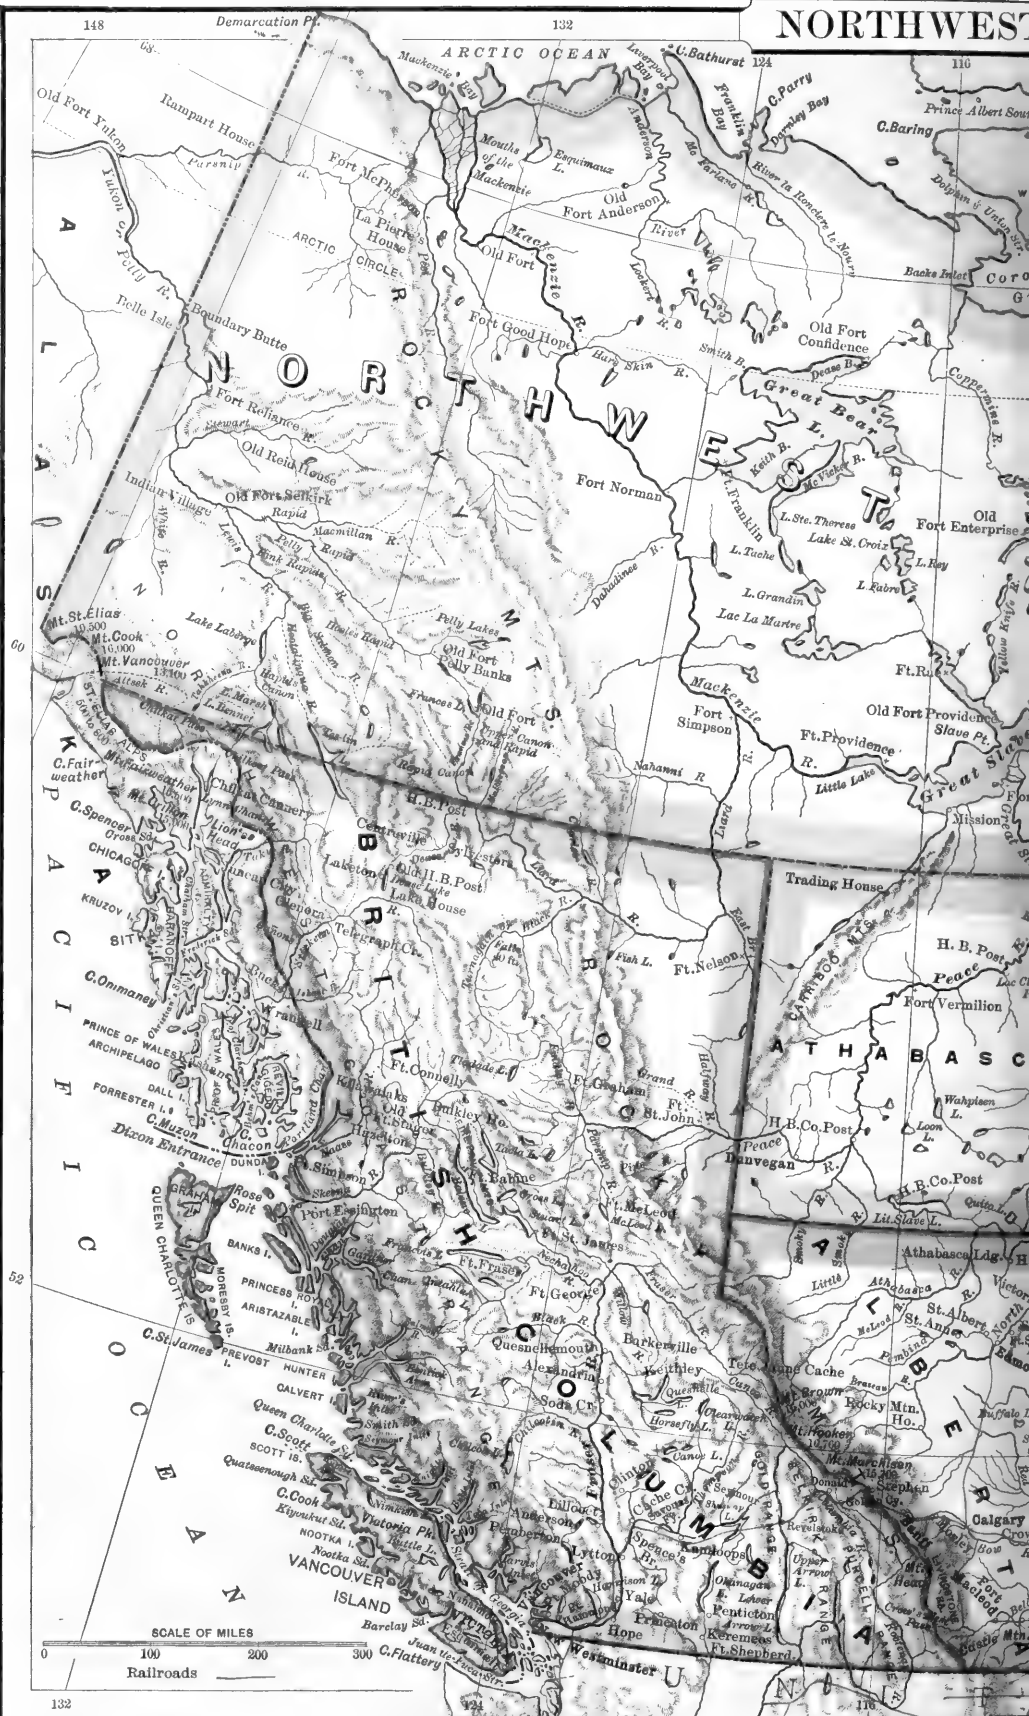

Mr. Speaker and Gentlemen of the Legislative Assembly:

While I have much pleasure in meeting you on the opening of this the fourth session of the seventh Legis-

MONUMENT IN WINNIPEG TO THE SOLDIERS THAT FELL IN THE RED RIVER REBELLION.

lature of this province, yet I am grieved to miss from among you the Hon. William Winram, who, for the last three years so efficiently discharged the responsible duties of Speaker of the Legislative Assembly of this province. I am sure you will join with me in my heartfelt sympathy with his family in their deep affliction, and will, with me, also deplore the loss the province has sustained by the death of this faithful and tried public servant.

I have noticed with much pleasure the increased interest which is being taken in Manitoba as a place for immigration. This, no doubt, is due in a large measure to the export of a large surplus of wheat and other grain from this province during this season, and to the exertions of my Government in making known to the world the advantages of Manitoba as a place for settlement. You will be asked to provide means to enable my Government to adopt still more active measures to bring about the speedy settlement of the large area of land in this province still unoccupied.

In connection with the agricultural development of this province, I observe with much satisfaction that the farmers of the province have very generally taken advantage of the provisions of the act passed at the last session of this Legislature respecting the establishment of farmers' institutes. I have no doubt that these institutes will do a good work in securing a better system of farming.

Such progress has been made by the commission appointed to consolidate the statutes that their report will be submitted at an early date. Before the consolidation can be completed it will be necessary to make a number of amendments to the statutes of this province as at present existing in order to incorporate them with the consolidated statutes.

I regret exceedingly having to advise you that it will be found necessary to secure further accommodation for the care and treatment of insane patients, in consequence of the increasing number of that unfortunate class of the community. The number of patients admitted to the Home for Incurables since its establishment has almost reached the limit of accommodation. An enlargement of the present building, to meet the increasing necessities, will have to be considered during the present year.

The public accounts for the past fiscal year and the estimates for the current year will shortly be submitted to you, from which you will be pleased to learn that the policy of economy inaugurated by my Government has been strictly adhered to.

I leave you to the consideration of the business that may require your attention, in the fullest confidence that your deliberations will be conducted with the single desire of advancing the best interests of the province.

This speech sufficiently indicates the tenor of legislative proceedings during the session. The total provincial receipts from all sources during the year were \$924,431; the total expenditure, \$1,021,641. A large proportion of the latter is represented by works of permanent public benefit. Manitoba is essentially, and all but exclusively, an agricultural country. The product of cereal crops in 1890 was as follows: Wheat, 746,058 acres, 14,665,769 bushels; oats, 235,534 acres, 9,513,433 bushels; barley, 66,035 acres, 2,069,415 bushels. According to most reliable authorities, coming down to Dec. 10, the crop for 1891 will have been: Of wheat, over 25,000,000 bushels; oats, 14,792,605 bushels; and of barley, 3,197,875 bushels. The average yield of wheat per acre for the latter year was 25.3 bushels, against an average of 21.1 for 1890; the average of oats, 48.3 per acre, against 41.3 in 1890; and the average of barley, 35.6 bushels per acre, against 32 in 1890.

MANUAL TRAINING. The first complete historical sketch of this subject in the United States appears in the "Annual Cyclopædia" for 1887, under the title **EDUCATION, INDUSTRIAL**. Since 1887 much has been done to shape and define it as well as to introduce it into the common-school systems. The studies and exercises were then designated by many names, and the purposes of them were popularly confounded with those of trade schools. "Manual training" is now a technical term, standing for a system of education based upon certain definite principles, and employing a variety of methods. It is no longer an equivalent or alternative term for industrial education, nor for industrial training. Industrial education—education combining scientific and practical technical training of a certain grade—may or may not employ manual training at some stage in its course, but industrial training, as the term was in use a few years ago, is disappearing. "Manual training" (which, after all, is a misnomer) is likely to stand for the system of instruction that aims at quickening the intelligence and faculty of thought, observation, and reasoning by means of exercises not of the hand only, but of the eye as well, and many other members and muscles of the body, but which does not involve the notion of physical exercise, as such, nor mere manual dexterity, nor of developing skill for the production of a material object. This is not the system that is in use in many of the schools and institutions named in this article. In some a combination of this with industrial or technical education is to be found, but it is the system that seems to be the object sought through many and seemingly widely divergent ways for the common schools in many places, and by the seekers after the best secondary education everywhere in the United States.

Alabama.—The Alabama Polytechnic Institute, at Auburn, introduced manual training in 1885, well equipped with buildings and machinery for four departments—wood-working, forging, founding, and machinery. It has a special appropriation from the Legislature. The course is obligatory upon the three lower classes, and requires of each class three exercises a week of three hours each.

First year: carpentry and cabinet making, about five months; turning, about three months. Second year: pattern making, half of the first term; followed by molding and casting, ten weeks; forging for the remainder of the year. Lectures on metallurgy are given during this year. Third year: chipping, filing, and finishing take the first term, and machine work the remainder of the year. Drawing is taught and practiced in connection with the work of the course.

Colorado.—Haish Manual Training School of the University of Denver has taken account of the older schools, such as St. Louis, Chicago, and Toledo, in fitting up its very complete plant and arranging its course. The shops have the latest improved appliances for 128 students. The school year is divided into 3 terms, of sixteen, thirteen, and eleven weeks, respectively, and the course of study and hand training is continued through three years. It is a pay school.

Connecticut.—The State Normal School at New Britain has had manual training for several years, under favorable conditions and with good

PROBLEMS IN JOINERY, CARVING, TURNING, AND PATTERN WORK.

results. The use of carpenter's tools, carving, modeling, and sewing are taught. There is a well-equipped workshop. All students take courses in slöjd, and those who desire it receive special training. All must make for themselves apparatus for illustrating physical science. The children, who begin in the kindergarten, continue in the training of the workshop till they leave the school. There were about 300 children in 1890. They have a molding room, drawing-room, workshop, and gymnasium.

The Normal School at Willimantic has a course which proceeds from and carries forward the kindergarten work, but no slöjd. In all the schools connected with State and city institutions, State Reform School, Storrs' Agricultural School at Mansfield, Industrial School at Middletown, orphan asylums, and homes for the destitute, industrial education is carried on.

New Haven, beginning in 1886 with a permanent special instructor in manual training, has now 10 classes, one for each grammar school, in which 24 boys each have been instructed two hours a week. The pupils are selected by the principals in their discretion. The course is systematic, and extends to a great variety of practice with tools, not with the object of constructing any articles for use, though such articles are often made. Drawing is studied and practiced through the course.

The Greenwich Manual Training School, opened in 1889 in connection with the public schools, has lately had more than 100 pupils, about one third of high-school age, the remainder of grammar-school ages, besides a few adults, working from one to two hours a week.

In Brooklyn and Stamford studies and work have been introduced to a greater or less extent, and in Norwich, where a systematic course is likely to be opened soon.

District of Columbia.—The public schools are provided with progressive studies in manual training, beginning in the kindergarten and leading up to the physical and chemical laboratories of the high school. Boys of the seventh and eighth grammar grades have two hours a week in wood and metal work, similar to that of the St. Louis school. One such laboratory was opened in 1886, with 1 teacher and 150 boys. There are now 13 laboratories, 4 teachers, and 1,600 boys. Girls have cooking and sewing.

Florida.—State and county authorities have taken up the subject of manual training, and already it has been successfully introduced in the normal schools for white and black and in the graded schools at Pensacola and Jacksonville, the latter for colored youth. In the State Normal and Industrial College for colored students at Tallahassee, the professor, F. C. Johnson, is a graduate of the Chicago Manual Training School. The course runs through several years, and much attention is paid to drawing, especially mechanical drawing. In the Agricultural and Mechanical College, at Lake City, the course runs the entire four years, disciplinary and instructive, with drawing all the way. The shops for work in wood and metal are well equipped and supplied with hand tools; the wood shop for forty students. No trades, but the principles underlying all trades and handicraft, are taught, and nothing is made for sale.

Georgia.—In Atlanta University a mechanical course of three years embraces two years of wood working and one of metal working, and, including drawing, requires seven hours and a half a week of all boys above the third grade, in addition to the other studies. A brick building for the department was provided by private subscription, and has been well equipped and supplied with tools. To those who have finished the course and have shown ability and fitness, special instruction in some of the trades is given.

The School of Technology, at Atlanta, established by the Legislature in 1888, for education and training in the industrial and mechanic arts, aims at placing the pupil during the course of training in an environment not unlike what he may find when he enters on the active duties of life. But the object is educational. This is not a trade school, though it teaches the manual dexterity necessary in all trades, with courses in the usual studies, and especially in drawing. The course covers four years, and there are no electives.

The Normal and Industrial College, at Milledgeville was established in 1889. The Legislature appropriated \$35,000 in money, to be paid in three yearly installments, beginning in 1891, and gave for the use of the college valuable property in Milledgeville (22 acres), with a handsome and commodious dwelling and small buildings, and gave \$8,000 for the current expenses of 1891, and has since appropriated \$1,800 toward those of 1892. The city gave \$1,000, and the people of the city lent and advanced \$50,000 to enable the directors to push the erection and equipment of the necessary buildings, so as to open the institution in the fall of 1891 with its full quota of 360 pupils. There are four departments—the normal, the industrial, the collegiate, the domestic—not constituting separate schools. Industrial and free-hand drawing, manual training, cooking, and dress-making are taught.

Illinois.—In the article before referred to is given the history of the beginnings, in 1883, of the Chicago Manual Training School, founded and controlled by the Commercial Club of Chicago. Under the direction of Dr. Henry H. Belfield, the experiment, which graduated its first class (which was in carpentry only) in 1886, soon became a large and thorough-going high school upon the so-called manual-training principles, with all the pupils it could accommodate, and a model for many schools which have been opened or are about to be opened in different parts of the country. The plant has been steadily increased, and in 1890 the building was considerably enlarged. The wood rooms accommodate 160 boys; the foundry and forge rooms, 90 each; and the machine shop, 60. All are completely equipped for each student. Power is supplied by a Corliss engine of 52 horse-power and 2 steel boilers. The drawing rooms, furnished with models and casts, have tables and lockers for 365 boys. This is the course;

JUNIOR YEAR.—*Mathematics:* Algebra, geometry. *Language:* English language and literature, or Latin. *Drawing:* Free-hand, model and object, projection, machine, perspective. *Shop Work:* Carpentry, joinery, wood turning, pattern making, care and use of tools.

MIDDLE YEAR.—*Mathematics*: Geometry and plain trigonometry. *Science*: Physics. *Language*: General history and English literature or Latin. *Drawing*: Orthographic projection and shadows, line and brush shading, isometric projection and shadows, details of machinery, machines from measurement. *Shop Work*: Molding, casting, forging, welding, tempering, soldering, brazing.

SENIOR YEAR.—*Mathematics*: Book-keeping, higher algebra, reviews. *Science*: Chemistry, physical geography. *Language, etc.*: English literature, civil government, political economy, or Latin or French. *Drawing*: Machines from measurement, buildings from measurement, architectural perspective. *Machine Shop Work*: Chipping, filing, fitting, turning, drilling, planing, etc., study of machinery, management and care of steam engines and boilers. Instruction is given upon the production, properties, and uses of the materials used in each year. Throughout the course one hour a day is given to drawing and two hours to shop work; the remainder of each school day is devoted to study and recitation.

Education, not manufacture, is the controlling principle, and, notwithstanding the prominence given to manual work, experience shows that

experiment was begun in 1886 by a manual training annex to the high schools, and was made an independent school in 1890.

The Cook County Normal School, in order to follow out the principles of the kindergarten in all the public-school grades, has a course in manual training for which there is a room fitted up with the latest appliances, and which is closely related to and supplemented by free-hand and industrial drawing. "It is the purpose of the school," says Prof. Francis W. Parker principal since 1883, "to bring the members face to face with the duties and responsibilities of their prospective profession. Manual training will become a factor in our common schools just so fast as skillful teachers are trained who can do the work."

Peru introduced manual training into the public school ten years ago, has lost nothing of interest and usefulness, and there is now a settled content with it as a part of the public-school system. Moline and Beardstown public schools have manual training of some sort.

Iowa.—In the Davenport public schools the initial step to manual training was taken some years ago by the introduction of industrial drawing. In the lower grades this was supplemented by stick laying and paper folding. In 1888 a well-fitted cooking school was opened for girls of the high school and ninth grade grammar. The course was of forty lessons. It was popular, and seemed to exert a good effect upon the interest in other work. In 1890 another large room was furnished for training boys in the use of joiner's tools. Only boys of fourteen years are admitted. Attendance is optional, but once begun must be continued, except for good reason shown. Two and a half hours a week is the usual instruction, and the pupils must keep up with their regular studies. This they cheerfully do, while showing great interest in the manual work.

The directors of the Independent School District of West Des Moines, in 1889, appointed a committee to investigate the subject. The committee visited the manual training schools of St Paul, Minneapolis, Chicago, and Toledo, and reported in favor of the adoption of the system in the schools of the West City.

A room was at once fitted up for shop work, and later another for domestic economy. Two special teachers were engaged at the outset. The course is to some extent a combination of manual training with industrial and technical education. It is carried through four years, and there is drawing, free-hand and mechanical, all through. The pupils have begun with kindergarten in the primary schools.

The boys have, first year, hand work in wood and care and use of tools; second year, machine work; third year, hand work in metals, casting, soldering, and brazing; fourth year, machine work in metals, study of steam engine and boilers. Girls have, first year,

ENTRANCE OF CHICAGO MANUAL TRAINING SCHOOL.
(FROM A PUPIL'S FREE-HAND SKETCH.)

the other branches need not fall behind those of the best high schools. On the recommendation of the director, graduates of this school are admitted without examination to many of the leading polytechnic and engineering institutes of this and other States. In September, 1890, 155 juniors were admitted, and in 1891, 130. It is a pay school.

The Chicago English High and Manual Training School was opened by the Board of Education in the fall of 1891, with large workshops and an academic department, having about the same studies as the other high schools. The course is optional, and over 260 boys are enrolled. The

FORGE-SHOP, BALTIMORE SCHOOL.

light hand work in wood, care and use of tools; second year, wood carving and clay modeling; third year, plain sewing, drawing and cutting of garments from measure, fitting and making garments; fourth year, chemistry of combustion and of cooking, selection, care, and use of cooking apparatus and utensils, selection and preparation of articles for food, cooking, including bread making and preparing food for the sick.

Oskaloosa has had drawing, sewing, and cooking for several years.

Kentucky.—Louisville is to have a manual training high school as soon as the building can be erected, when an extended course of study will be arranged. At present 96 boys of the freshman class of the regular high school receive instruction in the use of wood-working tools forty-five minutes each day, and in drawing one hour a week, all the time that can be spared as the course of study is now arranged.

Louisiana.—In Tulane University, New Orleans, a manual training school is a distinct department, but the laboratory and workshop, in charge of the Director of Manual Training, is administered in connection with two other departments—the high school and the college. Shop work, drawing, and some experimental work are carried on. There are a carpenter's shop, forge shop, and machine room, well-fitted and supplied with machinery and tools. The manual training course in the high school comprises the second and third years, and is purely educational, with drawing as an important part throughout, five hours a week. In the college course, manual training is given in the freshman and sophomore years, five hours a week in addition to a like number of hours in drawing. In the junior and senior years engineering and other technical work is taken up.

Maryland.—The Baltimore Manual Training School has been increasing in every way upon the lines taken up at first and fully described in this "Annual" for 1887. The curriculum has not materially been altered. A post-graduate course was opened in 1888. Sixteen instructors are now employed. The school year 1890 began with 506 pupils, of whom 9 were special stu-

dents, and of these, 6 were from Johns Hopkins University. During the year 249 were admitted, 310 withdrew. There were 17 graduates in 1890. During that year a large new building was completed and the old one altered to correspond. The school is now handsomely housed and admirably equipped. It was the first manual training school in the United States established as part of the public school, and it is still the largest among similar schools.

Massachusetts.—The Legislature in 1889 requested the Board of Education to investigate and report upon the subject of manual training, and, among other things, upon what additional legislation, if any, was necessary in order to provide such instruction in the schools of the Commonwealth. An act of 1884 requires industrial drawing to be taught in all the public schools, and permits every town and requires every city and town of more than 10,000 inhabitants to give free instruction in industrial drawing to persons over fifteen years of age. Another act of the same year authorizes the purchase of hand tools at the expense of the town. The Board of Education in 1890 made to the Legislature a report admirable for its brevity and its fullness. Industrial drawing is taught in 201 of the 351 cities and towns in the State; models and objects are used in connection with the drawing in 119 of them, while in 43 special teachers are employed. Nearly 80 per cent. of the school population received instruction in industrial drawing in 1889. The State Normal Art School has over 200 pupils. The Board of Education employs an agent whose whole time is given to aiding the school authorities to introduce and teach industrial drawing.

In the Boston public schools the experiments described in the article of 1887 have been carried on in about the same manner, sewing in regular course for girls, industrial drawing for all; and outside the course, in small classes at a time, instruction to girls of certain grades in cooking and boys in carpentry. As a result of this long experience, manual training is to be made a part of the school system. A compre-

hensive plan has been adopted for the entire city, and will be gradually worked out. The generous support of Mrs. Shaw and Mrs. Hemmenway, who have maintained the outside schools, is not to be withdrawn all at once, nor their plan dispensed with. The City Council has appropriated \$100,000 for a mechanic arts high school, and the course of study in the elementary schools is to be shaped with reference to it, so that boys who are to follow industrial pursuits shall be trained in the best way to profit by this new opportunity. The course laid out begins in the kindergarten. It has been found that a child who has had a year in the kindergarten has had his perceptive faculties so quickened that he has a year's start of the child who enters first into the primary school. The rudiments of manual training are taken up in the primary schools with stick laying, paper cutting, clay modeling, etc. In the grammar-schools a distinction between the boys and girls is introduced. Girls have sewing and cooking, these being accepted after several years' experience as indisputably of educational and practical value—educational in matter of neatness, order, and value of time, and practical in many instances which are interesting and forcibly instructive. The committee recommends that every girl be taught plain sewing, and in the upper classes pattern making and cutting, and cooking and so much of chemistry as enters into it. There are now 8 cooking schools, 3 more are nearly ready, and 4 more on the way—in all 15, so distributed about the city as to be convenient to groups of the other schools. A principal of cooking schools will have oversight and authority upon all, and the teachers must not only be familiar with the art they teach, but must illustrate in person the most perfect habits of neatness, and convey their instruction in well-chosen language. All the boys of every class, and all classes of the same grade throughout the city, are to have exercises in wood work (the starting-point is drawing, not models), and the work beginning in the fourth class. Below this—that is, in the fifth and sixth classes—they practice construction in card-board. Two plans of a four years' course have been arranged on the same principles, each complete in itself, differing in certain practical features. They are being thoroughly tested, one in one school, the other in another, and it is the intention to reduce the two to one harmonious system. What classes to instruct first, upon the introduction of the system and how many at a time, are problems that have been submitted to long experiment and much discussion. It has been determined that to begin with boys of the second grade is best, and that a single teacher can instruct about 280 pupils a week in ten classes of 28 each. There are about 2,000 boys in the second grade. Eight teachers and 14 shops are required. The next grade to be taken in upon the introduction of the plan is the fourth; and in this there are about 3,000. In one of the grammar schools the pupils in the lower grades are drawing simple geometric forms, which are then cut out of white wood by the use of a knife only, with commendable results. This work is not in any way a substitute for intellectual

studies. The change wrought in some of the boys is most wonderful. To be deprived of their tools is the severest punishment that boys hitherto most unruly can now incur, and it has been found that as much is done in the regular studies as when the whole time was given to them. The wood working has helped to retain boys longer in school. Formerly they were almost universally taken out to be put to work as soon as the law would permit.

PLAN No. 1.—The first year is arranged with special reference to the drawing, light tool work only being introduced. By using only very thin wood, the third dimension in both drawing and tool work is practically eliminated. A board placed upon the regular desks is used, the drawing is made upon the wood, and the piece thus drawn is afterward cut out with a bracket saw, small plane, and file. The drawing and the tool work are thus brought intimately together in the mind of the pupil, and he is taught at the same time the necessity of using care and accuracy in his drawing. The instruction is given by the teacher to the whole class from a model at the blackboard. The pupil thus begins at the same time to make an accurate drawing of a piece, and the piece from a drawing. The first lesson begins with the cube, and teaches parallel, horizontal, and vertical lines, and proceeds step by step till at the end of the year, out of these pieces thus formed, which may be called the alphabet, are made the needle-book, fish-line winder, a pin-cushion, sled, corner bracket, silk winder, pencil sharpener, calendar, easel, inkstand, and box for paper and envelopes.

The object of the second year's work is threefold: (1) to continue the combined drawing and tool work; (2) To introduce the third dimension, with its necessary additional views; and (3) to provide tool work which shall serve as a preliminary training to the joining course. The drawing consists of some new geometrical views, and introduces top, front, and side views. These views are drawn on thin stock as during the first year, are worked out and then used as patterns by which the real piece (in thicker wood) is marked out.

The third year introduces the more practical methods of working in both the drawing and tool work. The two are here separated for a time, the pupil making on paper correct working drawings of various models illustrating various principles, putting on all dimensions, and showing all facts of form needed by the workman for the construction of the piece, and in the tool work making models in wood, working from correct working drawings, and using for marking out the work the rule, square, gauge, and bevel, instead of the elementary principles of the second year. They are at length brought together again, the pupil making in the school-room the working drawings of the models he is afterward to make in the shop. The work done during the third year consists of: Exercise for rule, square, gauge, and bevel, sawing, planing, boring, jointing and doweling, mortising (two joints), chiseling exercise, towel rack, exercise in dovetailing (plain), book rack, and knife box.

The work of the fourth year is a review and continuation of the third year.

PLAN No. 2.—For the fourth class a series of models preparatory to the regular slöjd series has been arranged. The drawing, which should always be preliminary to the work, takes in only one view. A block of paper and the try-square, rule, and lead pencil used in the bench work are sufficient for the drawing in this course. No surface planing is required, and the pupil has thus only to grasp two dimensions. This series consists of fifteen models.

For the three upper classes the regular slöjd series has been arranged. This course is based upon the exercises developed at Näås, Sweden—that is to say, the exercises have the same progressive order, though

represented by different models. But as the models themselves are of minor importance and only an expression of the exercises, the two series are essentially alike. This "American series," as it has been called, has at present thirty-one models, ranging from a wedge to a small cabinet. Like the preparatory course for the fourth class, this is even more closely connected with mechanical drawing, using drawing-board, T-square, and triangles. The pupil must make his own working drawings.

Brookline has instruction in sewing for girls of the first, second, and third grades of all the grammar schools, arranged on a systematic plan, and in charge of a special teacher. All kinds of plain sewing are taught, and cutting and fitting in the last year. Cooking is compulsory in the Lincoln School to the girls of the 4 upper grades; the classes have two hours a week. In the Center School it is given to those who desire it in the 3 lower grades. It is taught in a vacation school, kept at the expense of the town, during July and August, for girls over twelve years of age. A vacation school for boys of the same age offers lessons in carpentry of a more practical sort than that taught in the regular school classes.

Cambridge has sewing in the 3 lowest grammar grades. There are manual training classes connected with the English High School. The Cambridge Training School for boys was founded by Frederick H. Rindge, and is under the immediate control of a committee appointed by him to carry into execution his plans. Pupils in the Manual Training School will recite two hours a day in the English High School, and will work three hours a day in the shops—one hour in drawing, and two hours at the bench. It is intended through this course to make it possible for boys of more than ordinary capacity, application, and fidelity, whose circumstances make it important to give the minimum time to preparation, to enter the Massachusetts Institute of Technology at the end of three years.

Canton has cooking classes provided by private subscription and taught in regular school hours. The attendance is voluntary, and 90 per cent. of the girls have joined.

Dedham has sewing as a part of the regular grammar-school course, cooking for girls in evening schools, and during the summer months a successful vacation school for slöjd work, with four classes of boys.

Easton, in the primary and grammar schools, has plain sewing for all girls, and some instruction in cooking. One lesson a week in carpentry is given to boys of the two upper grammar grades and the lowest grades of the high school. Attendance is voluntary. Expenses are paid from the income of the Oakes Ames fund.

Fall River provides a special elective course in the high school, called the industrial course, including two-hour lessons, and from six to ten a week in wood and metal work, during the four years. Rooms in the high-school building are well fitted up with benches, lathes, forges, and all other necessary means for carrying on the work. The superintendent of the shop says the objects of his lessons are purely educational. There are 55 pupils in these classes. The expenses of the course are paid from the Durfee fund of \$50,000. Sewing is taught only in the evening schools of the city.

Hyde Park schools have sewing for all girls in grammar schools.

Lawrence provides sewing for girls during fourth and fifth years.

Malden has sewing in five grammar schools.

Milton and New Bedford for all girls in grammar-schools. Newton for all girls from fourth to seventh grades, inclusive.

Quincy pupils are encouraged to make at their homes articles of paper, pasteboard, wood, etc.; and in some schools, taught by graduates of the Bridgewater Normal School, the pupils are taught to make simple apparatus for illustrating topics in chemistry.

Somerville has sewing for girls in fourth to ninth grades.

Springfield has a systematic and thorough course in manual training. Sewing to girls of the first four grammar grades, by a special teacher. Wood work is optional, and confined largely to the ninth grade grammar and the high school. About 240 are in the training classes. Weekly lessons, covering one year, for the ninth grammar, and daily lessons, covering three years, for the high school.

Stoneham schools have modeling in clay and paper cutting.

Waltham provides sewing for all girls from third to ninth grades, and manual training exercises each day for boys in seventh, eighth, and ninth grades.

Watertown has sewing in the grammar schools twice a week by a special teacher.

Wellesley has sewing for all girls in the grammar schools.

Winchester has sewing for girls of fourth and fifth years, and optional classes in cooking out of school hours. Carpentry is taught boys in the eighth and ninth classes.

The reform schools and schools for the defective, all, or nearly all, have incorporated manual training into their school exercises. The Board of Education reports that the new element of education is gradually working its way into the schools, and is of opinion that no further legislation is necessary.

Minnesota.—In 1887 a room in the St. Paul High-school building was fitted up for optional courses in wood working and to accommodate 40 pupils. More than twice that number applied to enter; the accommodations were enlarged, and at length opened to 96 pupils, in 8 classes, 5 of boys and 3 of girls—boys, three hours a week; girls, an hour and a half. In the following year a much larger appropriation was made, and an addition to the building was put up containing rooms and apparatus for metal working. The city now has a fine manual-training school house. The privileges of the course are extended to all students of both sexes of the seventh grade, and on through the high school, comprising 6 terms of prescribed work in which drawing—and for girls domestic economy—are included. It is entirely optional, but the pupil having once entered a class must continue in it.

In Minneapolis the system has been in successful operation since 1887. The beginning was made in the Central High School, with benches and tools for 34 pupils at a time, or 120 in all, during each morning session of four

hours, allowing the pupils eighty minutes each. In the same year similar provision was made, and courses were begun on smaller scales in 2 branch high schools. In 1889 another school was opened, and systematic courses of instruction are now carried on in 4 high schools. The equipment in all is the same, though the Central still accommodates the largest numbers. The superintendent says that, in his opinion, a danger in the way toward accomplishing the most valuable results lies in allowing the pupils too early to construct things, and that too much attention can not be given to the first elementary movements and operations.

Stillwater has daily exercises in drawing, has shop work in the high school, and, by way of a beginning, devotes the Friday afternoon sessions generally to exercises in manual training.

Missouri.—The Manual Training School of Washington University, St. Louis, opened in 1880, was the earliest, and is now, perhaps, the foremost in the country. The enrollment has increased from 226 in 1886-'87 to 239 in 1890-'91. This last number is exceeded only by the Chicago school. The results of the class exercises in drawing and tool work have been exhibited for the sake of influence upon educational methods at the annual meetings of the National Education Association at Saratoga, N. Y., in 1882 and 1883; at Madison, Wis., in 1884; at St. Paul, Minn., in 1890. Partial exhibits have been made in Springfield, Fitchburg, and Worcester, Mass.; in New York city and Albany, N. Y.; in Columbus and Cincinnati, Ohio; in Louisville, Ky.; in De Funiak Springs, Fla.; and in Kansas City, Mo. A large selection was sent to the International Exposition at Paris, 1889, and the school was awarded a gold medal. To meet the pressing demands for increased accommodations a new building is to be put up adjoining the present one, and the plant enlarged to a capacity for 500 students. Then 200 boys may be admitted every year, and about 120 will be graduated. The curriculum, covering three years, as described in the "Annual Cyclopædia" for 1887, will not be changed. The average age at graduation is eighteen. Eight classes have passed through the school, and many of the graduates are directors or teachers of the newer manual training schools and of supplementary classes to public and private schools which have been established in many different States. Prof. C. M. Woodward, the director since the beginning, says, in reference to the eleven years' work of the school, that he "is gratified by the thought that, in spite of its many shortcomings, the school has demonstrated the feasibility of incorporating the elements of intellectual and manual training in such a way that each is a gainer thereby"; and that he has "correctly read the public demand for an education which shall insure the most valuable mental discipline at the same time that it gives preparation for the various duties of active life." It is a pay school.

Nebraska.—The Omaha High School opened a manual training department in 1885, which has successfully maintained optional courses to boys and girls in carpentry, wood turning and carving, and in mechanical drawing: two hours a day during the first two years of the high school course.

New Hampshire.—A beginning has been made in Concord with carpentry in the grammar schools.

New Jersey.—The law of 1887 provides for State aid in introducing manual training, equal to the amount appropriated by any city or district, not less than \$500 and not more than \$5,000.

At Montclair the small and careful beginning made in the middle grammar grades in 1882 has prospered. In his report for 1891, Superintendent Spaulding says that, after eight years of experience, it is his conviction that the value of the school course is greatly enhanced by the manual training. A systematic, continuous course is now established in the schools of this city, beginning with the kindergarten of the first year in the primaries.

First year there are four lessons and a little drawing and clay modeling, which are continued during the second year, when usually the regular primary studies are taken up. Until the sixth year all the manual work is in the regular class-rooms. In the sixth year, the first "grammar" year, the pupils come under a special teacher of clay modeling two hours a week. In the seventh year girls are drilled for an hour at a time in overcasting, hemming, and running. Boys are instructed like hours in the week in the use of joiner's tools in the carpenter's shop. Eighth-year girls have two hours a week of instruction in domestic economy and cooking, and boys like hours in wood carving. Ninth-year girls have first cooking, and afterward, about two thirds of the year, wood carving, two hours a week. Boys like hours at wood turning and metal work throughout the year. In the seventh, eighth, and ninth years all have one hour a week in drawing under a special teacher.

The Orange Common Council in 1888 voted \$1,000 for the addition of manual training to the public-school studies, and a like sum was received from the State. At the opening of the fall term practice was begun upon a course which, as accommodations were completed, comprised paper work, clay modeling, sewing, drawing, and the elements of carpentry, and, for girls of the high school, cooking. Two special teachers were engaged and one of the drawing teachers assisted. It was an interesting and successful movement from the first. The carpentry room is commodious, and provided with benches, tools, and lockers, all of the most approved sort; and it is to be enlarged and fitted up for the addition of wood turning. The cooking school, opened in 1889, is well arranged and equipped. The sources, the essential qualities, and the means of preparing good and wholesome food, may here be thoroughly studied, but the preparation of dishes or composition of *menus* is not aimed at. In general, throughout the manual training courses, instruction is given twice a week for an hour at a time.

Elizabeth schools had taught industrial drawing for several years, when, in 1888, manual training was introduced. In 1890 the course was dropped. In 1891 it was resumed in part.

Vineland school trustees in 1876, by almost unanimous vote, directed that plans be prepared for the engrafting of industrial education upon the public-school system of the town. The plans were a long time in hand, and the expense of the outfit for manual training was a serious obstacle. After the law of 1887 was passed the

citizens voted \$500, and so secured a like sum. An instructor was engaged, who began in the summer a training school for the teachers, and with the school year the system went into operation. In 1888 the people again voted \$500, and a second summer training school established the course in a thorough-going way. Two lessons of about an hour are given each week, and all pupils are instructed in drawing. The good results are seen in all the other school work.

The Paterson High School has some similar instruction.

New York.—The Normal School at New Paltz reports that "two full sets of carpenters' tools have been placed in the room set apart for manual training, and the room itself enlarged and conveniently fitted up for work." But the normal-school circular of the State Superintendent does not show that this subject has any part in the curriculum of the normal schools, and in only two of the 120 or more reports for 1890 of the county and district commissioners and city and village superintendents is any mention made of manual training.

In Plattsburg, "drawing, form study, clay and sand modeling, stick laying, paper cutting, and pasting have been successfully pursued during the past year," and "there is a growing demand for an extension of manual training to tool work, sewing, cooking, etc. The problem how to meet the demand has not yet been solved."

The Albany High School has many classes in carpentry and industrial drawing.

Jamestown public schools have sewing and knitting in the primaries, and the privileges of the workshop, sewing room, and printing office are open to as many pupils as can be accommodated. The pupils are selected according to their fitness for this extra work.

In Lansingburg there are classes in clay modeling, with special teachers. Mount Vernon, Newburgh, and Olean have classes in carpentry.

In the Brooklyn public schools a few teachers have tried to start a movement toward the introduction of manual training by such experiments as they could make at their own expense and without interfering with the regular school work, and in some instances these experiments have met with success.

The Pratt Institute, founded in 1887 and richly endowed by the late Charles Pratt, is a comprehensive industrial school, in which special attention is given to manual training, beginning with the kindergarten. There is a technical high-school department, an art department, one of dramatic science, one of commerce, one of mechanic arts, and one of music, and a kindergarten for students of various ages and differing requirements and purposes. Tuition in all is low, in some classes merely nominal. The building and equipment are already extensive and complete, and are to be enlarged and increased. The arrangement and equipment, to which the founder gave so much thought and time, are elaborate. The halls, libraries, recitation rooms, laboratories, and work rooms are fully supplied with apparatus. The technical high school affords an academic course arranged on a manual-training system. Book work is the same for boys and girls, but the manual work differs from the beginning, excepting in some of the

drawing. Boys' work is under the direction of the department of mechanic arts, girls' work under domestic economy. The course is three years.

FIRST YEAR.—English language, rhetoric, algebra, geometry, physiology, physical geography, vocal music, elocution, supplementary reading. *Drawing for Boys and Girls:* Free-hand and instrumental working drawings; free-hand, model, and cast drawing; clay modeling. *For Girls:* Special work in drawing and design, in preparation for wood carving, millinery, and dress making. *Manual Work for Boys:* Bench work—use of tools, joinery, construction; wood turning—straight, shoulder, and molded; center turning—chucking; inside turning—spinning simple bowls and cups; pattern making—principles of molding; draft halving, core boxes, building up. *Manual Work for Girls:* The various stitches and principles of hand sewing, making apron, talks on materials used, machine stitching, and beginnings in cutting and dress-making; hygiene, first and second courses—methods of treatment in sudden illness and accidents and care of the sick.

SECOND YEAR.—General history and English history, or Latin, essay writing, geometry, trigonometry, book keeping, physics, with laboratory practice, elocution, vocal music, supplementary reading, physical culture. *Drawing:* Perspective, architectural, elements of design; and, *for boys,* mechanical, *for girls,* pen-and-ink sketching. *Manual Work for Boys:* Two-part molding, core making, three-part molding, swept-up work, ornamental pieces in bronze; in forging—management of fire, drawing, upsetting, forming, welding, making steel tools, soldering, sheet-tin work, brazing. *Manual Work for Girls:* Wood carving, cutting and making dresses, talks on choice of materials, color, and form.

THIRD YEAR.—English literature, civil government, political science, French or Latin, essay writing, principles of construction in physics, chemistry and metallurgy, with laboratory practice, vocal music, elocution, supplementary reading, physical culture. *Drawing for Boys:* Advanced mechanical drawing; problems in construction. *Drawing for Girls:* Optional work in the art department. *Manual Work for Boys:* Bench work—chipping, filing, fitting, use of taps and dies; machine-tool work—theory of cutting tools, turning, boring, screw-cutting; general tool work—construction. *Manual Work for Girls:* Millinery, selection of materials, lessons on form and color, to trimming and making hats, bonnets, and toques; cooking, making fire, care of utensils, the chemical and nutritive properties of foods, preparation and cooking of dishes, table serving, and marketing; dress making—cutting and making dress from original design; household economy—the application of scientific methods to practical housekeeping.

The high-school course leads to the advanced work of the high school, with its architectural and mechanical drawing, applied design, wood carving, and art-needlework courses, and to the advanced work of the mechanic art school, with its trade school and school of applied science and technology. There were 3,232 pupils in the fall and winter of 1891.

In the latter part of 1886 the movement for the adoption or trial of manual training for the public schools of New York city took shape when the Board of Education referred the general subject to their Committee on the Course of Study. The committee's report, presented in June, 1887, set forth the origin and development of the subject-matter as a school study and the history of its adaptation and use in this country, and recommended the introduction of "what is generally known as manual training" into the city schools, or at first some of them, and pre-

sented the outlines of a proposed course. The report was adopted, and in October of the same year the matter was re-referred to the same committee, with power to frame a course of study, and to introduce such course into not more than twelve grammar schools and the primary departments connected with them, and to employ special teachers of manual-training subjects. A complete new course of study, including manual training, was arranged and a new manual prepared. This course of study is so ordered that all the branches of education are interwoven together, and all the instruction and study and exercises of the schools are affected or influenced by the manual-training features or idea. It is so complete and elaborate that the mere outline is too long to be inserted in this article. This teachers' manual entirely supersedes the regular one in the schools in which it is used. With the new year the experiment was begun in a few selected schools. During 1888 the course was placed in four boys' and five girls' grammar schools and the eleven primaries connected with them. This put more than 10,000 children under the new training. In 1889 it was extended into 12 more grammar schools and their primaries. It was then in 32 schools—nearly 18,000 pupils. The results were so good that many of the features were embodied in the regular course for the entire city, which was revised that year and went into effect in the next, 1890. The free-hand and mechanical drawing were made the same in the two courses, except so far as directly connected with the shop work of the manual-training course. By the end of 1890 there were five more schools and their primaries, another thousand and a half of children, under the manual-training course. By the end of 1891, 20,670 pupils have the free-hand drawing, more than a third of these have mechanical drawing, which is in all of the grammar grades; cutting from drawn work in the highest primary and lowest grammar grades is taken by somewhat less than 6,000, and about the same number, all the girls in the three higher primary and five lower grammar grades, have sewing; while clay modeling, in the highest primary and all grammar grades but the highest, is taken by about 9,000; clay and paper are used in form study, the former by all pupils in the five lowest primary; shop work in wood in the five higher grammar grades is taken by about 1,800 boys; cooking in the second and third grammar by a still smaller proportion of girls. The course runs through fourteen terms, seven years. All pupils are required to study all the subjects taught in their respective classes, but a pupil who does not wish to take the manual-training course can go to one of the other schools, of which there are, schools and departments, about 190 within the limits of New York city.

The College of the City of New York maintains the courses of manual training established many years ago, and described in the article of 1887. The Workingman's School, founded by Felix Adler, in 1879; the pioneer and model school of this class, still has a kindergarten, with a normal class, and develops work and studies on the same principles, through three primary and five grammar classes; in all a course of eleven years. There are now between 300 and 400 pupils. Since 1890 the custom of receiving only the

children of very poor and working people has been broken in upon; a limited number have been admitted at the charge of \$100 a year or less, half the seats at least are still reserved for the free pupils. So far, pay pupils and free pupils associate freely and influence each other beneficially. The plan works well. The superintendent in his last report says they have pupils who seem singularly incapable of composition, or even the lesser grace of orthography, some of whom have been in the school from the kindergarten up, and have received the same careful treatment as the others; they lag behind in language, which is their weak point, and they would have been regarded as dunces in other schools. But some of them do admirable work in other branches. In the case of these children, proficiency in manual and art work, and in natural history usually go together. After they have developed their peculiar bent, and are encouraged by their success in the manual branches, they gradually gain a better control of tongue and pen.

The College for the Training of Teachers, into which has been merged the Industrial Education Association, described in the article of 1887, and which received a charter from the regents of the University of the State in 1889, has an elaborate department for the instruction of teachers in all branches pertaining to manual training. The various publications, the lectures on this subject, and the furnishing of teachers of manual training are continued by the college. Special attention is given to form study and drawing, domestic economy, mechanical drawing, and wood working. There are Saturday classes for the convenience of teachers actually engaged in teaching in New York and vicinity. There is a model school of four grades—kindergarten, primary, grammar, and high.

The college has an endowment fund. Tuition fees are moderate, and there are several scholarships.

Ohio.—The Legislature in 1886 authorized the levying of a tax for manual and domestic school purposes.

The trustees of the State University at Columbus are erecting a building for a manual-training school.

In Toledo the Manual Training School, established under an ordinance of the Common Council in 1884, is maintained under the joint control of the Board of Education and the directors of Toledo University, as described in the former article. Instruction in the workshops and in free-hand and mechanical drawing is furnished by the University Board, while the intellectual studies are pursued in the public schools at the expense of the City Board. The effect of this united action is to enlarge the scope of public instruction so as to include instruction in some of the practical arts. The course including this instruction is known as the manual training course. Graduates of it are occupying such places as superintendents of manufactures, as architects, designers, draughtsmen, and teachers; but they were taught no trades. In connection with ordinary school studies they were taught the elements of industrial drawing, and the skillful handling of tools that are at the foundation of all arts. The work in manual training causes

no interruption or diminution of work in other departments; and the school becomes more useful and popular from year to year. The course, which has been somewhat altered since 1887, still covers four years, and the lessons occupy from two and a half hours to seven hours a week. There are drawing classes all through the course; sewing, wood shops, blacksmith shop, and machine shop. The four-story building, which forms a wing of the high-school group, is specially constructed and fitted for the purpose.

The Cleveland Manual Training School was incorporated in 1885, opened in the following year, and upon the act of the Legislature, laying a tax for such education, the owners gave to the city Board of Education the use of the building and equipment for free classes to pupils of the public schools of the high-school grade, and at least fourteen years of age. Other than the

unusual skill in any particular line of work. Boys not younger than fourteen years and of high-school grade or acquirements are admitted, and without examination, on proper certificates. It is a pay school.

Pennsylvania.—In 1887 the Legislature provided for the appointment of a commission to make inquiry and report on the subject of industrial education, looking toward the best means of promoting it, and how far it is possible or desirable to incorporate it into the existing system of public instruction. The chairman of the commission, George W. Atherton, LL. D., President of the Pennsylvania State College, visited institutions in Europe, and the other members visited the schools of the State and elsewhere, and collected a vast amount of information, a small part of which was submitted to the Legislature with their report in

WOOD-WORKING SHOP, MANUAL TRAINING SCHOOL, WESTCHESTER, PA.

public-school pupils pay a small fee. The work, extending through three years, is in the use of tools, and mechanical and free-hand drawing. Nine hours a week are required, and one third of the time is given to drawing. The ground covered is much the same as in the course for boys in Toledo.

The Cincinnati Technical School, which is in fact a manual training school, was incorporated by the Order of Cincinnati. It was opened in 1886. In the following year the Commercial Club as a body took an interest in the project, and it has since borne nearly half the expenses of the school. The object of the school is to furnish instruction and practice in the use of tools, in mechanical and free-hand drawing, in mathematics, the English language, and the natural and physical sciences. The facility of making plans and the ability to execute them are sought for, rather than manual dexterity or

1889. The "Conclusions and Recommendations" are full and clear: "We are strongly convinced. We believe that the time has come when this step forward in the development of our public-school system ought to be taken." And it is recommended that provision be made for the introduction of manual training into each State normal school—wood work for all students, iron work for young men, and sewing for young women, as much as could be accomplished in a course of twelve weeks if the time were chiefly given to it; the work to be accompanied at every step with drawing in a progressive course. That an appropriation be made to each State normal school of \$5,000 for plant, and \$2,000 a year for maintenance. That after 1890 no certificate or diploma be granted to any pupil or graduate who shall not have completed at least the equivalent of a six-weeks' course in wood work; and, to train teachers already em-

ployed, a summer school in wood work and iron work at the State College. A moderate annual appropriation to such school districts as shall establish manual training. That provision be made for the introduction of drawing as a required study in every school in the State; and to require every district, in subsequent buildings, to provide rooms for manual training, and for the grouping of schools, and for special instructors. That there be a special deputy superintendent of public instruction as director of manual training. That the system be introduced into the reformatory institutions, and, in case any change be made in the provisions for maintaining soldiers' orphan schools, at least wood work for boys and sewing and cooking for girls be introduced. This report has not yet been fully acted upon by the Legislature. The Pennsylvania State College, though a manual labor school of agriculture and the mechanic arts, provides a great deal of instruction upon manual training lines for the first two years.

Pittsburg, encouraged by the generous offer of Henry Phipps, Jr., to provide a teacher, opened a kitchen school for the training of young women in the art of cooking, which has succeeded well. Several small towns on Alleghany river have made experiments in the simpler kinds of wood and iron work.

In Philadelphia the movement has assumed a very considerable magnitude, and the school authorities are making provision for its introduction into all the grades of the city schools. Several institutions of a higher grade, for the education of young men for the arts and industries, have long existed here, and the excellent work done by them has created a public sentiment in favor of eye and hand training which does not exist in most sections of the State. The first manual training school for boys graduated its first class in June, 1888. By that time there were more than 300 pupils. The school was crowded, and 30 applicants properly qualified had to be turned away. A second school for boys has been opened.

Girard College Manual Training Department, described in the former article, continues to succeed upon a strict adherence to the Russian system, "training for instruction, not construction." It has been found necessary to guard against too much specializing and too much machinery.

The Drexel Institute of Art, Science, and Industry, founded in 1891 by Anthony J. Drexel, with a gift of \$2,000,000 for building and endowment, will, in January, 1892, open classes in a normal department fitted for courses in manual training. Tuition fees are extremely moderate, and there are to be 160 scholarships in all; 15 in the manual training.

Tidioute opened in 1888 what is often called the industrial annex upon the public schools for elective courses; which are taken with much interest and good results.

Westchester opened a manual training room in 1889; convenient, well-lighted, with deadened floor and ceiling, and thoroughly well fitted up for instructing 18 students at a time. This department is in excellent working order, and has a two years' course open to boys of the senior and junior high-school classes, and girls who expect to teach. There are 86 pupils, divided into

6 classes, who have nearly two hours a week at the bench or lathe, and a half-hour at mechanical drawing.

The Wilkesbarre schools have joinery and sewing.

Rhode Island.—Newport has made a beginning in manual training under the Townsend fund, and the Board of Education contemplates the erection of a building to meet all the requirements of a systematic course. A sewing and cooking school, on manual training principles, has been maintained for several years chiefly through the exertions of Miss Katherine Wormeley, and wood working has been introduced into the boys' schools.

Providence, in several of the grammar schools, has lately given special attention to the teaching of drawing. Instruction has been given in the handling of tools, and a cooking school, with a special teacher, has been arranged for certain of the grammar schools. A new building for a manual training high school is nearly completed.

Bristol school board maintains a cooking school.

Pawtucket is about to build a new high school, with provision for a manual training course.

South Carolina.—Claflin University, Orangeburg, has a department of manual training. Over \$20,000 has been spent in supplying outfits for the various industrial departments in which these classes will be taught. The industrial education work that the university is doing for the colored people of the South is very great and valuable.

The Winthrop Training School for teachers, at Columbia, provides normal instruction in manual training. This school is exclusively for young women who already have a good education, and only those who intend to teach are wanted there.

Virginia.—In the Virginia Agricultural and Mechanical College, at Blacksburg, there is systematic instruction in drawing and in the use of iron-working tools upon the method of the St. Louis Manual Training School. The course runs through three years, and averages six hours' work a week.

The Miller Manual Labor School of Albemarle, Crozet Station, also has instruction on the plan of the St. Louis school. The complete course is four years.

Washington.—The Seattle High School has an industrial course, which is such a modification of the scientific course as provides for work in shop and laboratory. Mechanical drawing and wood work are fairly started and obtaining good results, even with imperfect facilities. A complete course has been arranged similar to those in the older manual training schools of the country, with wood carving and domestic economy for girls. The object is not to teach any trade, but to train the hands and eyes of the pupils while their minds are being developed, and to interest them in the direction of manual labor, domestic duties, and the accompanying sciences.

Wisconsin.—In Appleton manual training was introduced into the Ryan High School in 1889. There is a course in drawing, including working drawings obtained from the manufacturers of the city; carpentry, for which there is a workshop for 15 boys at a time; forging, and wood carving for the girls.

Eau Claire schools, since 1885, have had manual training as part of the work of the eighth grade, grammar, and of the high school. The course covers three years, with lessons in the use and care of tools, in carpentry, turning, forging, etc., and drawing. Girls have wood carving a part of each year. The enrollment is increasing. A new high school is under contract, to contain accommodations for the manual training school.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 319,728 in 1790; 341,548 in 1800; 380,546 in 1810; 407,350 in 1820; 447,040 in 1830; 470,019 in 1840; 583,034 in 1850; 687,049 in 1860; 780,894 in 1870; 934,943 in 1880; and 1,042,390 in 1890. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, Elihu E. Jackson, Democrat; Secretary of State, E. W. Le Compte; Treasurer, Edwin H. Brown; Comptroller, L. Victor Baughman; Attorney-General, William P. Whyte; Secretary of State Board of Education, M. A. Newell; Tax Commissioner, Frank T. Shaw; Chief Justice of the Court of Appeals, Richard H. Alvey; Associate Justices, John M. Robinson, James McSherry, Levin T. H. Irving, William S. Bryan, John P. Biscoe, Oliver Miller, and David Fowler.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, as reported by the Federal census:

COUNTIES.	WHITE.		COLORED.	
	1890.	1880.	1890.	1880.
Allegany.....	40,096	36,468	1,470	1,549
Anne Arundel.....	19,441	14,649	14,648	18,577
Baltimore.....	62,540	72,766	10,360	10,565
Baltimore city.....	366,920	278,584	67,326	53,716
Calvert.....	4,757	4,442	5,103	5,696
Caroline.....	10,008	9,603	8,895	4,166
Carroll.....	30,190	23,706	2,185	2,286
Cecil.....	21,580	22,644	3,978	4,464
Charles.....	6,975	7,700	8,215	10,548
Dorchester.....	16,085	14,684	8,808	8,476

Washington.....	87,191	85,495	2,590	3,066
Wicomico.....	14,600	12,948	5,830	5,073
Worcester.....	12,833	12,522	6,854	7,017
The State.....	824,149	724,693	218,004	210,280

There were 197 Chinese, 6 Japanese, and 34 Indians in the State in 1890.

Finances.—The total revenue received into the treasury during the fiscal year 1891 was \$2,827,568.29, and the balance Sept. 30, 1890, was \$666,845.94, making the total in the treasury during the fiscal year \$3,494,414.23. The receipts for 1891 are less than for 1890 by \$3,033,036.65. This large decrease is mostly due to the sale of the bonds of the "exchange loan of 1889," which occurred during 1890.

The total disbursements during the fiscal year 1891 were \$2,953,083.93, being less than those of 1890 by \$2,731,402.08. This difference is due to the redemption during 1890 of the State 5-per-cent. sterling bonds. The balance at the close of the fiscal year was \$541,330.30.

The estimates of receipts for the current fiscal year amount to \$2,082,559.90, which, if realized and added to the balance on Sept. 30, would make the total in the treasury during the current fiscal year \$2,623,890.20.

The receipts on account of the Free-school fund during the fiscal year were \$69,272.21. This, added to the balance standing to the credit of this fund Sept. 30, 1890, \$6,938.52, makes an aggregate during the fiscal year 1891 of \$76,210.73. The disbursements during the same time were \$71,052.21, leaving a balance on Sept. 30, 1891, of \$5,158.52.

The receipts into the several sinking funds for the fiscal year were:

General sinking fund.....	\$10,912 25	
Balance, Sept. 30, 1890.....	2,884 07	\$13,746 89
Sinking fund treasury relief loan....		109,758 85
Sinking fund defense redemption loan.....	\$424,714 24	
Balance, Sept. 30, 1890.....	852 38	425,566 57
Sinking fund exchange loan 1889....	\$27,209 00	
Balance, Sept. 30, 1890.....	18,634 50	55,903 50
		\$604,969 74

There was invested on account of these sinking funds during the past fiscal year, \$604,888.53, leaving cash balance to the credit of the treasury relief sinking fund of \$81.21.

The general sinking fund established by the investments from surplus funds of the State treasury contains stocks and bonds aggregating.....	\$273,003 55
Treasury Relief Loan Sinking fund established in the fiscal year 1880, in accordance with a special tax for the redemption of \$500,000 of treasury relief bonds, contains stocks and bonds aggregating.....	562,310 50
The Defense Redemption Loan Sinking fund, established in the fiscal year 1884 for the redemption of that loan, as by special tax, contains stocks and bonds aggregating.....	1,580,521 73
The Exchange Loan of 1887 Sinking fund, established by the Board of Public Works by exchanging the preferred stock of the Baltimore and Ohio R. R. Co. held by the State for bonds of said loan, by virtue of Art. XII, sec. 3, of the Constitution, contains stocks and bonds aggregating.....	1,298,208 50
Total stocks and bonds held by sinking funds.....	\$3,719,044 43

According to the Comptroller's report, the acts of the General Assembly of 1878 and 1888 levying a special tax of 1½ cent on each \$100 of the taxable property, to meet the interest and create a sinking fund for the redemption of the bonds of the treasury relief loan, can now be repealed, but he suggests that this special tax be added to that levied to pay the interest and create a sinking fund for the redemption of the exchange loan of 1886, as the tax of ½ cent on each \$100 is inadequate to meet even the interest on said loan; consequently, no sinking fund could be created.

The receipts of the oyster fund amount to \$52,260.33, which is less than those of the preceding year by \$5,918.34. The expenditures have been \$73,645.81, which exceed those of the

preceding year by \$2,689.90. In the expenditures is included \$2,726.68 for building two schooners. The amount standing to the credit of this fund at the close of the fiscal year 1891 was \$79,720.76.

The total indebtedness of the State at the close of the fiscal year 1891 was \$10,721,642.52, an increase of \$30,518.07; but this is only temporary, as the amount of the "exchange loan of 1891," issued at the close of the year, was that much greater than the amount exchanged and redeemed of the old loans, for the exchange and redemption of which this new loan is being issued. Deduct from the gross debt the productive stocks held by the State, and the cash and stocks held by the sinking fund, and the net debt will be \$3,876,046.88, a decrease of \$536,170.77 since last year.

The assessment of the real and personal property in the several counties and city of Baltimore for 1891 is \$510,003,077, being greater than that of 1890 by \$27,818,253. The levy for State taxes for 1891 on the real and personal property of the State, at 17½ cents on each \$100, amounted to \$905,253.50.

The State levy for public schools for the fiscal year 1891 amounted to \$535,503.25. The receipts of school tax for 1891 amounted to \$576,350.64, an increase over that of 1890 of \$8,418.36. The disbursements of the school tax amounted to \$607,205, an increase of \$5,217.99.

United States Direct Tax.—By act of Congress, chapter xlv, of 1861, a direct tax of \$20,000,000 was levied upon the several States to meet the expenses of the war then being waged, and Maryland's quota of this tax was \$436,823.33. The General Government made every provision to collect this tax, but at the same time accorded the privilege to the States to assume their quotas, and for prompt payment a discount of 15 per cent. was stipulated. Maryland assumed her quota of the levy, and by an act of the General Assembly of 1862, chapter cxliii, issued the "Maryland defense loan" to provide means for the defense of Maryland, and especially to meet the State's proportion of the United States direct tax, levied, or to be levied, for the purpose of suppressing rebellion and maintaining the integrity of the Union. On June 28, 1862, Maryland paid her proportion of this war tax, \$436,823.33, less 15 per cent., leaving the net sum \$371,299.83.

Congress at its last session passed an act to credit and pay to the several States and Territories and the District of Columbia all moneys collected under the direct tax levied by the act of Congress approved Aug. 5, 1861. The Comptroller suggests that after the amount (\$371,299.83) paid to the General Government is returned to the State treasury, it should be placed to the credit of the Defense Redemption Loan Sinking fund, a fund created for the redemption of loans issued to defray the expenses incurred by the State during the civil war.

Education.—The whole number of different pupils enrolled in the schools of the State during the year was: White, 189,214; colored, 34,796; total, 224,010. The average number of pupils in daily attendance in all schools was: White, 106,170; colored, 17,273; total average attendance, 123,443. The total expenses for

school purposes derived from all sources—State, county, and city—were \$2,237,164.33, of which amount there was paid from the State treasury for white schools \$470,345.16; for colored schools, \$122,983.88; total, \$593,329.04. The amounts received from the State treasury for white and colored schools, respectively, were \$4.43 each for the white pupils in average daily attendance and \$7.12 each for the colored pupils in average daily attendance. The total amount of expenses of all the schools in the State shows an expenditure of \$9.98 each for the total number of pupils enrolled during the year, and of \$18.12 each for the total number of pupils in average daily attendance. The average daily attendance of white pupils was only 56 per cent. of the number enrolled, and of colored pupils only 50 per cent.

The State Normal School during 1891 was full to its utmost capacity, reaching the limit of numbers fixed by law, and the applicants for admission far exceeded this limit. The Board of Education and the Association of School Commissioners of Maryland have united in requesting the General Assembly to provide for enlarging the building.

Chesapeake and Ohio Canal.—Subsequent to the filing of the opinion of Judge Alvey, on Oct. 2, 1890, detailed in the "Annual Cyclopædia" for 1890, an appeal was taken by the State and the canal company to the Court of Appeals, but the decree of the court below was affirmed in February, 1891. The trustees were unable to complete the repairs by May 1, 1891, as stipulated, and the time was extended, and, by the latter part of August the canal was sufficiently repaired to permit transportation. The cost of repairs largely exceeded the highest estimate, and has amounted to \$360,000, while the tonnage has only been about 50,000 tons of coal and the gross receipts about \$20,000. The practical results thus far accomplished are: The canal has passed under the control of the Baltimore and Ohio Railroad Company; an additional debt of at least \$360,000, taking priority of the claims of the State, has been created; the revenues are not sufficient to pay the expenses of the restored work, and a sale, sooner or later, seems to be inevitable, perhaps, even before the expiration of the four years named in the court's decree. The proceeds of this sale will in all probability prove not more than enough to reimburse the trustees for the cost of these repairs and to pay the repair bonds of 1878, if indeed they prove adequate for these purposes, and consequently the State and the bondholders of 1844 will get nothing. Had the lease as authorized by the act of 1890 been made, the results would have been very different. A railroad competing in the interests of the people with the Baltimore and Ohio Railroad would have been built along the line of the canal from Cumberland to Georgetown; the repair bondholders of 1878 and the labor claims of \$70,000 for repairs prior to the recent expenditures would have been paid in full; the bondholders of 1844 would have received 25 per cent. of their bonds, and the State would be in the regular receipt of an annuity of \$15,000. The building of a railroad through Allegany, Washington, Frederick, and Montgomery counties would also

have added to the State's revenues from the tax on its gross receipts, while the benefit to these four counties in the increase of their taxable basis would have been very great. Moreover, the project was to extend the proposed railroad from Georgetown to Baltimore, so as to make that city its real terminus, and thus to give to it the manifest and great advantages of being an outlet for the coal from West Virginia over the West Virginia Central and Pittsburg Railway, and moreover lead to commercial and business relations of incalculable value with that great and growing region. The experiment of continuing to spend money on the canal in the hope of making it pay, however well meant, has been a costly one to the State, while to the bondholders of 1844 it has thus far proved to be anything but a success. The long-cherished policy of the State to secure for the people two competing lines of transportation from the coal fields has been reversed, and both of these highways are now under the control of the same corporation, and the rates of toll and transportation can be fixed without the check of competition.

The Oyster Industry.—The general measurers at Baltimore report that the sales in that city from Oct. 15 to Dec. 15, 1890, were 1,701,080 bushels, and from Oct. 15 to Dec. 15, 1891, 2,259,410 bushels, an increase of about 33 per cent., which must be credited to the Culling law, as the percentage of decrease had previously been in a greater ratio; but to make this law effective it will be necessary to extend its provisions to all persons having small oysters in possession, and thereby destroy all marketable value in them. The Governor, in his message, recommends the limiting of the time for taking oysters with scoops or dredges to Nov. 1; and that all licenses to take oysters, either with tongs or with scoops or dredges, should expire with the close of the season. He adds:

I must also call your attention to the condition of the oyster fund. The receipts from licenses to dredge are constantly decreasing, while the expense of maintaining and keeping in order the boats of the fishery force is increasing as the boats get older. The total receipts for this fund were in 1889 \$61,562.08; in 1890, \$58,178.67; and in 1891, \$52,260.33; while the expenditures were in 1889 \$63,306.09; in 1890, \$70,955.91; and in 1891, \$73,645.81; showing at present an annual deficit of over \$20,000. The license to dredge, which is at present the only source of revenue, is as great as it will bear, and a tax on the bushel is objectionable. I can see no mode of relief except to require the scrapers and tongs to contribute to this expense. If the licenses to tong or to scrape were all issued from the Comptroller's office to the clerks of the circuit courts, and one third of the receipts therefrom were paid over to the State, it would probably be sufficient for all present emergencies; and if the license to tong was made personal and fixed at \$3 it would bear more uniformly on the tonger and at the same time give a greater revenue to the counties. A thorough revision of our oyster laws seems to be absolutely necessary.

A cause of most embarrassment in the enforcement of our laws is found in the lack of harmony between the laws of Maryland and those of Virginia. The Legislature of that State is now in session, and has the oyster question under consideration, and I feel sure that this is an opportune time to secure their co-operation; I would, therefore, recommend that you pass a joint resolution early in your session

appointing a committee to confer with that body on this subject. I would also suggest that such conference should embrace the questions connected with the common rights of fishery in the Potomac and Pocomoke. The large and valuable oyster grounds of the Potomac, which belong entirely to Maryland, are a subject of concurrent legislation, and enjoyed by the citizens of Virginia equally with our own, while the citizens of Maryland are entirely excluded from any rights in the Pocomoke.

The eighth article of the compact of 1785 provides that all laws and regulations in relation to the preservation of fish in the Potomac and Pocomoke, within the limits of Virginia, shall be made with the mutual consent and approbation of both States.

The Penitentiary.—The annual report of the Maryland Penitentiary shows that financially it has been more than self-sustaining. The Board of Directors, after paying all expenses, paid into the State treasury in 1890 a surplus of \$1,991.64, and are ready to pay for 1891 a surplus of \$3,022.35.

By an act of the General Assembly of the last session \$25,000 a year was appropriated for ten years for the purpose of purchasing additional grounds for the extension of the Maryland Penitentiary and for the erection of necessary buildings thereon. It also says that:

It was suggested two years ago, with a view of the State's doing what it could to aid the farmers of the State, to have binding twine manufactured at the Maryland House of Correction by the prisoners confined therein; but upon investigation it was deemed inexpedient, owing to the fact that most of the inmates were under short sentences, and are a class of persons generally unfitted for such work. But with the extension of the Maryland Penitentiary, it would be entirely feasible to erect the necessary machinery at a comparatively small cost for the manufacture of binding twine; in doing so the State would not conflict with any similar manufactory in the State conducted by private enterprise, while, at the same time, it would be a vast saving to those engaged in wheat raising throughout the State. Under the present system the prison labor is hired out to manufacturers, and should the State erect a factory and manufacture binding twine, by charging the consumers with the cost of the raw material and the cost of the work, at the price now charged for such labor, the farmers of the State would be able to secure their binding twine at a much less price than they are now compelled to pay for such material, and, therefore, the enactment of such a law is recommended.

The Australian Ballot Law.—The General Assembly at its last session passed the Australian ballot law, providing for the printing, at the expense of the State, of an official ballot, and the appointment by the Governor of election officers, with a view of securing greater fairness and freedom in elections. From all sections of the State where the law applies it has received approval and commendation. There are counties where the provisions of the law do not apply, and it is recommended by the Governor that the law shall be extended to all the counties in the State, and that the whole of the election laws be revised and re-enacted. Indeed, the application of the Australian system to primary elections is advised by him.

Political.—At the election held in November for Governor the Democratic candidate, Frank Brown, was elected, receiving 108,539 votes, while the Republican candidate, W. J. Vannort,

received 78,388 votes, and Edwin Higgins, the Prohibition candidate, 5,120 votes. At this election six proposed amendments to the State Constitution were voted upon. The first empowered the Governor to disapprove separate items in appropriation bills; the second restricted the exemption of corporations from taxation; the third provided for uniformity of taxation; the fourth related to the election of county commissioners; the fifth authorized the sale of the State's interest in all works of internal improvement; and the sixth empowered the Legislature to provide for the taxation of mortgages, if such taxation is imposed in the county or city where the mortgaged property is situated. All of these amendments were adopted except the third. The State Legislature as now constituted includes in the Senate 22 Democrats and 4 Republicans, and in the lower house 78 Democrats, 10 Republicans, and 3 Independents, giving a Democratic majority of 18 in the Senate, 65 in the House, and 83 in a joint ballot.

MASSACHUSETTS. A New England State, one of the original thirteen, ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; and 2,238,943 in 1890. Capital, Boston.

Government.—The following were the State officers during the year: Governor, William E. Russell, Democrat; Lieutenant-Governor, William H. Haile, Republican; Secretary of State, William M. Olin, Republican; Treasurer, George A. Marden, Republican; Auditor, William D. T. Trefry, Democrat; Attorney-General, Albert E. Pillsbury, Republican; Railroad Commissioners, Everett A. Stevens, George G. Crocker, and Edward W. Kinsley, who died on Dec. 26; Chief Justice of the Supreme Court, Walbridge A. Field; Associate Justices, Charles Devens (who died on Jan. 7, and was succeeded by John Lathrop), William Allen (who died on June 4, and was succeeded by James M. Barker), Charles Allen, Oliver Wendell Holmes, Jr., Marcus P. Knowlton, and James M. Morton.

Finances.—The receipts and payments on account of revenue for the year were as follow: Cash in the treasury Jan. 1, 1891, \$1,488,057.19; cash received during the year, \$18,792,998.53; payments during the year, \$18,956,569.52; cash in the treasury Jan. 1, 1892, \$1,324,486.20. The estimated revenue for the year, exclusive of the direct tax, was \$3,782,837.50, and the actual revenue \$4,329,919.79. Adding to the latter sum the direct tax receipts, \$1,500,000, and the balance on Jan. 1, 1891, \$1,488,057.19, there is found to be a total actual revenue of \$7,317,976.98. The actual expenses for the year were \$5,965,171.94, as against \$5,833,353.24 in 1890. The principal sources of revenue were as follow: From corporation taxes, \$762,826.68; from bank-stock taxes, \$468,689.71; from savings-bank taxes, \$1,053,606.28; from insurance companies, \$317,432.64; from excise tax on life-insurance companies, \$127,802.45; from liquor licenses, \$573,714.10; from State-prison industries, \$146,699.40; from interest on deposits, \$174,908.23. The principal expenses may be classified as fol-

low: Interest, \$1,586,491.72; legislative department, \$315,603.77; executive and other departments, \$93,244.15; State House and Commonwealth Building, etc., \$39,233.99; sundry commissions, \$307,300.19; printing, \$115,906.36; educational, including State Library, \$199,007.60; judiciary, \$254,546.67; public buildings, \$515,392.30; agriculture, including scholarships, etc., \$61,764.01; State and military aid, including expenses, \$457,352.87; charitable, \$602,306.98; reformatory and correctional, \$810,568.68; military, \$235,186.18.

The transactions on account of the several sinking funds and trust deposits show the following aggregates for the year: Cash on hand Jan. 1, 1891, \$5,282,185.58; cash receipts during the year, \$20,037,376.82; total, \$25,319,562.40; payments on these accounts, \$20,776,287.63; cash on hand Jan. 1, 1892, \$4,543,274.77.

The State debt on Jan. 1, 1891, was \$31,381,158.30, and on Jan. 1, 1892, \$27,929,415.55, a decrease of \$3,451,742.75. This decrease is accounted for by the payment from the sinking fund of the debt incurred on account of the Troy and Greenfield Railroad and the Hoosac Tunnel, amounting to \$3,834,742.75, and by the issue of new bonds as follow: For the metropolitan sewerage loan, \$368,000; for the armory loan, \$15,000; total issue, \$383,000.

The total value of the several sinking funds held by the State on Jan. 1, 1891, was \$21,568,960.37; the increase during the year, \$1,355,696.41; the decrease by payment of the funded debt, \$3,834,742.75; and the total value of the funds on Jan. 1, 1892, \$19,089,914.03.

Valuation.—The total assessed valuation of property in the State for 1891 was \$2,245,042,273, personal estate being assessed at \$566,496,761, and real estate at \$1,678,545,512. The increase in the total assessment over 1890 was \$90,907,647. Included in the assessment were 4,498,012 acres of land, 361,066 dwellings, 181,705 horses, 257,396 neat cattle, 47,536 sheep, and 40,776 swine. Personal estate in Suffolk County, which includes the city of Boston, was valued at \$207,821,828, and real estate at \$677,828,400. For 1891 a total State tax of \$1,500,000 was levied.

Legislative Session.—The General Court of 1891 assembled on Jan. 7 and was prorogued on June 11, having been in session one hundred and fifty-six days. Although the Senate consisted of 20 Republicans and 20 Democrats, there was no delay in the organization of that body, Senator Henry H. Sprague, Republican, being re-elected President without opposition. In the House, the Republicans, being in the majority, re-elected William E. Barrett as Speaker, without opposition. During the session 431 acts and 118 resolves were passed and became law. A bill redistricting the State for members of Congress, on the basis of the national census of 1890, was passed and received the Governor's approval. The State is thereby divided into 13 districts, in 5 of which are included portions of the city of Boston.

No opposition was offered this year to the demands of the farmers for legislation protecting them against the sale of imitation butter. Early in the session an act was passed prohibiting the manufacture and sale of any such article, but allowing the production and sale of oleomargarine

without coloration and in such a manner as would apprise the consumer of its real character. The inspectors of milk were given authority to enforce these provisions. Later another act was passed which imposes a penalty upon any person selling or offering for sale oleomargarine, butterine, or other substance imitating butter, whether colored or not, to any one who asks for butter. It is further provided that dealers in oleomargarine and like substances shall post conspicuously in their places of business a placard saying that oleomargarine or butterine is sold there; peddlers are required to post upon each of their vehicles a placard showing that they are licensed to sell oleomargarine; tubs or packages must be labeled with a placard bearing the word "oleomargarine"; and at hotels, restaurants, and lunch counters guests or patrons shall be notified when served with any substance in place of butter. Every opened tub or package offered for sale shall have upon it a placard bearing the word "oleomargarine." A dairy bureau, consisting of three members of the Board of Agriculture appointed by the Governor, is directed to enforce this act, with the aid of an assistant secretary of the Board of Agriculture, and is authorized to expend not over \$4,000 in this work.

The act of 1890 creating the Gypsy-moth Commission was repealed, and the work of exterminating the gypsy-moth pest was intrusted to the State Board of Agriculture.

The clause in the license law forbidding the sale of liquor over a public bar was stricken out, and a provision was introduced prohibiting the sale of liquor at tables in any room where liquor selling is the exclusive or principal business. A radical change was made in the law respecting drunkenness. Police officers may now release from custody any person arrested for intoxication, after he has become sober, if satisfied from his affidavit that he has not been arrested for intoxication twice before within a year. Whether the prisoner is released or not, his affidavit shall be referred to a probation officer, who shall investigate the court records, and if there is no record against him of two arrests within the year, no further action shall be taken in the case, except to discharge the person if he is still under arrest; but if the records show two or more arrests, he shall be tried for drunkenness, being first rearrested if he has already been discharged. At the same time the penalty for drunkenness was changed to imprisonment for not more than one year, without fine, in every case.

The only important labor measure enacted prohibits the imposition of fines upon or the withholding of wages from weavers for imperfections that may arise in the process of weaving. The State Supreme Court, later in the year, decided that this act was unconstitutional and void.

Cities and towns were empowered to manufacture and distribute gas and electricity. A tax of 5 per cent. was imposed on collateral inheritances, when the estate is valued at over \$10,000.

The city of Boston was authorized to borrow outside of its debt limit \$3,500,000 for park purposes and \$1,000,000 for completing the public-library building. A board of survey was created with authority to lay out the course and grade

of streets over unimproved areas in the city. No streets shall be built over the areas so surveyed except those laid out on the plans of this board. The question of rapid transit in the city was referred to a commission, consisting of the mayor and city engineer, three members appointed by the mayor, and three appointed by the Governor.

For the purpose of preventing the manufacture, sale, or importation of clothing made in unhealthful places, the appointment of two additional inspectors on the district police was authorized.

Fraternal beneficiary organizations, endowment companies, and bond schemes received a large share of attention. A stringent bill affecting the first named was reported, and a contest arose as to whether it should affect all companies or only those formed since a certain date in 1890, the result being that the whole matter was sent over to the next Legislature. The bond schemes were forbidden.

Being satisfied that the Cape Cod Ship Canal Company was unable to complete the work intrusted to it, the Legislature refused an extension of its charter, and conferred its rights and franchises upon the Boston, Cape Cod, and New York Canal Company, on certain conditions.

The sum of \$75,000 was appropriated to secure a representation of the resources and progress of the State at the Columbian Exposition in 1893.

Two constitutional amendments which passed the Legislature of 1890—one abolishing the poll tax as a prerequisite for voting, the other providing that a majority of the members of each branch of the Legislature shall form a quorum to do business—were approved again at this session and provision was made for their submission to the people in November. An amendment for biennial elections, which was passed in 1890, failed of approval at this session. There was also passed for the first time an amendment striking out the constitutional requirement that the Governor shall be seized in his own right of a freehold in the Commonwealth of the value of £1,000.

Other acts of the session were as follow:

Giving to notaries public the jurisdiction and right to act in all counties.

Imposing a penalty for unlawfully issuing certificates of divorce.

Appropriating \$27,000 to enable the State Board of Health to examine into the best methods for protecting the purity of inland waters.

To prohibit the employment of prisoners outside of their place of confinement.

Prohibiting after Nov. 1, 1892, the heating of steam railroad passenger cars by stoves or furnaces placed within or attached to the car.

To authorize the State Board of Agriculture to collect and circulate information relating to abandoned farms.

To prevent excessive charges in the redemption of tax titles.

Incorporating the town of West Tisbury.

Requiring the polls to be opened at 6 o'clock in the forenoon on the days appointed for the election of State and city officers.

To provide a uniform system of counting and canvassing votes cast at elections.

Prohibiting the sale to any child under sixteen years of any candy or other article inclosing liquid or sirup which contains more than 1 per cent. of alcohol.

Constituting nine hours a day's work for county employés.

Limiting the height of buildings in cities to 125 feet above the street; elevators, sugar refineries, steeples, domes, towers, and cupolas excepted.

Giving the Commissioner of Corporations authority to change the names of corporations.

Raising the compulsory school age to fifteen years in cities and towns where opportunity is furnished for industrial education.

To authorize the Superior Court, in criminal cases, to sentence persons convicted, although an appeal has been taken, where such appeal seems frivolous.

To prohibit the manufacture and sale of children's toys and confectionery containing arsenic.

Giving to the Superior Court exclusive original jurisdiction of capital crimes. [The Supreme Court formerly had exclusive jurisdiction.]

Establishing a nautical training school, and appropriating \$50,000 for its maintenance, provided a suitable vessel for such school be furnished by the United States.

Giving the Commissioners of Savings Banks authority to prevent foreign co-operative banks from transacting business within the Commonwealth.

To establish a board of commissioners for the promotion of uniformity of legislation in the United States.

Incorporating the Trustees of Public Reservations, for the purpose of acquiring, maintaining, and opening to the public, under suitable regulations, beautiful and historic places and tracts of land in the Commonwealth.

To establish a sinking fund for the State House loan, due in 1901.

Education.—The following public-school statistics cover the school year 1890-91: Number of children between five and fifteen years, 376,491; number of all ages in the schools during the year, 376,986; average attendance, 278,603; teachers employed—men 1,016, women 9,630; average monthly wages of male teachers, \$118.07; female teachers, \$48.17; number of public schools, 7,239; average length of school year in months, 8.9. During the year 244 high schools were maintained, with 26,294 pupils in attendance, an increase of 3 schools and 977 pupils. Evening schools to the number of 266 were supported in 55 cities and towns. The number of teachers employed therein was 1,018, the total number of pupils enrolled 28,453, and the average attendance 14,526. The whole amount of money raised by taxation for the support of public schools, including only wages of teachers, fuel, and care of fires and school-rooms, was \$5,707,514.37, an increase of \$182,631.72 for the year. The amount expended for new school-houses was \$1,026,032.27. The expenditures for schools, exclusive of the sum paid for repairing and erecting school-houses, was \$6,652,972.67, or \$17.67 for each child of school age. The total expenditures, including repairs and new school-houses, aggregated \$8,554,545.57 or \$22.72 for each child of school age.

During the year 471 private schools and academies, having an attendance of 59,030 pupils, were in operation.

The new law under which two or more small towns may unite in securing the services of a trained superintendent of schools is producing satisfactory results.

At the State normal schools the following pupils were in attendance during the year: At Bridgewater, 234; at Framingham, 167; at Sa-

lem, 269; at Westfield, 139; at Worcester, 170; at the Normal Art School, 225.

Charities.—The following is a summarized statement of the condition of the State charitable institutions: Danvers Lunatic Hospital, patients on Oct. 1, 1890, 813; admitted during the year ensuing, 366; discharged, 362; remaining Sept. 30, 1891, 817; total expenses, \$166,411.52. Northampton Lunatic Hospital, patients on Oct. 1, 1890, 495; admitted, 141; discharged, 183; remaining Sept. 30, 1891, 453; total expenses, \$82,721.18. Westborough Insane Hospital, patients on Oct. 1, 1890, 508; admitted, 397; discharged, 412; remaining Sept. 30, 1891, 493; total expenses, \$98,008.28. Taunton Lunatic Hospital, patients on Oct. 1, 1890, 672; admitted, 238; discharged, 239; remaining Sept. 30, 1891, 671; total expenses, \$116,489.46. Worcester Lunatic Hospital, patients on Oct. 1, 1890, 785; admitted, 549; discharged, 509; remaining Sept. 30, 1891, 825; total expenses, \$172,327.20. Worcester Insane Asylum, patients on Oct. 1, 1890, 299; admitted, 165; discharged, 53; remaining on Sept. 30, 1891, 411; total expenses, \$68,042.07. State Almshouse at Tewksbury, insane department, patients on Oct. 1, 1890, 364; admitted, 42; discharged, 42; remaining on Sept. 30, 1891, 364; almshouse department proper, inmates on Oct. 1, 1890, 802; admitted, 2,815; discharged, 2,772; remaining on Sept. 30, 1891, 845. State Farm at Bridgewater, inmates on Oct. 1, 1890, 545; admitted, 733; discharged, 666; remaining on Sept. 30, 1891, 612 (of the latter number 223 are insane persons); total expenses, \$74,989.09. At the Perkins Institution for the Blind there were 208 pupils on Sept. 30. The total receipts for the year, including a balance of \$60,415.35, were \$290,466.54, and the expenditures and investments \$284,450.17, leaving a new balance of \$6,016.37. At the School for the Feeble-minded at Waltham there were 296 pupils on Sept. 30, 1890; 83 were admitted during the year and 34 discharged, leaving 345 in the school on Sept. 30, 1891. The total expenses of the institution for the year, including \$78,846.24 for new buildings, were \$150,288.26.

Prisons.—The number of convicts at the State Prison on Oct. 1, 1890, was 580; during the year following 164 convicts were received and 129 discharged, leaving 615 remaining on Sept. 30, 1891. The net cost of supporting the prison during the year was \$148,487.26, from which may be deducted the profit of \$10,075.65 derived to the State during the year from the manufactures and other industries carried on in the prison by convict labor. At the State Reformatory at Concord there were 733 prisoners on Oct. 1, 1890, 668 were received during the year ensuing, and 589 were discharged, leaving 812 remaining on Sept. 30, 1891. The current expenses of the institution were \$175,430.86, from which should be deducted \$16,922.66, the profit made upon the labor of prisoners, and \$6,953.36 received from rents, etc., leaving \$151,554.84 as the net cost of the institution for the year. The Reformatory Prison for Women contained 242 inmates on Oct. 1, 1890, 216 were received during the year following, and 210 discharged, leaving 248 remaining on Sept. 30, 1891. The expenditures for the year were \$50,611.85, and the receipts from labor of prisoners

and other sources \$12,739.95, making the net cost of the institution \$37,871.90.

At the several county prisons and houses of correction there were 3,945 prisoners on Oct. 1, 1890, 15,439 commitments to these institutions were made during the year following, 15,211 prisoners were discharged, and there were 4,173 remaining on Sept. 30, 1891.

The Industrial School for Girls, at Lancaster, on Sept. 30 contained 91 pupils; the Lyman School for Boys, 200; and the Primary School, at Monson (at which neglected and dependent children and those convicted of light offenses are cared for), 329, of whom 259 were boys, 58 girls, and 12 women.

Banks.—During the year 2 savings banks, 4 safe-deposit and trust companies, and 5 co-operative banks were organized and began business. There are now in the State 181 savings banks, with assets of \$390,784,807.51; 19 trust companies, with assets of \$82,124,296.16; 108 co-operative banks, with assets of \$11,874,530.14; 2 collateral loan companies, with assets of \$378,207.72; and 2 mortgage loan companies, with assets of \$1,891,704.73; making a total of 312 institutions, with assets of \$487,053,546.26, and an increase of 11 institutions, and of \$27,718,486.04 in assets. The savings banks show total deposits on Oct. 31, 1891, amounting to \$369,526,385.54, an increase of \$15,933,448.30 for the year.

Licenses.—At the December elections of this year 16 cities voted for license and 12 for no license, being a gain, compared with 1890, of 4 cities on the side of no license. The total city vote shows a majority of 8,274 votes against license. Of the 321 towns, about 250 voted no license.

Political.—On Sept. 1 a State convention of the People's party met at Boston and nominated the following candidates for State officers: For Governor, Henry Winn; for Lieutenant-Governor, William J. Shields; for Secretary of State, Joseph D. Cadle; for Treasurer, Thomas A. Watson; for Auditor, William O. Wakefield; for Attorney-General, Israel D. Andrews, succeeded on the ticket by Herbert McIntosh. At an earlier convention, held in Boston, an organization for the party had been perfected and a platform adopted, which embraced many of the doctrines of the Farmers' Alliance, and some of the principles of the Nationalists, a faction believing in government ownership and control of property and industries.

On Sept. 9 the Prohibitionists met in State convention at Worcester and nominated the following ticket: For Governor, Charles E. Kimball; for Lieutenant-Governor, Augustus R. Smith; for Secretary of State, Alfred W. Richardson; for Auditor, William O. Armstrong; for Treasurer, Samuel B. Shapleigh; for Attorney-General, Wolcott Hamlin. The candidate for Auditor was a colored man, his nomination being made for the purpose of attracting the colored vote, heretofore almost entirely Republican. The platform contains the usual denunciation of the liquor traffic, calling special attention to the great exportation of rum from Boston to Africa, amounting to over 100 barrels a day, and favors civil-service reform, universal suffrage without regard to sex, subject only to an educational qualification, restriction of immigration, a currency every dollar of which shall

be equal to the best known to commerce, and legislation to suppress trusts and to secure a more complete taxation of personal property. On the public-school question the following declaration was made:

The public common school is a foundation stone of the republic. We will sacredly guard it from removal or undermining by hostile hands. To this end, and that its power and beneficence may continue unabated, we are against any sectarian interference therewith, and would forbid the appropriation of any public money for the support of sectarian schools or teaching.

The Republican State Convention was held at Boston on Sept. 16. Two candidates for the gubernatorial nomination were presented to the convention, Hon. William W. Crapo and Hon. Charles H. Allen, of whom the latter was selected on the first ballot by the following vote: Allen, 713; Crapo, 514; scattering, 4. For the office of Auditor, Gen. John W. Kimball was selected over five competitors. Lieut.-Gov. Haile, Secretary of State Olin, Treasurer Marden, and Attorney-General Pillsbury were renominated without opposition. The platform approves the national Administration, denies the charges of Republican extravagance in enacting pension laws, favors further restriction of immigration, and contains the following:

It is a cardinal principle of the Republican party that full and adequate protection should be given to every citizen in every State and Territory of the Union in the enjoyment of his civil and political rights; and it is essential to the safety of our Government that the right of ballot and the purity of elections should be maintained sacred and inviolate.

We are unalterably opposed to the unlimited coinage of silver by this country, excepting upon a uniform international ratio to gold, and under similar restrictions and conditions, both as to the government and to individuals, as prevail in other leading nations of the world. We condemn the Democratic party for its indorsement of free silver in the party platforms in Ohio, Iowa, Indiana, Michigan, and 18 other States.

We again affirm our unwavering fidelity to the American system of protection, and our belief in its inestimable value to the interests of this country.

We favor the most efficient legislation for the restriction, prevention, and suppression of the evils arising from the sale of intoxicating liquors, and we demand that all laws for the promotion of this desirable result be faithfully, diligently, and vigorously enforced.

The standard of living and education among the working people is the true test of the prosperity of a country; their welfare is the welfare of the State, and all just and reasonable legislation calculated to maintain and advance the present high standard of Massachusetts in this regard, and to insure to all the full enjoyment of the fruits of their labor, should receive our earnest approbation and support.

On Sept. 29 the Democratic State Convention met at Worcester, and renominated Gov. Russell and Auditor Trefry by acclamation. John W. Corcoran was again made the candidate for Lieutenant-Governor, and Eldridge Cushman for Secretary of State. For Treasurer the nominee was James S. Grinnell, and for Attorney-General George M. Stearns. The platform contains the following:

The Republican party has fastened upon the Commonwealth a system by which the most important functions of our State government are vested in boards which are practically beyond the power of the Governor and responsible to nobody. We demand that

members of all commissions, as well as other administrative appointees, be made responsible to the people by being made accountable to the people's Governor.

We believe in free schools supplied with free textbooks. Believing not only in their maintenance, but in their constant improvement, we are in favor of establishing an efficient system of manual training for both sexes, and of increasing the school age in connection therewith.

We reaffirm our sympathy with all wise and constitutional measures in the interests of manual labor, and we renew the declarations upon this subject in our platform of last year; we indorse the recommendations contained in the Governor's inaugural message and his action in regard to suppressing the evils of the sweating system.

A demand was made for the repeal of the McKinley act so far as it increases rates of duties, and for the enactment of a genuine measure of tariff reform. The recent silver legislation of Congress was denounced; and the free coinage of silver, in the absence of international agreement, was disapproved.

A fourth ticket was placed in the field by a small faction, known as the Socialist Labor party, containing the following names: For Governor, Harry W. Robinson; for Lieutenant-Governor, George R. Peare; for Secretary of State, Edward W. Theinert; for Treasurer, Charles Friede; for Auditor, Squire E. Putney; for Attorney-General, James Waldo.

During the canvass, the Republican and Democratic candidates for Governor were heard upon the stump in every county of the State. The vote for Governor was as follows: Russell, 157,982; Allen, 151,515; Kimball, 8,968; Winn, 1,772; Robinson, 1,429. Although Allen was defeated, all the other candidates on the Republican ticket were elected by considerable pluralities. For Lieutenant-Governor, Haile received 157,216 votes; Corcoran, 145,865; Smith, 9,346; Shields, 2,399; and Peare, 1,471. The plurality of Olin for Secretary of State was 15,384; of Marden for Treasurer, 14,155; of Kimball for Auditor, 12,769; of Pillsbury for Attorney-General, 12,817. Members of the State Legislature were elected as follow: Senate—Republicans 24, Democrats 16; House—Republicans 149, Democrats 90, Prohibitionist 1. To the Executive Council, 6 Republicans and 1 Democrat were elected. The proposed amendment to the State Constitution abolishing the poll tax as a prerequisite for voting was adopted by a vote of 144,931 yeas to 53,554 nays; the amendment fixing the number of members necessary for a quorum in the Legislature was adopted by a vote of 152,688 yeas to 29,590 nays.

MEISSONIER, JEAN LOUIS ERNEST, French painter of *genre* and historical subjects, born in Lyons, France, on Feb. 21, 1815, according to Vapereau (although the date has been given as 1811 by Meissonier's friend Jules Claretie, and as 1813 by other writers), died in Paris on Jan. 31, 1891. Meissonier was the fourth child of a *commissionnaire de marchandise*, and his childhood was cramped by extreme poverty. Throughout his life he was unwilling to speak of his earlier years. The evolution of his peculiar talent was a repetition of the familiar story of a natural gift demanding expression in the face of many obstacles. "When in school," says Vapereau, "he manifested a very lively

taste for painting, and obtained permission, not without much difficulty, to take lessons of a professor of drawing at Grenoble, M. Feriot." At the age of nineteen he went to Paris to devote himself to the study of art. "Well for him that he was born robust!" exclaimed Jules Claretie in after years. "But what is a struggle even in misery for a true-born artist? I have read some-

JEAN LOUIS ERNEST MEISSONIER.

where that in these dark days of his *début* Meissonier used to work side by side with Daubigny at the production of pictures for export at five francs a square metre. It is, perhaps, only a studio tradition. But it is a fact that Tony Johannot, to whom Meissonier exhibited his sketches at the time, gave him encouragement, and that Léon Cogniet opened his studio to him." Yet he remained only four months with Cogniet. Meissonier may fairly be accounted a born draughtsman, for his early training was hampered and imperfect.

It was impossible for Meissonier to maintain himself by painting alone in the first third of a century which in its last third witnessed millions offering scores of thousands of francs for his works. He resorted to illustration, the frequent resource of youthful painters, not because he loved illustration the more, but because it was necessary to live. In this field also he met constant rebuffs. Once he went timidly to the Rue St. Jacques and offered an editor four sepia drawings which he hoped might be used for the illustration of a fairy tale. It is to the editor's credit that he saw merit in the work, but the merit was not deemed sufficient to counterbalance the expense of engraving the drawings, and he bowed the heart-sick young artist out. There is another story of a publisher who was accustomed to keep Meissonier waiting in an ante-room where paper and pencils lay upon a table, placed as a decoy for the artist, who almost unconsciously began to make sketches which became the booty of the publisher on his departure. Meissonier's earliest illustrative work is considered to be five woodcuts representing humorous and pathetic

scenes in the life of "The Old Bachelor." About the same time he drew three designs for the "Bible of the Sieur Raymond," published in 1835. For the "Discourse on Universal History," also published by Curmer, he drew the figures of Isaiah, St. Paul, and Charlemagne, and many head and tail pieces and ornamental letters. He illustrated a new edition of Lamartine's "Chute d'un Ange," but this was before the appearance of Laroignat, and the blocks of Meissonier's earliest works, sent to England to be engraved, are said by M. Burty to have been "massacred." He furnished two designs for an edition of "Orlando Furioso," 43 for a "Paul and Virginia," and 86 designs reproduced in wood, with one on steel, for the "Chaumière Indienne," issued by M. Curmer in 1838. Meissonier's work in the latter volume includes landscapes, plants, and foliage, and ornamental letters as well as figures. A vignette landscape, "The Valley of the Tomb," won especial praise for Meissonier from his fellow-artists. To M. Curmer's official account of the removal of the remains of Napoleon I from St. Helena to Paris Meissonier contributed two illustrations, the "Entrance into Havre" and "The Quays at Rouen." This was in 1840. From 1841-43 Meissonier regularly contributed designs, figure drawings, head and tail pieces, and ornamental letters to M. Curmer's serial publication "Les Français peints par eux-mêmes." Two children's books published in 1845 were illustrated by Meissonier, and he executed 10 drawings, engraved on wood, for "Lazarello de Tormes." He also furnished some compositions for the "Comédie Humaine" of Balzac.

In after years Meissonier's work as an illustrator was almost forgotten until biographers and collectors began to attach to it an importance due in their eyes to his swelling fame as a painter. Yet this work has a marked value in itself, and it is of significance because it embodies an influence upon his art. In drawing on the block for the wood engraver he was compelled to furnish most careful execution and draughtsmanship most accurate in details. Of necessity his subjects were rendered in miniature. The books which he illustrated and the old-time costumes which he studied undoubtedly exercised some influence upon the choice of subjects for his paintings.

His work as an illustrator antedated but a little his *début* as a painter. Of "The Visitors," owned by Sir Richard Wallace, Meissonier wrote: "My first picture, exhibited in 1833 or 1834, bought for a hundred francs by the Society of the Friends of Art at Paris, and adjudged to M. Poturle, who has always kept it. After his death it was bought by Sir Richard Wallace." The picture represents an old gentleman receiving two visitors, all in the costume of James I of England, and is said to be remarkable, not so much for the detail, as for the Rembrandtesque management of lights. In 1836 Meissonier exhibited "The Chess Players" and "The Little Messenger," which, according to Theophile Gautier, "attracted at once a crowd of admirers, and in which the artist struck his true line as the conscientious and skillful painter of miniature subjects." This was a new departure in the French art of that day. Like his first work,

these two pictures were sold for only 100 francs apiece, but by them the artist scored a hit. He followed it up with pictures of smokers, readers, chess players, and sentinels. Says one writer: "His earlier style, and, as some think, his best, was a frank study of character and costume for its own sake. He painted pictures without any thought of a motive, for nothing but the delight of representing simple subjects with sincerity and force. The figures that then sat to his imagination were toppers, chess players, serenading cavaliers, bibliophiles ensconced in snug corners of seventeenth-century libraries, and so on." Much attention was bestowed upon Meissonier's pictures in the Salon of 1830. These were "The Doctor" and "The Monk at the Bedside," both considered to have been inspired by "Paul and Virginia," which the artist was then illustrating, and both "remarkable for the expression of an intensity of sympathy which has subsequently disappeared from Meissonier's works." Of the same date is the first "Smoker," and a little later "A Beer Drinker." In the Salons of the next ten years Meissonier was represented by a similar class of studies. "The Reader" of 1840 is one of the more famous. "The Skittle Players" ("La Partie des Boules"), exhibited in 1849, is counted as one of the artist's masterpieces. His fame was already established. The third medal awarded him in 1840 was followed by a second medal in 1841, first medal in 1843 and 1848, and the cross of the Legion of Honor in 1846. He had become a shining mark for the critics of the old school, who accused him of always "contemplating nature through the small end of a telescope," and of studying "stuffs, gilding, interiors, and a still life to which living nature is only an accessory." But Meissonier had already gained a large popular following.

In the famous Salon of 1853, which contained Delacroix's "Pilgrims of Emmaus" and Rosa Bonheur's "Horse Fair," Meissonier, among other pictures, exhibited the well-known example "The Bravos" and a panel painting of a subject from the "Decameron," noteworthy from the circumstance, rare in Meissonier's works, of its presenting several female figures. "An Incident of Civil War," dated 1852, and "Moreau and Dessoles before Hohenlinden," dated 1853, were among the artist's first military subjects of importance. At the Universal Exhibition of 1855, where he received the "grand medal," Meissonier was represented by four panel paintings, small, of course, but up to that time his masterpieces. They were "La Rixe" ("The Tavern Brawl," familiar through colored prints), "Les Bravos," "La Lecture chez Diderot," and "The Skittle Players." One writer has said that Meissonier painted the "Diderot" to confute the critics, who declared him equal only to studies, never to historic work; that he painted the "Portrait of the Sergeant," a subject in full out-of-door light, to answer those who said that he could only paint interiors; and that "La Rixe" was his reply to those who claimed he could never paint movement. The last picture was presented by Napoleon to the Prince Consort of England. Yet critics who had a right to be heard protested against the tendency personified by Meissonier. Said one: "The Exposition Universelle finds the new school of the Trivial

denying art, genius, inspiration, poesy, to hold to an impossible cult of reality."

At about this time Meissonier began to paint pictures a little larger in size, but his perfection of execution and finish remained unimpaired. In 1856 he was made an officer of the Legion of Honor. In 1857 his "Confidence," called by Gautier "a pearl and a marvel among pictures," and his "Amateur in a Studio" were first exhibited. The "Soldiers at Cards," painted in 1858, was sold by the artist for \$5,000, and sold in this city in 1876 for \$11,500. The Emperor Napoleon III began to bestow liberal commissions upon Meissonier, who visited Italy once or twice to secure sketches for "The Emperor at the Battle of Solferino," a picture long announced, but not exhibited until the Salon of 1864. This was the first of a series of eight pictures projected by the artist to illustrate the "Napoleonic cycle." In 1860 a remarkable loan exhibition of modern works was held in Paris, at which Meissonier was most favorably represented. In 1861 he was elected a member of the Academie des Beaux Arts, succeeding Peyol. M. Chesneau and other thoughtful writers began to analyze the success of Meissonier as more than a change in fashion—as a significant development in French civilization. In 1861 he exhibited the "Portrait of Madame T.," his first portrait of a lady. To the English International Exhibition of 1862 Meissonier contributed four pictures, unnoticed in Mr. Palgrave's introduction to the catalogue of the French school. In the same year the "Napoleon in the Campaign of France" was shown in Paris and "The Halt" was finished for the Duc de Morny. The Salon of 1864 contained the "Solferino" and "The Retreat of 1814." For the latter picture Meissonier had the coat worn by Napoleon I copied by a tailor "with a Chinese exactitude." He put the garment on himself, mounted a wooden horse in his studio, saddled like the Emperor's steed, and passed hours in studying his figure and the fall of the skirts in a mirror. At another time he moved his wooden horse to the housetop during a snow-storm, and while the flakes whitened his coat and the cold changed his face to a livid hue he patiently sketched the effects which he saw in the mirror before him. In his studio he had a miniature landscape made and strewn with white powder, representing snow, through which he drew models of tumbrils and heavy wagons, that he might study the furrows and the fall of the snow. In his work and in his painstaking capacity for the closest application and study Meissonier was indefatigable. The jurors at the Salon of 1864 refused to award the "grand medal" to the painter of those remarkable pictures, and were soundly rated by Edmond About and other critics. Probably the best known of Meissonier's works, certainly of his Napoleonic pictures, is the "1807," "a page of history, but unlike the '1814,' a page of triumph." Upon this painting the artist worked for fifteen years, and it remains, we believe, the largest of his works. He modeled all the horses in wax and every figure was drawn from life. This is the picture for which the late A. T. Stewart paid \$60,000. At the sale of the Stewart collection, in 1887, this picture was purchased by Judge Henry Hilton for \$66,-

000 and presented to the Metropolitan Museum of Art. In the last years of his life he painted a large water color of the same subject for an English print publisher. In 1866 Meissonier painted the "Marshal Saxe and Staff," sold for \$8,600 at a New York sale in 1876.

The year 1867 may be regarded as bringing the culmination of Meissonier's public triumphs. In that year the International Exhibition, held in Paris, included a magnificent fine-arts section, and all the art critics of Europe gathered for the fray. Meissonier were represented by 14 pictures. He received one of the eight grand prizes, and when the prizes was presented by the Emperor his "Battle of Solferino" formed the center of the "Art Trophy" erected in the space cleared for the ceremony. The same year he was made commander of the Legion of Honor. English critics at the exhibition spoke of Meissonier's "heartlessness" as compared with Edouard Frère or Israels. Said one: "Wonderfully minute are the works of Meissonier, and they convey a great number of facts in a very small compass. But, after all, what are these facts? What does he really tell us of the joys and sorrows, hopes and fears, loves and hates of human kind? Much as we admire him, does he ever touch our hearts?" But this exhibition showed clearly that Meissonier, although his position was unrecognized by many critics, had become the chief figure in French art. At the outbreak of the Franco-Prussian War Meissonier, who had been nominally attached to the Emperor's staff, was made colonel of foot regiment, and it is said, among other adventures, that he narrowly escaped being shut up in Metz with Bazaine. The exhibition of the Wallace collections in London in 1872 gave the English a better opportunity for making acquaintance with Meissonier, and at the Vienna Exhibition of 1873 the artist won fresh laurels. In 1877 he sent to the Salon a portrait of Dumas. He also painted a portrait of Mr. Vanderbilt, and one of Mrs. J. W. Mackay, whose dissatisfaction with her portrait gave rise to an acrimonious controversy. Out of this affair grew the Meissonier Exhibition of May, 1884, which was designed by the friends of the artist to be a "vindication." This exhibition contained 155 pictures, about one third of the artist's work, but it can not be said to have presented his peculiar talent in any new light. It afforded, however, a valuable opportunity, since for many years of his life Meissonier rarely exhibited in the Salon. His next conspicuous appearance before the public was in the controversy among French artists, which led to the establishment of a new or rival Salon in 1890. Meissonier was a leader among the seceders, and exhibited a picture called "Octobre, 1806." So far as his art was concerned, Meissonier's industry remained unabated to the close of his life, but his execution grew harder and more constrained, and his coloring more harsh and metallic in quality.

Meissonier's etchings are not numerous. The more important are: "La Sainte Table," "L'Adresse du luthier Vuillaume," "Le Petit Fumeur," "Le Vieux Fumeur," "Les Apprêts du Duel," "Les Pecheurs," "Il Signor Annebale," "Les Reitres," "Le Sergent," and "M. Polichinelle." He used an extremely fine point in his

etching, but his eulogists consider that the minuteness of his detail is lost sight of in a general "largeness of effect."

At death of Meissonier, which was followed by a pompous funeral, he left a widow, to whom he was married a few years before, and a son, Charles Meissonier, a painter of some talent, whose mother, Meissonier's first wife, was a sister of the artist Steinheil. Meissonier's career was rendered extraordinary by his isolated position in art, the perfection of his execution, the remarkable prices paid for his work, and the exalted place which he occupied in the popular estimation. For nearly two generations this "painter of the infinitely little" ruled the kingdom of Lilliput alone. He was imitated by artists like Plassan, Chavet, Fichel, and Fichelet. He was approached only by Bargue. Among artists of the past he was compared with the Dutch masters of the seventeenth century, with Terburg, Gerard Dow, Metz, and Mieris. So far as execution is concerned, his best work deserves much of the admiration which has been lavished upon it. His executive ability in his chosen field was something to wonder at. His finest achievements will always retain a real and a considerable value. That his was the highest art no one can claim seriously. It was the "how" rather than the "what" which interested him. The ideal, the sentimental, the moral, never found expression in his art. He remained unmoved by contemporary currents of thought and feeling, and a conception of humanity for humanity's sake was reflected in nothing which he did. He was a virtuoso among painters, or, to use another simile, a splendid mechanism. It is natural that there should have been some differences among his critics. His admirer Theophile Gautier claims for his work "the serious qualities of grand painting"; Menard wrote that "it is always the man rather than the accessories which plays the principal part in his pictures"; Edmond About pointed to his faultless drawing and the "dignity and elegance of his lilliputian personages"; and Chesneau emphasized Meissonier's study of the "expression of feeling, especially the refinements of the intellect." Much of this may be admitted without affecting the final judgment upon Meissonier's art. It is not enough to say, as one writer has said, that "Meissonier's pictures interest the mind like clockwork, . . . like any fine and successful exhibition of the mechanical talent." It is not an unfair summary which Hamerton made when he wrote: "Perfection in any kind of art is so rare that when we meet with it we are sure to take notice of it. . . . Meissonier is not a man of any grandeur or sublimity of genius, and he has apparently no tenderness, but his keen observation and ready, accurate hand have made him king of his own realm in art, and his work, I suppose, will never diminish in money value, because such work must always be excessively rare."

Of hardly less interest to the student of character is Meissonier's independence of the art as well as the actual life of his time. His boyhood was the old age of David, the leader of the classical school in which Ingres and Isabey were the foremost pupils. But Meissonier was no more infected with classicism than with romanticism

when Delacroix headed the romantic movement. Severe academic art as typified in Paul Delaroche never swerved him from his purpose. The influence of Constable and Bonington, which stimulated Theodore Rousseau, "the father of modern French landscape art," affected Meissonier not a whit. Before Turner's death Meissonier himself had become an influence in French art and a bone of contention for critics. He saw Millet, Corot, Dupré, and Diaz win slow recognition, and finally fame. His life-time stretched from the classicism of David to the impressionism of Claude Monet and Degas. His purposes, his methods, and to a great extent his subjects were the same at the end as at the beginning of his career.

In other respects also Meissonier was exceptional. No artist of this century received in his life-time such prices as have been paid to Meissonier or his agent for his works. For the "1807" he received \$60,000, and for the "Arrival at the Chateau," in the Vanderbilt gallery, \$40,000. His "1804," formerly in the Delahante collection, was re-sold by dealers to M. Chauchard, the owner of Millet's "Angelus," for a price reported to be \$100,000. Yet Meissonier was not a rich man, and it was an effort for him to maintain his two costly establishments in the Boulevard Malesherbes, and at Poissy. In both cases he was the architect, and at his country house he was the designer of even the furniture and the silver table service. Both places have been frequently described by newspaper correspondents, for whom this "artist of millionaires" has been a never ending-theme. In person, Meissonier was small, almost dwarfish, with bowed shoulders, long white hair, a flowing white beard, prominent, slightly hooked nose, and keen dark eyes.

The number of Meissonier's paintings owned in this country may be estimated at about 75. Among the owners are the Metropolitan Museum of Art, Mrs. William H. Vanderbilt, Cornelius Vanderbilt, Mrs. Paron Stevens, William W. Astor, J. D. Rockefeller, Jay Gould, D. O. Mills, Theodore Havemeyer, and Henry C. Gibson, of Philadelphia.

MELVILLE, HERMAN, an American romancer, born in New York city, Aug. 1, 1819; died there, Sept. 28, 1891. His great-grandfather, Allan Melville, emigrated to America from Scotland in 1748, and established himself as a merchant in Boston. Allan's son, Major Thomas Melville, was a member of the Boston "tea party." He was the last person in that city to retain the old-fashioned cocked hat and knee breeches, and in this way became the original of Dr. Holmes's poem, "The Last Leaf." His son Allan, father of Herman, was an importing merchant of New York, a gentleman of fine culture, and an extensive traveler. On his mother's side, Herman was descended from Gen. Peter Gansevoort, also of Revolutionary fame, and known as "the hero of Fort Stanwix." His father's early death compelled the lad, who had passed most of his boyhood at and near Albany, to seek his own fortune. His fondness for English composition was early noticed by his Albany instructor, Dr. Charles E. West, now of Brooklyn, N. Y. It was doubtless the stories of travel told by his father and a seafaring uncle which originally influenced Melville to follow the sea as a vocation, and to ship

for Liverpool as cabin boy in 1837. Returning, he devoted some time to teaching at Lansingburg, N. Y., and Pittsfield, Mass., and received at one period, as his records show, a salary of "six dollars a quarter and board." Not long afterward he was again seized with the roving spirit, induced this time, perhaps, by the reading of Dana's "Two Years before the Mast," which appeared in 1840. On Jan. 1, 1841, the whaler "Acushnet" sailed from New Bedford,

HERMAN MELVILLE.

bound for the Pacific sperm-fishery, and Melville began the voyage that was responsible for his chief romance. The "Acushnet" had cruised for eighteen months when it reached the island of Nukuheva, in the Marquesas group. To that island in the summer of 1842, being wearied with harsh fare and hard treatment, the young sailor escaped from the whaler, with a single companion, familiarly known as "Toby." The latter's real name was Richard T. Greene. The comrades entered the hostile Typee valley by mistake, but through a fortunate accident made friends with the gentle but man-devouring savages. Their sojourn in the "happy valley" is the basis of Melville's first book, "Typee," and it may justly be said that in romantic descriptions of the South Sea islanders, their surroundings, and their ways of life, this book has never been excelled. "Toby" mysteriously disappeared, to find Melville in New York some months after the appearance of the first edition of "Typee." Melville himself remained for four months in the valley, and was finally rescued from his friendly captivity by an Australian whaler after a fight on the island's beach between two factions of the natives. From Nukuheva he sailed to the Society Islands in this vessel, and thence to the Hawaiian group, remaining long enough at both places to take observations of the countries and their people. At Honolulu he joined the crew of the frigate "United States," then on its return voyage, and, after a sojourn at one of the Peruvian ports, reached Boston in the autumn of 1844, where he was discharged. The following months were passed at Lansingburg, in the writing of his first book, "Typee." About the time it was finished an old friendship between his father's family and that of the late Chief-Justice Lemuel Shaw, of Massachusetts, was renewed, and this led to his engagement with Justice Shaw's daughter. Their marriage followed on Aug. 4, 1847, in Boston. Mr. and Mrs. Mel-

ville resided in New York city until 1850, when they purchased a farm-house at Pittsfield, Mass. The house was situated so as to command an uninterrupted view of Greylock Mountain and the adjoining hills, and was named Arrow Head, from the numerous Indian antiquities found in the neighborhood. Here he remained for thirteen years, occupied with his writing and with managing his farm. He had many literary neighbors in the surrounding towns, but was more intimate with Hawthorne than with any others during the latter's residence at the "red cottage" in Lenox. While at Pittsfield he was induced to enter the lecture field, and from 1857 to 1860 he filled many engagements in lyceums, chiefly speaking of his adventures in the South Seas. He lectured in cities as widely apart as Montreal, Chicago, Baltimore, and San Francisco, visiting the last-named place in 1860, by the Isthmus route, for the benefit of his health. Besides this voyage, he journeyed to England and the Continent in 1849 and 1856, partly to superintend the publication of English editions of his works and partly for recreation. At Pittsfield, besides his own family, Mr. Melville's mother and sisters were with him. As his children grew up, he found it necessary to obtain for them better facilities for study than the village school afforded; and so, in the autumn of 1863, the household was broken up and he removed with his wife and children to the New York house that was afterward his home, No. 104 East 26th Street. In December, 1866, he was appointed by H. A. Smyth, a former traveling companion in Europe, a district officer in the New York Custom House. This place he held until 1885, preferring it to indoor clerical work, and then resigned when the duties became too arduous for his failing strength.

Melville from early manhood indulged deeply in philosophical studies. Hawthorne has described in the "English Note-Books" his fondness for discussing such matters. This habit grew as he advanced in years, until his conversation with friends became chiefly a philosophical monologue. He was also much interested in all matters relating to the fine arts, and devoted most of his leisure hours to the two subjects. A notable collection of etchings and engravings from the old masters was gradually made by him, those from Claude's paintings being a specialty. After he retired from the Custom House, his tall, stalwart figure could be seen almost daily tramping through the Fort George district or Central Park, his roving inclination leading him to obtain as much out-door life as possible. His evenings were spent at home with his books, his pictures and his family, and usually with them alone; for, in spite of the melodramatic declarations of various English gentlemen, Melville's seclusion in his later years, and in fact throughout his life, was a matter of personal choice. More and more, as he grew older, he avoided every action on his own part and on the part of his family that might tend to keep his name and writings before the public. A few friends felt at liberty to visit him; he himself sought no one. Various efforts were made by the New York literary colony to draw him from his retirement, but without success. It has been suggested that he might have accepted a magazine

editorship, but this is doubtful, as he could not bear business details or routine work of any sort. His brother Allan was a New York lawyer, and, until his death in 1872, managed Melville's affairs with ability, particularly the literary accounts. It was late in the year 1845 when Melville completed the manuscript of "Typee." At nearly the same time his brother, Gansevoort Melville, sailed for England as secretary of legation to Minister McLane, taking the manuscript with him. It was offered to John Murray, who at once accepted it, buying the book outright for England for a moderate sum. The same plan was followed a year later with "Omoo." The house of Murray wished to include both volumes in their "Colonial and Home Library," so the title "Typee" was omitted, and that book was first published in England as "Melville's Marquesas Islands." In the United States Wiley & Putnam, whose London agent had contracted for the work, brought it out simultaneously with the English edition in the spring of 1846. Both "Typee" and "Omoo" (1847) were immediate successes, and Melville gained an international reputation at an earlier date than James Russell Lowell, who was born in the same year. Harper & Brothers issued "Omoo" in the United States, and "Typee" was placed with them two years later. This firm published all of Melville's works except four, not including two privately printed booklets. "Mardi, and a Voyage Thither" (1849) was severely criticised in some quarters for certain "metaphysical and morbid meditations." "Redburn, his First Voyage" (1849), more favorably received, was partly based on Melville's own experiences on his trip to Liverpool. "White Jacket, or the World in a Man-of-War" (1850) of course repeated much of his life on board the frigate "United States." "Typee" and "White Jacket" are the most consistent of his books. With "Moby Dick, or the White Whale" (1851) he reached the topmost notch of his fame. It is perhaps the most graphic and truthful description of whaling life ever written, although it contains some of the objectionable characteristics of "Mardi." "Pierre, or the Ambiguities" (1852) was the signal for an outburst of hostile criticism. In the year following its publication the great Harper fire occurred, destroying the whole stock of Melville's books—although the plates were preserved—and keeping them out of print at a most unfortunate time. Thereafter Melville's star waned. "Israel Potter" (1855) and "The Confidence Man" (1857) detracted from his reputation; and "The Piazza Tales" (1856), while containing the powerful stories of "Benito Cereno" and "The Bell-Tower," was published in an unattractive form. "Battle-Pieces, and Aspects of the War" (1866) embraces some of the best lyrics inspired by the civil war, notably "Sheridan at Cedar Creek." "Clarel, a Poem and Pilgrimage to the Holy Land" (1876), is written in the author's most mystical style. At the beginning of his physical decline he wrote and privately circulated a little story entitled "John Marr, and other Sailors" (1888), to which a few poems were appended. This volume was dedicated to W. Clark Russell, a genial correspondence with whom cheered Melville's last years. Mr. Russell considers Melville

the first of "the poets of the deep," using the word "poet" in its general sense. A few months before his death Melville collected his remaining shorter poems in a similar book, "Timoleon, etc." (1891), which was dedicated to "My Countryman, Elihu Vedder." The causes of the decline in popularity of Melville's writings may be found chiefly in his own career. Had he confined himself closely to an amplification of the interesting materials first discovered by himself, after the manner of a later Californian romancer, he might have gone on indefinitely producing works of more than common respectability. But he was led by his inclination for philosophical speculation to commit grave literary errors, which destroyed his popularity with the reading public. Perhaps, also, having once recited the story of his adventures in a series of romances, he felt his inability to create new characters and situations in the same domain; and his subsequent efforts might be considered as vain seeking after new successes. With lessening fame his desire for retirement increased, until a generation of writers for the press grew up to whom the announcement of his death was the revelation of his previous existence.

METALLURGY. The relation between theory and practice in metallurgy, with special reference to the indebtedness of the practical man to the scientific investigator, formed the subject of the address of Prof. W. C. Roberts-Austen, as president of the chemical section of the British Association. Practical metallurgists, the author said, are too apt to think that improvements in their processes are mainly the result of their own experience and observation unaided by science. On the other hand, those who teach metallurgy often forget that for the present they have not only to give instruction in the method of conducting technical operations, but have truly to educate, by teaching the chemistry of high temperatures, at which ordinary reactions are modified or even reversed, while they have further to deal with many phenomena of much importance which can not as yet be traced to the action of elements in fixed atomic proportions, or in which the direct influence of the atom is only beginning to be recognized. Metallurgical chemistry is, in fact, a special branch of chemical science which does not come within the ordinary sphere of the academic teaching of chemistry. It is often urged that metallurgical practice depends upon the application of chemical principles which are well taught in every large center of instruction, but a long series of chemical reactions exist which are of vital importance to the metallurgist, though they are not set forth in any manual of chemistry or dealt with in courses of purely chemical literature. The author gave particular attention to the influence of allotropism on the qualities of metal, and showed that interest was centered to a large extent on the question whether metals can, like many metalloids, pass under the application of heat or mechanical stress from a normal state to an allotropic one, or whether metals may even exist in numerous allotropic states. Prof. Spring, of Liège, has given evidence that in cooling lead-tin alloys polymerization may take place after the alloys have solidified, and it seems to be ad-

mitted that the same cause underlies both polymerization and allotropy. The phenomenon of allotropy is dependent upon the number of the atoms in each molecule; but we are at present far from being able to say what degree of importance is to be attached to the relative distance between the atoms of a metal or to the "position of one and the same atom" in a metallic molecule, whether the metal be alloyed or free, and it must be admitted that in this respect organic chemistry is far in advance of metallurgic chemistry. It is probable that minute quantities of foreign matter, which profoundly modify the structure of masses of metal, also induce allotropic changes. In the case of the remarkable action of impurities on pure gold, the author has suggested that the modifications which are produced may have direct connection with the periodic law, and that the causes of the specific variations in the properties of iron and steel may be thus explained. The recent use of nickel-steel for armor plate and the advocacy of the use of copper-steel for certain purposes are the industrial justification of the author's views as to the influence of the atomic volume of an added element on the mechanical properties of iron, and it is remarkable that the two bodies silicon and aluminum, the properties of which in the free state are so different, should nevertheless when alloyed with iron affect it in the same way. Silicon and aluminum have almost the same atomic volume. The consequences of allotropic changes which result in alteration of structure are very great. The case of the tin regimental buttons which fell into a shapeless heap when exposed to the rigorous winter at St. Petersburg is well known. The recent discovery by Hopkinson of the changes in the density of nickel-steel (containing 22 per cent. of nickel) which are produced by cooling to -30° affords another instance. This variety of steel after being frozen is readily magnetizable, although it was not so before; but its density is reduced by no less than 2 per cent. by the exposure to the cold.

Iron and Steel.—The year 1890 is declared by Mr. John Birkinbine, President of the American Institute of Mining Engineers, memorable as placing the United States in the lead of the nations in the production of pig iron. The total production in that year in the several countries from which reports had been received was: United States, 9,202,703 gross tons; Great Britain, 7,904,214 gross tons; Germany, 4,563,025 metric tons; France, 1,970,160 metric tons; and Sweden, 781,958 metric tons. Of the other pig-iron-producing countries, Austria-Hungary, Belgium, Italy, Spain, Canada, and Russia, none have produced in any one year 1,000,000 gross tons. The production of the United States for 1890 exceeded that of Great Britain by 16 per cent., and that of other countries by much more. Among the factors named by the author as aiding in securing its very large output to the United States is the fact that 7 per cent. of the amount never took the form of pig iron, but was taken in ladle directly from the blast furnace to the converters. Another factor was the association of the blast furnace and the chemical laboratory; another, the study which the consumers have given to the character and qualities of the pig

iron they use. During the last thirty years the United States has increased its relative production from 1 ton of pig iron for every 32 inhabitants to 1 ton for every $7\frac{1}{2}$ inhabitants. The Middle States have advanced from 1 ton to every 11 inhabitants to 1 ton for every $2\frac{1}{2}$ inhabitants. In Pennsylvania, in 1860 1 ton was produced for every 5 inhabitants; in 1870, 1 ton for every $3\frac{1}{2}$; and in 1890, 1 ton for every $1\frac{1}{2}$ inhabitant. A marked increase is shown in the Southern States, which in 1860 produced 1 ton for every 99 inhabitants; in 1870, 1 ton for every 66 inhabitants; and in 1890, 1 ton for every 10 $\frac{1}{2}$ inhabitants. In the Western States the production in 1860 was 1 ton for every 70 inhabitants; in 1870, 1 ton for every $32\frac{1}{2}$ inhabitants; in 1880, 1 ton for every 24 inhabitants; and in 1890, 1 ton for every 12 $\frac{1}{2}$ inhabitants.

Mr. Berkeley, President of the English Institution of Civil Engineers, specifies as the most conspicuous difference between English and American practice in the production of iron, the output from one blast furnace. The largest production in Great Britain seems not to exceed 750 tons in the week, while in America it has reached 2,000 tons. It might be questioned whether this large output from a single furnace was not obtained at some sacrifice of economy in material used and of wear and tear of furnaces. The production of pig iron in the United States amounted to 10,000,000 tons, or 2,000,000 tons more than that of the United Kingdom. This amount was wholly used within the country, showing a larger quantity of iron used per head of the population (300 pounds) than in any other part of the world. In Great Britain, after deducting from its production the quantity exported, the production equaled only 250 pounds per head of the population.

Describing the results which had been obtained from a plant erected at the Hoerde works for the elimination of sulphur from pig iron, Herr J. Massenez claimed that a saving of lime and coal was realized and a certainty that no red-short charges were obtained in the treatment in the converter, while the pig iron passed to the converter at a suitable temperature. There was also the further advantage that it rendered the Bessemer works independent of the time at which the individual blast furnaces were tapped, as the pig iron required for the Bessemer process could be taken at any time from the desulphurizing plant. Sir I. Lowthian Bell said that their experiences at Barrow with the mixer showed that it obviated the difficulties arising from the very great variation in the composition of the pig iron, which necessarily affected all future operations. If they had too much silicon they had far too high a temperature in the converter, and if they had too little silicon they had far too low a temperature, and the consequence was a variation in the product which was a great inconvenience and a cause of great waste. Since they had applied the mixer they got really an average, and thus avoided the variation. Mr. J. B. Stead, of Middlesbrough, said that he had tried an interesting experiment in mixing ferro-manganese with sulphide of iron and smelting them together in a crucible, the results of which bore out the conclusions arrived at by the author of the paper.

The following are some of the conclusions reached by Dr. E. J. Ball from his studies of the effect of carbon on iron: 1. That in iron containing 0.1 per cent. of carbon the tenacity of the metal increases by hardening either in oil or in water, with the temperature at which the metal is quenched, with a view to hardening, a maximum tensile strength being reached at a temperature of about 1,300° C. This temperature once exceeded, however, the tenacity of the metal diminishes, although the extensibility increases. 2. By raising the percentage of carbon from 0.1 to 0.2 the maximum tenacity is attained not at 1,300° C., but at a much lower temperature—about 1,000°—below the melting point of iron oxide, which, moreover, was not present. 3. By further considerably increasing the percentage of carbon, this point of maximum tenacity apparently disappears, and the annealed metal has nearly as high a tensile strength as the same metal which has been quenched in oil from any temperature up to a bright-red heat. Beyond this temperature, or when quenched in water, the hardened metal became so hard and brittle that it could not be gripped by the jaws of the testing machine.

In an address before the Iron and Steel Institute Dr. Wedding said that the progress of the metallurgy of iron in Germany had been practicable only with the help of science. Chemistry, physics, and mechanics have furnished the foundations for successive improvements. Sometimes new processes or devices have been directly deduced from the results of scientific inquiry; sometimes it has been the function of science to seek the principles underlying practical improvements, and thus to render their further development possible. In the matter of testing the tendency now is, departing from former rules, not to draw conclusions from single results, perhaps of a purely accidental character, but to make observations systematically, in series, and upon as many samples as possible, for the elimination of accidental errors; and also to establish the most suitable methods of testing, so that even if errors be involved they need not vitiate comparisons when the same methods have been employed. This latter tendency may be asserted likewise for the special branch of analytical chemistry which deals with the ores and products of iron. Here also are reported not so much the invention of wholly new methods as the determination of the sources and limits of error which are and always will be involved in the different methods employed. In the laboratory of the Rothe Erde, near Aachen, there are made in a year, by 2 or 3 chemists and 6 or 7 assistants, 26,500 chemical determinations and 62,000 bending and tensile tests, so that about 90 chemical determinations must be made daily. Phosphorus can be determined in thirty minutes, carbon in thirty, manganese in one hundred, silicon in sixty, and sulphur (cadmium method) in thirty. Thus it has been made practicable to maintain a continuous control of the running of works, and even, for instance, to wait before tapping a heat in the open-hearth furnace until its sufficiently complete dephosphorization has been chemically ascertained. The microscopy of iron is constantly widening its field. The method of examination of carefully

ground sections, instead of the surfaces of fracture, has been increasingly employed. The aid of photography has been invoked to make the results obtained by single observers the property of all.

In a paper on "The Future Situs of the Principal Iron Production of the World," Mr. Edward Atkinson, having shown that while the world's demand for iron and steel is likely to continue, as it does now, to tax the capacity of all producing countries, the United States is the greatest consumer. The enormous increase in demand will require the utmost effort of production at every point where the raw materials can be assembled at reasonable cost, and where furnaces can be operated to advantage on either continent. Supremacy in production must go to the point where the facilities for working the mines are best and the cost of assembling the materials at the furnace is least. Such a point appears to exist in the southern Appalachian region, the northwestern strip of which, from Pennsylvania to Alabama, as described in a letter from Mr. George B. Cowlam, of Knoxville, Tenn., and Mr. Goldsmith B. West, of Jacksonville, Fla., is an unbroken coal field, 39,000 square miles in area, containing from 2 to 5 thick workable seams of excellent coal. A valley strip of nearly equal area extending along the southeastern side of this coal field is a broad belt of persistent and heavy seams of fossil-iron ores, which run a little more than 40 per cent. of metallic iron, rather high in silica and phosphorus, containing considerable lime, and well adapted to furnace work. The southeastern rim of the valley strip is another belt of hydrated ores, brown hematite or limonite, running upward of 50 per cent. of metallic iron of desirable qualities. The mountain strip southwest of this valley contains large beds of very high grade iron ores, mainly magnetite Bessemer ores. Seven distinct beds large enough to be worked have been traced in different parts of this strip. The topography of the region is favorable to its development by a system of cross lines. The report by Carroll D. Wright, Commissioner of Labor, shows that as between the Northern and Southern States a great difference in the cost of iron and coal exists in favor of the South, although it is partly compensated as to the ore by the comparatively higher percentage of iron in the Northern States. Tables giving the cost of a ton of pig iron in 7 establishments in the Northern States, 5 in the Southern States, and 1 in Great Britain, show it to be from \$13.97 to \$16.50 in the Northern States, from \$9.16 to \$10.61 in the Southern States, and \$10.21 in the British establishment. As between 2 establishments in the United States, 8 on the Continent of Europe, and 3 in Great Britain, the cost of producing a ton of steel rails is from \$24.79 to \$27.68 in the United States, \$18.71 to \$24.52 on the Continent, and \$18.58 to \$21.90 in Great Britain. While reasons are pointed out for which the cost of labor, after all the materials have been assembled, should be less relatively per ton of steel rails in the United States than on the Continent or in Great Britain, the actual results show a difference as against the United States of \$3.78 in favor of Great Britain and \$3.49 in favor of the Continent.

An invention for the manufacture of continuous sheets of malleable iron and steel direct from fluid metal was described by Sir Henry Bessemer at the annual meeting of the Iron and Steel Institute. The author's first experiments were made in 1856, and resulted in his being able to produce a thin sheet some 3 or 4 feet in length. The sheet had a clear surface, was nearly free from oxidation, and absolutely free from scale. It was as tough as any rolled-iron plate he had ever seen, and it left no doubt in his mind of the entire success of this system of rolling thin sheets direct from molten metal. The invention was patented, but did not find favor with manufacturers. Since then the author had made improvements by which he proposed to remedy its defects, and it now became a question which was the least costly mode of dealing with a ladleful of fluid steel—forming it into massive ingots in molds or making it into thin sheets in the manner proposed.

In a paper at the Iron and Steel Institute on "Illustrations of Progress in Materials for Ship-building and Engineering at the Royal Naval Exhibition," Mr. W. H. White referred specially to the specimens of bending, stamping, flanging, and welding as showing the relative behavior of mild steel and iron under the shock of powerful explosives, and as serving also as a useful reminder of the enormous advantages and great economies which had resulted from the substitution of mild steel for iron in structures made up of plates and stiffening bars. Allusion was made to the increased sizes of plates now supplied in steel, and it was said that the difficulties experienced in welding mild steel have practically disappeared. The exhibits of forged steel and cast steel were described, and the ram-stem castings in war ships were especially referred to. When these were made in forged iron, the rabbits to receive the armor plating, shell plating, etc., the special forms required for the spur, and the arrangements for attaching decks, breast-hooks, etc., all had to be obtained by costly machine work, often involving months of almost continuous labor, after the forging had come out of the shop completed as far as the hammer could do the work. Under these conditions it was not unusual to see the central portions of war ships far advanced, while work at the bow and stern were untouched because of the want of stems and stern posts. Now, thanks to the use of steel castings, no such delay was necessary.

A new method of testing the hardness of iron and steel during manufacture has been devised by A. C. Caspersson, of Forsbacka Iron Works, Margrethill, Sweden, who conducts a current of electricity through a test piece of iron or steel allowing the current to melt the metal; upon which the strength of the current required in the operation is compared with the strength of current required for the fusion of a standard piece of metal of determined degree of hardness.

Part of Sir Frederick Abel's address at the opening meeting of the Iron and Steel Institute was devoted to the self-destruction, if that term may be used, of steel projectiles by the development of cracks. Steel projectiles may be received from the manufacturer to all appearance sound, yet after a time cracks will develop themselves. In extreme cases the occurrence has been so sud-

den that a violent rupture, attended by a sharp report, has taken place. The cause doubtless is the surface treatment to which the shot is subjected in order to get the requisite hardness, which leads to internal strains being set up. In one case mentioned, the head of the projectile had been thrown to a distance of many feet by the violent spontaneous rupture of the metal. The importance of rest in bringing about a diminution, if not a disappearance, of internal strains in masses of metal is illustrated by the behavior of chrome-steel projectiles which had to be stored for several months before their transportation to a distance could be ventured upon. The tendency to the development of cracks in tempered steel dies was discussed in a letter written to the speaker by Thomas Graham, when master of the mint, who said it was considered that if such dies were kept in store for a year or two, they became less apt to crack when in use, and coined more pieces than dies newly tempered. The same phenomena had to be considered in the manufacture of steel ordnance, a fact which enforces the objections of those who are opposed to oil-hardening the parts of a steel gun, the development by which of minute fissures or cracks in the metal was also referred to by the speaker.

Describing a new automatic hydraulic forging press that had been erected in Manchester, Mr. W. D. Allen, in the Iron and Steel Institute, said that it was essential in the production of heavy forgings from cast ingots of mild steel, that the mass of metal should be operated on as nearly as possible throughout its entire thickness. When employing a steel hammer for this purpose, it had been found that the external surface of the ingot absorbed a large proportion of the sudden impact of the blow, and that a comparatively small effect only was produced on the central portion of the ingot, because of the resistance offered by the *vis inertia* of the mass to the rapid motion of the falling hammer—a disadvantage that was entirely overcome by the slow, though powerful, compression of the hydraulic forging press, which seemed destined to supersede the steam hammer for the production of massive steel forgings.

In the process invented by Capt. G. Feodosieff, of St. Petersburg, for tempering steel, glycerin is employed for hardening, tempering, or annealing steels, cast steel, or cast iron. The specific gravity of the glycerin is graduated, according to the composition of the steel and the effect desired, by adding water. The quantity of glycerin is from one to six times greater in weight than the pieces to be plunged into it, and its temperature is varied, according to the hardness of the metal, from 15° to 200° C., a higher temperature being employed for tempering the hardened steels, while a lower temperature is used for tempering the milder steels.

The investigations by M. H. Le Chatelier of the influence of hardening on the electrical resistance of steel have been extended to a new series of metals and alloys. These metals, which show no molecular changes before fusing, have electrical resistances that vary directly with the temperature, plus a constant. Copper, silver, and their alloys have almost an identical coefficient for temperature, while the coefficient for

platinum and its alloys is three times as great. When heated in oxygen, the curve of electric resistance for silver remained straight, its mechanical properties were not changed, and its melting point was found to be $1,733^{\circ}\text{C}$. When heated with hydrogen its properties were changed from the temperature of $1,200^{\circ}\text{C}$; its resistance increased more rapidly than when in oxygen, the metal after cooling showed great loss of strength, and the melting point was lowered to $1,680^{\circ}\text{C}$. The metal takes on a dull appearance, similar to that of palladium, obtained by deposition from its hydrate. These facts prove that silver at a red heat occludes hydrogen. A large number of metals show, like iron, sudden molecular changes, which occur at well-defined temperatures. The electrical resistances then show at those temperatures sudden variations in their law of increase, but the absolute value does not change on passing a point where those changes occur, as is the case on passing the melting point. Molecular changes occur in zinc at 680°C ; in brass, with 38 per cent. of zinc, at $1,330^{\circ}\text{C}$; and with an alloy of copper, iron, and nickel at $1,270^{\circ}\text{C}$. In brass the molecular change is accompanied by a considerable absorption of latent heat. Some alloys show progressive molecular changes which call to mind those observable in the chemical equilibrium of saline solutions. The presence of small quantities of foreign matter seems to hinder the transformation and the amount of the change seems to vary considerably with different specimens. At temperatures above those of transformation, iron, nickel, and their alloys exhibit a law of change for the electrical resistance which is similar to that of platinum and its alloys, while at lower temperatures the law of change is infinitely more rapid.

By means of the acoustic method which he has invented, M. Mercadier finds that steel containing nickel in the proportion of 25 to 100 is homogeneous and nearly isotropic. The incorporation of the nickel with the steel in sufficient quantity, he adds, while increasing the homogeneity of the metal, imparts to it an isotropy similar to that of the *belles glaces* of Saint-Gobain.

Aluminum.—According to a paper by Dr. Lindeck, of Darmstadt, aluminum is preferable to silver on account of its lightness and its non-discolorative quality. It is, however, effected by alkalis and even by soap; it can not, therefore, be used in the manufacture of household utensils. As an adjunct for the production of castings free from blow-holes, for use in the manufacture of the lighter parts of instruments, for the manufacture of tubes and wires, etc., it is adapted in a remarkable degree. As an alloy it is also very useful; and it meets with great favor in the fine arts; but no method of soldering the metal has yet been invented. Herr von Vogtlander, in the discussion of the paper, referred to the difficulties experienced in the employment of the metal as a greater drawback to its general use than the question of price.

Graham's method of obtaining aluminum is based upon the reduction by sodium of fluoride of aluminum, produced by the action of sulphate of alumina upon fluor-spar and cryolite; but the latter mineral is employed only at the

beginning of the operation, after which it is reproduced in large quantity in an artificial form, as a consequence of the reduction of the fluoride of aluminum. Thus obtained, it is of higher purity than the natural mineral, which always contains spathic iron ore and quartz.

In the Hall process for preparing aluminum a mixture of alumina and some fluoride serving as a flux is submitted to the action of the electric current, the electrolyte being placed in vessels of iron lined with coke and having a capacity for from 80 to 130 kilogrammes of material. For obtaining pure aluminum the electrodes are made of carbon; for aluminum bronze, copper electrodes are used, which dissolve as the mineral is reduced.

Aluminum and its alloys can be smelted in a small way in ordinary fire-clay or iron crucibles without the metal thereby becoming brittle or acquiring silicon, provided no liquid method is employed and the smelting point is not too much exceeded. Large quantities of aluminum are smelted in a reverberatory furnace fed with wood or gas fuel. Owing to its high specific temperature, the metal requires much time for smelting, and likewise for cooling to the correct casting temperature.

A new aluminum flux, called stephanite, is composed of about 70 per cent. of alumina and emery. While not volatilizable, it gives off in the furnace its metallic gases or vapors, which unite with the fusible iron acting as a condensing agent, while all impurities go to the liquid slag and are drawn off in the usual manner. The tests of the action of this flux, made in June, at Messrs. H. Young & Co.'s foundry, Pimlico, gave the "inevitable conclusion" that Mr. Stephan's method of incorporating aluminum with iron is a practical success, producing a metal combining the qualities of iron and steel.

One of the new applications of aluminum is to the refining of other metals by the addition of small quantities of it. It is thus applied to the refining of iron, copper, and brass.

Gold and Silver.—Balling's method of using cadmium in assaying gold bullion is regarded by Mr. Cabell Whitehead as inferior to the old method with silver; but with certain modifications it may be found rapid and satisfactory for a preliminary assay. The author has found cadmium an efficient aid in the estimation of small quantities of silver in gold bullion containing considerable amounts of copper or platinum. In his method the ore is covered with potassium cyanide, and heated till the cyanide is in quiet fusion. A suitable proportion of cadmium is then dropped into the crucible, where it quickly melts and forms a bright, homogeneous alloy with the gold. On cooling the contents on a porcelain slab, the alloy will be found in one piece, and is easily detached from the potassium cyanide. It is then washed in warm water, dried, and placed in a mortar, where several sharp blows with a hammer quickly reduce it to powder, which is assayed.

The improved furnace of the Fulton Iron Works, San Francisco, for melting bullion is operated on the principle of an ordinary forge. The pan constituting the bottom of the furnace is filled with a mixture of bone ash and fire-clay, thoroughly tamped down and then scooped out,

so as to leave a lining of the mixture about two inches thick over the entire inner surface of the pan. On the top of this, and confined by a wrought-iron basket or grate, charcoal and bullion are placed. As the bullion melts, it percolates through the charcoal to the bottom of the pan, and as it accumulates there it is, to a certain extent, refined by the absorption of the base by the bone and ash lining. The melted bullion is drawn off directly into molds. The succeeding bars can be melted and poured at intervals of about fifteen minutes each.

A gold-saving apparatus patented by Mr. John H. Hobart comprises a novel arrangement of amalgamating plates or copper plates, intended more particularly for saving float gold, but adapted for ordinary gold saving. The arrangement is such that barriers or impediments are formed in the course of the pulp, so as to cause a whirling or eddying of the flowing material very advantageous for the catching of the precious particles.

In the process of J. Buchanan, of Glasgow, for precipitating gold and silver from the liquid in which they are dissolved, in the process of extracting the same by chlorine, bromine, and iodine the liquid is allowed to percolate through iron or steel borings at the ordinary or at an elevated temperature. The gold and silver are claimed to be thus completely deposited on the iron, from which they may afterward be removed by riddling and washing, or otherwise. Copper, brass, zinc, or any other metal or alloy capable of precipitating gold and silver under the conditions, may be used instead of iron, together with charcoal.

In J. Edlington Chaster's process for extracting gold from refractory ores, the pulverized quartz or ore is fed direct from the stamps into the hopper of the machine; thence it passes by gravity into mercury kept bright by a weak current of electricity.

In the Moebius electrolytic parting apparatus, as operated at the works of the Pinos Altos Company, Chihuahua, the *doré* bullion, which varies in fineness from '800 to '900 in silver, and 25 to 50 in gold, is cast into thin plates. The plates are hung in the cell and subjected to the action of a current of small electro-motive force. The silver passes into the solution (nitrate of copper and nitrate of silver acidulated with nitric acid) from the anodes, and is precipitated as heavy needles and tree-like crystals at the cathodes. The copper from the anodes is also dissolved, but remains in solution provided the exciting liquid is sufficiently acidulated or carries enough nitrate of silver. All the lead (as peroxide), the platinum metals, antimony, and other impurities remain with the gold in the bag surrounding the anodes. The process is also employed at one or two works in the United States.

The inventor, Mr. Molesworth, claims for the Molesworth process for extracting gold from pyrites or other refractory matrices that it will save from 90 to 95 per cent. of the gold contained in pyrites, at a cost of about 4s. per ton of crushed ore. The process consists in calcining the crushed ore or pyrites in a cylinder which is kept slowly revolving in a furnace where only a moderate heat is required, and exposing it

during the process to a gas compound of oxygen and nitrogen. By this the ore is heated to a white heat, and is desulphurized. The gold is then ready to be amalgamated, or is treated with a bath of *aqua regia*.

In the method of William West for treating complex sulphide ores carrying silver, the ore having been crushed to suitable dimensions, a sufficient amount of pyrites is added to reduce the zinc, if it exceeds that amount, to 21 per cent.; the charge is roasted till most of the sulphur is driven off, and is then drawn, and when cool is moistened with water. In this condition it is placed upon a layer of pebbles in a false-bottomed tank. The sulphurous-acid fumes from the furnaces, having been cooled, are forced into the tank, and with them a jet of steam at low pressure is admitted to facilitate chemical action. The result is the conversion of the zinc oxide to zinc sulphite, which rapidly changes to sulphate. The operation is usually repeated for the oxidation of all the zinc. The ore is leached with water in other vats, and, the zinc having been thus removed, the residue, containing the lead and precious metals, is dried on an iron floor heated by the hot sulphurous-acid fumes from the muffles, after which it is ready for the lead smelters.

Crude silver is refined at Lautenthal according to Roessler's method by treating it in graphite crucibles with powdered quartz and silver sulphate. The process occasions less than the ordinary loss of silver, and purifies it almost completely from bismuth. The slag consists mainly of silicates, and is sold according to the percentage of silver and bismuth.

Copper and Tin.—Experiments are described by Mr. Percy C. Gilchrist, which he has been making with the object of obtaining similar advantages in copper smelting to those which resulted from the replacement of the ordinary siliceous linings of steel-melting furnaces by a lining composed of basic material, or the Gilchrist basic process. Improved results were sought in the direction of lessened oxidation and consequently increased yield. The removal of arsenic was accompanied by an increased yield of "blister," and advantages were gained in the greater durability of the furnace bottom; and a considerable gain in output was obtained in the treatment of white or "pimple" metal. Analyses of various samples showed no practical difference between the refined copper produced from the basic blister and that produced from acid blister when an acid-lined refinery is used. When making ordinary tough cake, however, it is doubtful whether the extra cost of the initial basic lining and of the current repairs is compensated by the slight increase in the yield, but the saving in making "best-selected" copper from ordinary arsenical blister is considerable.

An important departure in electro-metallurgy has been made by Messrs. Elmore, of Leeds, England, in their process for the manufacture of tubes and articles of a similar character by the electrical deposition of copper. The process for the electrical deposition of copper on a large scale for the purpose of producing pure copper was introduced several years ago, and is extensively used. By the old processes the copper so produced is again cast and used where articles of

high quality and for special purposes are required. The discovery of Messrs. Elmore is the automatic production of finished articles direct during the process of electro-deposition. The distinguishing features of this process are the purely automatic character of the working, the apparently low cost of production, and the greatly improved character of the finished product. One element of its value lies in the fact that the tubes produced by it are seamless, of a true circular section of uniform thickness, and homogeneous, and that they can be produced practically in any length and of any diameter.

The solvent action of acid ferric salts is utilized in Herr B. Schultze's process¹ for recovering tin from tin-plate scrap. The process includes three principal operations—the solution of the tin, its precipitation, and the treatment of the waste liquor. When acid ferric sulphate is used, the tin-plate cuttings are placed in iron baskets and lowered into the solution contained in an open wooden vat. The tin covering is stripped off the iron in a few hours. A similar procedure is taken when an acid stannic solution is used. The precipitation of the tin from the neutral stannous solution is effected by running it into vats containing clean metallic iron. The reaction is slow, but the reduction is complete. The precipitate, when washed and cleaned from iron, is either melted or used for making tin salts. The green vitriol liquors from the precipitating vats are concentrated by allowing them to drop slowly over a large heap of cleaned iron scrap, which causes a rapid evaporation and a deposit of ferrous sulphate on the metal. This may be washed off and purified as commercial copperas by recrystallizing, or it may be used for forming the acid liquor for dissolving fresh quantities of tin.

In the analysis of tin ores, Dr. J. S. C. Willis has found nascent hydrogen the most convenient reagent for obtaining tin in the metallic state.

Alloys.—In a long series of investigations, W. Spring has shown that alloys may be formed at the ordinary temperature, provided that minute particles of the constituent elements are submitted to great pressure. W. Hallock has recently given strong evidence in favor of the view that an alloy can be produced from its constituent metals with but slight pressure, if the temperature to which the mass is submitted be above the melting point of the alloy, even though it be far below the melting point of the more easily fusible constituent. A further instance is thus afforded of the fact that a variation of either temperature or pressure will effect the union of solids.

One thing, says Mr. F. Lynwood Garrison, in his review of the subject, must not be overlooked in considering alloys of steel—that, whereas frequently admirable results are obtained, in some respects the material is practically worthless on account of its unworkability in the ordinary operations of the machine shop. This is illustrated in some of the grades of manganese steel. One of the most serious disadvantages connected with the use of mild steel for ship-building purposes is its greater liability to corrode in salt water than iron. In several of the new steel alloys, more particularly in nickel-steel, this defect is overcome. Some of these alloys seem to be particularly well adapted for rivets—a fact the im-

portance of which can not be overestimated when we consider that the limit of strength of steel suited for ship-building, boilers, and other riveted structures is not so much determined by the quality of the steel that may be used as by the quantity of the rivet-steel used in combining plates of high tensile strength.

Of aluminum, Mr. Garrison believes that while for some special purposes it may be employed in the manufacture of iron, this use can not, with our present knowledge of its properties, be large. It might, however, be larger if the material was less expensive. Of chrome steel, the status is, on the whole, not satisfactory. Other steel alloys coming into use are so much better that it seems only to be a question of time when it will drop out. Copper acts much like sulphur in rendering steel more or less red-short and destroying its welding power. Copper-steel alloys are almost too new to determine for what particular purposes they would be most useful. It is claimed in the Schneider patents that they are useful for making ordnance, armor plate, rifle barrels and projectiles, and also girders for building purposes and ship plates. In view of the remarkable elastic limit of copper-steel, while it maintains at the same time a considerable elongation, its use may become very extensive in the arts. It has the advantage over aluminum, nickel, and tungsten steels of being cheaper to manufacture.

Regarding the properties of certain new alloys and their value in engineering applications, Mr. Garrison considers Tobin bronze, which is composed chiefly of zinc and copper, with small proportions of tin, iron, and lead, as practically a brass, or a *sterro* or *delta* metal with the addition of a small amount of lead, which tends to render copper softer and more ductile. According to the inventor's claims, it can be forged and stamped at a red heat as readily as steel. Bolts and nuts can be forged from it by hand or by machinery, when cold drawn. Its increased density and high-elastic limit, and the facility with which it can be upset while hot, adapt it for special purposes. In forging it, care should be taken to work it only at a cherry-red heat.

Three copper alloys containing phosphorus have gained a place in engineering work—phosphor-bronze, deoxidized bronze, and the Eureka tempered copper. The use of phosphor-bronze is the result of the discovery, by Messrs. Montefiore and Künzel, that, by adding small proportions of phosphorus or phosphuret of tin or copper to copper, the oxides of that metal, nearly always present as an impurity, were deoxidized to a greater or less extent, and the copper was much improved in strength and ductility; the grain of the fracture became firm, the color brighter, and a greater fluidity was attained. The results of comparative experiments with phosphor-bronze and other similar alloys indicate that copper wears nearly 50 per cent. faster than standard phosphor-bronze; that arsenic bronze containing no lead wears about 42 per cent. faster, but that containing 7 per cent. of lead wears 15 per cent. faster, while that containing the same amount of lead as phosphor-bronze wears only 1 per cent. faster; that Damascus bronze, containing as high as 12-50 per cent. of lead, wears from 7 to 8 per cent. slower; and that an experimental alloy containing less tin and more

lead than any of the other alloys experimented with wears 13.50 per cent. slower.

Deoxidized bronze—an alloy resembling phosphor-bronze somewhat in composition, and also delta metal, in that it contains zinc and iron—is found to have a tensile strength of 150,000 pounds per square inch against 70,000 pounds in copper wire, and its sheets a tensile strength of from 30,000 to 50,000 pounds per square inch.

The action of silicon on copper in silicon-bronze is similar to that of phosphorus, as a deoxidizer; while the silica formed is a valuable flux for any metallic oxides remaining unreduced. Wire made from this alloy is said to have the same resistance to rupture as phosphor-bronze wire, with a higher degree of electric conductivity, and, though very much lighter than ordinary wires, is of equal strength. The manufacture of silicon-bronze has greatly improved since its introduction. The latest kinds, with perhaps less conductivity, have a greater strength, which gives it particular efficiency when subjected to strains caused by accumulations of snow and ice.

It is claimed for the new alloy of copper, nickel, and manganese, called manganine, that its specific resistance is higher than that of nickel, which has hitherto passed as the least resisting metal. Its resistance being affected in only a minute degree by high temperatures, it is adapted for the manufacture of measuring instruments and electrical apparatus in general, for which as little resistance as possible under different degrees of heat is required. Moreover, while the resistance of other metals is increased by raising the temperature, that of manganine is diminished.

A new alloy of gold and aluminum, containing 78 per cent. of gold, has been discovered by Prof. Roberts-Austen. It is described as the most brilliantly colored alloy yet known. It is bright purple, and by the reflection of light from one surface to another bright ruby tints are obtained. Of other alloys of gold and aluminum, 1 per cent. of aluminum gives the precious metal a green color, and the very hard and white alloy contains 10 per cent. of gold.

The following alloys have recently been invented: **Nickel-aluminum**, composed of 20 parts nickel and 8 parts aluminum, used for decorative threads; **zinc-nickel**, composed of 90 parts zinc and 10 parts nickel, used as a pigment; **nickel-hardlead**, composed of 100 parts type metal and 5 parts nickel, used for metallic types and for electros; **platinide**, composed of 60 parts platinum, 35 parts nickel, 2 parts gold, and 3 parts iron, used for crucibles and chemical utensils; **roseine**, composed of 40 parts nickel, 10 parts silver, 30 parts aluminum, and 20 parts tin, for jewelers' work; **sunbronze**, composed of 60 parts cobalt, or 40 parts cobalt, 10 parts aluminum, 40 parts copper, or 30 parts copper; **metalline**, composed of 35 parts cobalt, 25 parts aluminum, 10 parts iron, and 30 parts copper.

Processes.—The Thies process of treating low-grade auriferous sulphides is, in brief, according to the inventor's account, the treatment of dead-roasted auriferous concentrates (pyrite, sometimes also chalcocopyrite, as at the Phoenix mine, Cabarrus Co., N. C.) with nascent chlorine, without artificial pressure or exhaust, in lead-lined iron cylinders; the throwing of the mass on a

sand filter, and the quick filtration and precipitation of the gold chloride with fresh and active ferrous sulphate. The gold is precipitated as metallic gold of a reddish-brown color, which, after being allowed to settle, is collected, washed, dried, and melted with soda and borax in graphite pots and cast into bars. The efficiency and economy of the process are such that in working on a large scale crude ore of the assay value of \$4 per ton, carrying about one third of its gold free and two thirds in sulphurets, can be profitably treated.

The method of working the Bernados electric welding process has hitherto been kept secret, but has recently been published. An ordinary lighting low-tension continuous-current dynamo is used, to the terminus of which a battery of accumulators is connected, and into this the current flows continuously. When the welding circuit is closed the current flows from the dynamo and accumulates through a large regulating resistance. One terminal of the system is connected by means of a flexible cable to a carbon pencil fixed in an insulated holder. This is held by the workman. The other terminal is connected to the table on which the work lies, or to the work itself. Thus the carbon pencil forms one pole and the work the other pole, and the electric arc is sprung between them. It is possible to obtain an arc for welding purposes six inches in length and having a sectional area of about two square inches. When iron or steel is under treatment, it is usual to make the carbon the negative pole and the iron or steel the positive pole; for other metals the poles are sometimes reversed.

The burning of zinc during melting may be prevented by covering the metal while in a crucible or ladle with a layer of common salt. Combustibility is impaired if a layer of charcoal is kept on top of the zinc, or of any other soft metal which can be melted in a ladle. The coating of oxide forms a protection against oxidation only to a certain degree, but the layer of charcoal tends to reduce the oxide again to its metallic form. Indeed, it is possible to recover lead, tin, zinc, and antimony from the dross or oxide which gathers in the ladle. It is only necessary to melt the oxide with charcoal, salt, and soda to get it again into useful shape. The dross, salt, charcoal, and soda should be powdered, mixed, and melted. The soda and salt melt into a pasty mass, and the carbon unites with the oxygen of the dross, leaving the metal free. The salt and soda simply act as flux in reducing the oxides.

A method of recovering acid from waste pickle has long been sought, without any satisfactory result having been obtained. A process devised by Mr. Thomas Turner appears to secure this object in a simple and economical manner. The plant consists of three parts, viz., a special combined roasting and evaporating furnace, adapted for carrying on continuous double distillation; a series of cooling and condensing pipes; and a condenser for collecting acid that would otherwise be lost. The waste liquor is allowed to run in a continuous stream into the furnace, and is there decomposed by the combined action of heat, air, and steam from the liquor itself into hydrochloric acid and oxide of iron. The latter remains in the furnace and is

raked from time to time, while the hydrochloric acid is condensed and is used over again in the galvanizing process. When the apparatus is once erected and in working order, it is only necessary to supply it with fuel in order to recover hydrochloric acid continually from waste pickle, and to remove the irregularities in the form of oxide of iron. The acid recovered is generally of the same strength as that originally used for pickling, and is suitable for use in galvanizing. The oxide of iron is used for filtering in the puddling process and for other purposes for which it is well adapted, and goes a long way toward paying for the fuel that is used.

The experiment of glazing a furnace lining was successfully tried at the Crown Point Iron Company's works, Lake Champlain, on the occasion of relining and starting in blast one of its large furnaces. After the fire-bricks were in place a cheap article of graphite or plumbago was reduced to a paste with water, and the interior of the furnace washed with it. The plumbago paste gave a slippery glaze to the fire-brick lining, which refused to be coated with slag, and the charge pressed down in less time and left the lining free and clear.

In the new method for producing steel free from sulphur and phosphorus proposed by the French Société Metallurgique du Midi, the pig iron is taken at the moment of fusion, and, some minutes before introducing it into the converter, very fine sand and a very small quantity of crystallized chromic acid are thrown into the bath. After introduction into the converter, as soon as eruption begins, finely divided carbonate of ammonia, inclosed in small balls of pure pig, is introduced into the bath. The product of the casting is a homogeneous iron or steel, free from metalloids.

The method of M. Bertrand, of Paris Grenelle, for producing magnetic oxide on iron consists essentially in depositing by galvano-plastic means a metal or a metallic alloy susceptible of volatilization at a temperature of about 1,000° C. After receiving this coating the articles are introduced into a furnace, where the metallic deposit is volatilized. The iron oxidizes, without receiving sufficient oxygen to form a sesquioxide, but enough to form the magnetic oxide.

Dr. W. Stahl's process for recovering cobalt from low-grade ores consists in roasting the powdered ore with salt and pyrites, whereby the cobalt and copper and manganese, if present, are converted into chlorides, while the iron is chloridized to a small extent only. After roasting, the ore is leached with water, and the solution is treated with sulphuretted hydrogen to remove the copper. From the filtrate cobalt is precipitated with sodium sulphide.

Miscellaneous.—With good reason, said Dr. Wedding, of Germany, in an address before the Iron and Steel Institute, may the invention of the Brothers Mannesmann in the manufacture of pipes be regarded as an important improvement. For pipes destined to meet severe requirements of resistance to interior pressure, it is indeed calculated to revolutionize previous practice. The process consists in feeding a solid, highly heated round bar of ingot metal between rolls which, while their axes are oblique to the axis of revolution, revolve in the same

direction. The metal of the surface of the bar thus acquires an increased motion in a spiral direction, and is drawn over its core, receiving, consequently, the form of a pipe. It is not practicable, without an excessive expenditure of power, to make the interior diameter of such a pipe very large. But it is sufficient that an interior space is created, for there is no difficulty in widening it over a mandril. Since in the operation the pipe moves spirally forward and all its parts are spirally pushed and pressed, the metal becomes still denser. It is this spiral arrangement of material which makes the Mannesmann pipes so remarkable, apart from the advantage they possess in presenting no lines of welding. Moreover, blow-holes are so squeezed out spirally as to make the walls of the pipe impermeable.

The importance of extending the use of the less-known metals is pointed out by Prof. W. C. Roberts-Austen. There will doubtless be in the immediate future, he says, a rapid increase in the number of metallurgical processes that depend on reactions which are set up by submitting chemical systems to electric stress. Sodium is growing in importance for cheapening the production of aluminum, and as a powerful weapon of research. The production of magnesium, which was a curiosity a few years ago, now constitutes a considerable industry. We may confidently expect to see calcium and barium produced on a large scale as soon as their utility has been demonstrated by research. Minerals containing molybdenum are not rare, and the metal could probably be produced as cheaply as tin if a use were to be found for it. The quantities of vanadium and thallium that are available are also far from inconsiderable; but we as yet know little of the action of any of these metals when alloyed with others which are in daily use. The field for investigation is vast indeed, for it must be remembered that valuable qualities may be conferred on a mass of metal by a very small quantity of another element. The useful qualities imparted to platinum by iridium are well known. A small quantity of tellurium obliterates the crystalline structure of bismuth, but we have lost an ancient art which enabled brittle antimony to be cast into useful vessels. Two tenths per cent. of zirconium increases the strength of gold enormously, while the same amount of bismuth reduces the tenacity to a very low point. Chromium, tungsten, cobalt, titanium, cadmium, zirconium, and lithium are already well known in the arts, and the valuable properties which metallic chromium and tungsten confer upon steel are already familiar; but as isolated metals we know little of them. A rich reward awaits the labors of chemists who will bring themselves to divert their attention, for even a brief period, from the investigation of organic compounds to raise alloys from the obscurity in which they are at present left.

In welding and metal working by electricity, two systems are in use; the incandescent system, in which the material operated upon is traversed by currents of large volume and low electro-motive force, the current having a continuous metallic circuit during the welding operation; and the arc system, in which the electric arc is utilized. A paper by Mr. A. B. Wood, in

the American Institute of Mining Engineers, calls attention to the arc system as one of the recent developments in the art of metal working. In it the material may be included in the electric circuit or may be wholly without it; in either instance the enormous heat of the electric arc is brought into requisition and utilized. In the Coffin arc-welding system the material is in the electric circuit or independent of it, as the case may require, different processes being applied as may be best suited to the work. The system seems destined more especially to give material aid in work on sheet metal, tubes, and boilers, since the tremendous heat of the arc can be applied where it is most needed. The heating of the material is not dependent upon its electrical resistance or its current-carrying capacity, and perfect contact at a joint is not a necessity, while these are points of the utmost importance in operating on such work under the incandescent system. The mechanical application is readily made.

METHODISTS. General Statistics.—The statistics of the world's Methodism, prepared by the special committee on statistics of the Ecumenical Conference, held in Washington in October, give the following numbers:

	Churches.	Ministers.	Members.
<i>American churches:</i>			
Methodist Episcopal	22,858	15,058	2,256,463
Methodist Episcopal, South	11,787	3,050	1,218,561
Methodist, Canada	3,092	1,519	241,376
African Methodist Episcopal	4,069	4,150	475,565
African Methodist Episcopal Zion	3,509	3,650	425,000
Colored Methodist Episcopal	3,196	1,800	180,824
Methodist Protestant	2,003	2,153	157,604
United Brethren in Christ	2,719	2,017	197,123
Union American Methodist Episcopal	50	112	3,500
African Union Methodist Protestant	50	56	5,990
Free Methodist	952	1,050	20,998
Congregational Methodist	50	50	5,525
Primitive Methodist	77	64	5,620
British Methodist Episcopal	85	8	2,500
Independent Methodist	2,062	1,227	150,234
Evangelical Association	279	101	58,575
West Indian Methodist	22	19	5,226

Total	77,181	45,271	6,505,667

I. Methodist Episcopal Church.—The "Methodist Year Book" for 1892 gives statistics of the annual conferences of this church for 1891, of which the following is a summary: Number of annual conferences, (including those in foreign mission fields), 131; of ministers (including those in full connection and on trial), 15,877; of local preachers, 14,202; of members and probationers, 2,385,916; of Sunday schools, 27,273, with 303,644 officers and teachers and 3,313,844 pupils; of churches, 23,350, valued at \$99,277,101; of parsonages, 8,749, valued at \$15,256,681. Amount of benevolent contributions: For the Missionary Society, \$1,228,888; for the Board of Church Extension, \$311,827; for the Freedmen's Aid

and Southern Education Society, \$322,656; for the Sunday School Union, \$26,138; for the Tract Society, \$23,863; for the Board of Education (including all sources of revenue), \$75,440; for the American Bible Society, \$37,317; for the Woman's Foreign Missionary Society, \$263,660; for the Woman's Home Missionary Society, \$155,398.

Board of Education.—The total receipts of the Board of Education for 1891 were \$74,577. The board has investments to the amount of \$226,000. One thousand and sixty-nine students—909 young men and 160 young women, all but 60 of whom were intending to become ministers, missionaries, or teachers—were aided during the year by loans. The whole number aided since the organization of the board in 1868 was 3,818. The whole amount loaned was \$49,037. The educational institutions under the care of the Church consist of 15 theological institutions, 56 colleges and universities, 53 classical seminaries, 10 colleges and seminaries for young women, and 74 schools connected with foreign missions. These return in the aggregate 2,204 teachers, and 39,298 students, and \$22,780,436 of property and endowments free of debts.

A meeting of presidents of colleges connected with this Church was held at Cleveland, Ohio, Nov. 10, and discussed the subjects of "The Establishment and Classification of our Institutions of Learning," "The Methods of raising Funds for creating and endowing Institutions of Learning," "The Methods of raising and appropriating Funds for aiding Needy Students," and "Is there a Demand for Institutions devoted exclusively to Post-graduate Work?" A memorial was resolved upon asking the General Conference to take measures for fixing the minimum requirements for the bachelor's degree in colleges officially recognized. A permanent "College Association of the Methodist Episcopal Church" was organized, to which institutions requiring three years of special preparatory and four years of college work are eligible to representation in membership.

Church Extension.—The General Committee of Church Extension met in Columbus, Ohio, Nov. 5. The receipts of the board for the year from conference collections had been \$145,009; from other sources, on general account, \$48,779; making a total of \$193,788. For the Loan fund, to be added to the capital, \$52,876; from property, \$7; and from loans returned, \$65,155, or \$118,038 in all; making the total receipts \$311,826 and showing a net increase of \$12,540. The Loan fund had reached a cash capital of \$729,810, and property valued at \$22,608, or a total of \$752,418. Five hundred and ninety-three churches had been aided during the year, making the whole number aided from the beginning 7,937. Applications were on hand from 317 churches for \$143,625. The committee apportioned \$309,000 among the conferences to be raised for the ensuing year's work.

Freedman's Aid Society.—The income of this society for the year ending June 30, 1891, was \$322,656, or \$56,008 more than in the year preceding. The society sustains 10 collegiate institutions, 1 theological seminary, and 11 academic institutions among the colored people of the South and 3 collegiate and 16 academic

institutions among the white people; in all of which are returned 330 teachers and 9,310 pupils. The aggregate value of the property of these institutions is \$1,800,800.

Missionary Society.—The annual meeting of the General Missionary Committee was held in Cleveland, Ohio, beginning Nov. 11. The treasurer reported that the cash receipts of the society for the year ending Oct. 31 had been \$1,228,888, or \$93,616 over those of the previous year. Of the total amount, \$1,078,544 had come directly from the churches through the collections. The increase in contributions of this class was \$26,901. Besides the receipts already mentioned, \$22,169 had been obtained from various sources to meet contingent appropriations made by the board to respond to pressing demands in India. If this amount were added the total receipts would be swelled to \$1,256,056.

Appropriations were made for the ensuing year as follow: Foreign missions—Africa, \$5,400; South America, \$60,545; China, \$121,772; Germany, \$35,600; Switzerland, \$9,500; Scandinavia, \$48,170; India, \$123,729; Malaysia, \$9,000; Bulgaria, \$22,000; Italy, \$43,634; Mexico, \$59,000; Japan, \$66,000; Corea, \$17,562; Lower California, \$1,000; total for foreign missions, \$622,912. Domestic missions—Welsh, \$2,250; Scandinavian, \$57,950; German, \$50,250; French, \$7,275; Spanish, \$14,000; Chinese, \$11,400; Japanese, \$7,000; Bohemian and Hungarian, \$7,350; Italian, \$4,750; Portuguese, \$800; American Indian, \$9,350; English-speaking, \$327,625. Miscellaneous appropriations, \$102,455. Total of all the appropriations, \$1,225,367. Re-appropriated, \$8,000; contingent appropriations, \$42,167.

Woman's Foreign Missionary Society.—The receipts of this society for the year ending Oct. 1, 1891, were \$263,660, showing an advance of \$43,330 over the receipts of the preceding year. The society supports 120 missionaries, of whom 101 are in the foreign field, and 350 schools, with about 12,000 pupils. About 30,000 patients are treated annually by its physicians. Of the missionaries, 32 are in India, 27 in Japan, 23 in China, 8 in Mexico, 5 in South America, 2 in Italy, 1 in Bulgaria, and 3 in Corea. Twelve are medical missionaries.

Woman's Home Missionary Society.—The cash receipts of this society for the year ending in October, 1891, were \$155,398; estimated value of supplies distributed to frontier preachers and industrial homes, \$160,824. The society has in the South 12 model homes and industrial schools, 12 missionary teachers, 198 resident pupils, and more than 1,000 day pupils in industrial classes. In the Western States and Territories and among Mormons and Spanish Americans it has 16 industrial schools and 36 missionaries; in city missions, 26 missionaries and many helpers; in 8 deaconesses' houses, 54 deaconesses and nurses; making in all 143 missionaries.

II. Methodist Protestant Church.—The receipts of the Board of Foreign Missions for the year ending April 30 were \$14,573; amount of funds, \$2,500, balance in favor of the current fund, \$510. The foreign mission is in Japan, with stations at Nagoya and Yokohama.

The reports of the Woman's Board show a gradual increase of income in twelve years from

\$381 to \$4,000 in 1890; and the accounts of the Building fund show that \$7,930 have been raised for its purposes since it was instituted.

III. American Wesleyan Church.—The special commissioner of the United States census on the statistics of churches gives the following numbers for this denomination: Number of annual conferences, 22; of church organizations, 565; of church edifices and halls in which services are held, 554; seating capacity of churches and halls, 104,737; value of church property, \$393,250; number of members, 16,492.

The thirteenth quadrennial meeting of the General Conference was held in Grand Rapids, Mich., beginning Oct. 21. A report was made of the beginning of a mission during the quadrennial term in Western Soudan, Africa. The Missionary Society had received \$5,826, and had expended \$4,469. As the result of discussions concerning the articles on regeneration and sanctification, the Church was declared bound to the law on the subject as expressed prior to 1887, and no action in connection with it was regarded as legal since 1844. New articles on the subjects were proposed, conditionally approved, and ordered inserted in the Discipline, with a foot-note explaining that they were in process of adoption, and not to be regarded as legal unless approved by a two-thirds vote of the annual conferences. A section on temperance and prohibition was added to the Discipline. Arrangements were made for incorporating the Church.

IV. Methodist Church of Canada.—*Missions:* The domestic missions of this Church include 399 missions, with 342 missionaries, 73 assistants, and 38,109 members. The Indian, French, Chinese (in British Columbia), and foreign (in Japan) missions return 76 missions, 72 missionaries, 47 teachers, 15 interpreters, and 6,391 members, distributed as follow: Indian, 4,153; French, 254; Chinese, 165; Japanese, 1,819. The Board of Missions, at its annual meeting in October, appropriated \$236,366 for missionary works, of which \$100,073 are to be applied to domestic missions.

V. Wesleyan Methodist Church.—The following statistics of the Wesleyan Methodist Church of Great Britain for 1891 were given by the Rev. David J. Waller in his paper at the Œcumenical Conference on "The Status of Methodism in the Eastern Section":

COUNTRIES.	Ministers.	Lay preachers.	Members.
England.....	2,018	16,088	486,950
Missions.....	641	10,732	118,437
Ireland.....	238	25,652
France.....	32	90	1,461
Total.....	2,924	26,860	627,500

In Australasia, where an affiliated general conference has been organized, there are 593 ministers, 4,636 lay preachers, and 73,310 church members, making the total for the Eastern Section of the Wesleyan Methodist Church 3,517 ministers, 31,496 lay preachers, and 700,810 members, together with 11,910 Sunday schools, including 151,716 teachers and 1,234,080 pupils.

Mr. Waller's tables also embraced statistics of other British Methodist churches, including the

Primitive Methodist Church, the United Methodist Free churches, the Bible Christian Church, the Methodist New Connection, the Wesleyan Reform Union, and the Independent Methodist churches. The totals for these are 1,900 ministers, 23,551 lay preachers, and 346,253 members, with 8,177 Sunday schools, including 113,200 teachers and 816,315 pupils.

Wesleyan Missionary Society.—The annual meeting of the Wesleyan Missionary Society was held in London, May 3. Alderman W. O. Quibell, of Newark, presided. The receipts for the year had been £122,072, and the expenditures £132,885, while the debt had risen to £19,377. The following general summary of the work of the society was given:

Missions under the immediate direction of the Wesleyan Missionary Committee and British Conference in Europe, India, China, West Africa, the Transvaal, British Honduras, and Bahamas:	
Central or principal stations, called circuits.....	363
Chapels and other preaching places in connection with the above-mentioned central or principal stations, as far as ascertained.....	1,572
Missionaries and assistant missionaries, including supernumeraries.....	388
Other paid agents, as catechists, interpreters, day-school teachers, etc.....	2,163
Unpaid agents, as local preachers, Sabbath-school teachers, etc.....	4,234
Full and accredited church members.....	34,722
On trial for church membership.....	5,250
Scholars attending either the Sabbath or day schools.....	65,503

The report of the Wesleyan home missions, May 4, spoke of the work of the great central missions as "surprisingly successful."

The income of the chapel fund for the year was £9,054. There had been 383 cases of erections and enlargements, at an outlay of £276,801, whereby 18,115 sittings had been added to the total church accommodation. The erections involved a sum of £198,903, to be raised by contributions, and the expenditure in new erections and reductions of debt had been £353,000.

The committee of the fund for the extension of Methodism in Great Britain had received 130 applications and had promised 106 grants and loans to the total amount of £6,196, of which it had paid £5,698. It had received since the foundation of the fund 1,913 applications, and had promised assistance in 1,366 cases to the amount of £98,332. Owing to the difficulty of securing the return of its loans, it would make no more at present. The fund was formed to promote the building of 1,000 chapels in the metropolis. This number had already been exceeded in erections and enlargements, but in many cases the new buildings had only superseded previously existing inadequate chapels. The committee gave many reasons why the fund should be continued and special reasons for present activity. The Committee on the London Mission reported an increase of 465 members.

Reports were received by the committee of the Sunday School Union of 6,992 schools, with 129,280 officers and teachers and 938,327 pupils.

Wesleyan Conference.—The one hundred and forty-eighth Conference met at Nottingham, July 21. The Rev. Dr. Thomas B. Stevenson was chosen president. A committee appointed by the previous Conference to ascertain whether any modification could be legally made in the Deed Poll, whereby the restriction of the pastoral time to three consecutive years in the same cir-

cuit could be removed, reported that it had consulted with competent counsel, who had found that no modifications appeared to be possible; that no court had power to change the Deed Poll; and that the only way of securing relief was by act of Parliament, to obtain which practical unanimity in the connection would be necessary. The existing special arrangements with regard to town missions appeared, however, not to be illegal. After a discussion of the question, the Conference resolved

That in view of the great and numerous advantages which would arise from an extension of the term of ministerial residence in a circuit, and also of the fact that eighteen districts have adopted minutes in favor of it, the Conference shall appoint a special committee to consider the desirability of securing by act of Parliament liberty of action for the Conference, and, secondly, to suggest an equitable and effective way of submitting the proposals to the judgment of the people. The special committee shall report its conclusions to both sessions of the next Conference.

A rule allowing the circuits to control a certain part of the contributions for home missions was rescinded, and the whole fund was ordered administered by the General Committee on the basis of a report sent up by the district meetings. The Conference decided, subject to approval by the district meetings, to abolish the yearly collection in the classes in behalf of home missions, and to substitute for it an assessment on the circuits. Approval was given to the work carried on within the Church in behalf of social purity, and the Social Purity Committee was authorized to represent the Conference at any general council of Christian Churches that might be held during the year in the interest of that cause, and especially to consider the relation of personal character to public life. The Temperance Committee was authorized to seek the establishment of White Cross associations in connection with Bands of Hope. A resolution was adopted expressing strong disapproval by the Conference of raising money for any Methodist purpose by any means in which the element of gambling is involved. The Conference deplored the widespread prevalence of betting and gambling which certain occurrences of the past year had brought into painful prominence, and expressed its sorrow that countenance had been given to those vices in high places, and that the newspapers stimulated them by devoting so much space to the publication of sporting items; entered a protest against their publication of such news, and suggested the need of legislation on the subject. For securing more full and distinct lay representation in the district meetings the circuits were authorized each to send, in addition to the circuit stewards, a freely elected representative to those meetings. The use of the term "church" was authorized in speaking informally of the societies and the connection. In formal documents the legal designation of societies has to be retained. It was ordered that henceforth an abstract of the accounts of the Book Room should be presented annually to the Conference.

West Indian Conference.—The West Indian Triennial General Conference met in its third session at Bridgetown, Barbados, March 16. The Rev. George Sargeant presided. The General Conference includes two annual conferences, the

Eastern and Western, the statistical returns from which are summarized as follow: Number of chapels, 279; of preaching places, 166; of ministers, 101; of local preachers, 458; of full members, 47,743; of members on trial, 2,576; of junior members, 8,256; of pupils in Sunday schools, 30,810; of day pupils, 28,916. These returns show an increase in six years, or since the meeting of the first General Conference, in 1885, of 4,453 members, 5,380 junior members, 6,489 pupils in Sunday schools, and 6,976 pupils in day schools. The work of higher education was provided for at York Castle and Barbican, Jamaica, Coke College and girls' high schools in Antigua and British Guiana, which were, in all, attended by 216 pupils. The sum of £60,460 had been raised, and £70,221 had been expended of chapel and other trust income, in six years; and 29 new chapels, 7 ministers' residences, and 4 school-houses had been built. Missions had been undertaken in Panama and St. Lucia. The subjects of the formation of an annuitant society, chapel and trust funds, and education were considered. On the last subject the Conference resolved, with especial reference to two cases where Government ordinances had been passed or were under consideration, that an acceptable scheme must comprise the establishment of a system of Government schools under the direction of a representative board, sufficiently tolerable and equitable to satisfy the reasonable claims and wishes of all parties, and allowing equal rights of visitation and religious instruction to the ministers of the several churches. Delegates were chosen to the Methodist Ecumenical Conference appointed to meet in the United States in October. The Rev. George Sykes was chosen to be president of the next General Conference.

VI. Primitive Methodist Connection.—The numerical reports made to the Conference in June, give the following footings: Number of church members, 192,652; of ministers, 1,043; of local preachers, 16,256; of class leaders, 10,408; of connectional chapels, 4,405; of other preaching places, 1,267; of hearers, 585,346; of Sunday schools, 4,118, with 60,833 teachers and 430,675 pupils; value of connectional property, £3,283,203.

The year's profits of the Book Room exceeded £4,300, of which £3,800 had been given to the Superannuated Ministers' Widows' and Orphans' fund. The total issue of publications had been more than 2,500,000.

The Conference met at Northampton, June 10. The Rev. Joseph Ferguson was chosen president. The first subject for discussion concerned the age qualification for Deed Poll membership, regarding which the Conference reaffirmed the declaration of the Conference of 1886, that the fact that any minister has to apply for superannuation is proof of his physical incapacity to perform the duties of that office. A proposition submitted to the quarterly meetings for the recognition of a separate order of evangelists, the Connectional establishment of an evangelists' home, and the setting apart of a minister to train evangelists and superintend their work had been defeated by an overwhelming majority adverse to all its counts. In its resolution concerning educational measures the Conference

declared itself in favor of free education, and of a board or undenominational school being placed within easy reach of every child in the country; protested against any scheme of assisted education which did not at the same time grant popular control of the schools assisted; and expressed the belief "that the proposals which have been made by the Government would not only perpetuate, but would intensify the anomalies and injustice which already exist, and would be dangerous to the civil and religious liberties of the people of the country and contrary to their social and intellectual progress and freedom." Legislation was proposed, to the effect that no person engaged in the manufacture or sale of intoxicating liquors, or holding shares in any limited liability or joint-stock company where intoxicants are manufactured or sold, should be a member of the Connection. The view prevailed in discussion that so positive a measure might bear in some instances upon really blameless persons, and the Conference, while it accepted the principle of the proposed legislation, referred the arrangement of the details to the General Committee. Public attention being at the time directed to the scandals developed in the judicial proceedings in the "baccarat case," the Conference in its resolutions declared its regret that the Prince of Wales did not follow more closely the example of his royal parents, and also expressed the opinion that his conduct was not consistent with the exalted position of the heir-apparent to the throne, and the belief that it would do incalculable injury to large masses of people. The Conference, it was added, "while profoundly regretting his conduct, respectfully expresses the hope that he will refuse in future to give further countenance to this degrading national vice in any of its forms."

The income of the Primitive Methodist Missionary Society was £11,099 for the General fund and £2,313 for the African fund. The expenditure had been £10,476 for the General fund, and £2,363 for the African fund. The society had 54 stations in the United Kingdom, with 7,041 members, and 653 members on the foreign stations.

Congregations of Primitive Methodists largely composed of emigrants from Great Britain have been formed in the United States, chiefly in New England, Pennsylvania, and Wisconsin. Until 1891 they were formed into two conferences, the Eastern and the Western. At its session in 1891 the Eastern Conference was divided into Eastern and Pennsylvania Conferences.

VII. Methodist New Connection.—The numerical summary of all the districts of this body, at home and abroad, gives as totals: Number of chapels, 522; of ministers, 203; of local preachers, 1,239; of members, 31,020; of probationers, 4,561; showing an increase during the year, of 211 members and a decrease of 375 probationers.

Missionary reports were made to the Conference from the home missions and missions in Ireland, and from China, where there were 10 native students in the Training Institution, 1,390 members and 530 on trial, and 6,000 patients had been cared for in the medical work. Within six months 39 invitations, each signed by from 20 to 100 people, had been received, to

open new preaching stations. Services had been established in 20 of the places.

The Conference met in Leeds, June 15. The Rev. Henry I. Marshall was chosen president. The Connectional Committee reported concerning the negotiations for union with the United Methodist Free Churches, transmitting the resolutions of the General Assembly of those societies and calling attention to the fact that they did not express an opinion on the particular point which the last Conference of the New Connection had submitted to the judgment of the Assembly. The Conference ordered that the resolutions of the Assembly of the United Methodist Free Churches be placed on the minutes, and added to them as its own expression:

That, considering that the Assembly of the United Methodist Free Churches gave no deliverance on the report of the joint committee, and considering especially that the discussion of the question of the union has developed serious differences of opinion and sentiment among our ministers and people, the Conference is constrained to conclude that further action in relation to the proposed union is not at present advisable. The Conference, however, devoutly trusts that whatever may be the course of events, the relations of the ministers and members of the two denominations will continue to be those of fraternal sympathy and cordial co-operation in the great common cause of our Lord Jesus Christ.

In its resolutions on education the Conference unanimously approved of a system of free education which should extend throughout the whole school life, and declared that no scheme for free or assisted education would be satisfactory which did not provide for the universal establishment of school boards charged with the duty of supplying all educational deficiencies as they might arise; and that in every case there should be a board school within reasonable reach of all. A full delegation was appointed to attend the Methodist Ecumenical Conference. An invitation to appoint two persons as guests to attend the Congregation Council was accepted, and they were appointed. In a resolution unanimously adopted the Conference expressed sorrow

at the recent revelations in a court of law of gambling, and cheating in gambling, by those who occupy high positions in society, and from whom, therefore, a higher example of virtue should proceed. But it is most deeply concerned that the Prince of Wales should have been intimately involved in these disreputable proceedings. Such encouragement of vice and immorality by one from whom the nation expects impulse and encouragement to its higher life is fraught with great danger to its future well-being. It earnestly hopes that all such practices by one who aspires to be the king of a Christian people will henceforth cease.

VIII. United Methodist Free Churches.—The following is a summary of the statistics of these societies as they were reported to the Annual Assembly in July: Number of itinerant preachers, 378; of supernumeraries, 43; of local preachers, 3,333; of leaders, 3,801; of church members, 77,710; of persons on trial for membership, 8,134; of chapels, 1,399; of preaching rooms, 235; of Sunday schools, 1,374, with 26,514 teachers and 203,333 pupils.

The Annual Assembly met in Sunderland, July 14. The Rev. M. T. Myers was re-elected president. Reports were made of the condition

of the Benevolent fund. The income of the Superannuation and Beneficent fund had been £8,838, and the expenditure on its account £7,188. The capital of the fund had reached £40,076. The income of the Chapel Relief fund had been £603, and the expenditure £471. Advances had been made from the Loan fund of £2,190. The capital of this fund amounted to £12,760. The "Silver Wedding fund" (a fund commemorative of the twenty-fifth anniversary of the Annual Assembly) amounted to £29,560. The newly formed Chapel Insurance fund had issued 429 policies. The Book Room returned a year's profit of £1,802. The amount of £23,284 had been raised for foreign missions and £21,997 had been expended upon them. A scheme for the prosecution of special active evangelistic work among the masses, denominated "forward movement," was introduced, for which it was proposed to raise the sum, of £15,000, to be called the "Wesley Memorial fund." In the Connectional evangelistic scheme 12 evangelists had been employed during the year, conducting 86 missions. Forty thousand books and 8,000 Bibles and Testaments had been sold through the operation of the Jubilee and John Wesley mission cars. Questions relating to the employment of woman evangelists and the evangelization of villages were referred to the Connectional Committee for consideration. A training house for female workers, suitably furnished, fitted up by private means, was offered to the Assembly as a gift, and accepted. The Assembly acknowledged the reception of the resolutions of the Methodist New Connection Conference on Union, reciprocating the friendly and fraternal sentiments expressed in them, and declared:

That this Assembly derives great satisfaction from the fact that, both by resolution and by its representatives on the joint committee, the Annual Assembly has earnestly and honestly endeavored to give practical effect to the sentiment and principle of Methodist Union, and it now confidently leaves the ultimate issue with the great Head of the Church, believing that in his own time, and in his own way, he will accomplish that unity among his people for which he earnestly prays.

The annual meeting of the United Methodist Free Churches Home and Foreign Missionary Society was held in London, April 27. Mr. R. Shadforth presided. The society's income for the year had been £21,609, and its expenditures £22,081. The report showed that the society had 66 missionaries, 295 lay preachers, 10,335 church members, 227 preaching places, and 11,347 pupils in Sunday school, each item showing an increase.

IX. Bible Christian Church.—The summaries of the connectional statistical reports of this Church presented to the conference in July give as the number of local preachers 1,923; of chapels, 854; of preaching places, 159; of full members, 31,601; of members on trial, 562; of teachers, 8,946; of pupils, 52,503. A net increase of 662 members was returned.

The Conference met at Plymouth, July 29. The Rev. Frederick William Bourne was chosen president. The Missionary Society returned an income of £4,757, showing an increase of £138. A committee was appointed to draw up a scheme for the fitting celebration of the centenary of the

birth of James Thorne, which will occur in 1895.

The Missionary Convention of the Bible Christians was held in London, May 4. Resolutions were adopted recommending earnest preaching "in the power of the Holy Ghost sent down from heaven," and advising every effort to establish mission centers in all the important towns as well as to sustain and extend the operations of the society in the colonies and China.

Œcumenical Conference.—The second Œcumenical Methodist Conference (the first having been held in London in 1881) met in Washington, D. C., Oct. 7. The following churches were represented by a total of 300 delegates from the Western Section and 200 from the Eastern Section. *Western Section:* Methodist Episcopal Church, Methodist Episcopal Church, South, Methodist Church in Canada, African Methodist Episcopal Church, African Methodist Episcopal Zion Church, Colored Methodist Episcopal Church, Methodist Protestant Church, United Brethren in Christ, American Wesleyan Church, Union American Methodist Episcopal Church, African Union Methodist Protestant Church, Free Methodist Church, Congregational Methodist Church, Primitive Methodist Church, British Methodist Church, Independent Methodist Church, United Brethren in Christ (Old Constitution), Evangelical Association. *Eastern Section:* Wesleyan Methodist Church, Primitive Methodist Church, United Methodist Free Churches, Methodist New Connection, Irish Methodist Conference, Bible Christian Church, Wesleyan Reform Union, Free Gospel Church, Australasian Wesleyan Methodist Church, French Wesleyan Conference, West Indian Wesleyan Conference, South African Wesleyan Conference. Previous to the opening of the Conference a reception was given in New York to the delegates, Oct. 5, when Mr. John D. Slayback presided. An address of welcome was made by the Rev. J. M. King, D. D., and addresses in response were made by the Rev. T. B. Stephenson, D. D., President of the British Wesleyan Conference, and by representatives of other foreign and American Methodist churches. Bishop Thomas Bowman, of the Methodist Episcopal Church, presided at the opening session of the Conference. The opening sermon by the Rev. Dr. William Arthur, of England, was read for him by the Rev. Dr. T. B. Stephenson. An address of greeting was made by Bishop J. F. Hurst, of the Methodist Episcopal Church, who spoke to the French and German delegates in their own languages. Other addresses were made by the Hon. J. H. Carlisle, of Wofford College, S. C., the Rev. George Douglass, D. D., of the Methodist Church of Canada, and the Rev. Dr. T. B. Stephenson, of England. At the following sessions the chief officers or representative delegates of the several bodies participating in the Conference presided in turn. The following subjects were discussed, in essays and by chosen and volunteer speakers: "The Present Status of Methodism in the Eastern Section" (Great Britain, Europe, and the Eastern Colonies); "The Present Status of Methodism in the Western Section" (America). "The Christian Church, its Essential Unity and General Catholicity"; "Christian Co-operation." The general subject of "The Church and Scientific Thought"

was discussed under the heads of "The Influence of Modern Scientific Progress on Religious Thought," "The Attitude of the Church toward the Various Phases of Unbelief," and "The Bible and Modern Criticism"; that of "The Church and her Agencies" under the heads of "The Responsibility and Qualifications of the Preacher," "Church Agencies," "The Intellectual and Moral Qualifications of the Preacher," "The Religious Press and the Religious Uses of the Secular Press," "The Place and Power of Lay Agency in the Church," "The Deaconess Movement," "Methodist Brotherhoods and Sisterhoods," and "Woman's Work in the Church"; the subject of education under the heads of "The Religious Training of the Young," "The Family," "The Sunday School," "Elementary Education, how it may be best promoted," "The Ethics of Elementary Education," "Sectarianism and State Education," "Secondary Education," "The Broadest Facilities for Higher Education the Duty of the Church," "University Education," and "The Adaptation of Œcumenical Methodism to World Leadership in the Field of University Education"; that of "Romanism" under those of "Romanism as a Political Power" and "Romanism as a Religious Power"; that of temperance under those of "The Church and the Temperance Reform" and "The Legal Prohibition of the Saloon"; that of "Social Problems" under those of "The Church in her Relation to Labor and Capital," "The Moral Aspects of Labor Combinations and Strikes," "The Moral Aspects of Combinations of Capital," "The Obligations of the Church in Relation to the Social Condition of the People," "Christian Work among the Poor," "Christian Work among the Rich," and "Christian Work in Agricultural Districts"; that of missions under those of "Missions in Heathen Lands," "New Fields entered since 1881," and "Missions in Christian Lands"; that of "The Church and Public Morality" under those of "Legal Restraints on the Vices of Society," "Marriage and Divorce Laws," "The Lord's Day," and "The Attitude of the Church toward Amusements." Other subjects treated of were "International Arbitration," "The Christian Resources of the Old World," "The Christian Resources of the New World," and "The Church of the Future."

An executive commission was constituted on the basis of the organization of the Œcumenical Conference, to consist of eighty members, and be divided into the Eastern Section with thirty members and the Western Section with fifty members, the same to be distributed by a fixed plan among the several bodies associated in the Conference. It was given power to act in the interim of the Œcumenical Conference not exceeding the limitation of the rules of that body. The conference recognized gratefully the growing desire for closer union among the evangelical churches, and particularly the extension of that desire among the various Methodist churches; declared that it could not doubt "that concerted action among the different Methodist bodies upon many questions would be greatly to the advantage of the kingdom of God"; suggested "that such concerted action might be possible and useful in the following great provinces of the Methodist world, namely: (a) Great Britain and Ireland, in-

cluding the affiliated conferences and missions; (b) the United States, including its missions and mission conferences; (c) Australasia, with Polynesia and its other missions; (d) Canada, with its mission." The churches represented in the Conference were therefore requested "to consider whether such concerted action be possible, and, if so, by what means and in what way." A scheme for the erection of a bronze statue of John Wesley in the city of Washington was approved, and a committee was appointed to further it. Fraternal delegates to the Presbyterian Council of 1892, to be held in Toronto, Ontario, were provided for. A memorial was addressed to the commissioners of the Columbian Exposition against opening the fair on Sunday. Resolutions were passed on the subject of social purity, against immoral legislation, and urging that men of notoriously immoral life should not be allowed to occupy places of public trust and authority; expressing sympathy with movements for the abolition of the opium traffic in Asia; and the following on the subjects mentioned in it:

This Conference views with deep concern the subtle and persistent efforts of the Roman hierarchy to make its power felt outside its own proper sphere in many lands, to the detriment and danger of the civil and religious liberties of the people.

This Conference recognizes with satisfaction the fact that the Roman Catholic laity have in notable instances had the courage and the wisdom to withstand the unwarrantable pretensions of their ecclesiastical superiors, and the Conference further disclaims any intentions to seek for itself or the churches it represents a single privilege which it would not readily concede to all others; but it feels bound to remind the members of these churches of the sacred rights and privileges they enjoy, won for them by the sacrifices and fidelity of their forefathers, and to call on them to unite with the members of other Protestant churches in maintaining their great inheritance of freedom, and handing down the same intact to the succeeding generations.

A pastoral address was issued to the ministers and members of all the Methodist churches throughout the world.

African Methodist Union.—A meeting of representatives of the African, African Zion, and Colored Methodist Episcopal Churches was held in Washington during the session of the Methodist Ecumenical Conference, in favor of fraternity and organic union. Resolutions were passed favorable to organic union. The bishops of the several churches represented were requested to present the subject to their several annual conferences and to advocate the appointment of a commission concerning it; and a committee was appointed to publish accounts of all matters in connection with the Conference.

MEXICO. A federal republic in North America. The legislative power is vested in the Congress, consisting of a Senate, in which each of the 27 States and the Federal District is represented by two members elected indirectly for four years, and of the Chamber of Deputies, the members of which are elected biennially by direct popular suffrage. One half of the Senators retire every two years. The Congress meets on Sept. 16 for general legislative business, and adjourns on Dec. 15, unless the session is prolonged thirty days more. On April 1 it comes together again, and till May 31 is occupied with auditing the accounts of the previous financial year and passing

the budget for the year to come. The President of the United Mexican States is chosen for four years by an electoral body created by the general suffrage. The President has the right to appoint and remove the seven Secretaries of State. Gen. Porfirio Diaz entered on his second term as President on Dec. 1, 1888. The Cabinet at the beginning of 1891 was made up of the following members: Secretary of Foreign Relations, Ignacio M. Mariscal; Secretary of Finance, M. Dublan; Secretary of War and the Navy, Gen. Pedro Hinojosa; Secretary of the Interior, Manuel R. Rubio; Secretary of Justice and Public Instruction, Joaquin Baranda; Secretary of Public Works and Commerce, C. Pacheco. In June Benito Gomez Farias became Minister of Finance, and Manuel Fernandez Leal was appointed Secretary of Public Works, Colonization, and Industry. On July 1 a new department, that of Communications and Commerce, was created, of which Manuel G. Cosío was made Secretary.

Area and Population.—The area of Mexico is 751,664 square miles. About 19 per cent. of the native inhabitants are of pure Spanish blood, 38 per cent. Indians, and 43 per cent. of mixed blood. The great majority of the people profess the Roman Catholic religion, which has, however, no legal advantage over other forms of faith. Monastic orders are not allowed, marriage is a civil contract, and religious societies are forbidden to hold land. Education in most States is gratuitous and compulsory. There were 10,726 elementary schools in 1888, with 543,977 pupils, besides a great number of intermediate schools, colleges, and professional and technical schools.

Finance.—The Federal Government derives its revenue from import and export duties, stamps, and internal taxes on certain articles of consumption and from contributions levied on the individual States. The States levy direct taxes, and have hitherto imposed excise duties on imported and domestic merchandise. In 1891 a revision of the system of State taxation was taken in hand with the design of doing away with the duties on imported articles. The Federal revenue in 1890-'91 was estimated in the budget at \$41,770,000, and expenditure at \$38,452,804. The foreign debt, contracted in London and Berlin, is \$16,500,000, consisting of £10,500,000 of 6-per-cent. bonds issued in 1888 for the purpose of redeeming the old defaulted debts at the rate of 40 cents on the dollar in accordance with an arrangement concluded with the creditors in June, 1886, and of a further loan of £6,000,000 obtained in September, 1890, to enable the Government to pay off arrears of railroad subventions. The internal debt, as far as it has been converted, amounts to \$31,500,000. In 1890 Congress authorized the Minister of Finance to arrange a compromise with the holders of the old Spanish bonds of the nominal amount of \$14,000,000. The Federal revenue increased from \$14,882,366 in 1868-'69 to \$32,385,981 in 1888-'89. In 1889-'90 the expenditure was \$36,765,895, of which the items were \$12,449,693 for army and navy, \$6,145,555 for public works, \$5,910,370 for financial administration, \$5,400,003 for the debt, \$3,553,128 for the interior, \$1,350,471 for education and worship, \$1,009,036 for legislation, \$465,095 for justice, \$432,695 for foreign relations, and \$49,849 for the executive.

In the new customs tariff proclaimed by the President in September, 1891, the duty on live stock was largely raised; that on sheep and goats from 35 cents to \$1.50 each, that on mules from

cents to 8 cents, that on cotton was 20 to 25 cents a kilogramme, net weight. Duties on raw cotton were considerably lowered, those on wool were raised largely, those on waxes and tallow

REGLA FALLS, ON A TRIBUTARY OF THE PANUÇO, MEXICO.

\$2 to \$5, that on cattle from \$3, and that on hogs from \$2.25 each to 3 cents a kilogramme. The duty on tallow was advanced from 7 cents to 10 cents a kilogramme, that on macaroni from 3

cents to 8 cents, that on cotton was 20 to 25 cents a kilogramme, net weight. Duties on raw cotton were considerably lowered, those on wool were raised largely, those on waxes and tallow

vanced in a less degree, and a heavy tax has been placed on precious stones, which were formerly exempt. The duty on fine-grained sugar was reduced by one half, and coarse powder and

dynamite were placed on the free list. Machinery, coal, telegraph and telephone wires, iron pipes, and wood pulp remain on the free list.

The Army and Navy.—The standing army in 1891 consisted of 17,307 infantry, armed with Remington rifles of .43 caliber; 5,484 cavalry; 1,604 artillery, having steel breech-loaders and other modern guns; 655 engineers; 1,950 rural guards; and 244 gendarmes; making a total of 27,244. There are over 3,000 officers, and the total military strength of the nation, including the reserve of the active army and the general reserve, is 131,523 infantry, 25,790 cavalry, and 3,650 artillery. The military academy at Chapultepec has about 300 students. The naval force consists of two unarmored vessels carrying two 20-pounders and three small gunboats.

Commerce and Production.—The export trade has increased from \$32,663,554 in 1879-'80 to \$62,499,388 in 1889-'90. Aside from silver, the greatest increase has been in henequen and in coffee, the export of which increased from less than 6,000,000 kilogrammes in 1883 to 9,250,000 kilogrammes in 1890. Henequen is grown on the peninsula of Yucatan. The export of this fiber in 1889-'90 was valued at \$7,392,244, against \$6,872,593 in 1888-'89. The ramie culture is encouraged by the Government. Other fibrous plants are the organ cactus and the species called *cirio*, growing in Lower California, from which paper is made. The export of ixtle in 1889-'90 was \$827,980 in value. Coffee is raised in the States of Chiapas, Vera Cruz, Morelos, Oajaca, Colima, and in Michoacan, where the celebrated Uruapam coffee is produced. The crop is valued at \$4,200,000 per annum, and one half of it is exported to the United States, which is the chief market for henequen, taking 80 per cent. of the entire export. The value of the coffee export in 1889-'90 was \$4,811,000, against \$3,886,035 in 1888-'89. Cotton is produced without fertilizers and with little cultivation in Sonora, Chihuahua, and other States, and the annual crop is valued at \$10,857,000; but the culture has become less profitable since the railroads were built, allowing foreign cotton to be brought to the manufacturing centers at less cost than the domestic product. Cacao of fine quality is produced in Tabasco and Chiapas, but not on a large scale for export. Tobacco has become an export article of importance; the value of the crop is about \$2,500,000 per annum, and the export in 1889-'90 was \$948,332. The rubber exports from the Soconusco district, where the best cacao is raised, have almost ceased because the Indians have destroyed the trees. The Public Works Department in 1889 made a contract with three Mexican citizens who have undertaken to plant a million trees a year for the next fifteen years in the State of Oajaca. The sugarcane is cultivated extensively in Morelos, Vera Cruz, and other States; the average value of the crop is \$8,735,000. The vanilla plant grows wild, and the export of this article was \$917,409 in value in 1889-'90. The gum exports were \$719,746. Orchil weed is collected in Lower California, and pays an export duty of \$10 a ton. Other mosses and lichens are gathered for the dye substances that they yield. Medicinal herbs and roots are found in the *tierras calientes*, the low plains on the Gulf of Mexico, and in the forests

near the foot-hills of the Cordillera, which abound also in mahogany, ebony, rosewood, rubber, Campeche wood, ironwood, and trees yielding medicinal substances. The exports of woods in 1889-'90 were \$1,739,138, against \$1,390,215 in the previous year. Sarsaparilla is gathered for export. The cultivation of the banana on the coasts has become a profitable industry, and the exportation of oranges from the State of Sonora and the hot lands on the Gulf of Mexico is increasing. The fruit brings high prices in the American market. The same regions produce lemons, nuts, guavas, pine-apples, tamarinds, citrons, and all kinds of tropical fruits and other products in great variety, including rice, arrow-root, beans, jalap, indigo, plantains, and dates. They also contain good grazing ground. Indian corn thrives in all parts of Mexico, and furnishes the staple food of the people. Usually two crops are grown every year. Since the introduction of the wheat culture on the Mexican plateau the two crops are raised in alternation, one of wheat and two of corn every two years. Wheat began to be exported from Sonora to Liverpool in 1889, and the authorities have taken measures to encourage the trade. It is estimated that 110,000,000 bushels of wheat and 440,000,000 bushels of corn might be exported if the entire suitable area were brought into cultivation. The cereal product of all the States in 1888 was returned as 131,478,425 bushels of corn, 11,396,195 of wheat, and 5,930,716 of barley. Of beans, which form an important part of the diet of the people, 7,766,980 bushels were raised. One of the great agricultural industries is that of the *maquey* or agave, from which the national fermented drink, *pulque*, is extracted, while the pulp and fiber are used for making paper, cordage, and other articles. The raising of cattle in Sonora, Chihuahua, Coahuila, and others of the northern States, as well as in Vera Cruz and Michoacan, has become one of the largest interests of the country. In the north large ranches have been bought and stocked by Texan cattle growers and British capitalists. The capital value of the 20,574 cattle ranches existing in 1883 was \$515,000,000, and in that year there were estimated to be in the country 1,500,000 horned cattle, 1,000,000 sheep, 2,500,000 goats, 1,000,000 horses, and 500,000 mules. The exports of horses, cattle, and other animals to the United States in 1887-'88 were valued at \$507,377. In 1889-'90 the value of the animal exports was \$500,217. The exports of hides and skins reached \$1,913,129.

The cotton mills consume 80,000,000 pounds of cotton annually, of which one third is imported from the United States, and the value of the product is \$13,000,000. The native industries of distilling, cigarette making, pottery, the weaving of woolen *zarapes* or blankets, tanning, saddlery, hammock making, etc., are being supplemented by others at a rapid rate; though as yet only the beginnings of manufacturing industry have been made. Sugar is extracted by primitive processes. Good iron is produced and common agricultural implements are made in the country. The textile and other factories in the State of Colima have been freed from all taxes, and by the law of 1887 anything required for wine growing, the silk culture, or fish culture can be brought free of duty into any part

of Mexico. Agricultural implements of immigrants are likewise exempt. The State of Puebla in 1886 offered a bounty of 50 cents a kilogramme for all the silk produced, and exempted mulberry plantations from taxes. The silk fac-

years. Subsequently more than eighty articles necessary for the mining and agricultural industries were transferred to the free list. There are more than 1,000 mines in the republic employing about 200,000 men, and turning out

CHIHUAHUA CATHEDRAL.

ories of Tetela and Oajaca are equipped with French machinery, and the industry is growing rapidly. Coal, iron, and quicksilver mines were exempted in 1887 from all taxation for fifty

\$30,000,000 worth of silver and \$5,000,000 worth of other minerals per annum. The export of silver in 1888-'89 was \$38,000,000. The capital invested in silver mines is \$500,000,000,

of which about one fifth belongs to American citizens. Coal is mined in Coahuila to supply the Southern Pacific Railroad. Anthracite was discovered in Sonora, Puebla, Michoacan, and other States in 1881, but it can not be profitably mined. The Mexican railroads use English coal, and the steam factories wood and charcoal. Petroleum and asphaltum are widely distributed, but are not utilized. The lead exports in 1889-'90 were \$607,329 in value.

Of the total exports in 1889-'90 the United States received \$43,022,440; England, \$13,722,122; France, \$3,159,258; Germany, \$1,693,773; Spain, \$534,057; other countries, \$367,738. Exclusive of coin and bullion and silver ore, the imports into the United States from Mexico were valued at \$22,690,915, as compared with \$21,329,601 in 1889, \$17,329,889 in 1888, \$14,719,840 in 1887, \$10,687,972 in 1886, and \$9,267,021 in 1885. The exports of fibrous substances to the United States were \$5,851,822 in value; coffee, \$3,542,851; hides and skins, \$1,579,250; drugs and dyes, \$1,349,743. The largest article of export to Great Britain and to France is mahogany and other hard wood. The total value of the imports in that year was \$46,000,000, having risen in steady progression from \$38,715,000 in 1885-'86. The imports from the United States were valued at \$12,666,108, the principal articles being iron and steel goods, raw cotton, furniture, and cotton fabrics. From Great Britain iron and machinery and cotton goods are largely imported, and from France, are sent woolen manufactures, wines, apparel, and all kinds of fine goods.

Railroads.—There were 4,648 miles of railroad in operation in 1890, and 1,360 miles more were building. American companies had \$245,126,249 invested, and English companies about \$75,000,000. In 1889 the number of passengers was 12,977,952. The receipts from passenger traffic were \$2,090,505, and from 875,894 tons of freight carried \$4,822,690. In 1890 the line from Tampico to San Luis de Potosi, opening communications with the northern part of the central plateau, was completed. Connecting links were made between the railroad from Monterey to the Gulf and the International and National Mexican lines, and an extension from Monterey to Linares was finished. The Jalapa and Matamoras Izucar sections of the Inter-oceanic line were completed, and connection was made with the Halmanales Railroad. In the same year the Valley of Mexico and the North-eastern Railroads were opened to traffic. The Mexican Central Company, incorporated in Massachusetts in 1891, had 1,527 miles open in 1891; the Mexican National, 1,248 miles; Mexican, 321 miles, exclusive of 71 miles in the Jalapa branch; Mexican Northern, 78 miles; Mexican Southern, 79 miles; Monterey and Mexican Gulf, 390 miles; Sinaloa and Durango, 38 miles; International, 409 miles; Sonora, 262 miles. The International Railroad, begun in 1883 and completed in 1888 by a company chartered in Connecticut, was built chiefly to transport coal from mines in Coahuila that have not yet proved profitable. It runs from Ciudad, Porfirio Diaz (formerly Piedras Negras), on the Rio Grande, to Torreon, where it connects with the Mexican Central. On Aug. 1, 1891, the

railroad, which has a share capital of \$11,835,500 and a debt of \$9,742,000, was transferred to an English company.

Posts and Telegraphs.—There were 87,509,640 inland and 37,193,403 international letters, papers, etc., sent through the post-office in 1889. The length of the telegraph lines in that year was 27,861 miles, of which 14,841 miles were the property of the National Government. Of the rest, about a third belonged to the States, and the remainder was divided between railroad and telegraph companies.

Relations with the United States.—Negotiations for a revision of the extradition treaty with the United States were opened by the Mexican Government in April, 1891. A convention for a new survey of the boundary by a mixed commission was concluded. The commissioners began their work in November. Col. Jacobo Blanco and Felipe Valle are at the head of the Mexican commission, the former as chief engineer and the latter as astronomer. The United States commissioners are Col. John W. Barlow and Lieut. David du B. Gailliard, of the Engineer Corps, and M. H. Moseman, of the Coast Survey. In the new Mexican tariff, which went into force on Nov. 1, 1891, the duties were raised on many articles of American produce and manufacture as a preliminary to negotiating new reciprocity arrangements with the United States Government. José Limatour, President of the Chamber of Deputies, was appointed a special commissioner to discuss the bases of a new treaty. The reciprocity convention concluded at Washington on Jan. 28, 1883, by Gen. U. S. Grant and William H. Trescott, acting for the United States, and Minister Matias Romero and Estanislao Canedo as Mexican plenipotentiaries, was signed by the presidents of both republics in May, 1884; ratifications were exchanged at Washington on May 20, and the convention was proclaimed on June 2, 1884. It could not go into effect until the laws and regulations necessary to carry it into operation were passed by both countries, and for this the term of one year, from May 20, 1884, was allowed. On Feb. 25, 1885, the period was extended to May 20, 1886, both governments having failed to pass the necessary legislation. On May 14, 1886, the term was extended for another year, and on May 20, 1887, the treaty became void, the bill to give it effect having been rejected by the House of Representatives in Washington.

Insurrectionary Movement.—Since the secularization of the State various revolutionary uprisings have been fostered by the clerical party. The revolution of Palo Blanco, which unseated Lerdo de Tejada and made Gen. Porfirio Diaz President for the unexpired term, in 1877 was of a different character. In 1884 Diaz was regularly elected, and his administration has since been marked by prosperity, the introduction of American capital, and a great development of the national resources. His enemies accuse him of selfish ambition, of the arbitrary removal of officials who were not subservient to his personal aims, of accepting gifts of stock in companies receiving concessions, and of pursuing a system of religious persecution and oppression of the Catholic Church. Prominent

among the denunciators have been Gen. Reiz Sandival, who was expelled from the army for sedition, and Catarino Garza, a journalist who has conducted several revolutionary periodicals hostile to the Diaz Government in the border towns of Texas, and has lately resided on his cattle ranch near Palito Blanco, Texas. The latter collected a band of revolutionists, and in September, 1891, he issued a manifesto proclaiming the overthrow of Diaz. At the head of from 50 to 100 men he crossed the Rio Grande, and had several encounters with Mexican troops. When pursued, he and his lieutenants who invaded Mexico with other guerilla bands took refuge on the American side of the river. Gen. Sandival, in the mountain districts of northern Mexico, recruited men for the revolutionary enterprise and laid plans for a general uprising. In the States of Nueva Leon, Tamaulipas, Coahuila, and Chihuahua there was a widespread sympathy with the revolutionary movement, and the Mexicans of Texas were generally in league with Garza. For that reason warrants issued by the United States authorities for the arrest of persons accused of abetting the movement could not be executed. Capt. Bourke and Capt. Hardie endeavored to intercept Garza's bands when they appeared on the American side, with detachments of the United States cavalry force stationed at Fort Ringgold. Companies of Texas rangers also took the field. Re-enforcements of regular troops were hurried up to strengthen the frontier guard. The guerillas, who were superior in numbers, made every effort to avoid combats with the American forces, and would not fire unless driven into a corner. The wild nature of the country was favorable for their concealment, and when hard pressed they could disperse and disguise themselves as cattle herders. Nevertheless, several of the bands were overtaken and some of the members were wounded and taken prisoners. Nothing would induce these men to reveal the plans of the conspiracy and the persons engaged in it.

After they were dispersed by the Mexican troops in their first raids, the revolutionists did not venture across the border in force for many weeks. On Nov. 16 they attacked Guerrero in considerable numbers. At the same time Garza issued a proclamation in which he spoke in the name of the oppressed priests and Churchmen and plundered masses of Mexico, and called on patriots everywhere to join him, saying that his force was strong enough to cope with the Mexican army. His followers had increased already to nearly 1,000 men, and others were joining fast. An invoice of arms brought from New York, consisting of 1,000 rifles, was captured in the Rio Grande by the American custom-house officers. Gen. Sandival was said to be organizing another insurrectionary army in which 2,000 men were enrolled. Gen. Lorenzo Garcia encountered a large body of Garza's men, and the revolutionists were driven to take refuge in the desert parts of Texas. The Mexican Government, alarmed at the rapid spread of the insurrection, hastened troops from central Mexico until they had 8,000 or 10,000 near the frontier, and were able to patrol the whole length of the Rio Grande with squads of 50 men and garrison the States of Nueva Leon and Coahuila. Dis-

tress in northern Mexico, caused by a failure of the crops, created a condition favorable to revolution. A guerilla war was still carried on near the border by detached bands of Garza's men, who escaped into Texas when attacked and pursued in force by Col. Ceron's frontier guard. The Mexican operations were directed by Gen. Bernardo Reyes at Monterey. The American troops co-operating to prevent a violation of the frontier, though consisting only of two companies of infantry and two of cavalry, were able by their activity to compel the bands to scatter wherever they were assembled on American soil. The persons engaged in the movement who were residents of Texas were compelled to return to their ranches, where they were located by spies and scouts, and roundups were carried out by the United States troops, which resulted in the capture of some of the leaders.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population, according to each decennial census since admission, was 212,267 in 1840; 397,654 in 1850; 749,113 in 1860; 1,184,059 in 1870; 1,636,937 in 1880; and 2,093,889 in 1890. Capital, Lansing.

Government.—The following were the State officers during the year: Governor, Edwin B. Winans, Democrat; Lieutenant-Governor, John Strong; Secretary of State, Daniel E. Soper, who resigned in December and was succeeded by R. R. Blacker; State Treasurer, Frederick Braastad; Auditor-General, George W. Stone; Commissioner of State Land Office, George T. Shaffer; Attorney-General, Adolphus A. Ellis; Superintendent of Public Instruction, Ferris S. Fitch; Commissioner of Insurance, William E. Magill; Commissioner of Railroads, Charles R. Whitman; Commissioner of Labor, Henry A. Robinson; Commissioner of Mineral Statistics, Charles D. Lawton; Chief Justice of the Supreme Court, John W. Champlin; Associate Justices, Allen B. Morse; John W. McGrath, Charles D. Long, Claudius B. Grant. On Dec. 31 Chief Justice Champlin's term expired, and Justice Morse became Chief Justice. R. M. Montgomery took his seat as Associate Justice on the same day.

Finances.—The following is a summary of the operations of the State treasury for the year ending June 30, 1891: Balance on hand June 30, 1890, \$1,151,259.78; receipts, \$3,181,398.81; disbursements, \$3,107,924.37; balance on hand June 30, 1891, \$1,224,644.32. The summary for the general fund is as follows: Balance on hand June 30, 1890, \$903,420.60; receipts, \$3,090,438.16; disbursements, \$2,117,994.82; balance on hand June 30, 1891, \$972,444.04. Included in the general fund receipts is the sum of \$1,295,184.09, received of county treasurers from the State tax levy. There is also included an item of \$31,000 paid to the State by the General Government for the support of the agricultural college. From specific taxes on railroad, telegraph, and mining companies and the like was realized \$1,071,749.48, nearly all of which was devoted to educational purposes. The following table shows the cost of maintaining the State institutions for the year ending June 30, 1891, and the portion thereof derived from the State treasury:

INSTITUTIONS.	From State treasury.	From other sources.
Michigan Soldiers' Home.....	\$68,397 50	\$40,906 08
Schools for deaf, dumb, blind, etc.	139,209 85	5,753 81
Insane asylums.....	399,219 98	201,698 58

Total.....	\$1,602,547 49	\$277,645 84

The State debt is practically extinguished, there being now outstanding only about \$100,000 of bonds, none of which bears interest. But there is a trust fund debt on which the State pays interest permanently for the benefit of educational institutions. The rate of taxation is 12.7 cents on \$100.

Education.—The following statistics cover the public-school year of 1890-'91: Number of districts 7,168, increase in one year 23; school population 654,502, increase 14,433; number enrolled in public schools 427,032, increase 2,328; average school year in months, 7.7; number teachers employed, 15,990; average monthly wages, male, \$46.78, increase 40 cents; average monthly wages, female, \$32.78, increase 46 cents; number of school-houses, 7,531, increase 38; value of school property \$13,858,627, increase \$571,990. The school revenue for the year was as follows: From balance of preceding year, \$1,095,840.35; from primary-school interest fund, \$795,813.47; one-mill tax in townships, \$658,305.11; district tax, \$3,451,729.93; other sources, \$761,436.34; total, \$6,763,126.20. The total amount paid teachers was \$3,328,287.04. There are reported 6,655 ungraded and 513 graded districts. The free-text-book system has been adopted throughout the State, and in 1891 the city of Detroit also voted by a large majority to furnish all the pupils in the public schools with free books.

The principal of the various educational funds held by the State on June 30, 1891, was as follows: Agricultural College fund, \$395,605.73; Normal School fund, \$64,622.62; Primary School fund, \$4,410,623.05; University fund, \$518,218.01.

The number of students at the various State educational institutions for the year 1890-'91 was as follows: University of Michigan, Ann Arbor, 2,157; Agricultural College, Lansing, 369; Normal School, Ypsilanti, 900; Michigan Mining School, Houghton, 56; School for the Deaf, Flint, 303; School for the Blind, Lansing, 95; State Reform School, Lansing, 715; Industrial Home for Girls, Adrian, 233; School for Dependent Children, Coldwater, 206.

Charities.—Insane patients were distributed among the several asylums as follow: Kalama-

zoo, 1,011; Pontiac, 975; Traverse City, 700; Ionia Asylum for Insane Criminals, 175. All of the institutions are badly crowded, and many insane persons are for that reason kept in jails and county asylums.

The State Soldiers' Home at Grand Rapids has a total enrollment of 1,461, of whom 541 are reported present.

Live Stock.—In the spring of 1891 the Secretary of State reported in Michigan 396,940 horses, 405,818 milch cows, 363,625 other cattle, 450,830 hogs, and 1,908,372 sheep.

Railroads.—The total revenue realized from the operation of Michigan railroads during the year was \$94,096,854.83, an increase over the preceding year of \$5,950,262.45. The operating expenses for the same period were \$63,925,091.54, a decrease of \$689,763.41, leaving a net income on traffic account of \$31,809,276.64, which was \$6,900,470.73 in excess of the net income of the year before.

The total track mileage in the State, as ascertained for purposes of taxation was 6,944.28 miles. The amount realized to the treasury from the specific taxation of railroad companies was \$778,493.91, an increase of \$21,204.99. The capital stock paid in is reported at \$338,199,052.70, making the capital per mile \$23,019.28. The earnings per mile were given in 1891 as \$6,285.11. According to the report of the State Labor Bureau for the year 1891 the funded debt of the railroads of Michigan was \$388,889,869, and the floating debt \$27,490,659. The cost of construction was \$281,205,724.

Banks.—On Jan. 7, 1889, when the present State banking law went into effect, 80 banks were doing business in the State, with assets amounting to \$38,963,417. The report of the banking commissioner for the year 1891 enumerates 124 State banks, with assets amounting to \$65,191,097.53, an increase of 44 in number, and \$26,228,555.34 in assets. These banks on Dec. 2, 1891, reported their deposits \$49,751,468.06. The common rate of interest paid savings depositors was 4 per cent. The 106 national banks in the State reported \$70,555,261.76 in resources, with \$15,244,600 in capital stock and \$38,500,510.19 in deposits.

Salt.—The salt-producing territory of the State is divided into 9 districts, with a total manufacturing capacity of 5,900,000 barrels. In the year ending Nov. 30, 1891, 113 firms operated 122 plants and produced 3,966,784 barrels, against 3,863,407 barrels in 1890. The largest district in the State produced no salt during 1891.

Labor.—The State labor commissioner published an elaborate report covering the year 1891, largely devoted to the condition of female labor in the State. The average wage of the 13,139 working women who reported to the commissioner was 79 cents a day, \$216.45 a year. Only 2,382 women reported that they saved anything from their wages, and these averaged \$62.37 a year. The average expense was reported to be \$202.21 a year, leaving an actual average saving of \$14.24 per annum. The lowest wage paid was \$1 a week and the highest \$18.75. Of the woman workers, 9,108 lived at home and 730 with relatives. The common length of the day was ten hours. One reported a day of eighteen hours, 118 reported working fifteen hours, 168 reported

thirteen hours, 377 reported twelve hours, 7,161 reported ten hours, 1,501 worked nine hours, 968 worked eight hours, 135 worked seven hours, 86 worked six hours, and 1 worked three hours. Of the female laborers canvassed, 181 were under the age of twelve, while 8,569 were between the ages of thirteen and eighteen. Five began work at the age of eight, and 34 at the age of forty or over. Out of the whole number, 1,060 were orphans, 2,361 had no mother, 3,432 had no father, and 8,336 had both parents. The report states that 6,571 of the women stooped over their work, while 2,682 had to reach up.

Land Values.—The average assessed value of agricultural real estate in the lower peninsula, according to the assessment rolls of 1891, is \$20.82 an acre; of city realty, \$2,320.72; of village realty, \$131.44 an acre; timbered land, \$13.53 an acre; of upper peninsula mineral land, \$480 an acre. The average rent of an acre of farm land is 83 cents, and of an acre of city realty \$162.45. In the city of Detroit, in 1884, there were 3,310 persons holding real property under \$1,000 in value, while in 1891 there were 13,774 of the same class, an increase of 10,461, or 316 per cent.

Farm Mortgages.—In a late report the Bureau of Labor states that of 90,803 farms in the State into the condition of which inquiry was made, 84,488 were occupied by owners. The number of farms mortgaged was 43,079, and the number not mortgaged was 47,724. The assessed value of the mortgaged farms was \$79,713,041, the total mortgage indebtedness \$37,456,372, and the average rate of interest 7-2 per cent.

Legislation.—The Legislature sat for about six months at the beginning of 1891. The most famous of its enactments was what is known as the Miner electoral law, which provides that the presidential electors shall be chosen by congressional districts, one from each district, and not on a single ticket by the State at large, as before. The law has given rise to much controversy, and has attracted national attention. The railroad laws were amended in several important particulars. Among the railroad laws enacted was one providing that where passenger earnings were reported by the company to exceed \$3,000 a mile the maximum rate of fare should be 3 cents a mile; where the reported passenger earnings were less than \$3,000 a mile, the maximum fare should be 4 cents. A law providing for the taxation of mortgages was enacted after bitter opposition. Toward the end of the year a movement was set on foot to test the validity of the mortgage tax law in the Supreme Court. Banks declined to take mortgage security unless the borrower or mortgager contracted to pay the tax on the mortgage.

The election law passed by the Legislature of 1891 provides in the main for the Australian system of voting with a secret ballot. The new system was tried in the Detroit municipal election in the autumn of 1891, and met with universal approval. But one serious difficulty arose. The law provided that the tickets nominated by any regularly called convention of any party were to be placed upon the official ballot by the election commission, under such names and captions as the several parties might designate. Two conventions were held by the Democratic party and two tickets placed in the field. Each

of the factions wanted to use the caption "Regular Democratic Ticket" over its nominees on the official ballot to the exclusion of the other faction. The Supreme Court decided, on mandamus proceedings, that both factions were equally entitled to use the caption.

Another important act of the Legislature was to consolidate the several prison boards into one board, and place under the control of a single body all the penal and reformatory institutions supported by the State.

Decisions.—The most important decision of the Supreme Court during 1891 was that by which the law providing for indeterminate sentences for convicted criminals was set aside as unconstitutional. The law was passed in 1889, and under it the trial judge of a State court might sentence a criminal, duly convicted, to serve an indeterminate time in prison, between specified limits, the date of his release being left to the Board of Prison Control, that body to use its discretion. The Supreme Court held the law to be invalid, in that it conferred judicial powers on the Board of Prison Control, and declared that criminals sentenced under the indeterminate system were entitled to their release at the expiration of the minimum period of imprisonment provided by law as punishment for the crimes of which they were convicted. As a result, several convicts were actually released before the expiration of the time they were sentenced to serve.

The court held, in a decision filed during the year, that a female ward of the State Industrial School for Girls might marry without the consent of the board of control or the managers of the institution. The question arose over a girl who was regularly committed to the institution and was afterward sent into a private family on ticket-of-leave, the institution still maintaining its authority over her. She married without the consent of the managers at the school, and was by them imprisoned in punishment. *Habeas corpus* proceedings were instituted, and the young woman's release was ordered by the Supreme Court of the State.

Political.—No general election occurred in the State during 1891. At the spring elections the only office to be filled was that of justice of the Supreme Court, the term of Chief-Justice John W. Champlin being about to expire. Justice Champlin was a candidate for re-election on the Democratic ticket, while the Republican candidate was R. M. Montgomery, who was elected after a quiet canvass.

The only notable elections held in the autumn were the special congressional election in the Fifth District to fill the vacancy caused by the death of Congressman M. E. Ford and the municipal election in the city of Detroit. In the former, Charles E. Belknap was the Republican candidate and John S. Lawrence the Democratic candidate. Mr. Belknap was chosen. The Detroit election was chiefly notable on account of the split in the Democratic party. Two city conventions were organized, and two tickets nominated. At the head of one was William G. Thompson for mayor, and the other was led by John Miner. The canvass was characterized by the greatest acrimony. The Republicans nominated Hazen S. Pingree for mayor, and he was elected

by a small majority over all. The Republicans also gained control of the City Council. The Democrats had just secured the State government for the first time in thirty years, and the Detroit split was of the deepest moment to the State at large, inasmuch as it tended to jeopard the supremacy of the party.

MINERAL WOOL OR MINERAL COTTON, a filamentous substance produced from furnace slag, resembling wool or cotton in appearance, useful, by reason of its low conducting power, as packing to prevent the freezing of water pipes and the cooling of steam pipes and boilers, and also to keep out dampness, and as a protection against fire, it being incombustible. The spray from the slag emitted from the volcano of Kilauea is blown by the wind into glassy fibers called the "Hair of Pélé," which have the same nature and character as artificial slag wool, the process of manufacturing which was invented by John Player, and was patented at the United States Patent Office on May 31, 1870, and the patent was renewed on Feb. 1, 1876. The liquid slag issuing from a tap in the pig-iron furnace is conducted through a runnel formed by coal ashes on iron plates to the point where it is to be blown and allowed to fall in a stream about 1 centimetre thick for a distance of 15 centimetres, where it is met by a powerful blast of steam, which separates it into long filaments, as fine as hair and as white as wool, in which form it drops into the room constructed for its reception. This chamber is about 100 feet from the place where the jet of steam strikes the falling stream of slag. In some furnaces the slag is brought on cars in a molten state to the place where it is tapped and blown into the wool house. In the Krupp works at Essen, Germany, a blast of cold air is used, instead of a jet of steam, to blow the slag into filaments. Ordinarily, pellets of slag of various sizes are found mingled with the wool-like mass. These are larger drops of the slag that the blast fails to divide thoroughly, and must be separated from the product. A process for preventing them from falling into the chamber by means of a second blast of steam or air striking the blown slag in its passage through the air transversely from below was patented in Germany by A. D. Elbers in 1877. The light wool, blown upward by this second blast, falls into a basket, while the heavier pellets and lumps are not deflected from their original course. The long filaments are broken up into short ones, and the substance when ready for use has the appearance of wool waste. The handling of mineral wool is attended with some danger to the health, as the fine threads penetrate the skin easily, producing inflammation, and the dust when inhaled irritates the respiratory organs. In some furnaces, after the manufacture of this by-product was introduced it was afterward abandoned on account of the injurious effects on the health of the workmen. The uses of mineral wool are many. As a packing and insulating material for steam pipes, boilers, and cylinders it rivals asbestos. It is used for the insulating layer in ice chests and ice cellars. As a protection against damp and for deadening sound it is used in board floors, and also in roofing. To guard materials exposed to damp and decay it finds various em-

ployments. In making telegraph cables a protective layer of mineral wool is often used. Another application is for the filtration of the corrosive fluids used in the manufacture of paper and pasteboard. For purposes of insulation cotton or linen hose filled with mineral wool is sometimes wrapped round the pipes or cylinders. Another method is to mix it with dissolved borax or alum, forming a soft mass like mortar that hardens and adheres to the parts that are to be insulated.

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; and 1,301,826 in 1890. Capital, St. Paul.

Government.—The following were the State officers during the year: Governor, William R. Merriam, Republican; Lieutenant-Governor, Gideon S. Ives; Secretary of State, F. P. Brown; Auditor, Adolph Bierman; Treasurer, Joseph Bobleter; Attorney-General, Moses E. Clapp; Superintendent of Public Instruction, D. L. Kiehle; Insurance Commissioner, C. P. Bailey; Railroad and Warehouse Commissioners, John P. Williams, John L. Gibbs, George L. Becker; Chief Justice of the Supreme Court, James Gilfillan; Associate Justices, Loren W. Collins, William Mitchell, Daniel A. Dickenson, and Charles E. Vanderburgh.

Finances.—The estimated receipts and disbursements for the fiscal years 1892 and 1893 are as follow:

ITEMS.	1892.	1893.
<i>Receipts:</i>		
State taxes.....	\$975,000	\$1,000,000
Railroad taxes.....	730,000	785,000
Insurance taxes.....	110,000	115,000
Insurance fees.....	17,000	18,000
Telephone and telegraph fees.....	8,000	9,000
Incorporation fees.....	30,000	30,000
Interest on deposits.....	15,000	15,000
Seed-grain loans.....	15,000	10,000
Mining taxes.....	6,000	8,000
Earnings of various State institutions.....	60,000	70,000
Forestry transfer.....	30,000	35,000
Miscellaneous.....	5,000	5,000
Total.....	\$2,001,000	\$2,050,000
<i>Disbursements:</i>		
Executive expenses.....	\$95,000	\$100,000
Judicial expenses.....	140,000	145,000
Printing and paper.....	35,000	75,000
Interest on railroad bonds.....	65,000	50,000
Support of State institutions.....	840,000	840,000
Repairs, etc., and improvements.....	80,000	80,000
Boards, commissions, etc.....	65,000	75,000
Societies.....	40,000	45,000
Fire companies.....	30,000	32,000
Miscellaneous.....	134,500	134,500
Printing laws in newspapers.....		40,000
Legislative expenses.....		150,000
Total.....	\$1,524,500	\$1,766,500

RECAPITULATION.

Receipts, 1892.....	\$2,001,000	
Disbursements, 1892.....	1,524,500	
Surplus, 1892.....		\$476,500
Receipts, 1893.....	\$2,050,000	
Disbursements, 1893.....	1,766,500	
Surplus, 1893.....		\$283,500
Total surplus, 1892-'93.....		\$760,000

This estimate shows that the excess of receipts over disbursements for the years 1892-'93 will approximate \$700,000, which sum will be available for enlarging and improving State institutions and other necessary objects. The various boards and commissions have suggested expenditures which, if made, would involve an outlay of about \$1,500,000. It will probably be impossible to provide so large a sum of money, as it is forbidden by law to create any further bonded debt, and it is undesirable to increase the tax levy.

In July, 1892, the payment and retirement of the 4½ per cent. Minnesota railroad adjustment bonds becomes possible. The amount then outstanding will be \$3,965,000. All of this sum, except \$1,686,000, is held by the various trust funds of the State. Of the latter, it is proposed that a certain portion be absorbed by the cash available in the Internal Improvement fund, leaving about \$1,500,000 of bonds, which may be allowed to run at the rate of 4½ per cent., or funded into a bond bearing lower interest. It is recommended that a funding bill be prepared permitting the proper officers to take up the bonds when the option may be availed of, in case any saving can be effected for the State. Should the condition of the money market warrant, a bond bearing a rate as low as 3½ per cent. a year could be sold at par. A constitutional amendment authorizing the trustees of the Internal Land Improvement fund to exchange the land contracts in that fund, amounting to about \$1,800,000, for the adjustment bonds held in other trusts, and to provide that when so exchanged an equal number of bonds be canceled, thus extinguishing that amount of the State debt, has been recommended to the Legislature for action.

Legislative Session.—The work of the Minnesota Legislature includes the passage of about 70 general laws and about 800 special laws. The chief contests were over the usury bill to reduce the legal rate of interest from 8 to 6 per cent., which is disposed of for two years; the Keyes Australian law, which passed through the efforts of the Republicans and a few Alliance men and Democrats, requiring the voter to mark every name on the ticket, and the Courier and Hompe railroad bills, the former of which gave way to the latter. Radical changes have been made in the prison law, and the binding-twine plant at the State Prison has been provided for. The State has been reapportioned into congressional districts, and some changes have been made in the election law. Two constitutional amendments at least will be submitted—one in regard to the taxation of telegraph and telephone lines, and the other prohibiting special legislation. The jury system and the penal code have been amended, and changes have been made touching the judiciary. The most important general laws that have become effective are the following:

Joint resolution asking Congress to appropriate money for a ship canal around Niagara.

Joint resolution to Congress protesting against guaranteeing the bonds of the Nicaragua Canal.

Amending the general laws relating to the taxation of railroad lands.

Taxing the output of mining companies.

Regulating building and loan associations.

Legalizing the incorporation of church societies.

Providing for supervision of mutual building associations.

Repealing the law requiring liquor licenses to be taken out at a certain time in the year, and forbidding the issuing of licenses for fractional parts of a year.

Appropriating \$400 for a monument at the scene of the Indian massacre in Swift County.

Providing for the organization of school districts.

Amending law of normal schools.

Regulating labor of railway employes.

Amending section 235 of the penal code, relating to the crime of rape.

Amending section 245 of the penal code, relating to indecent assault upon women.

Amending the penal code relating to the slander of women.

Amending penal code relating to wages of laborers.

Education.—The general condition of the public schools in 1891 is shown by the following statistics: Number of pupils enrolled in the public schools entitled to apportionment, 225,336; for which \$721,136 was allowed, or about \$3.20 for each pupil.

The Governor, in his biennial message, says: "It would be well to enlarge the present high-school board, consisting of three members, to five, the two additional to be selected, one by the Board of Regents and one by the Normal School Board. The employment of a special secretary who would devote his time to the inspection and improvement of the high and graded schools seems to me desirable. Quite a number of graded schools might rank as high schools if the appropriation was increased \$8,000 a year. The sum of \$400 is allowed each high school under certain conditions, and at this time the appropriation only provides for 60. At least 25 additional schools should receive the aid of \$400."

State Institutions of Charities and Corrections.—The following shows the expense of each inmate for the year ending July 31, 1891: St. Peter's Hospital, \$166; Rochester Hospital, \$171; Fergus Falls Hospital, \$428; total insane, \$182. Soldiers' Home, \$266; School for Deaf, \$199; School for Blind, \$325; School for Feeble-minded, \$183; School for Dependents, \$204; Reform School, \$138; Reformatory, \$349; State Prison, \$250; total, \$201.

During the year all the State correctional and charitable institutions were visited except the St. Peter's Hospital, the Soldiers' Home, and the State Reformatory.

The Fergus Falls Hospital was found in excellent condition. The Rochester Hospital for the Insane was thoroughly inspected and found in excellent condition.

The population of the Soldiers' Home continues to decrease. The number of inmates in the home has been as follows: Sept. 30, 1888, 62; 1889, 121; 1890, 118; 1891, 110.

May 31, 1889, the number reached 141. This number was not again reached until Feb. 28, 1891, when it was 144. After that time it declined until Aug. 31, 1891, when it was 109, the lowest number reported since December, 1888. The finances of the home are in good condition. There was a surplus of \$3,865 at the beginning of the fiscal year, which had increased to \$8,795 at the close of the year.

The new dormitory building for the School for the Deaf is progressing, but will not probably be ready for occupancy before January, 1892. The number of pupils is larger than ever. The

new building will allow vacating the attic dormitories.

The School for Dependent Children appeared to be in excellent condition. The new wing for the little children is approaching completion, and is admirably planned. The cottage for the residence of the State agent was under way.

The Reform School is in process of removal. The new plant is one of the finest, if not the very finest, in the United States.

The Reformatory has reached a satisfactory financial basis. Beginning the year with a deficit of \$14,217, it closed with a surplus of \$10,152. Besides this, unsold stone is estimated at \$15,000. During the year 78 inmates have been released, of whom 49 remain under its guardianship.

The State Prison runs quietly, and is to all appearance admirably conducted. The managers are negotiating for an additional binding-twine plant, being encouraged by the success of the binding-twine business thus far.

The new solitary prison has been opened, and is a decided improvement upon the old one.

The two years' prison contract expired Sept. 30. No bid was received, except that of the Minnesota Thrasher Company, which was 45 cents a day for half the convicts. The bid was rejected as being too low, and a new contract was finally closed at 55 cents a day.

The Cottonwood County poorhouse has proved an expensive nuisance, and the commissioners are seriously discussing the sale of the farm.

Goodhue County poorhouse proves to be thoroughly satisfactory.

Redwood County has a poor farm of 170 acres in the northeastern corner of the county, which served an admirable purpose in relieving the county of the care of a class of paupers who became self-supporting when required to go to the poorhouse.

The Renville County commissioners purchased a fine farm of 320 acres, with a large stock barn at a cost of \$8,000. Specific reports on the different county jails were included in the annual report of the commissioners.

Minnesota at the World's Fair.—The board of managers of the World's Fair for Minnesota includes: D. A. Montfort, J. J. Furlong, A. L. Ward, George N. Lamphere, M. B. Harrison, and L. P. Hunt. Minnesota has been assigned a site for a building. It is about 175 feet square, and is on a corner of two avenues. It is in the improved portion of Jackson Park, near a lovely artificial lake, and only a short distance from Lake Michigan, with magnificently adorned landscape between it and the lake. A legislative appropriation of \$50,000 has been made and further funds are being collected, so that Minnesota may erect a building and make a display equal to her importance in the sisterhood of States.

Agricultural Experiment Station.—The biennial report of the State Agricultural Experiment Station shows that numerous improvements have been made in the buildings and a dairy department equipped, in which there is an increasing interest, and demand for instruction. Much attention was paid to experiments in the use of fertilizers, in the hope of discovering what fertilizers were most available and effective in

the State. Experiments were continued with a great variety of grasses, many varieties of corn, with leguminous plants and root crops. Mixtures of oats and peas of different varieties and of different relative quantities were sown under similar and unlike conditions. Root pruning, listing, deep tillage and surface tillage for corn, together with tests of varieties were continued. In the line of animal industry several kinds of work were undertaken and are progressing satisfactorily, giving promise of results of great value. A valuable stock of hogs was secured. Sheep feeding was made a subject of experiment.

White Pine.—There are really but three white pine States—Minnesota, Wisconsin, and Michigan—and for census purposes statistics of the standing pine owned by manufacturers and the amount of State holdings were collected. The figures of the latter were furnished by the State Auditor, but there can be only an estimate of the standing pine owned by the Government, as the figures of the land office are inconclusive.

In Minnesota the manufacturers have 10,000,000,000 feet of building pine, the State has 20,000,000,000 feet, and the Federal Government is estimated to have 20,000,000,000 feet, a total of 50,000,000,000 feet, more than the holdings of all manufacturers in the three States.

The statistics show that Minnesota has advanced from third place in 1880 to first place in 1890, with double the amount of manufactured product. It is the opinion of the expert that another lumber-manufacturing city will soon have to be built in Minnesota on the upper Mississippi, in order to accommodate needs of the manufacturers. There is not room in Minneapolis to manufacture any more, and with the immense pine forest yet untouched, there is enough to build another lumber city and also to keep Minneapolis going. The output of lumber from Minneapolis, Minn., amounted to \$6,584,456.

Crops.—During August a report was prepared by the State Auditor from returns received by him from the county auditors of the State. These reports were quite elaborate, and showed the acreage, number of bushels, and yield per acre for 1890, and the acreage for 1891, in the various counties. The wheat acreage in 1890 was 2,078,787, yielding 40,298,142 bushels of grain, but this year the acreage is 3,359,983, which, estimated at 20 bushels an acre, a fair average for this year, will yield 67,193,660 bushels of wheat. The corn crop was estimated at 21,907,648 bushels, taking an average of 28 bushels to the acre; the oats about 51,000,810, on an average of 35 bushels to the acre, and the flax 5,598,144 bushels, an average of 12 bushels.

The following gives an estimate of the acreage sown in this State to the three great crops—corn, oats, and flax—by counties: The total acreage in corn is 782,416, an increase of 55,923 acres over 1890. The acreage in oats is 1,457,166, giving an increase of 117,179 acres over 1890. The flax acreage is 466,512, an increase of 66,371 acres over 1890.

The figures issued by the Agricultural Department at Washington credit Minnesota with a wheat acreage in 1891 of 3,143,917, bushels 55,333,000, value \$45,159,692; corn 814,556, bushels 21,586,000, value \$8,418,436; oats 1,415,080, bushels 52,015,000, value \$14,044,163.

Railroad and Warehouse Commission.—

Since the creation of the commission the records demonstrate that much has been accomplished of direct benefit to the general public, as the gradual but material reduction in transportation rates for freight and passengers, and as requiring of the railroad companies equal consideration for all classes of shippers. Competition, improved methods in handling trains, newer and better machinery, lower grades, and the reduced cost of transacting business, aided by a growing traffic, have also assisted in making lighter the burdens of transportation. The commissioners regard the issuing of free passes as now practiced in Minnesota as an unjust discrimination against every passenger that pays, and thus opposed to the spirit of the act passed for the regulation of common carriers; also that it is a fruitful source of corruption: that it is injurious alike to public and private interests, and to the interest of the companies themselves, and that it is one of the chief obstacles in the way of proper and necessary reform in railway management and the control thereof under authority of the State. The present law regulating common carriers especially permits the issuance of passes for the free transportation of passengers, although all other discrimination is prohibited under severe penalties.

The decision rendered in March, 1891, by the Supreme Court of the United States, holding that certain provisions of the act of 1887 regulating common carriers are not in harmony with the Federal Constitution, will make necessary some changes in the Minnesota laws in this regard. It was understood when the law of 1887 was enacted that while the railroads were entitled to receive reasonable rates for service rendered, the Legislature was the sole arbiter as to what rates were reasonable. It was also admitted that this power could be delegated by the Legislature to a board of commissioners. With this in view, the law of 1887, as interpreted by the Supreme Court of the United States, delegated this power to the Board of Railroad and Warehouse Commissioners, and provided no means for a review of its action. The court of last resort has determined that action upon such matters is not final either in a commission or in the Legislature itself. The power of the Legislature to make reasonable rates for common carriers is not denied, but whether a given rate so made is reasonable is a judicial question, and must be settled as other matters of law and fact are determined, through the medium of the courts.

Political.—Under the Apportionment act of Congress approved Feb. 7, 1891, which fixes the number of members of the House of Representatives after March 3, 1893, Minnesota's delegation was increased from 5 to 7, and the State has been redistricted as follows:

1. The counties of Houston, Fillmore, Mower, Freeborn, Waseca, Steele, Dodge, Olmsted, Winona, and Wabasha.

2. The counties of Faribault, Martin, Jackson, Nobles, Rock, Pipestone, Murray, Watonwan, Blue Earth, Nicollet, Brown, Redwood, Lyon, Lincoln, Yellow Medicine, Lac Qui Parle, Chippewa, and Cottonwood.

3. The counties of Goodhue, Dakota, Rice, Scott,

Le Sueur, Sibley, Carver, McLeod, Renville, and Meeker.

4. The counties of Ramsay, Washington, Chicago, Isanti, and Kanabec.

5. The county of Hennepin.

6. The counties of Cook, Lake, St. Louis, Itasca, Carlton, Aitkin, Crow Wing, Pine, Mille Lacs, Anoka, Sherburne, Wright, Stearns, Benson, Morrison, Todd, Cass, Wadena, Hubbard, and Beltrami.

7. The counties of Kittson, Marshall, Polk, Norman, Clay, Wilkin, Traverse, Big Stone, Swift, Kandiyohi, Stevens, Pope, Douglas, Grant, Otter Tail, and Becker.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,621 in 1830; 375,651 in 1840; 606,526 in 1850; 791,305 in 1860; 827,922 in 1870; 1,131,597 in 1880; and 1,289,600 in 1890. Capital, Jackson.

Government.—The following were the State officers during the year: Governor, John M. Stone, Democrat; Lieutenant-Governor, M. M. Evans; Secretary of State, George M. Govan; Treasurer, J. J. Evans; Auditor, W. W. Stone; Attorney-General, T. Marshall Miller; Superintendent of Public Instruction, J. R. Preston; Railroad Commissioners, J. F. Sessions, Walter McLaurin, and J. H. Askew; Chief Justice of the Supreme Court, Thomas H. Woods; Associate Justices, J. A. P. Campbell and Timothy E. Cooper.

Finances.—The balance in the State treasury on Jan. 1, 1890, after deducting the sums embezzled by ex-Treasurer Hemingway, was \$276,835.90; the total receipts for the year following were \$1,251,693.64, and the total disbursements were \$1,210,346.22, leaving a balance on Dec. 31, 1890, of \$318,183.32. For the year 1891 the total receipts were \$1,273,845.42; the total disbursements, \$1,178,632.37; and the balance on Dec. 31, 1891, \$413,396.37. The chief sources of revenue for 1890 were the following: From the *ad valorem* State tax of 4 mills, \$572,134.45; from the privilege taxes, \$201,408.28; from fines, \$62,573.74; from retail licenses, \$161,450. For 1891 the receipts from the State tax were \$606,811.42; from the privilege taxes, \$174,350.37; from fines, \$83,923.62; from retail licenses, \$157,812.50.

The total State debt on Dec. 31, 1891, including interest due, is reported by the Governor to amount to \$3,375,583.59. Of this sum, \$827,000.81 represents only a nominal debt, which probably never will be paid, and \$1,606,312.60 represents a debt of which the State is pledged to pay the interest and not the principal, leaving \$942,270.18 as the actual payable State debt. The total assessed valuation of property in the State was \$165,847,334 in 1890 and \$167,109,303 in 1891, in both of which years a State tax of 4 mills on the dollar was levied.

Railroads.—There were built in Mississippi during the year ending June 30, 1890, 102.57 miles of railroad, and during the year ending June 30, 1891, 42.83 miles. The total mileage in the State at the latter date was 2,456.45 miles.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, as reported by the Federal census:

COUNTIES.	WHITE.		COLORED.	
	1890.	1880.	1890.	1880.
Adams	6,054	4,796	19,973	17,947

The State	539,708	479,393	747,720	650,291

There were 122 Chinese, 1 Japanese, and 2,054 Indians in the State in 1890.

Education.—During the past two years the enrollment of educable children has increased nearly 6,000, and the increase in average attendance falls but little below that number. For the same period the increase in number of teach-

ers employed is 431, and in salaries \$59,590. Within the past two years more than 700 school buildings have been erected. The estimated value of public-school buildings in the State is \$1,129,615.

Nearly every city or town in the State having a population of 1,000 or more is a separate school district, and maintains a public school for eight or nine months in the year. In addition to these, many high schools have sprung up.

At the State University during the school year 1890-'91 there were 217 students in the collegiate department and 23 in the law department; at the Agricultural and Mechanical College there were about 275 students; at the Industrial Institute and College (for girls), 307 students; and at the Alcorn Agricultural and Mechanical College (for colored), 238 students. The State Normal School at Holly Springs has an enrollment of about 200 students.

Charities.—The accommodations of the State Lunatic Asylum at Jackson were increased during the year by the erection of a new building for the colored insane, which will accommodate 400 patients. The 75 colored patients in the East Mississippi Insane Asylum were transferred to it on Dec. 19, making a total of 550 patients in the Jackson institution. The buildings at Jackson will now accommodate about 825 patients.

At the East Mississippi Asylum, at Meridian, there has been a daily average of 246 patients for the two years 1890-'91. There are also many insane in the county jails and elsewhere.

At the Institution for the Deaf and Dumb there were 81 pupils at the close of the year. The cost of the institution to the State in 1891 was about \$18,000.

Penitentiary.—On Dec. 3 there were 543 prisoners at the State Penitentiary, of whom 54 were white and 489 colored. The average number during 1890 was 456, and during 1891, 509. The institution is now managed by a State Board of Control, which directly superintends the labor of prisoners. During 1890 the carriage-making industry employed a considerable number of prisoners within the walls, while the remainder were engaged in farming. During 1891, in addition to carriage-making and farming, a portion of the prisoners were making brick for the addition to the State Lunatic Asylum at Jackson. The Penitentiary is not only self-supporting, but during 1890 the State derived from it an income of \$19,000, and during 1891 an income of \$29,295.44.

Pensions.—Since 1888, the first year in which the State appropriated money to pension Confederate soldiers, the list of pensioners has increased from 1,000 to 1,284, in 1890. The first year the fund appropriated was \$21,000, and each pensioner received \$21; in 1889 the number increased, but the appropriation was the same, and the amount paid each was \$17.85. For 1890 the fund was increased to \$30,000, and the pensioners obtained \$23.36 each.

Confederate Monument.—Early in June a monument to the Confederate dead of Mississippi was unveiled at Jackson in the presence of a large concourse. United States Senator E. C. Walthall delivered an oration on the Confederacy, and an address upon the life and character

of Jefferson Davis was made by ex-Gov. Robert Lowry. The monument was erected at a cost of \$20,000, half of which was appropriated by the State Legislature, and half was raised by a committee of ladies. The shaft is placed in a conspicuous position on the grounds surrounding the State Capitol, and contains, in a chamber at its base, a statue of Jefferson Davis.

Political.—The only State officers to be chosen this year by popular election were three railroad commissioners. At a State convention of the Democratic party, at Jackson, on July 16, the commissioners then in office—J. F. Sessions, Walter McLaurin, and J. H. Askew—were renominated. A declaration of party principles was adopted by this convention, of which the following is a portion:

The farmers have been unduly taxed; they have been made the bearers of the burdens imposed for the benefit of the manufacturers, while the prices of their chief products are fixed by the prices in Europe. The protective system has been so arranged as to restrict the markets and thus reduce the prices of such products, and at the same time enhance the prices of what the farmer has to buy.

We believe that gold and silver should be coined on the same terms and conditions, and when the Government shall cease to discriminate between them they will freely circulate side by side, and be equally useful and acceptable. We also believe there should be an additional issue of treasury notes, interchangeable with coin, sufficient to transact the business of the country, and to relieve the present financial depression.

We demand liberal appropriations for the improvement of our rivers and harbors.

We are opposed to what is known as the Sub-treasury Scheme, as violative of the time-honored principles of the Democratic party, and a violation of the Democratic idea of proper construction of the Constitution, and we regret that the discussion of the same has been thrust into the politics of our State.

No party ventured to place an opposition ticket in the field, and at the November election the candidates above named received all the ballots cast. The vote for McLaurin was 31,986; for Sessions, 31,552; for Askew, 31,475. At the same election members of the General Assembly of 1892 were chosen. Forty-five Senators and 133 Assemblymen were elected, all regular Democrats, except 3 Republicans, 1 Greenbacker, and 7 Independents. The "understanding" clause of the new State Constitution was not rigidly enforced in the registration of voters preceding this election.

MISSOURI, a Western State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to the census of 1890, was 2,679,184. Capital, Jefferson City.

Government.—The following were the State officers during the year: Governor, David R. Francis; Lieutenant-Governor, Stephen H. Claycomb; Secretary of State, Alexander A. Le Sueur; Auditor, James M. Seibert; Treasurer, Lon V. Stephens; Attorney-General, John M. Wood, all Democrats; Chief Justice of the Supreme Court, Thomas A. Sherwood; Associate Judges, Francis M. Black, Theodore Brace, Shepard Barclay, James B. Gantt, J. L. Thomas, and George B. MacFarlane; Clerk, Jacob D. Conner, all Democrats; Superintendent of Public Schools, Lloyd E. Wolfe.

Finances.—The balance in the Treasury Jan. 1, 1889, was \$585,499.07; the receipts from all sources during 1889 were \$3,757,851.92; the total receipts in 1890 were \$3,393,513.99; the outstanding warrants charged to the school fund, \$1,996.26; the disbursements in 1889 were \$4,002,096.45, and in 1890 \$2,832,280.92, leaving a balance Jan. 1, 1891, of \$904,483.87. In the State revenue fund the balance on Jan. 1, 1889, was \$15,937.94; the receipts for the biennial period were \$4,273,399.51, and the expenditures \$4,092,401.78, leaving a balance Jan. 1, 1891, of \$180,997.73. The balance in the sinking fund Jan. 1, 1889, was \$330,025.78. In 1889 \$742,000 was paid out of this fund to redeem maturing bonds, and in 1890 \$218,000. In 1890, also, \$33,840 was paid for the purchase of 32 unmaturing bonds; the balance Jan. 1, 1891, was \$453,168.49.

The disbursements for the support of public schools in 1889 were \$843,320.19, and in 1890 \$861,386.40, of which \$1,331,605.99 were the one third of the State revenue applied to school purposes, and \$371,865 were the receipts from interest on certificates of indebtedness. The disbursements for the support of the State University during the biennial period were \$55,967.08; the moneys in this fund arise from the proceeds of the lands granted by acts of Congress in 1818 and 1820 for the establishment of "a seminary of learning." For the School of Mines and Metallurgy \$20,000 was expended during the two years, and for the normal schools \$76,733.

The sums paid out for support of the three lunatic asylums, including repairs and improvements, was \$250,390.58; for the Deaf and Dumb Asylum, \$181,481.52; and for the Blind Asylum, \$51,672.23.

The Missouri Penitentiary cost the State \$114,370.46; the Reform School for Boys, \$22,638.51; and the Industrial Home for Girls, \$17,103.97.

The assessed valuation of real and personal property, including railroad, bridge, and telegraph property, for 1889, was \$807,551,460.29, and for 1890 \$862,772,099.44. Of this, the railroad, bridge, and telegraph property amounted in 1889 to \$57,420,321.29, and in 1890 to \$60,322,959.44. The State revenue tax was $\frac{1}{10}$ of 1 per cent.; the State interest tax, $\frac{1}{10}$ of 1 per cent.

Education.—For the school year ending in 1890 the county commissioners reported as follows: White children of school age enumerated, 810,707; colored children of school age, 48,047; total, 858,754; white children enrolled in the public schools, 587,510; colored children enrolled, 32,804; total enrollment, 620,314; average number of pupils attending each day, 384,627; whole number of teachers employed, 13,785, of whom 6,123 were male and 7,662 female, 13,065 white and 720 colored; average monthly salary of teachers, \$41.94; number of schools in operation, 9,712, of which 9,205 were white and 507 colored; total number of school-rooms occupied, 12,574; number of pupils that can be accommodated, 701,947; average cost per day for tuition on enrollment, 49 cents; average cost per day for tuition on average attendance, 79 cents. The value of school property in the State was \$12,194,381. The receipts and expenditures for the year, as reported by the county commission-

ers, were as follow: Amount on hand July 1, 1889, \$1,413,326.74; receipts during the year for tuition fees, \$29,848.44; from public funds, \$1,487,515.98; from railroad tax, \$204,747.72; from loan voted, \$582,787.10; from local taxation, \$4,214,237.18; total receipts, \$7,932,463.16; amount paid for teachers' wages, \$3,472,225.26; for incidental expenses, \$665,928.63; for salaries of district clerks, \$213,922.54; for purchase of sites, erection of school-houses, and furnishing them, \$704,103.66; for repairs and rent, \$350,280.08; for defraying indebtedness (sinking fund and interest), \$223,608.64; for library, \$27,801.71; total expenditures, \$5,657,870.52; amount on hand July 1, 1890, \$2,274,592.64. The number of volumes in the district libraries was 130,880. The number of trees planted on Arbor Day was 9,903.

The permanent school funds were as follow: Total amount of State school fund in State certificates and cash in the treasury to the credit of the school fund, \$3,140,853; university or seminary fund, \$540,000; county school fund \$3,687,565.43; township school fund, \$3,331,055.95; district-public-school fund, \$48,407.61; total, \$10,747,881.99.

The total number of students enrolled in the preparatory and college departments of the State University at Columbia was 245, and in the professional courses 187. Of the latter, 9 were in the agricultural, 50 in the normal, 69 in the law, 17 in the medical, 38 in the engineering, and 4 in the commercial department.

The semi-centennial anniversary of the laying of the corner-stone of the university was celebrated July 4, 1890. The connection that had existed for several years between this institution and the Missouri Medical College at St. Louis was severed in 1890. Dr. A. W. McAlester was appointed dean of the medical department, and a thorough three years' course was adopted. The General Assembly enacted a law in 1889 by which the military department of the State University was made the Missouri State Military School. The corps of cadets is to consist of one from each senatorial and representative district in the State, each to be an actual resident in the district and appointed by the Senator or the Representative in August of each year. These cadets pay no tuition fees, but only laboratory and incidental fees in any department of the university where they may be matriculated, and are reckoned a part of the National Guard of the State, having its military organization and subject to its rules.

By a congressional land grant the State received about 300,000 acres for the endowment and maintenance of a college of the mechanic arts. All but about 60,000 acres has been sold, and from the proceeds \$312,000 invested in State certificates at 5 per cent. The State has designated Columbia as the site of the college, but has so far failed to provide the buildings to which the congressional grant can not be applied.

The enrollment at the State normal schools was as follows: At Kirksville, 520 pupils; at Warrensburg, 744; at Cape Girardeau, 349. The Lincoln Institute for training colored teachers, at Jefferson City, enrolled 52 pupils in the normal department out of a total of 183. About 7,591 were reported enrolled in private schools.

Legislative Session.—The thirty-sixth Legislative session began on Jan. 7, and adjourned on March 24. A vote was taken Jan. 27 for United States Senator. In the Senate George G. Vest received 24 votes; Samuel W. Headlee, 7; and O. D. Jones, 1. In the House Vest received 106 votes; Headlee, 25; and Leverett Leonard, 8. The following day a joint session was held, the vote was verified, and Senator Vest declared his own successor. Gov. Francis sent in his message Jan. 9. Among his recommendations is one for the restoration of the Board of Fund Commissioners, abolished by the thirty-fifth General Assembly. Under the head of legal matters, the Governor calls attention to the claim of the State against the St. Louis and San Francisco Railroad for \$300,000, being the purchase price for that railroad, which the State had sold on March 17, 1868. Suit was instituted in the circuit court of St. Louis Jan. 30, 1889, the day before the ten-year period of limitation would have expired, for the principal and 6 per cent. interest from maturity. The defendant filed a demurrer to the State's petition, but it was overruled, and the case set for trial at the February term of the St. Louis circuit court. The attorneys of the railroad have notified the State of their intention to take depositions in New York and various other cities, beginning Jan. 10, 1891.

In regard to education the Governor said:

The last Legislature set aside one third of the revenue for the support of the public schools, and, in addition, appropriated \$183,388 for the State University and State normal schools, making a total appropriation for the benefit of education for the years 1889-'90 of \$1,514,988.99. In addition to this sum the schools derived \$427,520 as interest on the public-school fund and seminary fund, making a total of \$1,942,508.99 paid out of the State treasury for the promotion of education in Missouri during the past two years. This is independent of the money raised in the school districts of the State by local taxation and from county and township funds, which, for the two years 1889 and 1890 aggregated \$8,646,480.23—a grand total of \$10,407,656.20 paid by the people of Missouri for school purposes during the past two years.

Among the bills passed by the Legislature were the following:

- Prohibiting the alien ownership of land.
- Requiring mine operators to give employes noon hour above ground.
- Extending the Australian ballot law to all parts of the State.
- For the assessment of surplus funds and undivided dividends of banks.
- Prohibiting pool selling and book-making. Making it a felony to blacklist employes.
- For endowment of the State University.
- Requiring original-package dealers to take out dram-shop license.
- Appropriating \$150,000 for a State exhibit at the World's Fair.
- Fixing the legal contract rate of interest at 8 per cent.
- Providing for the forfeiture of principal and interest in cases where exceeding 10 per cent. interest is charged.
- Appropriating one third of the revenue for school purposes.
- Requiring foreign corporations to become incorporated under the State law before doing business in the State.
- Taxing sleeping-car companies \$2 on the \$100 of gross earnings.

Appropriating \$50,000 for support of the State militia and university cadets.

Authorizing independent parties to avail themselves of the ballot law without reference to numerical strength.

Restoring the Board of Fund Commissioners.

The constitutionality of the law against pool selling was disputed, but the Supreme Court, Nov. 16, held it to be constitutional.

The Noland Defalcation.—This case (see "Annual Cyclopædia" for 1890, p. 563) was brought to trial in May before Judge Burgess, a part of whose instructions to the jury was as follows: "Before you can convict the defendant you must believe beyond a reasonable doubt, from the evidence in the case, that he converted the public money to his own use, with the intent at the time of converting to retain said money and deprive the State of it." The jury stood six to six, and were discharged. On the next trial, in July, the jury rendered a verdict of guilty, fixing the punishment at two years in the Penitentiary. Motions were made for a new trial before Judge Burgess, the affidavits affirming that some members of the jury were incompetent by reason of intoxication, and some on account of opinions previously formed. The motion was denied. Appeal was then taken to the Supreme Court. There are still other indictments against the ex-Treasurer, one for forgery and the other for loaning the State's money.

The Confederate Home.—This institution, near Higginsville, was opened in April, and though not ready to be operated to its full capacity, has provision for the support of fifteen inmates.

Geological Survey.—An act of the Legislature approved May 23, 1889, created a Bureau of Geology and Mines; the board was organized in the following August, and Arthur Winslow was elected State Geologist, entering on the discharge of the duties in September. His biennial report, sent to the Legislature in January, 1891, shows that the cost of the survey to the end of 1890 was \$16,148.10. Monthly reports have been made, and bulletins issued, giving results of the work in special departments as it progressed. Topographic maps have been made, and specimens to the number of 2,300 collected and classified. Work in the coal fields had been done by earlier surveys, and some attention had been given to the zinc and lead deposits. The present survey has gone more thoroughly into these subjects, and has taken up in addition the clays, building stones, limes, sands, and cements, and the mineral waters, of which no scientific and critical examination had been made; 1,574 square miles have been studied and mapped with reference to the distribution of the granites, syenites, and porphyries. A preliminary report on the coal deposits gives results of the field work prosecuted during the years 1890-'91.

With reference to the value of coal and coal lands, the report says it "must remain indeterminate until the question of the amount of the coal is settled. With a bed 2 feet thick, the value of the 2,500 tons of available coal per acre, at \$1.30 per ton, is \$3,250. The value of the product of a square mile of such coal is \$2,080,000. If we allow a profit of 10 cents per ton, the net value of the coal from an acre of

land is \$250, and for 40 acres of such land it is \$10,000.

The production of lead for the year ending June 30, 1891, was valued at \$2,411,399, that of zinc at \$2,673,073, and that of iron at \$331,665.

Charities.—The amount appropriated to the support of eleemosynary institutions during the biennial period was \$623,458. The School for the Blind at St. Louis cost the State during the two years \$59,209.46 for an average of about 100 pupils. The committee appointed to visit and examine the State institutions reported that in their opinion a suburban location would be far preferable to the present one, which is now in the heart of the city, though it was far out in the suburbs in 1855, when the school was organized. The location has so increased in value that it would bring a sum much greater than would be needed for new grounds and modern buildings. The School for the Deaf and Dumb, at Fulton, had special appropriations, aggregating \$93,000, from the thirty-fifth General Assembly, and asked for \$11,750 more from the thirty-sixth; \$70,000 was appropriated for the current expenses for the last biennial period, and an increase to \$95,250 was asked for the next. The appropriation for salaries was \$24,500; 123 new pupils were added, the whole number being 355. The average *per capita* for current expenses was \$197.50; for salaries and wages, \$97.50.

The appropriation for the State Lunatic Asylum, at Fulton, was \$40,000 for support, \$20,000 for improvements, and \$19,200 for salaries. The average number of inmates was 550. For the one at St. Joseph the total appropriation was \$87,500, of which \$56,764.37 was expended. The number admitted during the two years was 340, the total number under treatment 819. The one at Nevada had admitted 438 and discharged 306, of whom 145 were restored and 43 improved. The sum received from the State was \$93,648.88.

MOLTKE, HELMUTH KARL BERNHARD, Freiherr von, a German soldier, born in Parchim, Mecklenburg, Oct. 26, 1800; died in Berlin, April 24, 1891. His father, Fritz von Moltke, a retired captain in the Prussian service, married Henrietta Paschen, the only daughter of a wealthy Hamburg merchant and Prussian Councillor of Finance, and purchased an estate in Priegnitz, and afterward one in Mecklenburg, his native province. Helmuth, the third of seven sons, was born while his parents were visiting the uncle for whom he was named. Baron von Moltke, the father, sold his land in 1803, and retired to Lübeck, where his house was sacked by the French in 1806. Shortly afterward he bought an estate in Holstein, near Kiel, but lost the buildings and granaries a year later through fire, and when the maternal grandfather died soon afterward, after the payment of numerous legacies, little was left of the fortune, depreciated as it was through the war. The property had to be sold, and the father was compelled to return to military life, taking service in the Danish army, in which he rose to be a lieutenant-general. He entered Helmuth and his brother Fritz in the cadet school at Copenhagen in 1811, and while being trained in the rudiments of the military profession they were subjected to harsh treatment and privations. The uncle, Helmuth von Moltke, as a captain of Mecklenburg troops in the French

service, was killed in Russia at the passage of the Beresina in 1812. In 1818 young Helmuth passed his examination as candidate for a degree at the head of his class. He served for a year as a page at court, as the rules of the Danish service required, and in March, 1819, was appointed a lieutenant in the Oldenburg regiment. He won the good-will of his superiors by his attention to duty and zeal for knowledge. Desiring to serve for a time under the Prussian flag in order to complete his training, he asked the King for an advance of pay, as he was very poor. His colonel, the Duke of Holstein, afterward King of Denmark, gave him leave of absence and good recommendations; but the King, whom he promised to repay by acquiring such knowledge and capacity in the Prussian service as would enable him to serve Denmark more efficiently, refused to pay the expenses of any Danish officer seeking service abroad, and owing to this refusal the future strategist of the Schleswig-Holstein campaign remained in the Prussian service, which he entered in 1822. He became a second lieutenant in the infantry regiment stationed at Frankfort-on-the-Main, and did regimental duty for a short time, after which he studied in the military academy at Berlin and in the school at Frankfort-on-the-Oder, and applied himself so assiduously to the practice and theory of the military art that in 1832 he was assigned to duty on the general staff. He took part in the topographical survey of Silesia and Posen. About this time he published a pamphlet entitled "Holland and Belgium," discussing the politico-military aspects of the secession of Belgium from the Netherlands. In 1835 he obtained leave of absence to visit the East, and was presented to the Sultan Mahmoud, who asked him to remain in order to assist Chosref Pasha in reorganizing the Turkish army on the Prussian system. Willing to oblige the Sultan, the King of Prussia gave him permission. When Mehemet Ali, Viceroy of Egypt, invaded Syria, Moltke and another officer named Mühlbach went to the headquarters of Hafiz Pasha in the valley of the Euphrates to act as military advisers. In the advance of the Turkish army, 70,000 strong, on Aleppo Moltke commanded the artillery. He advised the commander-in-chief to remain on the defensive until the raw troops could be trained into some degree of efficiency, and when Hafiz Pasha, relying on the enthusiasm roused by the *mollahs*, insisted on making the disastrous attack on Ibrahim Pasha's position, Moltke predicted that on the morrow he would be a general without troops. Returning to Berlin in August, 1839, Moltke was placed again on the general staff, and for his services in the Syrian campaign he received the order *Pour le Mérite*. A year later he was assigned to the staff of the Fourth Army Corps, stationed at Magdeburg. Descriptions of his experiences and observations in Turkey contained in his correspondence with his sister, Frau Burt, wife of an Englishman living in Holstein, were published under the title of "Letters from Turkey, 1835-'39." These letters, which gave him a high literary reputation, had already won the admiration of Mr. Burt's attractive daughter, and this impression ripened into love when they met in her father's house. They were soon engaged, and in April, 1842, a few days

after he had been made a major, they were married. He was much his wife's senior, yet their union, until it was broken by her death in 1868, was remarkably harmonious and affectionate, though they had no children. In 1845 he published a critical work on "The Russo-Turkish Campaign of 1828-'29 in European Turkey," that made a great impression on army circles in Germany and still stands high among the classics of military criticism. In the same year he was appointed aide-de-camp to Prince Heinrich of Prussia, who was living in Rome, where he died in the following year. After his return from the East Moltke had published maps of the Bosphorus and Constantinople and had drawn the map of Asia Minor published in Kiepert's "Atlas," and while in Rome he made a map of the city and its environs. While the prince's corpse was borne on board a man-of-war to Germany, Moltke traveled through Spain and France, leaving the ship at Gibraltar. For the next two years he served on the staff of the Eighth Army Corps, stationed at Coblenz, and then was given charge of a department of the general staff at Berlin, from which he was transferred before long to the post of chief of staff of the Magdeburg corps, being promoted lieutenant-colonel in 1850 and colonel in 1851. In 1855 he was called from this post to become aide-de-camp to Prince Friedrich Wilhelm, the future Kaiser Friedrich. He accompanied this Prince to St. Petersburg and Moscow in 1856, on the occasion of the Czar's coronation. Graphic and unrestrained pictures of court life and observations on the country, the people, and the army, contained in letters to his wife, were printed without leave long afterward in a Danish newspaper, and later in an authorized version in the "Rundschau" and in the form of a pamphlet. He was made a major-general in 1856, and after the trip to Russia he went with the prince to England, and remained with him when he took command of a regiment at Breslau and in 1857 of the First Brigade of the Guards.

When Gen. Reyher died, in 1857, Moltke, one of the youngest general officers in the service, was intrusted with the duties of chief of the general staff, though only provisionally till May, 1859, when he was permanently appointed chief of staff with the rank of lieutenant-general. His preparations for mobilization when the French army advanced through Lombardy convinced the Prussian military authorities that he would uphold and improve the standards set by Scharnhorst, Gneisenau, Müffling, and Reyher, and impelled the French Emperor speedily to conclude the peace of Villafranca. A critical history of the Italian campaign prepared under his direction was the first of a series of valuable military works issued by the Prussian staff. The prospect of a war with a maritime power caused the Prussian Government to commission Moltke to prepare, at the shortest notice, a general scheme of naval defense, which was worked out with the assistance of the best naval and engineer officers. The plans, which involved the creation of a common navy under Prussian direction, were submitted to the Diet at Frankfort, but, the war cloud having passed over, they were not examined for three years, at the end of which a federal commission condemned all the Prus-

*Cpt. Molten
Antimorphall*

sian propositions. When Wilhelm I, who had acted as Regent since 1857, became King in 1861 he determined on such a reorganization and augmentation of the land forces as would make Prussia a leading military power. With Count Bismarck, the head of the Cabinet, and Gen. von Roon, the Secretary of War, to carry on the fight for the new armaments in Parliament, Moltke proceeded with the organization, which was completed in 1863. In 1864 the war of Prussia and Austria against Denmark on account of the Elbe duchies gave him his chance to prove his strategical ability by drawing up the plan of operations against the army in which he had first learned the soldier's trade. After Field-Marshal von Wrangel had invaded the duchies and taken Düppel by storm, as he had planned, Moltke accompanied the King to the seat of war and directed the concluding operations as chief of staff with Prince Friedrich Karl as commander-in-chief. When it was discovered that England would not interfere, the German army was allowed to deliver a crushing blow to the Danes, which was easy to do with the needle-gun and breech-loading cannon, and to occupy Jutland and the islands too, if necessary, in order to obtain the desired terms, which were the annexation of Schleswig, Holstein, and Lauenburg to Germany. The allies quarreled about the possession of the duchies, and in 1866 Prussia found herself at war with Austria and the majority of the confederated German states. Surrounded by enemies and in danger of having whole sections of the monarchy cut off from the main body, it was necessary for the Prussians to carry the war into the enemy's country. The swift advance of the Prussian army into Bohemia in three columns, such a division being rendered safe by the introduction of the field telegraph, and the crushing defeat of Benedek's army, taken on three sides at Königgrätz, proved to the world the strategical genius of Moltke and the superior organization of the Prussian army, for which he and the general staff received the credit. The position of the Austrians was not known until Prince Friedrich Karl, on the afternoon of July 2, 1866, found a large force posted behind the Bistritz. He determined to attack at daybreak, and asked that a part of the second army should hold the Austrians in check near Josephstadt. Moltke, feeling sure that he could bring up the second army, that of the Crown Prince, although it was wearied out by a week of hard marching and fighting, persuaded the King to countermand the order to rest the armies on the following day, and direct the whole of the second army to attack the enemy on the right flank. When the battle opened eight Austrian corps were found in position, but they were rolled up and routed completely when the Crown Prince came up. After the war of 1866 Moltke and his general staff had the great work of extending the Prussian military system to the other North German states and preparing for the war with France. With a dotation of 200,000 thalers granted by the Landtag, he purchased an estate near Schweidnitz, Silesia, on which to pass his declining years in repose. After his wife's death, in 1868, he withdrew from court festivities and social gatherings more than ever. Although affable to all, polished in manners,

and a man of æsthetic and literary tastes, Baron von Moltke was so sparing of words that he was spoken of in the army as the man who "kept silence in seven languages." The Deputies no longer opposed the plans for strengthening the German army which Gen. von Moltke explained to Parliament, as far as was necessary, in terse and weighty speeches, as he had been elected Deputy for a district in East Prussia.

When the French war broke out the preparations had been so complete, down to the minutest details, that a rapid concentration of the Prussian troops on the line of the Rhine prevented the invasion of German territory. A bold advance of the three German armies, at first extended over a line of 150 miles, drawing together after the affair at Wörth, caused MacMahon to retire, and closed in round Metz, cutting Bazaine's line of retreat to Châlons. These movements were executed with sufficient caution to allow the German armies to support one another in case of a French attack, but promptly enough to give the Germans a great advantage from the beginning. The campaign was not planned, for no one could have foreseen the disorganization of the French defense caused by the concurrent political revolution. The German mobilization in July, 1870, when 370,000 men, with 1,200 guns, in the space of two weeks were massed on the frontier between Coblenz and Germerheim, was a feat that had never been accomplished before, and was a striking manifestation of Moltke's genius as a military administrator. Before March 1, 1871, a million German soldiers were united on French territory, while a quarter of a million more were ready to move to the front, and the movement of these masses of troops was directed by Moltke, whose dispositions were accepted implicitly by the King. He had no chance during the war to exhibit his strategical insight as brilliantly as at Königgrätz. He cautiously swung the Army of the Meuse round to the northwest when Emperor Napoleon and Marshal MacMahon had moved to the north, and in dealing with the various developments that he could not account for on military grounds he was always on guard against surprises. The great augmentation of the German cavalry since 1866 gave him a great tactical advantage over the French commanders, for all the German manœuvres were effectually screened by their cavalry. The efficiency of the military machine perfected by his life's labor was seen in the military results of the war—nearly 400,000 French soldiers carried as prisoners to Germany, 150,000 men disarmed in Paris, 100,000 more driven into Switzerland, 22 fortresses captured, and 1,835 field guns, 5,373 fortress guns, and 600,000 rifles taken. He was made a field marshal after the conclusion of the war, received a dotation from the Parliament, and in 1872 was made a life member of the Reichsrath. Residing in the staff palace in Berlin in winter, and on his estate of Kreisau in summer, he continued to preside over the organization of the German army while it was being successively increased, to give instruction to officers of the staff, and to attend Parliament regularly, in which he represented the West Prussian county of Memel-Heydekrug, and occasionally to speak on military subjects. The Emperor presented

him with the star of the order *Pour le Mérite* with the medallion portrait of Frederick the Great, a distinction usually reserved for royalty, and wished to confer on him the title of prince, which Moltke declined. The simplicity and modesty of his character, the absence of self assertion and personal ambition, were the secret of the affection shown for "Father Moltke" by the officers and soldiers of the army. He chose as his confidential assistant Count Waldersee, who was appointed quartermaster-general, and who succeeded him as chief of staff when he resigned, on Aug. 29, 1888, and was succeeded in turn by Count von Schieffen. When he assumed the office the period required for the mobilization of the Prussian army was estimated to be twenty-one days, and when he asked the young Emperor to relieve him because he could "no longer mount a horse" it could be done in ten days. He still continued to act as military adviser to the general staff, and was appointed President of the National Defense Commission. In politics Gen. von Moltke was a member of the Conservative party, but not a strong partisan. "*Erst wägen, dann wagen*" (first weigh, then wage) was the motto he took when he was made a count. Like Napoleon and Wellington, he did scarcely any regimental duty during his career. He had a reputation for cool calculation and imperturbable *sang froid*, and his courage was well known from the few occasions when, for sufficient reasons and without the least bravado or ostentation, he unhesitatingly exposed his life, as when at Königgrätz he rode down into the first line of skirmishers in the wood of Sadowa, in order to observe the enemy's position.

MONTANA, a Western State, admitted to the Union Nov. 8, 1889; area, 146,080 square miles; population, according to the census of 1890, 132,159. Capital, Helena, which has a population of 23,834.

Government.—The following were the State officers during the year: Governor, Joseph K. Toole; Lieutenant-Governor, John E. Rickards; Secretary of State, Louis Rotwitt; Treasurer, Richard O. Hickman; Auditor, E. A. Kenney; Attorney-General, Henri J. Haskell; Superintendent of Public Instruction, John Gannon; Chief Justice of the Supreme Court, Henry N. Blake; Associate Justices, William H. De Witt and E. N. Harwood. All of these officers are Republicans except the Governor.

Finances.—The balance in the treasury Jan. 1, 1891, was \$187,181.49; the amount of State taxes collected in 1891 was \$331,301.63; the balance on Jan. 1, 1892, was \$315,330.32.

The total assessed valuation of real and personal property in the State for 1891 was \$144,688,752. The rate of taxation was 2½ mills.

The total debt of counties on March 1, 1891, was \$1,830,006.51, a reduction of \$107,143 from the total debt of counties in 1890.

Legislative Session.—The deadlock in the Legislature, caused by the disputed election of representatives in the Thirty-fourth Precinct, in Silver Bow County (see "Annual Cyclopædia" for 1890), continued after the time for opening the session, Jan. 5, 1891, but was finally ended at the close of the month. While the subject of a compromise was under consideration in the third week in January, the Republican House adjourned

and about half the members went home. The half remaining agreed to accept the proposition of the Democrats in case the consent of the absentees could be obtained. This was secured, and a caucus was held on Jan. 26. The main feature of the proposal of the Democrats, namely, to organize with 28 Republicans and 27 Democrats, thus giving the former 3 and the latter 2 of the contested seats, was readily accepted; but differences of opinion arose on the method of organization. It was finally decided to propose that the Democrats should have the officers of the House and a majority of the committees, provided they would open a new journal and hold a new election of officers. These propositions were embodied in a resolution, which also submitted the matter for final settlement to the Senate committee, Messrs. Goddard and Thornton. On Jan. 27 the Democratic House held a caucus to consider the compromise, and adjourned, leaving everything in the hands of the Senate committee. They, however, expressed a willingness either to give the Republicans the majority of one and take for themselves the entire organization, or to take the majority and give the organization to the other party; and also to open a new journal in case such proceeding should be deemed legal by the committee. This committee met and arranged details, and submitted copies of the proposed agreement to the caucuses of the two assemblages, dated Jan. 28, 1891. After setting forth the facts in the case the agreement goes on to provide that the two bodies shall meet at Helena at noon of Thursday, Jan. 29, and proceed to the organization of the House on a plan of which the following are the main features:

1. The House to consist of 25 members of each party about whose election there was no dispute, together with 3 of the 5 Republican contestants, to be chosen by ballot by the 25 undisputed Republican members, and 2 of the Democratic contestants similarly chosen.

2. The House to be called to order at the hour named by the oldest member, and a temporary clerk elected from among the Democratic members. The temporary Speaker to appoint a committee on credentials, consisting of two from each party.

3. After the adoption of their report, the House to adopt a preamble and resolutions, of which the most important provided for depositing the journals of the two assemblages with the Secretary of State, and the opening of a new journal; the payment of mileage and *per diem* for the full period of each session to all members of the first and second Legislatures, including the contestants on both sides, the officers and *attachés* also, if not already paid, to receive pay for the entire period of each session; the Democrats to have a majority, if they so desired, of all the standing committees and the chairmanships of the same; the rules adopted by the Democratic assemblage to be the rules of the House, and in the event of the sickness or death of any member, the relative numbers of the parties to be maintained; and in case of the inability to act of any officers or *attachés*, or of any more being required, the Democrats to elect the new officers or *attachés*.

The resolutions further prescribed the names of officers and *attachés* to be elected by one ballot, leaving a blank only for the name of the Speaker *pro tem*. They were signed by all members of both parties, one only, a Silver Bow Republican, signing under protest. The House accordingly met and organized on Jan. 29, the Committee on Credentials reporting the names of Messrs.

Thompson, Monteith, and Roberts (Republicans), and Messrs. Day and Dussault (Democrats) as members for the contested seats. The report was adopted without dissent, and the oaths of office were administered. There was some difficulty in filling the blank left for the name of the Speaker *pro tem.*, but that of R. G. Humber was finally selected; the ballot was cast, and the Governor and Senate were notified that the House was ready to proceed to business.

In the Senate the question of fines imposed on the Senators who left the State in February, 1890 (see "Annual Cyclopædia" for 1890), was brought up, and the resolution then passed was reported back with instructions that the fines be remitted. The report in accordance with these instructions was adopted by a vote of 8 to 1, 5 being excused from voting.

But thirty-three days remained before the expiration of the session by constitutional limitation, and into these had to be crowded the work that would have occupied the ninety days prescribed for the first Legislature and the sixty of the second. Appropriations were made for salaries for the two years, for the support of State institutions and other debts, and for other purposes, somewhat in excess, it appears, of the present resources of the State. Some time was wasted in fruitless attempts to organize new counties, and more on the selection of sites for State institutions. A bill was passed dividing the newly ceded portion of the Crow reserve between Yellowstone and Park Counties. The Committee on Public Lands reported favorably on a petition to Congress to open Fort Shaw military reservation to homestead settlement.

A bill to extend the term of corporations from 20 to 50 years was vetoed by the Governor, passed over the veto by the Senate, and lost in the House by a vote of 20 to 29. An act to provide for the organization of an irrigation board and the sale of bonds therefor was defeated by a vote of 25 to 24. A bill was passed conferring additional powers on clerks of district courts. This is designed to expedite business in districts where only four terms of court are held each year. Under present laws no steps can be taken to probate a will till the district court convenes, but this act enables the clerk to transact all preliminary business, subject to review by the court.

A bill making it a misdemeanor for a miner or a mine owner to make a contract for more than eight hours' work in a day was defeated. It was supported by nearly 4,000 miners.

A bill to create a railroad commission providing for three commissioners at a salary of \$3,000 a year each, and an assistant at a salary of \$1,500, was lost. Acts concerning the assessment and collection of taxes, and to provide for the selection, appraisal, and sale or lease of State lands were passed. An appropriation of \$75,000 was made for the expenses of the State's exhibit at the World's Fair. The number of commissioners to the fair was raised to sixteen, one for each county.

The following are among other bills passed:

Prescribing the method by which railroad companies shall exercise the right of eminent domain.

Allowing married women to transact business in their own names as sole traders.

Regulating the mining of coal, and for the protection of coal miners.

Amending the law in regard to acquisition of rights of way by railroads, and prescribing the mode of procedure in rights of way for canals, ditches, and flumes.

For the protection of discharged employes, and to prevent blacklisting.

For the prosecution of criminal cases on information.

Requiring railroad companies to pay for damages to stock.

Allowing the raising of the waters of Jefferson river for irrigating and other purposes.

For submitting the question of a constitutional amendment fixing the terms of county commissioners.

Repealing the gag law.

To provide for the election of presidential electors, and of a Representative in Congress.

Attaching certain portions of Northern Pacific and Cooke City railways to Yellowstone County for taxation and judicial purposes.

For a new charter for the city of Helena.

For the filling of vacancies in the Legislative Assembly.

For the submission of the question of the permanent location of the State capital.

To provide for the holding of regular terms of the Supreme Court.

To enable universities and colleges under the patronage of religious bodies to reorganize and change their names, amended.

To provide for the selection, location, appraisal, sale, and leasing of State lands, amended.

To amend an act relating to bounties on stock-destroying animals, amended.

To encourage the production of sugar beets and the manufacture of sugar therefrom, amended.

To fix Sept. 1 as a legal holiday, to be known as Labor Day.

Allowing cities and towns to incur certain indebtedness.

Providing for the election of State and county officers, and for canvassing the votes.

Concerning obscene literature.

Requiring transient merchants to take out licenses.

A bill was also passed providing for the appointment of a commissioner to look after the mineral-land interests of Montana, the office to expire in February, 1893. The commissioner is to have \$3,000 salary, and \$3,000 for expenses. Hon. Martin Maginnis was appointed to the office by the Governor.

Two members of the Legislature died during the year. Hon. Aaron C. Wetter, a member of the constitutional convention and of the first and second Legislatures, from Beaverhead County, died during the session, Feb. 5. Hon. W. J. Penrose, editor of the Butte "Mining Journal" and member of the House, was assassinated in the street in Butte on June 10.

Railroads.—The number of miles of railroad completed was 2,116½; in course of construction, 200. A bill passed Congress in March granting to the Missoula and Northern Railroad Company a right of way through the Flathead Indian reservation. A branch line of the Great Northern to the Neihart camp in the Belt mountains was completed in November. The contract requires the extension of this line nine miles south to the large timber fields, which it is necessary to tap in order to secure material for the extensive prosecution of mining in that section. This brings the road within thirty-five miles of the Castle mines.

One of the greatest works on the extension of the Great Northern is the Wickes tunnel, which will require about 15,000 carloads of granite and will cost more than \$200,000. The granite comes from a quarry fifteen miles south of Helena, on Clancy creek. At Great Falls about \$100,000 is to be expended in the erection of car shops. Great smelters are now in course of construction at that place.

Mineral Lands and Railroads.—An important controversy is in progress in regard to the claim of the Northern Pacific to mineral lands. It was to forward the interest of the State in this matter that the office of Mineral Land Commissioner was created. Following is an extract from his report:

The vast land grant of the Northern Pacific Railway Company stretches from the eastern to the western boundary of the State of Montana in one broad belt, which, including indemnity lands, is nearly 70 miles wide and over 700 miles long. The Congress which created this corporation gave it one half the lands within these limits, carefully excluding all mineral lands, and emphasizing their reservation from the grant by giving to the company indemnity for such lands as might turn out to be mineral. Little prospecting had then been done; very little was known of the character of these lands. All the discoveries of mineral land had yet to be made, the mines upon them to be developed, and these to be finally segregated from the land grant of the company and the company recompensed therefor with other lands not mineral. Nothing would seem to be plainer than the fact that the reservation went with and was part of the grant; and that future exploration, survey, and classification would be necessary to define the non-mineral lands, which would become the property of the company, and the mineral lands, which were reserved to be forever open to the prospector and the miner, under the mining laws of the United States. It was not until later that the audacious claim was set up that lands not then known to be mineral, or known to be mineral at a certain date, were therefore not mineral, and, by consequence, passed to the corporation.

One object of the great grant was to secure an immediate or a rapid construction of the road. The railroad did not, as its charter and its grant contemplated, open up and develop the country for the people; but the people opened up and developed the country for the railroad. For financial reasons its construction was delayed until the Indians had been subdued, the mines, or many of them, discovered, and cities and towns had been built and farms opened along the line of its route. All that portion of the railroad in this State, and in other States where the mineral lands are in controversy, was delayed in building beyond the time limit fixed for forfeiture both of the charter and the land grant, and but for the successful operations of a financier of great vigor and ability, might not have been built yet. Although the railroad failed in its mission as a prospector and a pioneer, and although its construction was delayed until the country which it was designed to open was so far occupied and developed independently of it that other companies felt justified in building equally good railways without any land grant at all. Congress did not exercise its power of forfeiture, but, recognizing the greatness and the value of the enterprise, permitted the company to complete its line and to acquire its immense grant, which makes it the most extensive land owner in America outside of the General Government itself. A large portion of the lands inside the lines of the grant has never been surveyed or in any way examined, prospected, or classified by the Government. The labor and toil of the voluntary prospector and miner has alone made known which are mineral districts and which are

not. Suddenly the astounding claim was set up that all the portions of the country which had not been voluntarily examined by the individual prospector, acting under no agency of the government, but at his own expense, and therefore proved to be mineral at a certain date, were to be considered non-mineral and to become the property of the Northern Pacific Railroad Company in spite of the fact that the charter itself said that such lands never should be, and that the company could take other lands in lieu thereof in order to make up the quota that it claimed.

The Legislature passed memorials on the same subject, one to Congress, and one to the Legislatures of other States and Territories interested. The following is the memorial to Congress:

Whereas, The Northern Pacific Railroad, running 400 miles through the mountainous mineral portions of Montana, claims ownership to over 8,000,000 acres of our mountainous mineral lands, none of which are coal or iron lands, and has been permitted to select already about 2,000,000 acres of our choicest mineral land, embracing the most productive mining camps of Montana, and on which are more than 4,000 mining properties, discovered and recorded, but as yet unpatented, and over 1,000 patented mines bearing gold, silver, copper, or lead; and none of these lands are agricultural, or such lands as they are entitled to under their grant; and *whereas*, under the present decisions of the courts, if the patents to these 2,000,000 acres of selected land should be issued to this railroad company, it would wrest from their rightful owners these thousands of mining properties, and all the undiscovered mines in this vast area of mineral lands would become the property of the Northern Pacific Railroad Company; and *whereas*, we believe that the Congressional action can alone save these mines to the people to whom belongs this heritage of untold millions:

Now, therefore, the Legislative Assembly of Montana do earnestly request of your honorable bodies in Congress assembled, that you will pass such an act or acts as will forever preserve to the people, not only the discovered but all the undiscovered mines of Montana, bearing gold, silver, copper, and lead, and all other valuable mineral except coal and iron.

Some suits involving these claims have since been decided against the railroad. In another case the court decided that the legal title to the land rested with the railroad company. But, as the land had been taken up as a mineral claim and the patents issued, the case would rest between the patentee and the Government.

Irrigation.—A bulletin of the Census Bureau on the subject of irrigation in Montana shows that there are in the State 3,702 farms irrigated out of a total number of 5,664. A State congress met in Helena, Jan. 7, 1892, to consider the best means for securing irrigation for the arid lands, and especially to get an expression from the people of the State on the resolutions of the irrigation congress that met in Salt Lake City in September, calling for the cession to the States and Territories by the General Government of the unoccupied portions of the arid regions of the public domain.

Education.—The number of children of school age was 29,353; number attending public schools, 19,051; the number of teachers employed, 585; average monthly wages of teachers, \$51.08; total amount paid to teachers, \$273,276.27; amount collected for school purposes, \$548,021.61; amount paid for libraries, \$6,289.50; for school apparatus, \$7,621.42; for incidental expenses, \$54,197.54; sites and buildings, \$1,100,570.13.

A circular letter was issued in May in regard to the purchase and lease of State lands by the Board of Land Commissioners. Sections 16 and 36 in each township and 72 sections known as university lands belong to the State. When the surveys and classification of these lands have been completed, they will be offered for sale or lease. Until this is done, no right can be initiated under the laws of the United States or of the State. The law prescribes that they shall be sold at not less than \$10 an acre, the proceeds to constitute a permanent school fund, the interest only of which shall be expended in the support of the schools; or they may be leased for periods of not more than five years. These lands are not subject to pre-emption homestead entry, or any other entry under the land laws of the United States; but those who entered upon school lands in good faith prior to March 6, 1891, for the purpose of making a home, will be given the preference in the disposition of those lands; meantime they are liable under the law for cutting or removing from them timber or other material, or despoiling the property in any way.

Strong efforts were made in the Legislature to have the State University located at Missoula, the Agricultural College at Bozeman, and the Normal School at Twin Bridges, but no choice was made. One proposition was to unite all the State institutions for higher education in one great university. There are 72 sections of land available for a university, but no fund or other resources. All the institutions together would have 200,000 acres of land, and about \$20,000 in cash. None of the bills for locating the institutions were passed.

Appropriations were made for the Montana Law Library, and the Historical Society was made a State institution.

Montana University, four miles north of Helena, in the Prickly Pear valley, observed its first anniversary in June, with orations by three graduates. A project is under way to build an electric railroad from the city to the university.

A committee of the State Association of Congregational Churches has been visiting various places in order to select a site for a proposed college under the care of the denomination. Helena bid 240 acres and \$15,000 cash; Great Falls, 300 acres and \$10,000 cash; and Livingston, 200 acres and \$20,000 cash.

Mining.—Great and increasing activity in this industry is shown. Discoveries are constantly made, and improved facilities for development constructed. Experiments are making in the use of electricity in treating the ore.

A recent decision of the Supreme Court is of interest to miners and prospectors. It discusses the question as to what is meant by the provision of the laws of the United States which declares that a mining claim shall not be subject to relocation, notwithstanding the failure of the owner to perform the labor required by law, if in the mean time he has resumed work. The conclusion is given in the following words: "When, therefore, he availed himself of the statutory privilege of resuming work to preserve his estate from forfeiture, we hold that he should have prosecuted the same with reasonable diligence until the requirements for the annual labor or improvements had been obeyed."

According to the last census, Montana exceeded any other State in the production of copper, the output in 1889 being reported at 98,232,444 pounds, while that of Michigan was 86,455,675. The product in 1890 was reported at 122,950,000 pounds, as against 99,570,000 at Lake Superior, and a total of 272,510,000.

The National Mining Congress is to be held at Helena in July, 1892.

The Sapphire Mines.—Interest in the sapphire and ruby fields shows no decline. Only the bars and bench lands lying along the Missouri can be successfully worked until arrangements can be made to carry water to other tracts. It is proposed to do this by means of a canal from Jefferson river.

The Sapphire and Ruby Company of Montana, in London, has secured 4,000 acres on the right bank of the Missouri, twelve miles northeast of Helena. The precious stones are found on the bed rock of an ancient river-channel, now a dry, elevated terrace, skirted by Missouri river and covered with gravel. The tract includes Eldorado Bar, formerly a celebrated gold field.

Marble.—An examination of the Sweet Grass Hills is reported to have shown that the marble there is of the finest quality. It concludes four varieties; a common marble, a green, and a variegated kind, and a black marble, very rare and susceptible of a high polish. A company has secured patents on a tract of territory there, 640 acres in all.

Salmon.—Senator Sanders this year addressed a letter to the Interior Department in reference to the desirability of clearing the obstructions from Clark's Fork of Columbia river, so as to allow the salmon free passage up that river and its tributaries, and the Flathead reservation and Flathead lake. He suggested that as this would result in an increased food supply for the Indians, the agents might be directed to make a reconnaissance, and report in regard to the obstructions. This was done, and the matter was then referred to the United States Fish Commissioner, since it was deemed that the improvement would be of as much value to the white as to the Indian inhabitants.

Bears.—The bounty of \$12,000 offered for destructive animals was almost or quite exhausted during the year; \$5 is paid for every lion or bear, \$2 for every wolf or coyote, and \$1 for every lynx or bobcat killed when the scalp is presented to the proper officer and be punched. The number of bears killed amounts to about 1,200, mostly black and cinnamon bears from Missoula, Dawson, and Custer counties.

MOROCCO, an absolute monarchy in north-western Africa. The Sultan is chosen from the Shereefan family of Tafiallet, which claims descent from the Prophet's daughter Fatima. Each Sultan before his death chooses his heir, whose succession is not often successfully contested, because he has possession of the imperial treasury and control of the black household troops, which furnish a large proportion of the palace officials. The reigning Sultan is Muley Hassan, born in 1831, who succeeded his father, Sidi Mohammed, on Sept. 17, 1873. The Sultan has an army of 10,000 trained infantry, armed with rifles, 400 cavalry, and a number of batteries of field artillery, besides irregular levies

estimated at 300,000 men. About 25,000 are in ordinary times kept under arms near the Sultan in his progresses from town to town.

Area and Population.—The extent and boundaries of the empire are undefined. The area is said to be 219,000 square miles. The population has been estimated at 9,400,000, composed of Berbers, mixed and pure Arabs, Tuaregs, and a small proportion of negroes. The people are Sunnite Moslems of the Malekite creed. There are about 300,000 Jews and 1,800 Christians, who are not admitted to citizenship, but are under the protection of foreign powers.

Commerce and Navigation.—The commerce was formerly in the hands of the English and French. In recent years Germany has got a considerable share of it. On June 1, 1890, Germany concluded a commercial treaty with the Sultan. A line of steamers was already running between Hamburg and Tangier. The German duties on sulphur, coral, cocoons, and spun silk from Morocco were removed, and those on dates, almonds, oil, lead, cork, lemons, oranges, iron and copper ores, hides and skins, and other articles were lowered. Loaf sugar, cotton and woolen and mixed cloths, felt, candles, aniline dyes, gilt jewelry, and other articles of German manufacture are imported in increasing quantities. The total imports in 1889 were valued at £1,681,275, and the exports at £1,585,020. There were 2,336 vessels, of 778,953 tons, entered at the ports of Morocco in 1889, and 2,352, of 783,529 tons, cleared. Of 2,042 vessels, of 612,689 tons, entered in 1888, 394, of 237,390 tons, were French; 735, of 211,994 tons, were English; 726, of 136,558 tons, were Spanish; 33, of 9,404 tons, were German; 92, of 7,423 tons, were Portuguese; 41, of 6,246 tons, were Norwegian; 13, of 1,875 tons, were Danish; and 8, of 1,799 tons, were of various other nationalities.

Political and Economical Condition.—Morocco was a thickly populated and highly civilized country in ancient times. It was one of the chief sources from which cereals were imported by the Romans. The Berbers, who constitute the bulk of the inhabitants, are as vigorous, warlike, and industrious as of old, and the richness of the soil is unimpaired. The policy of the Arab conquerors, who hold the outlets of the country, though they have never been able to impose their rule thoroughly on the Berbers, checks all development. The possessors of wealth are systematically plundered. The exportation of grain is forbidden, and other exports are so taxed that there can be no development of the export trade till the restrictions are removed. Foreigners know little about the country because their route of travel is confined to the road from Tangier, through Quasr el Kebir, to Fez, the usual residence of the Emperor, and thence through Mequinez, to the seaport of Rabat; or sometimes to the old royal city of Morocco, and thence to Mogador, where they can take ship for Tangier. The independence of Morocco is maintained through the rivalry of England, France, and Spain. The Spaniards look on the country as their political heritage. The French desire to extend their boundaries where Morocco touches Algeria, and especially to obtain control of the Sahara and the route of the projected railroad to Timbuctoo and Senegal. England is deter-

mined that there shall be no partition of Morocco that will not secure to her advantages equal at least to those reaped by other Mediterranean powers, and would thwart or retard the consolidation of the French possessions in northwestern Africa, and vigorously oppose the acquisition by Spain of strategic positions commanding the entrance to the Mediterranean, of which Gibraltar is now the only key. Italy, Austria, and Germany work together with England for the preservation of the *status quo* until they can see their way to obtaining compensation. The government of Muley Hassan has been atrocious. Wherever his authority is paramount, men of infamous character hold the offices of *kajids* and governors, while the industrious, the intelligent, and the enterprising natives are robbed of their possessions unless they can hide them from the knowledge of their tyrants. There is no public police force, and what the official extortioners leave, brigands and highway robbers can take. The penalty for saving is worse than that for crime. The Berber tribes, which have maintained their independence, except when periodically raided by the Sultan's army, live in different degrees of comfort and civilization. In some even the women learn to read and write. In 1891 great distress was caused in all the southern provinces by the ravages of locusts, which destroyed half the wheat crop in Rabat and Daralbaida and the whole of the maize and peas crops at Mazagan, produced a scarcity of grain at Mogador and throughout the wheat-growing districts, injured the olive and almond trees, consumed the fruit and vegetable crops everywhere except in northern Morocco, where they appeared too late to do much damage, and caused a failure of pasturage and such mortality among cattle that people sold a large part of their live stock for whatever they could get.

The Spanish Government in April, 1891, laid a cable to connect the port of Ceuta with Tangier. The natives in the Angera district prevented the erection of telegraph poles by the Spaniards until the Moorish Minister of Foreign Affairs interfered. An insurrection at Cape Juby impelled the British to send a gunboat to that part of the coast, where there is an English factory. Late in the year disturbances broke out in the vicinity of Tangier, and the British Government dispatched war vessels to that port and threatened to land sailors if the governor could not protect British interests from the depredations of the rebellious tribes. The trouble was caused by exactions of local officials to which the peasants refused to submit.

In October important changes were made in the *personnel* of the Sultan's court. His favorite brother, Muley Ismain, was accused of a conspiracy to overthrow the Sultan and mount the throne. This popular prince was deposed from the office of *khalifa* or chief judge and sent away to the city of Morocco. He was succeeded by the Sultan's son, Muley Abdul Aziz. At the same time the chief *kajid* and other officials were disgraced and the powerful and generally detested Vizier, Si Ahmed ben Musa, whom ambassadors have regarded as the principal obstruction to the exercise of wholesome foreign influence on Muley Hassan, was dismissed. He was succeeded by Si ben Segher.

N

NATIONAL ACADEMY OF SCIENCES.

Officers: President, Othniel C. Marsh; Vice-President, Francis A. Walker; Foreign Secretary, Wolcott Gibbs; Home Secretary, Asaph Hall; Treasurer, John S. Billings. During 1891 two sessions of the Academy were held, the first—the stated session—in Washington on April 21-24. On that occasion the following papers were read by members: "Report on the Human Bones of the Hemenway Collection in the United States Army Museum, prepared by Dr. Washington Matthews, U. S. A.," by John S. Billings; "Stellar Motion Problems," by Lewis Boss; "Researches on the Embryology of Mollusks," by William K. Brooks and E. G. Conklin; "On the Distribution of Colors in Certain North American Reptiles," by Edward D. Cope; "On the Taxonomy of the Apodal Fishes," by Theodore Gill; "On Aërodromics," by Samuel P. Langley; "Application of Interference Methods to Spectroscopic Measurements," by Albert A. Michelson; "Further Studies on the Brain of Limulus Polyphemus," by Alpheus S. Packard; "Effect of Pressure and Temperature on the Decomposition of Diazo-Compounds," by Ira Remsen; "On the Yttrium Earths, and a Method of making Pure Yttrium," by Henry A. Rowland; also the following papers contributed by scientists not members of the Academy, but presented by members: "The Solar Corona, an Instance of the Newtonian Potential in the Case of Repulsion," by Frank H. Bigelow; "Allotropic Silver; Note on a Paper by M. G. Lippman," by M. Carey Lea; and "The Corona, from Photographs of the Eclipse of Jan. 1, 1889," by H. S. Pritchett. Other business consisted of a report of the Watson trustees, who have in charge the consideration of the award of a medal to the person in any country who shall make any astronomical work worthy of special reward and contributing to the progress of astronomy. The Watson medal for 1890 was awarded to Prof. Arthur Auwers, of Berlin. There were two vacancies in the Academy, but owing to the large number of names presented for election a choice was impossible and action was deferred for a year. The "Scientific Session" was held in New York on Nov. 10-13, when the following papers were read: "On Geographical Variation among North American Birds, considered in Relation to the Peculiar Intergradation of *Colaptes Auratus* and *C. Caffer*," by Joel A. Allen; "The Follicle Cells of Salpa," by William K. Brooks; "On the Variation of Latitude," by Seth C. Chandler; "On Degenerate Types of Scapula and Pelvic Arches in the Lacertilia," by Edward D. Cope; "A Nomenclator of the Families of Fishes," by Theodore Gill; "Some Aspects of Australian Vegetation" and "The Nomenclature of Vegetable Histology," by George L. Goodale; "On Certain New Methods and Results in Optics," by Charles S. Hastings; "An Exhibition of the New Pendulum Apparatus of the United States Coast and Geodetic Survey, with Some Results of its Use" and "On the Use of a Free Pendulum

as a Time Standard," by Thomas C. Mendenhall; "Measurement of Jupiter's Satellites by Interference," by Albert A. Michelson; "Astronomical Methods of determining the Curvature of Space," by Charles S. Peirce; "On a Color System," by Ogden N. Rood; "On the Application of Spectrum Analysis to the Analysis of the Rare Earths, and a New Method for the Preparation of Pure Yttrium," by Henry A. Rowland; "The Tertiary Rhynchitidae of the United States," by Samuel H. Scudder; also the following papers by non-members: "Preliminary Notice of the Reduction of Rutherford's Photographs," by John K. Rees, introduced by Edward C. Pickering, and "The Proteids of Albuminoids of the Oat Kernel," by Thomas B. Osborne, introduced by Samuel W. Johnson. Subsequent to the meeting held in April, William Ferrel, Julius E. Hilgard, John Le Conte, and Joseph Leidy died, and, in accordance with the custom of the Academy, Cleveland Abbe, Eugene W. Hilgard, Joseph Le Conte, and S. Weir Mitchell were appointed to prepare memorial sketches of the deceased scientists. (Brief notices of their careers also appear, among the OBITUARIES, AMERICAN, in the present volume.) At a business meeting of the Academy its members accepted in trust the money left to them by their fellow-member Frederick A. P. Barnard, late President of Columbia College, the interest of which is to be expended in the procuring of a Barnard medal, which will be given once in five years for the best services in physics or astronomical science. The nominations are to be made by the Academy, and it is open to foreigners. The president's annual report to Congress was also submitted to the members at a private business meeting. Reception to the Academy were given by President Seth Low, of Columbia College, and by Mrs. Henry Draper, where an account of the astronomical and photographic work of the "Henry Draper Memorial fund" as conducted at Harvard University was presented by Prof. Edward C. Pickering, director of the observatory there.

NAVY OF THE UNITED STATES. A

careful estimate of the armored navies of the world, made one year ago, in which the fighting efficiency of each armor-clad then built or building was considered, established the fact that in 1894, so far as armored construction is concerned, the United States will rank sixth in naval power. By that time nearly all the vessels under construction in January, 1891, in our own and other navies will be completed. Unarmored cruisers and thinly plated armor-clads (with less than 6 inches of wrought iron or its equivalent in compound or steel) were not considered. But unarmored vessels are possessed by the different powers in nearly the same proportion as armor-clads, and whatever value be assigned them, the result would not be materially altered. Making some slight corrections for changes in the design of certain ships since the table was prepared, and expressing their strengths in percentages of

that of Great Britain, the first 10 naval powers probably stand as follow:

Order.	Power.	Relative strength.
1.	Great Britain	100
2.	France	68
3.	Italy	48
4.	Russia	38
5.	Germany	21
6.	United States	17
7.	Spain	11
8.	China	6
9.	Austria	5
10.	Turkey	3

This is far superior to the condition of affairs in 1882, when our navy was one of the weakest in the world. An account of the preliminary efforts of rebuilding the navy to and including 1888 is given in the "Annual Cyclopaedia" for that year (pages 787 to 798), to which frequent reference will be made in this article. At that time but three of the new vessels—the "Dolphin," "Atlanta," and "Boston"—were completed, and armor-clad construction had just begun. The work has since been prosecuted unremittingly, until at present there are ready for service, or in course of construction, 13 armored vessels, 25 cruisers (unarmored) of various types, and 3 torpedo boats. The details of these new vessels are given in the accompanying tables.

Notes on the Tables.—The abbreviations used are: A. C., armored cruiser; b., barrette; blt., armor belt (on the water-line); B. S., battle ship; C., cruiser; Cl., class; cr., cruiser; C. T., conning tower; Disp., dispatch; ft., feet; g. b., gunboat; in., inch or inches; mm., millimetres (in diameter of bore); P. C., protected cruiser (i. e., a cruiser with complete curved armor deck); P. P. C., partially protected cruiser (i. e., with armor or protective deck covering boilers and engines only, or extending over the entire length, but simply bullet-proof, and intended chiefly for cellular subdivision); P. P. g. b., partially protected gunboat; R. C., Hotchkiss revolving cannon; R. F., rapid-fire (guns); s., screw or screws; T., turret. The "Puritan," "Monadnock," "Amphitrite," "Terror," and "Miantonomoh" have iron hulls; all others are of steel. The "Boston," "Atlanta," "Dolphin," and "Petrel" have single screws; the remainder have twin screws, except cruisers 12 and 13, in which three are fitted. The speeds given for vessels that have had their trials are, first, the maximum results obtained on the trial at load draught for the best hour, and second, the average speed for the whole run of four or six hours, continuous steaming; in the case of vessels not yet completed, the higher speed is that which is expected on trial for one to four hours, and the second is the "sustained sea-speed," which it is believed the vessel will be able to maintain under favorable conditions for several days. In the recently designed ships the ability to preserve high speed has been aimed at, instead of power to achieve high speeds for short periods by excessive forcing, and the weights assigned to boilers and engines have been therefore more liberal. In comparing the speeds given in these tables with others reported from abroad, it must be remembered that the latter are chiefly from runs over a measured mile, and could not be maintained over the long courses on which our vessels are tried.

An asterisk (*) attached to any data indicates that it is more fully given in the "notes." The first of the two amounts given in the column of "coal capacity" is the number of tons that can be carried when the bunkers are full, the second is the normal supply with the vessel at her designed load draught; when the total bunker capacity is on board, her displacement is greater than that given in the displacement column by the difference between the two coal supplies. The coal bunkers surround the boilers and engines, and are, in general, arranged to give as much protection as possible consistent with accessibility. The danger of shot-holes at the water-line is reduced by cellular subdivision and a protective deck; in some vessels further security is afforded by a belt of woodite or similar water-excluding material extending around, or partly around, the ship at the water-line. This material will allow a shot to pass through without resistance, but through resilience and elasticity closes behind it again, leaving little or no hole for the admission of water; and, if water should gain entrance, it reduces the space in the cells that the water could fill, and consequently assists to preserve the stability which otherwise might be in danger from this cause. The boilers are chiefly horizontal fire-tubular, though the torpedo boats and the "Monterey" (in part) have the water-tubular type. The new armored vessels, the "Monadnock" and the later cruisers, have vertical triple-expansion engines; the torpedo boats have quadruple expansion, and the other vessels have compound or triple expansion, chiefly horizontal. With the exception of the practice cruiser, none of the recent designs have been fitted with sail power beyond a light fore-and-aft or schooner rig.

In the "Massachusetts," "Indiana," and "Oregon" (see illustration) it is believed that the United States possesses fighting ships that have few equals and probably no superiors. They are designated as "coast-line battle ships," which means that they are primarily intended for the defense of our coast, and their greatest fighting efficiency is expected to be under conditions likely to arise in such defense. To allow access to a large number of harbors, the mean draft has been kept down to 24 feet, considerably less than that of vessels of like tonnage abroad. With this draft 400 tons of coal can be carried, giving a steaming endurance or "radius of action" of about 4,000 miles; but the bunkers will hold 1,800 tons, sufficient for 16,000 miles at 10 knots, so that these ships may be dispatched on distant service. But they ought not to be sent out to immediate action with the bunkers full, as, with the consequent increased displacement, the top of the armor belt is only a few inches above water. Their batteries are the most formidable of any yet designed for ships of war. The large Italian and English guns of about 100 tons are theoretically superior to the 13-inch guns of these ships; but they fire much more slowly, their excess of penetrating power is of doubtful value, and recent developments have shown the English pieces at least to be total failures. The auxiliary battery of 8-inch guns has no counterpart in other navies. It is a complete answer to the open barbette with thinly shielded gun, as well as to the "Italia" type without water-line or machin-

ery protection other than the armor deck. The armor protection is equally excellent: 17 to 20 inches (horizontally measured) over heavy guns, 10 inches (horizontal measurement) over 8-inch battery, 17 inches on redoubts under 13-inch gun barbettes, 5 inches on the broadside between redoubts as a protection against high explosive shell, and 18 inches on the water-line. The speed is fair. All three vessels are expected to be ready for service early in 1894.

The "New York" is an armored cruiser of the latest type. She is intended as a "cruiser destroyer," a "commerce protector," and general raider along the coasts of an enemy. These rôles she is able to play, since her speed is superior to that of all other armored cruisers, and it is doubtful if any unarmored ones could escape in other than the smoothest water, her size (especially length) giving an immense advantage over most vessels and affording the option of compelling or refusing battle. The protection to the hull consists of a steel deck 6 inches thick on the slopes amidships; a water-line belt of armor (including skin plating) of 5 inches extending from the protective to the berth deck abreast the machinery; a coffer-dam, or belt of water-excluding material, with the same limits above and below, extending completely around the ship; and lastly as much defense as possible is derived from the arrangement of the coal supply. Two of the 8-inch guns are mounted in a 10-inch barbette forward in a 7-inch covered turret; two others are similarly disposed aft; the remaining pair are mounted, one on each side amidships, in semicircular barbettes, and covered with machine-gun-proof shields. The complement of officers and men is 475. The "New York" is expected to be completed in 1892.

The "Puritan" is described on page 789 of the "Annual Cyclopædia" for 1888. Since that article was written considerable changes have been made in her design. The battery is now four 12-inch guns mounted in barbette turrets, with the plane of fire 10½ feet above water, which will admit of its being fought in much heavier weather than if in roller-base turrets. On deck, between the turrets, is a superstructure in which are the quarters of the officers. The former quarters below have been given up to the crew, affording additional space for their accommodation, which was much needed. The armor belt is to be 5 feet 7 inches deep and 14 inches thick amidships. The armor deck is 2 inches; barbettes, 14 inches; and inclined turrets, 8 inches.

The "Amphitrite" and "Monadnock" are to be of the same type, but smaller, with 9-inch side armor, 11½ inch barbettes, 7½-inch inclined turrets, and 10-inch guns.

The "Terror" is to have roller-base turrets 12½ and 11½ inches thick, side armor 7 inches. Similar in design to the "Miantonomoh."

The design of the "Monterey" (as coast-defense vessel No. 1 has been named) has received important modifications. The armor belt is reduced to 13 inches amidships, and the barbettes to 13 and 11½ inches; the turrets are of 8 and 7½ inches. The 16-inch and 12-inch guns have been replaced by two 12-inch and two 10-inch, respectively. The dynamite gun and 4-inch rapid-fire guns have been removed. The

THE UNITED STATES ARMORED BATTLE SHIP "INDIANA."

armor deck forward has been increased from 2 to 3 inches.

Coast-defense vessel No. 2 will not be built, as the act authorizing her construction has been repealed.

Protected cruiser No. 6, building at the Union Iron Works, San Francisco, is officially designated as unarmored, but the protective deck is 4½ inches thick on the slopes abreast the boilers and engines, the guns of the main battery are protected by turrets and barbettes or segmental shields, all of 4 inches thickness, and the 6-pounders of the secondary battery have 2-inch shields. A belt of water-excluding material 2 feet 9 inches thick is worked above the protective deck, completely surrounding the ship at the water-line. The space between the protective and berth decks is subdivided as usual into a large number of compartments, and much of it is filled with coal, giving additional protection. As in the "New York," the machinery of this cruiser has been given sufficient weight to insure a high sustained sea speed nearly approaching the probable maximum performance over the usual trial course. The complement of officers and men is 466. Cruiser No. 6 will be completed about July, 1893.

Protected cruisers No. 12 and 13, practically identical in design, are unique in type. The leading features are speed and radius of action. The anticipated maximum speed is 22 knots; sustained sea speed, 21 knots; and the horsepower corresponding is 21,000 and 16,400, respectively. This power is divided between three sets of engines and three screws. One is in the usual position for a single screw vessel, and the others are farther forward, as in twin-screw ships. The protection to the vitals consists of a complete protective deck 4 inches thick on the slopes over boilers and engines, 2½ inches thick forward and abaft; second, of a coffer-dam or belt of water-excluding material 5 feet thick and cellular subdivision; lastly, coal protection. The guns of the main battery are protected by 4-inch and 2-inch shields, and the 6-pounders also by 2 inches. The coal supply is very large, about 2,400 tons, sufficient for about 31,500 nautical miles at 10 knots. Being intended for commerce destroyers, they were designed to represent merchant steamers as closely as possible; military tops have therefore been omitted, and the sponsons for the battery are inconspicuous. Both cruisers will be completed during 1893.

The "Cincinnati" and "Raleigh" are twin-screw protected cruisers with thick protective decks, high speed, and powerful batteries of rapid-fire guns. The single 6-inch is mounted on the forecastle; two 5-inch are placed on the poop, one on each side; the other eight are in sponsons, two under the poop, two under the forecastle, and four in broadside. They are well-decked vessels, i. e., having poop and forecastle, but with the waist or central portion uncovered. The protective deck is 2½ inches thick on the slope over the machinery spaces and 2 inches at the ends. A coffer-dam, or belt of woodite, will be worked above the protective deck next the outside plating in the coal-bunkers; the usual coal protection is afforded. The "Cincinnati" is building at the New York Navy Yard, and the "Raleigh" at Norfolk, as no bids were received

from private parties within the limit of cost prescribed by law. Both will be launched in 1892.

The "Detroit," "Montgomery," and cruiser No. 11 are twin-screw, well-decked cruisers of 2,000 tons each, with water-tight steel deck, eleven sixteenths of an inch thick, coal protection, and partial woodite belt. One 6-inch gun is mounted on the forecastle and one on the poop; the 5-inch are in sponsons, four on each side, with bow and stern fire for the forward and after pair, respectively. These vessels will probably all be completed during 1892.

The "Machias" and gunboat No. 6 are twin-screw, well-decked vessels of 1,050 tons with water-tight deck, coal protection, and partial woodite belt. On the forecastle is mounted one 4-inch gun, on the poop another; the remaining six are in sponsons, two under the forecastle with bow fire, two under the poop with stern fire, and one on each side amidships. The complement of officers and men is 150. Both vessels should be ready for service during the summer of 1892.

The practice cruiser is designed for use at the Naval Academy. She is a twin-screw, well-decked gunboat of 835 tons, barkentine rig, with 5,000 square feet spread of canvas. Quarters are provided for a captain, 8 wardroom officers, and 120 cadets and men. She will be completed during 1892.

The harbor-defense ram is from a design by Rear-Admiral Daniel Ammen, U. S. N. The armor is arranged in the form of a "turtle-back," 6 inches thick at the water-line and 2½ inches on the crown. The conning tower is 18 inches, and all hatches and ventilators and the smoke-pipe have armored bases. When ready for action the ram is submerged to fighting trim by admitting water into the double bottom. The only projections above the armor deck are the conning tower, smoke-pipe, ventilators, and boat supports. The contract time for delivery is July, 1892, and she should be ready for service very soon afterward.

The design for torpedo cruiser No. 1 is laid aside, awaiting further action by Congress. It was found impossible to build her within the limit of cost prescribed by law.

Armor.—The development of armor manufacture in the United States has been uninterruptedly successful. From its inception, in 1887 (see "Annual Cyclopædia" for 1888, page 794), to the present time the progress has been remarkable. When the first new ships were begun in 1882 no establishment in this country was able to turn out iron plates of over five inches thickness. The wise policy of the Navy Department in giving the first call for modern armor in one large contract enabled the Bethlehem Iron Company to perfect its plant and acquire the secrets of armor manufacture from abroad. In November, 1890, Secretary Tracy, finding that the amount of armor required for the new ships was far in excess of what the Bethlehem Company could produce within the necessary time, entered into a contract with Carnegie, Phipps & Co., of Pittsburgh, who, in consideration of an order for 5,900 tons of armor plates, agreed to adapt their plant for armor production and to begin deliveries within a few months. Their establishment is now fully

equipped, and they are delivering armor at a rapid rate.

The question of the best material for armor has been hotly discussed. Compound (hard-steel face with wrought-iron back), steel, and nickel-steel are the chief competitors. The conclusions of the Gun-foundry Board and investigations undertaken on its own account decided the Navy Department to adopt steel for the armored vessels under construction, and all contracts were made for that metal. Before deliveries had begun, and while there yet remained time to alter the provisions of the contract, the department conducted what may be regarded as the most important of all recent armor tests in this or any other country. Three test plates, 10.5 inches thick, were acquired—two from Schneider & Co., of Creusot, France, of steel and nickel-steel respectively, the third from Cammell & Co., of Sheffield, England, was of compound steel and iron. As the latter firm offered their plate for sale to the department without solicitation, and were aware that it would be tested in competition with the two that had already been contracted for with Schneider & Co., their efforts to place it in competition seem to indicate their perfect confidence in it, and that it was probably equal to their best production. The trial was conducted publicly, and under conditions acknowledged to be perfectly fair by the agents of the armor factories, immediately before it was begun. The result, while in a measure anticipated by our ordnance authorities, exceeded their expectations, and was a source of disappointment and considerable alarm to those nations that had wholly, or in part, committed themselves to the use of compound armor. The all-steel plate gave the least penetration, but was cracked through. The compound plate was completely perforated by each projectile (four 6-inch and one 8-inch), and at the end of the firing was a total wreck with nearly the entire hard-steel face stripped off. The nickel-steel plate, while not exhibiting quite so great resistance to penetration as that of all-steel, approached it very closely in that respect, and showed a marked superiority in tenacity and resistance to rupture. No through cracks were developed, and the few surface cracks were unimportant. Neither the all-steel nor the nickel-steel allowed a single projectile to get through. In the opinion of the trial board the nickel-steel proved itself the best, owing to its freedom from serious cracks, which more than counterbalanced the slightly greater penetration it permitted. Subsequent trials of the same plate to ascertain its behavior in cold weather showed that, while it was perhaps not wholly uninfluenced by temperature, the difference was very slight, and certainly not greater than that exhibited by other kinds of armor under similar conditions.

During 1890 and 1891 several thin plates treated by the Harvey process of surface hardening by carbonization and subsequent manipulation were tested, with results superior to any ever before attained. The process was then applied to thicker armor, and during October, November, and December, 1891, nine plates of American manufacture were tested at the new naval proving ground at Indian Head. The results were most satisfactory. Two of the plates—one of nickel-steel Harveyized and the other

of nickel-steel untreated—showed themselves superior to both of the best two plate obtained from Schneider in 1890. The others were all good. The conclusions of the Annapolis trial of the preceding year were sustained as to the superiority of nickel-steel, and the Harvey process, though still somewhat defective as regards uniformity, was shown to add materially to the resisting qualities of the plate.

In less than five years the armor industry has been created and developed to a point at which we are able to produce armor equal to, and, so far as any tests here or elsewhere have shown, superior to, any manufactured abroad. The work on the plates for the vessels building is going forward rapidly, and it is believed that little further delay will arise from future tardiness of deliveries; and when the ships are completed, we shall have the satisfaction of knowing that their armor protection is superior to that of equal thickness on any vessels in the world of previous or contemporaneous construction.

A most important point connected with the development of armor in this country is the success obtained by Carnegie, Phipps & Co. with the rolling process of manufacture, by which the great expense of forging under the hammer is rendered no longer absolutely necessary. This places armor manufacture within the reach of several firms heretofore deterred from attempting it on account of the great expense of establishing a suitable plant.

Projectiles.—During the past few years the manufacture of projectiles specially adapted to piercing armor has been vastly improved. The long used and highly esteemed chilled cast-iron Palliser shot is powerless against modern armor, breaking up like so much glass on its hard face, or crushing to fragments in a vain attempt to penetrate the more homogeneous varieties. Chrome steel and other varieties of that metal under special treatment have been tried, with the resulting production of a projectile that will pass through the toughest armor almost without a scratch, and often without deformation sufficient to prevent its being used again. The leading processes are probably the Holtzer and the Firminy, though several others approach them closely in results. No attempt was made to produce such projectiles in the United States until 1890, when, through the efforts of the Navy Department, the Carpenter Steel Company of Reading, Pa., was induced to purchase the patents and secret processes of the Firminy type, which were offered at much more reasonable rates than those of its chief competitor. During the present year the Carpenter Company has begun deliveries under contract, and their productions have proved satisfactory, the more so as their later shells show a distinct improvement, due, it is said, to a partial abandonment of the Firminy formula in favor of one of their own discovery. Several other methods of manufacture of domestic origin have been developed and give promise of good results, though not yet considered satisfactory.

Common shell (i. e., shell not intended for use against armor) are still largely made of cast iron, especially for the larger calibers; but as forged-steel shells have many advantages, notably their greater capacity for bursting charges, owing to

equal strength with thinner walls, a means of producing them at a moderate cost has been persistently sought. It is hoped that several methods recently invented will accomplish the desired end, and contracts have been entered into with two concerns—the United States Projectile Company, of Brooklyn, and the American Projectile Company, of Boston—for a large number of 6-inch, 5-inch, 4-inch, and 6-pounder caliber. The process of the latter company employs electro-welding, by which a drop-forged head is united to a steel tube.

Guns.—The manufacture of naval guns is proceeding substantially upon the same lines as described on page 795 of the "Annual Cyclopædia" for 1888. The principal change in design has been in the direction of length, which has

twelve tons. None of this latter size have been or are likely to be constructed in the near future, as it is a generally accepted idea that such extremely heavy ordnance is not needed for naval purposes. In case the constantly changing conditions of warfare should demand their production, the Bureau of Ordnance has prepared designs in which it is believed that the difficulties experienced with this caliber abroad have been overcome.

The largest guns deemed desirable by our naval authorities are of 13 inches, thirty-five calibers in length of bore, and weighing 135,500 pounds. Four of these pieces are to be mounted on each of the battle ships "Massachusetts," "Indiana," and "Oregon."

As may be seen from the table, 155 heavy guns

been generally increased from five to ten calibers. That is to say, a 6-inch gun of recent construction is from thirty (five times six) to sixty (ten times six) inches longer than one built three or more years ago. The added weight thus entailed is accepted, in view of the considerably increased velocity imparted to the projectile by its being exposed to the accelerating influence of the powder gas through a greater distance, and in view of the fact that the powder now used burns more satisfactorily in the longer guns.

Extensive additions have been made to the plant of the Washington Gun Factory, both as regards its capacity for turning out a larger number of guns of the sizes previously built and its facilities for constructing the larger calibers, including the 16-inch gun of one hundred and

had been completed up to the middle of November, 1891, and not one of all this number has failed even in a slight degree in service or in proof, or has shown weakness or defects requiring either unusual care in its subsequent handling or its return to the factory for repairs. This remarkable showing is believed to be unique in the history of gun-making.

The improvement in the quality and quantity of the machinery at the Washington Gun Factory and the adoption of advantageous methods and settled principles of construction have caused a marked reduction in the time required to manufacture the various pieces of ordnance, and in their cost. The following table shows the gain since high-power-gun construction was begun in this country. At first, the gun factory having

little or no plant, a large portion of the work of assembling and finishing was contracted for with private firms:

CALIBER.	AVERAGE TIME TO PRODUCE IN DAYS OF TEN WORKING HOURS.			AVERAGE COST.		
	1888.	1890.	1891.	By contract with private firms.	At the gun factory, 1888.	At the gun factory, 1890.
6-inch.....	144	75	60	\$3,400	\$2,649	\$1,298
8-inch.....	250	150	105	8,500	3,163	2,722
10-inch.....	300	205	150	6,344	3,500

Except two 5-inch for the "Chicago," none of the other calibers had been completed at the end of 1890. The average time required for each during 1891 was as follows: For the 4-inch, 48 days; for the 5-inch, 55 days; for the 12-inch, 270 days; and the estimated time for the 13-inch is 360 days.

Gunpowder.—The Du Pont Powder Company has produced brown slow-burning powder adapted to all calibers up to the 10-inch, and is now engaged upon that for the 12-inch and 13-inch guns, with every prospect of immediate success. Each class and caliber of gun requires a special sort of powder in order to obtain the best results, and its characteristics can only be determined by trial and experiment. Other firms are at work on these powders, and their products have shown distinct improvement, though not yet up to the required standard. A new kind of square-grained black powder coated with the slower-burning brown variety has been tried in the rapid-fire guns, with good results. But the greatest advance in this department is in smokeless powder. Prof. C. E. Munroe, the chemist of the naval torpedo station at Newport, has invented a powder of this kind which has been developed and successively adapted to the various calibers up to the 4-inch, with excellent results. With about half the usual charges, the velocities obtained have shown a gain of 150 to 200 feet a second, without increase of pressure in the guns. This powder is specially safe and stable; it is uninjured by repeated heating for long periods, and even by boiling in water. Commodore Folger, Chief of the Bureau of Ordnance, is so fully convinced of the progress made in the manufacture of smokeless powders that he expresses his belief that in a very short time the use of ordinary gunpowder will be abandoned, at least in calibers of 6 inches and less, for some form of the smokeless type.

High Explosives.—The use of high explosives in the navy is increasing, and experiments looking to their employment for the bursting charges of shells are being prosecuted. Armor-piercing shell with thick walls and small chamber capacity require a more powerful explosive than the small charge of gunpowder they are capable of containing. Gun-cotton offers great advantages, from the simplicity and safety of its manufacture and handling. The capacity of the apparatus for its production at the torpedo station at Newport has been doubled, and Messrs. E. D. Du Pont & Co. have undertaken the establishment of a gun-cotton plant, stimulated thereto by a large order from the Navy Department, conditional upon such establishment. Emmensite,

the invention of Dr. Emmens, is another explosive that is being experimented with. It seems to keep well without deterioration, is safe to handle, and is powerful in its action. Whether it can be fired through armor before detonation is yet to be determined, but its value for many purposes seems beyond doubt. An experimental 10-inch breech-loading mortar has been installed at the proving ground for testing high explosive shell.

Rapid-fire Guns.—The recent development of rapid-fire guns in the United States has fully kept pace with the progress abroad. The leading types used in the navy are the Hotchkiss, the Driggs-Schröder, and the Dashiell. The Sea-bury system is likewise being experimented with, and promises good results. The largest caliber considered practicable for fixed ammunition by our ordnance officers is the 5-inch, and even in that the weight of the shell has been somewhat reduced. The 6-inch is extensively used in Europe, but as the cartridge (powder charge, projectile, and cartridge case) weighs over 160 pounds, it is unwieldy and probably not much more rapid to handle than if the charge and projectile were separate in the ordinary way. But the 6-inch gun will be fitted with some form of rapid-working breech-closure, probably the Dashiell.

The calibers in service in the navy are the 1-pounder, 3-pounder, 6-pounder, 4-inch (33-pounder), and 5-inch (50-pounder); the quick-firing 6-inch gun is only of the "rapid-fire" type as regards its breech mechanism. From their superior power and accuracy and less weight, the 1-pounder of 37 millimetres bore (about 1½ inch) and the 3-pounder of 47 millimetres (about 1¾ inch) have practically displaced the revolving cannon of the same caliber. The 3-pounder has fallen somewhat into disfavor, and in turn is being supplanted by the 1-pounder and the 6-pounder. It is regarded as an unnecessary size for most vessels, the others giving sufficient variation in caliber for all ordinary purposes. Too many different kinds of projectiles approaching each other in size are liable to lead to confusion of the ammunition supply during an engagement.

One of the features of the batteries of recently designed cruisers has been the extensive employment of rapid-fire guns of 4 and 5 inch caliber. The 6-inch, of the usual breech-loading type, which has been the standard cruiser gun, has largely given place to them.

Machine Guns.—The musket-caliber Gatling gun now remains the sole representative of this type of gun, the revolving cannon being displaced, as mentioned above.

Naval Proving Ground.—In February, 1890, a tract of 659 acres at Indian Head, on the Potomac, 26 miles below Washington, was purchased and converted into a naval proving ground for the tests of guns, armor, and projectiles. It has been put in thorough working order, and all tests are now conducted there. Its nearness to the gun factory and the Navy Department, and ready accessibility by water, have greatly facilitated ordnance work.

Torpedoes.—Up to Jan. 1, 1892, no automobile torpedoes had been placed upon any vessels of the navy, but it is expected that during the coming

year all will receive complete outfits. The Howell Torpedo Company, in their latest model, have produced a highly satisfactory weapon, and deliveries have begun under the contract. At the instance of the department, E. W. Bliss & Co., of Brooklyn, have purchased the patents and secrets of the Whitehead torpedo, and a contract has been made with them for 100 18-inch (diameter) torpedoes of the most recent type. This firm is also nearly ready to begin deliveries. The Hall torpedo is still in the experimental stage. Three Patrick dirigible torpedoes have been purchased for harbor defense, and negotiations have been opened with the Sims-Edison Company, but no purchases have been made from lack of funds for the purpose. This torpedo is also of the dirigible type—i. e., directed by wires extending from the operator to the torpedo.

Submarine Gun.—The projectile of the submarine gun may also be considered a torpedo. It is fired underneath the water from a special form of gun contained within the vessel. It differs from an ordinary torpedo fired from an underwater tube in that the driving force is wholly in the gun, the projectile being merely a missile containing no means of self-propulsion. It is one of Ericsson's last inventions, and had not been fully tested and developed at the time of his death. No trials have been made under the present arrangement.

Torpedo Nets.—The Midgely Wire Belt Company, of Beaver Falls, Pa., have submitted for trial a sample net for defense against torpedoes, which compares favorably in stowage, weight, and flexibility with those in use abroad. Another American company is negotiating for the purchase of the patent rights of the Bullivant (English) net. These will be tested as soon as the submarine gun is completed, and if they are found satisfactory one or the other will be supplied to armored vessels of the navy, to which they are at present to be confined.

Torpedo Boats.—The navy still remains deficient in torpedo boats. The Cushing (torpedo boat No. 1) is completed, and her launching tubes are being placed on board. Another boat of the first class is under construction, and the "Stiletto" has been refitted and makes a fair second-class boat. The submarine torpedo boat described on page 798 of the "Annual Cyclopædia" for 1888 was not built, her design being in several respects unsatisfactory.

Dynamite Gun.—The experiments with the "Vesuvius," whose battery consists of guns of this kind, have not been wholly satisfactory. The valves and breech mechanism are undergoing alterations, which are expected to effect considerable improvement. The design of the vessel is not approved for the purpose intended, and, while the guns are admitted to be valuable, if any are to be hereafter mounted on shipboard the method of installation will be greatly changed, and probably some armor protection given.

Personnel.—In view of the rapid building up of the navy, the number of enlisted men allowed (8,250, including 750 apprentices) will doubtless soon be increased, and, if the new ships are to be manned as soon as completed, this increase must be made within the next two years.

The question of promotion of officers is attract-

ing more and more attention each year as the state of affairs under existing laws becomes worse and worse. As the case now stands most officers will reach the age of fifty years before promotion out of the grade of lieutenant. This is the result of ill-considered crowding of the list immediately after the civil war and of the various acts passed since, by which the number of officers in each grade was reduced. Various plans have been devised to remedy this state of things, and the Secretary of the Navy brought the matter before Congress in his last report.

Naval Reserve.—Much interest has been aroused recently regarding the development of a naval militia in all the seaboard States, and in several of them appropriations were made by the legislatures for the expenses of such organizations on the same footing as the National Guard. In March, 1891, following out the recommendations of Secretary Tracy, Congress appropriated \$25,000 for the armament of such forces. This money was allotted to the several States in proportion to the number of men actually on the rolls. The number certified to as mustered in and serving in the naval militia is as follows: California, 371; New York, 342; Massachusetts, 238; North Carolina, 101; Rhode Island, 54; Texas, 43; total, 1,149. Since the date of that report this number has been much increased and the Lake States have begun to form organizations. An additional sum has consequently been asked for to continue the supply of arms to those at present unprovided. The Navy Department has sought to encourage this movement by every means within its power, and, to facilitate the training by actual service on board ship, the squadron of evolution conducted drills for two weeks at Boston and in Long Island Sound, in which the naval militia of New York and Massachusetts, which States were most advanced in preparation, took part.

Coaling Stations Abroad.—In the event of war our ships would be unable to purchase coal in foreign ports. This has made the establishment of coaling stations abroad a question of great moment, and considerable attention has recently been paid to it. Santa Barbara de Samana, St. Nicholas Mole, and St. Thomas, in the West Indies, Pearl Harbor, in the Hawaiian Islands, the Galapagos Islands, and other points have been considered. A site in the harbor of Pago Pago, Samoa, has been ceded by the Samoan Government, and the station has been established under authority of Congress.

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,510 square miles. The population, according to each decennial census since admission, was 122,993 in 1870; 452,402 in 1880; and 1,058,910 in 1890. Capital, Lincoln.

Government.—The following were State officers during the year: Governor, John M. Thayer, Republican, succeeded on Jan. 8 by James E. Boyd, Democrat, who was ousted from office on May 5 by decree of the State Supreme Court, and was succeeded by John M. Thayer, the latter holding the office for the remainder of the year. Lieutenant-Governor, Thomas J. Majors; Secretary of State, John C. Allen; Auditor of Public Accounts, Thomas H. Benton; Treasurer, John E. Hill; Attorney-General,

George H. Hastings; Superintendent of Public Instruction, Alexander K. Goudy; Commissioner of Public Lands and Buildings, A. R. Humphrey; Chief Justice of the Supreme Court, Amasa Cobb; Associate Justices, Samuel Maxwell and T. L. Norval. Except Gov. Boyd, these officers are all Republicans.

Contest over State Offices.—According to official returns of the election of 1890, James E. Boyd, the Democratic candidate for Governor, received 71,331 votes, or 1,144 more than his nearest competitor, John H. Powers, the Independent or Farmers' Alliance candidate, and 2,453 more than L. D. Richards, the Republican candidate. For all the other State offices the returns gave the Republican nominees slight pluralities. As in every case the Independent candidates had failed of election by only a few thousand votes, they professed to believe that their defeat had been compassed by fraud and intimidation practiced at the polls by their opponents, and on these grounds they decided to contest the election. Late in November, 1890, notices of contest were served upon Boyd and the successful Republican candidates, and during the following month a large mass of testimony was taken in various parts of the State, bearing upon the charges alleged by the contestants. In the gubernatorial contest case testimony was also taken late in December in behalf of Powers, tending to show that the father of Boyd had never been naturalized, and that the son, not being a citizen, was ineligible to the office of Governor. When the Legislature assembled in January, all this testimony was ready for its examination. The first duty of that body in determining the result of the election is prescribed by the State Constitution as follows:

The returns of every election for the officers of the executive department shall be sealed up and transmitted by the returning officers to the Secretary of State, directed to the Speaker of the House of Representatives, who shall, immediately after the organization of the House, and before proceeding to other business, open and publish the same in the presence of a majority of each House of the Legislature, who shall for that purpose assemble in the hall of the House of Representatives. The person having the highest number of votes for either of said offices shall be declared duly elected. Contested elections for all of said offices shall be determined by both Houses of the Legislature, by joint vote, in such manner as may be prescribed by law.

Pursuant to these provisions, the two houses met in joint convention on Jan. 7. A resolution was then offered by the Independents, proposing that action upon the returns be suspended until the pending contest over State officers should be decided by law; but the presiding officer of the convention, Lieutenant-Governor Meiklejohn, a Republican, ruled that no business could be considered or acted upon by the convention till the returns were opened and published according to the constitutional requirement above quoted. This ruling was followed by scenes of confusion, in which the Independents attempted to carry an adjournment of the convention, but the Lieutenant-Governor refused to put the motion therefor. The Speaker of the House, S. M. Elder, an Independent, then refused to open and publish the returns as required by the Constitution, and in this course was supported by his

party associates. A motion for a recess (not adjournment) until the following day was finally entertained and carried. When the convention reassembled on Jan. 8, Speaker Elder was served with a mandamus from the State Supreme Court ordering him to open and publish the returns, and, in obedience thereto, the canvass proceeded, Boyd was declared elected Governor, and the Republican candidates were declared elected to the other offices. The proceedings of the day were marked by disorder, and armed officers of the law were in attendance.

All the persons thus declared elected qualified themselves, and all obtained immediate possession of their offices, except Gov. Boyd. To him Gov. Thayer refused to surrender the executive apartments, on the ground that he was not eligible to the office of Governor. Other quarters in the State House were, however, assigned him while Gov. Thayer fortified himself in the executive chambers, and for a time each contestant claimed to act as the State Executive. On Jan. 9, at the time of his refusal to vacate his office, Gov. Thayer filed in the State Supreme Court a petition praying that a writ of *quo warranto* issue against Gov. Boyd for the purpose of trying the title of the latter to the office claimed by him. On Jan. 13 the court ordered the writ to issue, saying at the same time that, pending the trial of the cause, it recognized Boyd as the legal Governor of the State by virtue of the declaration of the joint convention of the Legislature, and that Gov. Thayer would lose none of his legal rights by quietly submitting to the situation. In view of this assurance of the court, the latter, on Jan. 15, yielded up the executive apartments to Gov. Boyd.

Meanwhile, in the Legislature the Independents had passed through both houses a joint resolution appointing Jan. 20 as the day when the joint convention should meet for the purpose of hearing the contested election cases. On that day Gov. Boyd and the other contestees submitted to the convention a protest against its proceedings, on the ground that the joint resolution under which it had met had not been signed by the Lieutenant-Governor as President of the Senate, nor submitted to the Governor for his approval. The convention therefore passed a resolution asking the opinion of the State Supreme Court upon the question whether such a resolution must be submitted to these officials for their signatures, when, as in the present case, they were both interested in the case as contestees. To this question the court, on Jan. 20, replied that the signature of the Lieutenant-Governor and the approval of the Governor were clearly necessary, according to the terms of the State Constitution, and that such a resolution, if vetoed, must be passed by a three-fifth vote of both Houses in order to become law. The Independents, on learning this, dissolved the joint convention and decided to begin over again. A new joint resolution, fixing Feb. 17 as the day for the meeting of the joint convention, was introduced, but the impossibility of obtaining the Governor's signature thereto was conceded. A few of the Independents became disheartened at the prospect of passing it over a veto, and on Feb. 5 practically gave up the fight by joining with the Democrats

and Republicans of the House in passing a resolution requesting Gov. Boyd to deliver his inaugural address. A few days later the Senate voted down the joint resolution, and with this defeat ended all hopes of the contestants.

In the *quo warranto* suit, *Thayer v. Boyd*, a motion to dismiss was early filed by the respondent on the ground that the relator had no title or authority to maintain the suit, and that the facts stated did not form a good cause of action. Early in March, after a hearing, the court overruled this motion and ordered the respondent to file his answer.

Arguments upon the merits of the case were heard toward the middle of the month, and on May 5 the court rendered an opinion to the effect that Boyd was not a legal citizen of the United States, and was therefore ineligible to the office to which he had been elected. The fact that his father, being an alien, had never completed his naturalization as a citizen during the minority of his son, who was born in a foreign country, was held to be conclusive against the citizenship of the latter. It was further decided that the alien inhabitants of the Territory of Nebraska at the time of its admission as a State did not become citizens of the United States by virtue of the acts of Congress admitting the State into the Union. In view of these facts, the court held that the election of 1890 for Governor was void, and that the person elected Governor at the preceding election was entitled to hold over after the expiration of his term for the term succeeding. From these conclusions of the majority of the court Justice Maxwell dissented. Pursuant to the majority opinion, however, judgment of ouster was entered against Gov. Boyd, in obedience to which he immediately surrendered to Gov. Thayer the Executive office. His counsel then carried the case up to the United States Supreme Court upon a writ of error, but no decision had been reached by that tribunal at the close of the year.

Legislative Session.—The Legislature assembled for its regular biennial session on Jan. 6, and adjourned on April 4. Its action in the controversy over the State executive offices is recorded in the foregoing paragraph. Both Houses were controlled by members of the new Independent or Farmers' Alliance party. Hostility to railroads was one of their cardinal doctrines, and their avowed purpose was to pass at this session some law compelling a reduction of railroad tariff rates. Several radical measures were introduced and were the subjects of prolonged and heated debates. One of these, known as the Newberry Maximum Freight-rate bill, passed the House, and after causing a dead lock in the Senate for several days, was carried in that body and submitted to Gov. Boyd. In the bill an attempt was made to embody in a law for Nebraska the lowest rates in force in Iowa. A reduction from existing rates of from 40 to 60 per cent. was contemplated. Gov. Boyd, believing that such an act, if enforced, would bankrupt every road in the State, returned the bill without his approval on the last day but one of the session, and it failed to pass over his veto. A secret-ballot law was enacted at this session. Under its provisions all ballots used at elections shall be printed at county expense, except in municipal elections, when they shall be printed at municipal expense.

Candidates for office may be nominated by the convention or caucus of any political party that polled at the last election 1 per cent. of the entire vote cast in the State, county, or other division for which the nomination is made, or by nomination papers signed by electors of the district for which the nomination is made to the number of 500 when the nomination is for a State office, and to a number not exceeding 50 where the office is to be filled by the electors of a city, county, or other division less than the State, and to a number not exceeding 20 when the office is to be filled by the electors of a township, precinct, or ward, provided that the number of signatures need not exceed one fourth of the total number of voters when the nomination is for other than a State office. Ballots shall be white, printed with black ink. Each ballot shall contain the name of every candidate duly nominated, the names of all candidates for each office being arranged under the designation of the office in alphabetical order, except that the names of electors of President and Vice-President, presented in one certificate of nomination, shall be arranged in a separate group. At the end of the list of candidates for each office a blank space shall be left for writing in the names of other candidates. Each polling place shall be provided with a sufficient number of booths or compartments, which shall be furnished with such supplies and conveniences as shall enable the voter to prepare his ballot, and in which electors may mark their ballots screened from observation. The number of such booths shall not be fewer than one for every fifty voters or fraction thereof registered in the district or precinct. Before delivering a ballot to an elector, two of the election officers shall write their names in ink upon the back. The elector shall indicate his choice by marking a cross with ink opposite the name of his candidate, or by writing in the name of his candidate. He shall then fold the ballot so as to conceal his choice, and deliver it to the judge of election, who shall deposit it in the ballot-box. Electioneering within any polling place or within 100 feet thereof is forbidden.

Another important act of the session regulates and defines at length the rights and duties of public warehousemen. The mixing or shipping of different grades of grain together is forbidden, except by consent of the owner. Warehouses are divided into three classes, and they shall receive, ship, store, and handle the property of all alike without discrimination.

Eight hours are declared to constitute a legal day's work for all classes of mechanics, servants, and laborers, except those engaged in farm or domestic labor.

The State was re-districted into six congressional districts, as follow:

- 1.—The counties of Cass, Otoe, Nemaha, Richardson, Pawnee, Johnson, and Lancaster.
- 2.—Sapry, Douglas, and Washington.
- 3.—Burt, Thurston, Dakota, Dixon, Cuming, Dodge, Colfax, Stanton, Wayne, Cedar, Knox, Pierce, Madison, Platte, Nance, Boone, Antelope, and Merrick.
- 4.—Saunders, Butler, Seward, Saline, Gage, Jefferson, Thayer, Fillmore, York, Polk, and Hamilton.
- 5.—Hall, Adams, Webster, Franklin, Kearney, Phelps, Harlan, Gosper, Furnas, Red Willow, Frontier, Hitchcock, Hayes, Perkins, Chase, Dundy, Clay, and Nuckolls.

6.—Sioux, Scott's Bluff, Banner, Kimball, Dawes, Box Butte, Cheyenne, Sheridan, Duell, Cherry, Grant, Arthur, Keith, Lincoln, McPherson, Hooker, Thompson, Logan, Dawson, Custer, Blaine, Brown, Keya Paha, Rock, Loup, Holt, Garfield, Valley, Sherman, Buffalo, Howard, Greeley, Wheeler, and Boyd.

An act to provide cheaper text-books in the schools requires school boards to purchase all text-books necessary in their district, and to make contracts with publishers for supplying such books for a term of years not exceeding five. All books so purchased shall be held as the property of the district, and shall be loaned to pupils free of charge, except that pupils shall be liable for damage or loss. Pupils or parents, if they so desire, may purchase their text-books of the board, and shall be charged therefor only the cost price.

For the purpose of relieving the necessities of people in the counties afflicted with drought in the preceding summer, an appropriation of \$100,000 was passed, and a commission was appointed to purchase supplies therewith and to superintend their distribution. By another act the Governor and the Secretary of State were authorized to issue 4-per-cent. bonds, payable in five years, to the amount of \$100,000, the proceeds from the sale of which shall be used in the purchase of supplies and seed grain for distribution among people made destitute by the loss of their crops during 1890. The purchase and distribution were intrusted to a relief board of nine persons appointed by the Governor with the advice of the Senate. For the purpose of paying the bonds at maturity an annual tax of one eighth of a mill was levied. The county boards were authorized to use any surplus general funds in the purchase of food, fuel, seed grain, and feed for teams, and to distribute these among destitute and needy farmers, taking in payment their notes, payable in three years at 7 per cent. interest. The counties were also empowered by popular vote to authorize the issue of bonds in amount not exceeding 3 per cent. of their valuation and not exceeding \$20,000 in any case, and to use the proceeds from the sale of such bonds in the purchase of seed grain and feed for teams, the farmers giving their notes therefor, payable in five years with 7 per cent. interest.

To secure an exhibit of the resources of the State at the World's Fair in Chicago, \$50,000 was appropriated, and a commission was appointed to attend to its expenditure. A Girls' Industrial School for Juvenile Delinquents was established at Geneva, and \$40,000 was appropriated for the erection of buildings, the land therefor being given to the State. For additional buildings at the Institution for Feeble-minded Youth, near Beatrice, \$25,000 was appropriated, and for two wings to the main building of the Hospital for the Insane, at Hastings, \$60,000.

Two amendments to the State Constitution were proposed for submission to the people at the general election in 1892—one providing for the election of railroad commissioners by the people, the other providing for the preservation and investment of the permanent school funds.

Other acts of the session were as follow:

Repealing the act of 1889 establishing a bounty for the manufacture of sugar.

Providing for the establishment of agricultural and horticultural experiment stations at Culbertson and Ogallala.

To regulate the business of building and loan associations.

To protect associations and unions of working men in the use of labels, trade-marks, and other forms of advertising goods manufactured by them.

To enable associations of persons to become bodies corporate for the purpose of acquiring and holding real estate, issuing bonds thereon, and borrowing money.

Requiring railroad companies to equip all engines and cars with efficient and safe automatic couplers and brakes.

Creating the county of Boyd out of the unorganized territory north of Holt County.

To require registers of deeds to keep a record of mortgage indebtedness, and to make annual reports therefrom.

To prohibit the keeping of girls under eighteen years of age, and boys under twenty-one years, in any house of ill fame.

Making it a felony to sell or give fire-arms or ammunition to any Indian not a citizen.

Making it a felony to sell or give malt, spirituous, or vinous liquors or intoxicating drinks to any Indian not a citizen.

To authorize the organization of mutual-insurance companies.

To establish a State board of health, and to regulate the practice of medicine.

Assenting to the act of Congress appropriating money for the support of colleges of agriculture and the mechanic arts in the several States.

Railroads.—The number of miles of railroad assessed in 1891 by the State Board of Equalization was 5,418, against 5,157 for the year preceding. Although the mileage increased, the total assessed valuation of railroad property for the year was fixed at \$29,265,917.80, or \$588,303.25 less than in 1890, the valuation per mile being reduced from \$5,788.42 to \$5,401.45.

Valuation.—The total assessed valuation of the State for 1891, as fixed by the State Board of Equalization, was \$183,159,260.48, a decrease of \$1,611,044.06 over the valuation of 1890.

Relief Commission.—The final report of the State Relief Commission, appointed by the Legislature of this year to distribute provisions and grain to needy farmers, shows that the total amount of money at its disposal was \$200,785.91, of which \$195,687.67 was expended as required by law. Provisions were supplied to 41,663 persons, and grain to 13,662. The amount of grain distributed was as follows: Wheat, 57,796 bushels; corn, 38,445 bushels; barley, 10,818 bushels; oats, 12,779 bushels; potatoes, 6,680 bushels.

Political.—A justice of the Supreme Court and two regents of the State University were to be chosen this year at the November election. The first ticket in the field was nominated by the Prohibitionists in convention at Lincoln on Aug. 5. It contained the names of R. W. Richardson for justice of the Supreme Court, and William Gorst and Mrs. Caroline M. Woodward for regents of the State University. The resolutions adopted by the convention favor Government ownership of railroads and telegraph lines, a graduated income tax in place of the internal-revenue system, service pensions for soldiers, womn suffrage, and the election of United States Senators by direct vote of the people. An increase of the circulating medium was demanded, and the liquor traffic was denounced in

severest terms. After the convention it was discovered that the candidate for justice of the Supreme Court was ineligible to that office, and the name of Mrs. Ada M. Bittenbender was substituted on the ticket.

On Aug. 18 the State convention of the Independent or Farmers' Alliance party met at Hastings and nominated the following ticket: For justice of the Supreme Court, Joseph W. Edgerton; for regents of the State University, A. d'Allemand and E. A. Hadley. A long platform was adopted, which demands that the Legislature shall enact a freight-rate law establishing rates as low as those in force in Iowa; that corporations enjoying public franchises shall assume public burdens and be liable in damages for injuries of their employes sustained while on duty; that laws be enacted prohibiting alien ownership of land and discouraging land speculation; and that all lands held by railroads and other corporations, and not actually needed, be reclaimed and held for actual settlers. It also denounces Gov. Boyd's veto of the maximum freight bill as an outrage perpetrated in the interest of railroads; expresses sympathy with wage earners who are seeking to enforce the eight-hour law; declares in favor of a service pension bill, a bill equalizing soldiers' bounties, and a bill pensioning prisoners of war; pledges the support of a party to the Soldiers' and Sailors' Home; denounces the system of convict labor as maintained in the State by the Republican party; and asks Congress to provide for the establishment of postal savings banks. A resolution was adopted favoring the exclusion from the schools of United States histories which do not include the fireside history of the country, and another favoring the appointment of a State board of arbitration, with power to enforce its findings.

On Sept. 17 the Democratic State Convention met at Grand Island and nominated Jefferson H. Broady for justice of the Supreme Court, and two candidates for regents of the State University. The platform adopted condemns the McKinley bill and the reciprocity ideas of the National Administration, favors a tariff for revenue only, congratulates the people on the defeat of the Prohibition amendment, denounces the ousting of James E. Boyd from the governorship, arraigns the Republican State Board of Transportation for failing to reduce freight rates, favors protection of labor, liberal pensions, the election of railroad commissioners by the people, and the passage of a law governing freight charges, and contains the following resolutions:

We condemn the giving of subsidies and bounties of every kind as a perversion of the taxing power. We are in favor of the election of United States Senators by direct vote of the people. We denounce all trusts, pools, and combines, and we favor such action, State and national, as will forfeit to the public all franchises and property owned or used by corporations or other concerns to form trusts in manufactures, trade, or commerce, to the injury and spoliation of the people, and also to insure the punishment criminally of individuals conspiring against the public welfare.

We favor the free coinage of silver, and that it may be made a full and legal tender for all debts, private or public, and denounce as unjust and dis-

honest the provision of the law recently enacted allowing parties to stipulate against payment in silver and silver certificates, thus setting up one standard for the rich and another for the poor.

The Republican State Convention was held at Lincoln on Sept. 24. It resulted in the nomination of A. M. Post for justice of the Supreme Court, over four other candidates, one of whom was Chief-Justice Amasa Cobb, who sought a renomination. For regents of the State University, H. P. Shumway and C. H. Marple were nominated. The platform commends the National Administration, approves of reciprocity and the protective tariff, and favors an additional World's Fair appropriation by the next Legislature. These resolutions also appear:

We approve of the silver-coinage act of the present Administration, by which the entire product of the silver mines of the United States is added to the currency of the people, but we denounce the Democratic doctrine of the free and unlimited coinage of silver as a financial policy liable to precipitate the people of every city and every State in the Union in a prolonged and disastrous depression, and delay the revival of business enterprise and prosperity so ardently desired, and now so apparently near.

We are heartily in favor of the general provisions of the interstate commerce act, and we demand the regulation of all railroad and transportation lines in such a manner as to insure fair and reasonable rates to the producers and consumers of the country. We favor such legislation as will prevent all illegal combinations and unjust exactions by aggregated capital and corporate powers. We insist upon the suppression of all trusts, combines, and schemes designed to artificially increase the price of the necessities of life.

Early in the canvass the Democratic ticket was withdrawn, and the contest narrowed down to one between the friends and enemies of the Farmers' Alliance and its doctrines. At the November election the Republican candidate for Justice of the Supreme Court was elected by a vote of 76,447 to 72,311 for Edgerton, Independent, and 7,322 for Bittenbender, Prohibitionist. For regents of the State University, Marple, the Republican candidate, and Hadley, Independent, were elected.

NETHERLANDS, a constitutional monarchy in western Europe. The legislative body, called the States-General, consists of a First Chamber of 50 members, elected by the provincial states, and a Second Chamber containing 100 Deputies, elected by male citizens twenty-three years old, who pay 10 guilders of land taxes, or a personal-property tax beyond the limit of partial exemption, or who are lodgers under the law. About one man in three has a vote. The whole of the Second Chamber retires at the end of the four years' period. In the Upper Chamber one third of the members are replaced every three years. New bills can only be originated by the Government or by members of the Second Chamber. Amendments to the Constitution must be passed by both Chambers, which are thereupon dissolved, and the amendments are submitted for confirmation to newly elected Chambers, requiring a two-thirds vote. The reigning sovereign is Wilhelmina Helena Pauline, born Aug. 31, 1880, daughter of the late King Willem III and his second wife, Princess Emma of Waldeck, who acts as Regent during the minority of the infant Queen. The ministry in the beginning of 1891 was composed of the following mem-

bers: President of the Council and Minister of the Colonies, Baron Mackay, appointed Feb. 17, 1890; Minister of the Interior, Dr. A. F. de Savornin Lohman, appointed Feb. 17, 1890; Minister of Foreign Affairs, C. Hartzen, appointed April 20, 1888; Minister of Finance, Dr. K. A. Godin de Beaufort, appointed April 20, 1888; Minister of Justice, Dr. G. L. M. K. Ruys van Beerenbroeck, appointed April 20, 1888; Minister of Marine, H. Dyerinck, appointed April 20, 1888; Minister of War, J. W. Bergansius, appointed April 20, 1888; Minister of Public Works and Commerce, J. P. Havelaar, appointed April 20, 1888. (For area and population, see "Annual Cyclopædia" for 1890.)

Finances.—In the budget for 1891 the revenue was estimated at 126,536,025 guilders, of which 44,200,000 guilders are derived from excise, 23,638,000 guilders from indirect taxes, 12,302,175 guilders from the land tax, 11,515,000 guilders from the personal tax, 6,980,000 guilders from the post-office, 5,310,800 guilders from import duties, 4,464,000 guilders from patents, 4,355,000 guilders from state railways, 2,480,000 guilders from domains, 1,350,000 guilders from navigation dues, 1,270,000 guilders from telegraphs, 661,500 guilders from the state lottery, 231,000 guilders from the tax on gold and silver, 140,000 guilders from shooting and fishing licenses, and 7,639,950 guilders from other sources. The total expenditure is set down as 139,930,839 guilders, of which 34,942,118 guilders are for the public debt, 23,906,805 guilders for financial administration, 22,120,220 guilders for public works, 21,269,860 guilders for the army, 13,894,342 guilders for the navy, 11,192,117 guilders for the interior, 5,254,964 guilders for justice, 1,239,584 guilders for the colonial department, 756,302 guilders for foreign affairs, 654,527 guilders for legislation, 650,000 guilders for the civil list, and 50,000 guilders for contingencies. The excise duties in 1889 produced 44,136,909 guilders; direct taxes, 27,491,491 guilders; indirect taxes, 24,956,939 guilders; customs duties, 5,282,966 guilders. These taxes amounted to 22½ guilders per head of the population. The funded debt in 1891 amounted to 1,096,517,160 guilders, of which 630,567,200 guilders pay 2½ per cent. interest, 340,912,900 guilders were raised in 1886 at 3½ per cent. interest, 94,942,800 guilders pay 3 per cent., and the bulk of the remainder 3½ per cent. The interest charge on the funded debt was 31,708,649 guilders; the sinking fund, 2,673,900 guilders; expenses of the floating debt, 500,000 guilders; annuities, 59,569 guilders. There are 15,000,000 guilders of paper money in circulation.

(For statistics of the army and navy, see "Annual Cyclopædia" for 1890.)

Commerce and Production.—The value of the special imports increased steadily from 1,091,487,000 guilders in 1885 to 1,245,287,000 guilders in 1889. The value of the exports of domestic products increased from 891,036,000 guilders to 1,114,806,000 guilders in 1888, and in the following year declined to 1,094,078,000 guilders. Of the imports in 1889, 23.9 per cent. came from Great Britain, 19.4 per cent. from Prussia, 14.2 per cent. from Belgium, 11.5 per cent. from the Dutch East Indies, 6.1 per cent. from the United States, 2.4 per cent. from Brit-

ish India, 2 per cent. from Hamburg, 1.8 per cent. from France, and 9.6 per cent. from other countries. Of the exports, 43.6 per cent. went to Prussia, 26 per cent. to Great Britain, 12.8 per cent. to Belgium, 6.3 per cent. to the Dutch East Indies, 2 per cent. to the United States, 1.7 per cent. to Hamburg, 1.6 per cent. to Russia, 0.9 per cent. to France, 0.8 per cent. to Italy, and 4.3 per cent. to other countries. Of the soil of the Netherlands, which has a total area of 3,299,906 hectares, 712,524 hectares are barren heath, 146,868 hectares are marsh and water, 44,309 hectares in roads and dykes, 92,353 hectares more are untaxed, 38,850 hectares are covered with buildings and residences, 1,144,066 hectares are in pasture, 859,844 hectares are under field crops, 54,124 hectares are in gardens and orchards, and 226,968 hectares are under forest. Of the farming land, nearly 60 per cent. is cultivated by the owners. The imports of wheat in 1889 were valued at 69,445,000 guilders; of rye, 48,964,000 guilders; of wheat and rye flour, 19,984,000 guilders; exports of wheat, 35,562,000 guilders; of rye, 25,501,000 guilders; of flour, 13,309,000 guilders. The total imports of cereals and flour were 166,327,000 guilders in value, and the exports 95,138,000 guilders. The imports of iron and steel and manufactures thereof were valued at 129,417,000 guilders, and the exports at 87,419,000 guilders; imports of drugs at 165,995,000, and exports at 130,010,000 guilders; imports of textile materials and manufactures at 104,277,000, and exports at 99,571,000 guilders, not including flax, the export of which amounted to 130,010,000 guilders. The imports of coffee were 36,587,000, and the exports 26,053,000 guilders. There is a large trade with England in live animals, margarine, and dairy products, the exports of butter amounting to 47,652,000 guilders in 1889, and those of cheese to 11,207,000 guilders. The imports of mineral oil were 14,713,000 guilders. Coal was imported to the amount of 40,588,000 guilders, the quantity mined in the country being valued at only 223,569 guilders. There were 3,573 steam factories, having 4,280 engines.

Change of Ministers.—The Government of Lohman, Hartzen, and Baron Mackay, representing the Catholic Clerical party and the Evangelical party in the Protestant districts called the Antirevolutionists, took office in 1888—after the first general election subsequent to the extension of the suffrage to persons paying 10 guilders in taxes had resulted in a Second Chamber composed of 45 Liberals, 26 Catholics, 27 Antirevolutionists, 1 Conservative, and 1 Socialist—for the purpose of establishing the system of state-aided confessional schools on the English model in the place of the system of secular education introduced by the Liberals in 1878. This was accomplished by the new school law of 1889. The Cabinet was also pledged to a reform of the colonial administration, in which it was less successful, and promised to introduce a reorganization of the army and navy on the basis of universal suffrage, but has delayed bringing in measures to carry out this project in a thorough manner, not on account of the opposition of the Liberals, who accept the idea, but owing to the practical difficulty of imposing a burden of such magnitude on the people. As it made no

progress toward the fulfillment of its programme and drew criticism upon itself—much criticism on financial and other grounds—the ministry has lost prestige, and Minister Lohman declared that it would resign if the elections of June, 1891, for the Second Chamber went against the Government. Rear-Admiral Dýserinek, the Minister of Marine, had resigned in March, owing to an adverse vote of the Chamber, and was replaced by Capt. Kruys. In the elections the Antirevolutionists lost 9 and the Catholics 2 seats. The new Chamber was composed of 57 Liberals, 19 Antirevolutionists, 24 Catholics, and 2 Radicals. The Catholic leader Schaepman was ousted by a Liberal and the Socialist Domela Nieuwenhuis by a Radical, while the sole representative of the old Conservative party was defeated. On July 8 the Cabinet handed in their resignations.

Eight weeks after the elections had resulted in favor of the Liberals, the popular and accomplished burgomaster of Amsterdam, Dr. van Tienhoven, finally overcame the many difficulties that stood in the way of his getting together a ministry composed of Liberal elements purely. It was constituted on Aug. 20, and consists of the following members: President of the Council and Minister of the Interior, Dr. Tak van Poortvliet; Minister of Foreign Affairs, Dr. van Tienhoven, who had been Minister of the Waterstaat in 1877-'79; Minister of Finance, Dr. Pierson; Minister of Justice, Dr. H. J. Smidt, who held in 1877-'79 the same portfolio in the Kappeyne ministry; Minister of Marine, J. C. Jansen; Minister of War, Lieut.-Col. Seyffardt; Minister of the Waterstaat, Commerce, and Industry, C. Lely; Minister of the Colonies, Dr. Baron van Dedem.

The retiring ministry had brought in a new military bill and one for the insurance of workmen against accidents, but was able to make no progress with them, even with the help of Moderate Liberals. The former proposed to incorporate in the army annually 16,300 of the 40,000 young men who would be liable to serve on the introduction of obligatory service, which would provide a standing army of 45,000 men, a garrison army of 20,000 men, and a reserve force of 20,000 men, besides 50,000 Landwehr men and a complementary reserve of 209,500. Clergymen and divinity students would be exempt. The Schutteryen or national guards would be abolished, but the Landsturm would include all able-bodied citizens up to the age of forty who are not enrolled in the army or auxiliary forces. In the place of this sweeping scheme of reorganization the new Minister of War introduced a provisional measure moderately increasing the army. The new ministry was pledged to a large extension of the suffrage, but promised not to give priority to this question. It bound itself by a formal declaration to execute the primary-education law and maintain the observance of Sunday. The budget for 1892, which was presented on Sept. 18, estimated the revenue at 127,600,000 guilders and the expenditure at 130,000,000 guilders, leaving a deficit of 2,600,000 guilders to be met by increasing the taxes. The sum of 5,000,000 guilders for the demonetization of silver that has figured in former budgets was omitted. There was a larger sum appropriated for public instruction, but less for public works, than in the previous budget. Measures were promised

for covering or reducing the accumulated deficit of 36,000,000 guilders, and also a bill to secure a more equitable distribution of taxation.

Colonies.—The Dutch have a colonial empire in the East and West Indies covering 766,137 square miles, with a population of 29,550,000 souls. Of these, 29,475,613 are found in the East Indies, embracing Java and Madura, Sumatra, Banca, the Riau-Lingga archipelago, Billeton, the west coast and the Dutch districts in the south and east of Borneo, Celebes, the Molucca Islands, the Timor archipelago, Bali and Lombok, and New Guinea east of 141° of east longitude. These islands have a total area of 719,674 square miles. The European population in the beginning of 1889 consisted of 28,805 males and 23,731 females, of whom 21,097 males and 20,484 females were born in the East Indies.

The revenue of Netherlands India for 1891 was estimated at 116,414,315 guilders, and expenditure at 136,840,646 guilders, leaving a deficit of 20,426,331 guilders. The receipts are made up of 11,581,430 guilders from sales of Government coffee in Holland, 207,900 guilders from sales of cinchona, 5,822,650 guilders from sales of tin, 795,000 guilders from railroad revenue in Holland and 1,430,597 guilders from other receipts in Holland, 17,080,000 guilders from sales of opium, 10,340,000 guilders from import, export, and excise duties, 16,067,000 guilders from land revenue, 12,067,000 guilders from sales of coffee in Java, 7,742,000 guilders from sales of salt, and 33,299,638 guilders from other sources of revenue in the East Indies. The accounts for 1890 were expected to show a surplus. The total receipts in the Netherlands were 19,837,577 guilders, and in the East Indies 96,576,738 guilders. Of the expenditure, about one third goes for the maintenance of the army and navy, and the same proportion for the general administration of the Government in the East Indies and the Netherlands. The supreme administrative and executive authority in East India is vested in a governor-general, who is assisted by a council of 5 members, who advise him on legislative questions. Dr. C. Pýnacker Hordýk was appointed Governor-General on June 19, 1888. The army of Netherlands India consists of 1,406 officers and 33,169 men, of whom 14,984 are Europeans. The new Minister of the Colonies has declared in favor of the continuance of the war in Atcheen by the system of blockading the coast of that part of Sumatra, in the place of active offensive operations. The average production of coffee on Government lands before 1890 was 520,000 piculs (of 133½ pounds) a year. The harvest for 1891 was estimated at 383,796 piculs. The railroads have a total length of 790 square miles. In November, 1891, the Dutch Chamber approved a bill for the construction of railroads to connect Batavia, Bantam, Malang, Blitar, Probolingó, and Panaraeken.

The West India colonies of the Netherlands consist of Dutch Guiana or Surinam, on the north coast of South America, and the island of Curaçoa. The Government of Dutch Guiana is in charge of a governor, assisted by a council of officials, nominated and elected members. The area of the colony is 46,060 square miles, and the population consists of 29,204 males and 28,161 females. Paramaribo, the capital, has 27,752 in-

habitants. The revenue in 1888 was 1,325,000 guilders, and the expenditure 1,611,000 guilders. For 1890 the revenue was estimated at 1,340,813 and expenditure at 1,647,153 guilders, as compared with 1,426,913 guilders of revenue and 1,628,541 guilders of expenditure in 1889. The imports in 1889 were valued at 4,893,355 guilders, and the exports at 3,521,867 guilders. In 1888 the production of sugar was 6,206,553 kilogrammes; of cacao, 1,543,019 kilogrammes; of coffee, 5,560 kilogrammes; of bananas, 516,799 bunches. In 1888 there were granted 441 concessions for gold mining. The export of gold was 1,410,795 guilders. Gov. de Savornin Lohman, in his endeavor to benefit the black population, became involved in a conflict with the Provincial States, as the legislative council is called, which frustrated his purposes. He imported food on Government account, on the ground that there was scarcity, and sold it to the poorer people at less than market rates, thus offending the merchants. In the arrangements for celebrating the anniversary of representative government the Governor was ignored. The Legislature was opened without him. The negroes, incensed at the treatment of their patron, interrupted the festivities, and afterward looted the merchants' stores. The Governor released some that were arrested, and the mob became more inflamed and for two days held possession of Paramaribo. The civic guard, militia, regular force, and marines put an end to the riot, killing many negroes. The Governor's action during the disturbance led to a dispute with the Attorney-General. In consequence of these troubles he was dismissed in May, 1891, and M. van Asche van Wyck was appointed in his place. The whites say that the prosperity of the colony depends on their retaining the upper hand, and that it is still suffering from the consequences of a too precipitous emancipation of the slaves. The soil is so rich that the negroes can live without regular work, and for that reason the sugar and cacao plantations can only be cultivated with the labor of Chinese and Indian coolies, especially the latter. Latterly the Indian Government has refused to allow further importations of Madras coolies until the Surinam authorities can offer guarantees that they will be humanely treated and regularly inspected.

The question of the delimitation of the auriferous lands on the border of Dutch Guiana and the French colony of Surinam was settled in May, 1891, by the arbitration of the Emperor of Russia. He declined to act as arbitrator until the French Government withdrew its restrictions regarding the scope of the award. Nevertheless, the French people expected that the decision would be in their favor, and were much disappointed when he confirmed all the claims advanced by the Netherlands. The natural frontier formed by the river Lawa is fixed as the boundary between the two colonies.

NEVADA, a Pacific Coast State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles; population, according to the census of 1890, 45,761. Capital, Carson City.

Government.—The following were the State officers during the year: Governor, Ross K. Colcord; Lieutenant-Governor, J. Poujade; Secretary of State, Olin H. Grey; Comptroller, R. L.

Horton; Treasurer, John F. Egan; Attorney-General, J. D. Torreyson; Superintendent of Public Instruction, Orvis Ring; Surveyor-General, John E. Jones; Justices of the Supreme Court, R. R. Bigelow, M. A. Murphy, C. H. Belknap; Clerk, J. Josephs; Regents of the University, E. T. George, J. W. Haines. All these officers are Republicans.

Finances.—The balance in the treasury on Jan. 1, 1891, was \$366,825.28; the receipts and transfers during the year amounted to \$453,891.54; the total expenditures were \$503,414.05; the outstanding warrants at the end of the year, \$2,723.39; the net balance on Jan. 1, 1892, was \$314,579.38. Of this balance, the sum of \$140,748.49 was credited to the general fund, \$43,037.84 to the State school fund, \$36,157.43 to the general school fund, \$24,719.35 to the State interest and sinking fund, \$18,795.44 to the Territorial interest fund, \$23,094.83 to the State University fund, \$11,899.74 to the University fund (90,000-acre grant), \$7,274.60 to the insane interest and sinking fund, \$897.33 to the State library fund, \$3,601.07 to the contingent University fund, and \$4,353.26 to the interest account (90,000-acre grant). Of the disbursements, \$49,553.04 was for the expenses of the Legislature, \$99,825 for the support of schools, \$50,000 for purchase of bonds, \$23,000 for redemption of bonds, and \$25,730 for interest on bonds.

The State debt on Dec. 31, 1891, with accrued interest, amounted to \$222,913.39, exclusive of the \$380,000 irredeemable State bonds. The cash in the treasury applicable to the payment of the debt was \$185,158.60. On Jan. 11, 1892, \$24,000 of outstanding State bonds were redeemed. The sum of \$169,000 was in 4-per-cent. State bonds belonging to the State school fund, and \$38,000 in 4-per-cent. bonds belonging to the University fund.

The Comptroller's report shows that the net receipts into the treasury from the organization of the State government to the end of 1891, twenty-seven years, were \$11,281,082.03, of which \$1,610,750.28 was received from the sale of State lands, \$1,728,047.14 from the proceeds of mines, and \$5,753,458.01 from the State tax on real and personal property. The expenses of the Legislature have decreased from \$79,944 in 1865 to \$49,553.04 in 1891, and of the executive department from \$52,511.15 to \$39,729.37.

The taxable property in the State was valued at \$24,663,384.57 in 1890, and at \$29,807,542.98 in 1891, an increase of \$5,144,158.41. The total tax, State and county, in 1891 was \$691,472.70, that of the State amounting to \$223,539.81. The total value of the property of the Central Pacific in the State in 1891 was estimated at \$8,008,090.94, that of the Virginia and Truckee Railroad Company was \$982,596.25, and of all railroad property \$10,680,997.19.

The total debt of counties on Dec. 31, 1891, was \$446,741.60, of which \$325,222 is bonded. Five of the fourteen counties have no debt.

Education.—The schools, which cost the State \$3,049.52 in 1865, were maintained in 1891 at an expense of \$76,212.50. The total expense between these years, inclusive, was \$790,052.20. The present market value of securities in the school funds, consisting of State and United States bonds, is \$1,169,500. The total number

of children of school age in 1890 was 10,022; the number of school-houses, 254; of teachers, 251; average number of months of school, 7; average monthly wages of male teachers, of whom there were 41, \$97.68; of female teachers, \$63.86.

The State University, at Reno, had 145 students in 1890. It forms a part of the public-school system, and is free to residents of Nevada. It is coeducational, and has five departments—namely, schools of mines, agriculture, and liberal arts, a normal school, and a business department. As an agricultural and mechanical college, it will hereafter receive aid from the United States Government, beginning with \$15,000 annual appropriation, and increasing \$1,000 a year until it reaches \$25,000. The State made an appropriation of \$8,000 for the construction of a laboratory and its maintenance for 1891 and 1892, and \$20,000 for the support of the university for two years. The amount held in trust by the State for the institution in bonds and cash was \$124,254.57.

State Prison.—The support of the State Prison during the year required \$33,508.01; the receipts from the prison were \$2,678.25. The number of prisoners during the years 1889 and 1890 averaged 95.

Charities.—An appropriation of \$26,000 was made for the support of the State Orphans' Home for the years 1891 and 1892, one of \$85,000 for the State indigent insane, and \$1,000 for the deaf, dumb, and blind; the total amount expended on State charitable institutions in 1891 was \$54,807.15.

Agricultural Experiment Station.—This is at Reno, and receives \$15,000 annually from the Government, under the provisions of the Hatch act. Experiments have proved the soil well suited for potatoes, a large number out of the 100 varieties tried having been successfully cultivated. Thirty varieties of grasses were tried, and many were found suitable to a dry climate, but it was shown that alfalfa could not be surpassed. More experiments are to be made.

Mining.—The product of the mines for the year ending Sept. 30, 1891, was 375,708 tons; the gross yield or value, \$5,948,563.19; the net yield, \$762,895.71. The yield of the Comstock lode for 1890 was about \$4,228,903.31 (the last quarter estimated from the other three). The number of men employed on that lode is from 1,500 to 2,000. Some of the placer mines have been put in condition to be worked more successfully by the building of flumes for conveying water to them. A company has been formed to reclaim from the sands in the bed of Carson river, by means of dredges and electric amalgamators, the gold and silver they are supposed to contain. These sands have been swept into the river from the mills reducing the ore of the Comstock lode. It is believed that the value of these deposits may reach \$100,000,000.

The gross yield of salt, borax, and soda for three fourths of 1890 was \$72,047.85, and the net yield \$18,418.02. It is said that extensive beds of niter have been found on the south of the Central Pacific Railroad, near the sink of Humboldt river.

Manufacturing.—The total number of manufacturing establishments in 1890 was 166, of which 118 were quartz mills, 13 smelting fur-

naces, 11 flour and grist mills, 11 saw mills, and 10 borax works.

State Lands.—The report of the Surveyor-General for the years 1889-'90 was published in 1891. It gives, among many important statistics, a statement of the results of a survey ordered by the Government of California to correct and establish that portion of the eastern boundary line of that State southeastward from Lake Tahoe. Two surveyors from Nevada were appointed to act with those from California. The monument on the State-line point at the northern shore of the lake, marking the boundary, was found to be 1,609 feet too far west; the point of intersection of the one hundred and twentieth meridian of longitude with the thirty-ninth parallel of latitude was found to be 4,073.3 feet too far west as formerly established; and the boundary monument in latitude 358 on the Colorado river was found to be, according to this survey, 1,264 feet due east of the true State line.

Governor's Message.—In his inaugural message to the Legislature, Gov. Colcord called attention to the inequalities of assessment and taxation. He said that, while the amount now required for State purposes is 90 cents on each \$100, if all the property could be assessed at 70 per cent. of its actual cash value, the requirements would not exceed 55 cents on the \$100. For this purpose he recommended a State board of equalization. Other recommendations made by the Governor were the adoption of the Australian ballot system, the investment of the school funds on hand in cash in bonds of other States, a moderate appropriation for an exhibit at the World's Fair, a provision for an annual encampment of the State troops, and an appropriation for the Fish Commission.

NEW BRUNSWICK. The Hon. Sir S. L. Tilley, C. B., K. C. M. G., continues in the Lieutenant-Governorship of the province, with a Cabinet consisting of Hon. N. G. Blair, Attorney-General and Premier; Hon. James Mitchell, Provincial Secretary and Receiver-General; Hon. P. G. Ryan, Chief Commissioner of Public Works; Hon. L. J. Tweedie, Surveyor-General; Hon. William Pugsley, Solicitor-General; Hon. Archibald Harrison and Hon. C. H. La Billois, without office. By the appointment of seven members the Legislative Council has been increased to its full strength of eighteen. In the House of Assembly but one change has taken place, a new member elected to fill the vacancy through resignation in the representation for the county of Kent.

Legislation.—The important measures passed at the session of the Legislature in March and April were:

An act to further facilitate the construction of public works. This act provides for the rebuilding of bridges, where required, with stone piers and iron or steel superstructure, and authorizes a loan not to exceed \$250,000 at 4 per cent. interest, to be met by a sinking fund annually taken from the appropriations for public works. It repeals the act passed in 1890 for a similar purpose, under which no operations had taken place.

An act respecting the office of Queen's printer, which changes the mode of Government printing, the Queen's printer becoming an officer of the Provincial Secretary's department, and provides that all money received for the public printing and advertising shall

be paid to the Receiver-General as part of the public revenues, and all expenses be paid from the provincial treasury. The act goes into operation by proclamation of the Lieutenant-Governor.

An act relating to the Legislative Council, which abolishes the Legislative Council and vests the legislative powers in the Lieutenant-Governor and Legislative Assembly, instead of "the Lieutenant-Governor, Legislative Council, and Assembly." The lower branch of the Legislature has repeatedly passed acts to abolish the upper branch, but these have always been thrown out by the Legislative Council. The present bill, as introduced by the Government and passed by the Assembly, provided for immediate abolition. Amendments delaying the operation of the measure were moved in the Legislative Council, and after much spirited debate the bill as introduced was carried. A reconsideration was moved in the Council on the following day, with the result that the act will not come into operation until after the first session of the Legislature in 1894, or when the present House of Assembly ceases to exist by dissolution.

An act in aid of the construction of railways, authorizing the Government to pay a subsidy of \$2,500 a mile to any corporation undertaking to construct the lines of railway that are named in the act, and providing for a loan to meet the subsidies.

An act to amend the "Common Schools Act" and the act relating to the University of New Brunswick, by which the Chief Superintendent of Education becomes the president of the senate of the university, and makes other changes in the management of the institution, bringing it into closer relations with the educational system of the province.

An act respecting railways, being a general act for the incorporation of companies. It deals with all matters incident to the building and management of railways in the province.

An act relating to mines and minerals, authorizing prospecting licenses for gold and silver up to 100 acres (each 150 feet by 250 feet), issued at 50 cents an area up to 10 areas, and 25 cents afterward per area, good for one year. These licenses can be renewed for second year by payment of half this amount. Leases for twenty years to work and mine, on payment of \$2 an area of 150 feet by 250 feet. Renewable annually at 50 cents an area in advance.

Royalty on gold and silver, 2½ per cent. Licenses to search for minerals other than gold and silver, good for one year, \$20 for 5 square miles. Lands applied for must not be more than 2½ miles long, and the tract so selected may be surveyed on the Surveyor-General's order at expense of licensee if exact bounds can not be established on maps in Crown Land Office. Renewals for second year may be made by consent of Surveyor-General, on payment of \$20. Second rights to search can be given over same ground, subject to party holding first rights, on payment of \$20. Leases are given on payment of \$50 for 1 square mile, good for two years, and extended to three years by further payment of \$25.

The following are the royalties: Coal, 10 cents a ton of 2,240 pounds; copper, 4 cents on every 1 per cent. in a ton of 2,352 pounds; lead, 2 cents on every 1 per cent. in a ton of 2,240 pounds; iron, 5 cents a ton of 2,240 pounds; tin and precious stones, 5 per cent. of value.

Agriculture.—An exhibition, principally of manufactures, was held in the city of St. John, in September and October, under the management of a local company, and an agricultural exhibition in October, under the management of the District Agricultural Society, was held at Fredericton. The products of the farm throughout the province, both as respects quantity and quality, are in advance of other years. An increased interest in the improvement of agricultural live stock has been promoted through the importation of a large number of pure-bred

cattle and sheep by the Government of the province, thus continuing a policy that was adopted a few years ago in the importation of horses. The cattle and sheep were sold at reduced prices to the agricultural societies, and by them distributed through the province.

Census.—The third census since the confederation of the provinces was taken during the summer. The province has gained only 61 during the decade, the population in 1881 being 321,333, and in 1891 being 321,294. Taken by counties, the gains are shown to have been where the population is largely French.

COUNTIES.	1881.	1891.
Albert	12,329	10,971
Carlton	28,365	22,323
Charlotte	24,687	23,751

St. John city	41,353	39,179
Moncton	5,032	8,765

* Largely French.

Trade.—The value of exports of the province for 1891 was \$7,182,748, and of the imports \$5,658,385. Of exports, \$3,239,190 went to the British Empire, \$3,646,353 to the United States, and \$297,205 to all other countries. Of imports, \$2,366,882 came from the British Empire, \$2,994,088 from the United States, and \$497,415 from all other countries.

Finances.—The balance of debit in the current revenue account, Dec. 31, 1890, was \$42,587.57. The total payments were \$863,013.19, and the total receipts \$815,262.20, making a balance of \$90,338.56 against the province on current revenue account on Dec. 31, 1891. The gross debt of the province at the same date was \$2,484,559.73; assets, \$590,468.26; net debt, \$1,894,091.47.

NEWFOUNDLAND. Legislative Session.—During the legislative session of 1891 several important acts were passed, which are here summarized:

A comprehensive act, dealing with the management of the whole postal service of the colony, and assimilating it to that of Great Britain and Canada, defines the duties and responsibilities of the Postmaster-General and the officials. It also regulates local and foreign postage, parcels-post, registration of letters, money orders, post-office savings, banks, etc.

The act to provide for Newfoundland Lloyd's Classification and Registry of Shipping and for the encouragement and improvement of ship-building authorizes the payment of a bounty on vessels built in the colony, on the certificate of Lloyd's surveyor that they have been built in accordance with the specifications laid down in section 2. A fee of ten cents per ton is to be paid for survey. Provision is also made for the annual survey of all steam or sailing vessels engaged in the deep-sea fisheries (including Labrador) and the foreign trade of the colony, the fee to the surveyor to be five cents per ton. Bounty for vessels built to be according to class—seven years' class, four dollars a ton; ten years' class, five dollars a ton; thirteen years' class, six dollars a ton. Three

surveys to be held on each vessel: 1. When in full frame; 2. When planking (except deck) is completed; 3. When vessel is completed. Certificate to be given by Lloyd's surveyor on final survey.

An act amending a previous "Act for the construction and equipment of a line of railway toward Hall's Bay, etc.," authorizes the Government to purchase the Newfoundland Railway, and to raise by loan such sum of money as may be necessary therefor. It further provides the form of bond to be given under the provisions of the amended act.

An act amending a previous "Act for the registration of births, marriages, and deaths," appoints as registering officers all clergymen and other persons who are legally entitled to baptize, celebrate marriages, or perform funeral services in the colony and having charge of a mission or congregation. It also provides that no burial shall take place without a certificate.

An act to provide for the improvement of education authorizes the Governor in Council to appoint a board of nine commissioners, of whom three shall be members of the Church of Rome, three shall be members of the Church of England, two shall be members of the Methodist Church, and one Presbyterian. It also defines their powers and duties in connection with the improvement of the educational system of the colony. Since this act was passed by the Legislature the Church of England Synod and the Methodist Conference objected to its provisions, and the commissioners have not yet been nominated by the Governor in Council. The Legislature, last session, voted the sum of \$20,000, to be paid annually for increasing the salaries of teachers of board schools throughout the colony, which was distributed for the first time in 1891.

The act to amend "the Fisheries Commission act" provides for the promulgation of the rules and regulations of the commission by resolution of both branches of the Legislature and publication in the "Royal Gazette," and declares that nothing in the rules made shall affect the treaty rights on the coast of this colony of any state or power in amity with Her Majesty.

"The Newfoundland French Treaties act of 1891" makes provision for carrying into effect engagements with France respecting fisheries in Newfoundland. After reciting articles from the various treaties affecting the fisheries, from that of Utrecht (1713) to that of Paris (1815), the act declares that all orders given by Her Majesty to the Governor of Newfoundland, or any officer or officers on that station, which she or they deem necessary to fulfill the purposes of said treaties and agreements, or "any acts done by said Governor or officer or officers in pursuance of such orders and instructions as aforesaid, shall be lawful, and no action, suit, or other proceeding shall be brought or maintained in respect of the same." The act also recites the terms of the agreement or *modus vivendi* of 1890 between Her Britannic Majesty and the Government of the republic of France, in virtue of which the differences which had arisen in connection with the catching and canning of lobsters on the treaty shore of Newfoundland were to be submitted to a commission of arbitration, and declares that all orders or instructions issued by Her Majesty to the Governor or officer or officers "which she or they deem necessary for enforcing said *modus vivendi* during the fishing season of 1891, or any continuation thereof, pending the arbitration aforesaid, and all acts done by said Governor or officers in pursuance of such orders shall be lawful, and no action, suit, or other proceeding shall be maintained in respect to the same"; and that "persons refusing to obey the lawful orders from Her Majesty's officers shall be liable to a fine of \$200."

The act to amend the "Crown Lands act of 1884" provides that when any person desires to obtain a lease of mineral land he shall mark the land by four boundary posts or cairns, the extent of inclosed land not to exceed one square mile; and that as soon as

possible he shall apply to the Surveyor-General for a license and deposit a fee of \$20, the first notice filed to give priority of claim. The first license shall be for a year; a fee of \$30 shall entitle to extension for another year; and a further sum of \$50 to an extension for another year. At any time a party may apply for a lease (under the usual conditions), depositing with his application \$25. Owners of mills are not to permit sawdust or refuse to be introduced into bays or creeks, under a penalty of \$100 for each offense.

The act to amend the "Crown Lands act of 1890" renders less onerous the conditions under which the timber land may be held for the establishment of wood-pulp industry. It provides that the license fee per mile of land, payable each twenty-five years, shall be \$20 instead of \$30; and that the expenditure on buildings and machinery shall be \$1,000 per mile of land, instead of \$3,000; also removes all restrictions on removal of machinery or buildings, and repeals provision as to planting of trees to replace those cut down.

The act to provide for the holding of an industrial exhibition in St. John's in 1892 directs the appointment of a commission to superintend operations, and appropriates \$2,000 for the exhibition.

The act amending "the Temperance act of 1889" provides for prohibition or the repeal of prohibition in any district where a majority of the voters poll in favor of such prohibition or repeal of prohibition.

The act to amend "the Act relating to the preservation of game and deer" provides that the close time for caribou shall end on Sept. 15 instead of Oct. 1; that persons who have ptarmigan in their possession on Jan. 12 may offer them for sale till Jan. 22; and also extends the close time for trout, etc., from Dec. 1 to Feb. 1 succeeding.

The act amending "the St. John's Municipal act" makes the term of the Council's office three years instead of two, and makes every male British subject residing in the town and paying any municipal assessment a voter. It also gives plenary powers to Council regarding all matters affecting the health and safety of the inhabitants, the establishment of markets, the care and construction of streets, and the management of the fire department. It also gives Council authority to impose a "business tax" on distillers, brokers, railway and steamboat companies, proprietors of billiard rooms, peddlers, carters, insurance companies, banks, gas companies, telegraph, telephone, and electric-light companies doing business in St. John's.

The Fisheries.—The most valuable and important of the fisheries is the cod fishery, which is carried on upon the banks, the shores of the island, and the Atlantic coast of Labrador, which is under the jurisdiction of Newfoundland. In 1890 the export of codfish (inclusive of Labrador) was 1,040,916 quintals, the value being \$3,986,898. Of this quantity 266,622 quintals were exported from Labrador, the value being \$693,217. In addition 142,000 pounds of boneless codfish were exported—value, \$6,390. Of cod oil 3,195 tons were exported in 1890, and of refined cod-liver oil 5,440 gallons. The total value of the exports of the cod fishery of 1890 was \$4,238,556. It is estimated that 150,000 quintals of codfish are consumed in the island.

The following figures show the number of seals taken in the years named: In 1887, 230,555; in 1888, 286,464; in 1889, 207,084; in 1890, 220,321; in 1891, 343,503. The number of men engaged in the seal fishery in 1891 was 4,284; of steamers, 19, having a tonnage of 5,947 tons.

In 1890 the export of lobsters was 69,344 cases; value, \$520,078.

The quantity of herring exported in 1890 was 107,063 barrels; value, \$278,847.

The value of the export of salmon in the same year was \$113,370.

Total value of fisheries in 1890, \$5,640,760.

The Fisheries Commission are conducting their operations with a twofold object:

(1) To restore exhausted waters to their former abundance by the artificial propagation of marine and other food fishes; (2) to protect the various fisheries by a proper regulation for the seasons for fishing and of the various appliances for catching fish.

At Dildo cod and lobster hatchery, one of the largest in the world, in 1891, 40,000,000 codfish were hatched and planted in Trinity Bay, and also about 15,000,000 young lobsters.

In addition, the propagation of lobsters was carried on by means of floating incubators, the invention of Mr. Adolph Nielsen, Superintendent of Fisheries, in nearly all the great bays. A remarkable success has been reached. The incubators are worked by men who have been specially instructed, and at a very small cost. The ova are stripped from the fibrils under the tails of the female lobsters which are brought to the factories before they are thrown into the boilers, and the germs of life are thus saved from destruction. The incubators are placed near the lobster factories in pure sea water which has a certain amount of motion. They are hatched in a few days and liberated, and then a fresh supply of ova is obtained. In 1891 432 of these floating incubators were used at 18 different stations. The astounding number of 550,000,000 were hatched in the season. It is anticipated that this method of artificial propagation, together with a stringent enforcement of a close season and the prohibition of the capture of immature lobsters, will have the effect of arresting the threatened destruction of the lobster fishery, and even of extending it by planting lobsters in waters where they were previously unknown. In no other country has such success been reached in lobster hatching. Mr. Nielsen has invented a lobster trap which will permit the escape of young lobsters that have not reached the reproductive age, and are too small for use, while larger lobsters are retained.

The herring fishery receives special attention, and under Mr. Nielsen's instructions for curing and packing this fishery is developing rapidly. During his researches last summer Mr. Nielsen discovered a bank, over one hundred miles long, off the west coast of the island where herring of a superior quality resort in large numbers, and where a summer drift-net herring fishery might be established. In summer the herring are fat and in the best condition for being taken.

Finances.—The following table shows the imports, exports, and revenue in the years named:

YEAR.	Imports.	Exports.	Revenue.
1887.....	\$5,397,408	\$5,176,780	\$1,272,600
1888.....	7,420,400	6,582,018	1,370,029
1889.....	6,607,065	6,122,985	1,362,293
1890.....	6,363,855	6,099,686	1,454,536

The public debt in 1890 was \$4,138,627, which averages about \$19.69 per head of the entire population. The interest on the public debt in 1890 was \$202,914.

Industries.—The last census showed that there were in the colony 55 saw mills, 4 tanneries, 5 breweries and distilleries, 6 iron foundries, 6 bakeries, 7 furniture factories, 95 other factories; value of factories, \$954,536; value of goods produced, \$1,554,536; number of hands employed, 2,450.

Minerals.—As a mining country Newfoundland occupies a high place. It stands sixth among the copper-producing countries of the world. From 1864, when the first copper mine was opened, till 1879 copper and nickel ore to the value of \$4,629,880 had been exported. Since that date copper mining has gone on steadily. At present the chief copper mines are those of Tilt Cove and Little Bay, on the shores of Notre Dame Bay. From these two mines the export in 1890 was as follows:

	Tons.	Value.
Copper ingots.....	609	\$175,392
Copper green ore.....	400	8,400
Copper regulus.....	1,245	48,000
Total.....	2,244	\$226,792

An extensive deposit of iron pyrites, averaging 52 per cent. of sulphur, was discovered a few years ago at Pilley's island in the same bay. In 1890 the export of pyrites from this mine was 1,670 tons; value, \$72,315. In 1891 the export was more than doubled, and in 1892 will probably reach 70,000 tons. An antimony mine has been recently opened in the same region, which promises well, and news of a large deposit of asbestos on the west coast has been received lately. Silver and lead mines are worked in Placentia Bay, but as yet on a small scale. Both these minerals have also been found in workable quantities at Port-a-Port, St. George's Bay. A very valuable gypsum mine has recently been opened at Romaine's brook, St. George's Bay, from which the export is large, but returns are not yet available. The coal area of St. George's Bay as yet unworked is 25 miles wide by 10 in length.

Shipping.—The registered shipping on Dec. 31, 1891, was 2,207 vessels; net tonnage, 98,619 tons. In 1890 48 new vessels were built; tonnage, 1,896 tons; bounty paid, \$7,566.

Railways.—The construction of the Hall's Bay Railway made excellent progress during 1891. At the close of the year about 70 miles were graded and the rails laid over a considerable portion of this line. From 600 to 800 men were employed on it.

Political.—The political events of the "Ancient Colony" during 1891 were peculiarly important. They have been developed chiefly in connection with the vexed question of the "French shore." British subjects had established lobster factories at various points along that portion of the coast on which the French have certain fishing privileges secured to them by treaties. The French objected to such operations as a violation of the treaties, and claimed an exclusive right to take lobsters, or, at least, an equal right with British subjects. The British Government held that the right of the French was limited "to taking and drying fish," but that the treaties did not include the catching of shell fish and their manufacture and packing on shore.

After lengthened negotiations, both Governments agreed to refer the points in dispute to a commission of arbitration. Pending the results of such arbitration, a *modus vivendi* was agreed on, to the terms of which the Government and people of Newfoundland strongly objected, and two deputations were sent to England to lay their grievances before the British public and present a protest to the Government. No immediate results followed, and meantime the provisions of the obnoxious *modus vivendi* were enforced by Sir Baldwin Walker, who commanded the war ships stationed on the coast. It was discovered that there was no legal authority for the enforcement of this *modus vivendi*, the old statute which gave power to naval officers to put the treaties in force having been inadvertently repealed. When, then, Sir Baldwin Walker closed certain British lobster factories, Mr. James Baird, a St. John's merchant, whose property had been interfered with, took an action against him and obtained a judgment in the Supreme Court awarding him \$5,000 damages. Then the British Government discovered that to enforce the *modus vivendi* a new act of Parliament must be passed. A bill for this purpose was hastily introduced into the House of Lords, reviving an old coercive act which gave naval officers almost unlimited control on the French shore. As soon as the terms of this coercive act were known in the colony the Legislature, then in session, passed resolutions condemning it in the strongest terms, appointing delegates to proceed to London to arrest the progress of this bill, and claiming that they should be heard at the bar of the House of Lords. Their claim was allowed. One of the most brilliant and distinguished audiences that ever assembled within the walls of the Upper House listened to the representatives of the "Ancient Colony" as they pleaded for their rights and privileges, detailed the wrongs and grievances from which they long suffered, and protested against the new coercive measure, which they regarded as a violation of the Constitution of the colony. The scene was historic, and the impression made was decisive. The final result was that the British Government withdrew the obnoxious measure, on condition that the Legislature of the colony passed an act which would legalize the provisions of the *modus vivendi* for a limited period. This was done. The nature of the act has been defined in the early part of the present article. No progress, however, has yet been made in the arbitration.

Then another political agitation arose in connection with an attempt to negotiate a reciprocity trade arrangement between the United States and Newfoundland. Mr. Bond, Colonial Secretary, was authorized by the British Government to proceed to Washington, and, in conjunction with the British ambassador, to open communications for this purpose with the Government of the United States. A draft treaty was drawn up; but as soon as the terms were known the Government of Canada presented a vigorous protest, alleging that the treaty, if ratified, would affect the fishing interests of Canada most injuriously, and greatly embarrass them in carrying out fishery arrangements with the United States. The British Government recog-

nized the validity of the protest, and declined to ratify the Bond-Blaine reciprocity treaty. This treaty was strongly objected to by a large party in Newfoundland, on the ground that it made large and valuable concessions to the United States, but failed to secure corresponding concessions to the colony, so that the advantages were nearly all on one side.

Soon afterward, in order to mark its disapproval of what they considered the unwarrantable interference of Canada, the Government of Newfoundland declined to grant licenses for obtaining bait to any Canadian fishing vessels, while such licenses were given free of charge to American fishing vessels. Canada had hitherto made an exception in favor of Newfoundland fish and admitted it free of duty, while all other fish had to pay duties; and lately, to mark their sense of the wrong done them by the refusal of bait, the Canadian Government withdrew this privilege, so that Newfoundland fish has to pay duty in Canadian ports. The Newfoundland Government at once responded by placing increased duties on several articles of Canadian produce, such as flour, pork, butter, tobacco, corn meal, and farm produce. Thus the close of 1891 found two British colonies engaged in a war of tariffs.

Exploration.—The year 1891 was marked by the discovery, or rather rediscovery, of the Grand Falls of Labrador, about the same time, by H. G. Bryant, of Philadelphia, and Prof. Kenaston, of Washington, and by a party of tudents from Bowdoin College.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,976 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; and 376,530 in 1890. Capital, Concord.

Government.—The following were the State officers during the year: Governor, Hiram A. Tuttle, Republican; Secretary of State, Ezra S. Stearns; Treasurer, Solon A. Carter; Attorney-General, Daniel Barnard; Superintendent of Public Instruction, James W. Patterson; Insurance Commissioner, John C. Linehan; Railroad Commissioners, Henry M. Putney, Benjamin F. Prescott, and J. M. Mitchell, who resigned on April 11. The vacancy caused by the resignation of Commissioner Mitchell remained unfilled during the year, by reason of the persistent refusal of the Council to confirm the nomination of Thomas Cogswell, which was repeatedly made by the Governor. Chief Justice of the Supreme Court, Charles Doe; Associate Justices, Isaac W. Smith, William H. H. Allen, Lewis W. Clark, Isaac N. Blodgett, Alonzo P. Carpenter, and George A. Bingham, who resigned early in the year and was succeeded by William M. Chase.

Finances.—The following figures show the receipts and expenditures of the treasury for the year ending May 31 and the condition of the State debt: Cash on hand June 1, 1890, \$202,061.31; receipts during the year, \$1,799,807.85; disbursements during the year, \$1,690,050.08; cash on hand June 1, 1891, \$311,819.08; liabili-

ties June 1, 1890, \$2,691,010.45; assets June 1, 1890, \$209,566.11; net indebtedness June 1, 1890, \$2,481,453.34; liabilities June 1, 1891, \$2,579,376.89; assets June 1, 1891, \$319,335.75; net indebtedness June 1, 1891, \$2,260,040.64; reduction of debt during the year, \$221,412.70. The revenue for the year amounted to \$831,870.06, and the expenses to \$610,457.36, making the excess of revenue over expenses \$221,412.70, which corresponds with the reduction of the debt.

The revenue was derived from the following sources: From the State tax, \$500,000; from railroad tax, \$110,529.61; from insurance tax, \$13,332.58; from direct tax refunded by the United States, \$181,891.02; from interest on deposits, \$2,259.75; from miscellaneous sources, \$23,857.10; total, \$831,870.06. The expenses were divided into ordinary, \$294,575.97; extraordinary, \$118,462.76; and interest charges, \$157,418.63. There was collected and distributed to the towns during the year a tax on savings banks to the amount of \$642,312.45.

During the year State bonds to the amount of \$114,000 were paid, as well as a temporary State loan of \$150,000. The funded State debt on May 31 was as follows: Bond of 1873, due July 1, 1879, \$500; municipal war loans, due from Jan. 1, 1892, to January, 1905, \$2,206,100; bonds of 1879, due 1891 and 1892 (July 1, \$100,000 each year), \$200,000; total funded debt, \$2,406,600.

The valuation of railroad property for 1891, as fixed by the State Board of Equalization, was \$19,547,300, against \$17,867,908 for 1890. An annual tax of \$500,000 is paid to the State by the towns according to their valuation.

Legislative Session.—The regular biennial session of the Legislature began on Jan. 7 and ended on April 11. The difficulties that preceded its organization and the action of the clerk of the Lower House, by which the Republicans obtained a majority in that body, are discussed at length in the "Annual Cyclopaedia" for 1890, page 600. On the opening day of the session the returns of votes cast for Governor in the November election were opened in the presence of both Houses, and, as there appeared to be no choice by the people for that office, a ballot was taken which resulted in the election of Hiram A. Tuttle, Republican, by a vote of 185 to 150 for Charles H. Amsden, Democrat. The choice of a successor to United States Senator Henry W. Blair devolved upon this Legislature. At their respective caucuses the Republicans nominated Jacob H. Gallinger, and the Democrats Charles A. Sinclair, the former receiving 95 votes on the first ballot in the Republican caucus, Jan. 15, to 62 votes for Senator Blair, 25 for Person C. Cheney, and 11 scattering, and being nominated on the second ballot. On Jan. 20 the separate ballot for Senator taken in each House resulted as follows: Senate, Gallinger 14, Sinclair 9, Harry Bingham, Democrat, 1; House, Gallinger 191, Sinclair 183, Charles H. Burns, Republican, 1. In the joint convention of the following day Gallinger was declared elected. On the same day Ezra S. Stearns, Republican, was elected Secretary of State and Solon A. Carter, Republican, was re-elected State Treasurer.

The passage of a secret-ballot act was an important result of the session. Its provisions ap-

ply to all elections held for the choice of presidential electors, representatives to Congress, State and county officers, and to the election of all other officers chosen at biennial elections, or to any elections of national or State officers. Any city that chooses its municipal officers annually may adopt the provisions of the act for such elections, by a vote of its qualified voters, and any town may adopt the provisions of the act for its annual elections. After April 30, 1892, city, ward, and town caucuses of qualified voters representing a political party which at the last preceding biennial election polled at least 3 per cent. of the entire vote cast in the State for governor may in a city or ward nominate candidates for city or ward officers, and in town for town officers, whose names shall be placed upon the ballots to be furnished by the city clerk, town clerk, or Secretary of State. Such caucuses may choose delegates to State, district, or county conventions, and such conventions may nominate one candidate for each State, district, or county office whose name shall be placed upon the official ballots. Candidates may also be nominated by nomination papers, signed by qualified voters of the State, district, county, city, ward, or town in and for which the officer is to be elected to the number of at least 500 where the officer is to be elected by the voters of the entire State; to the number of 250 where the officer is to be elected by the voters of a congressional district; of 50 where the officer is to be elected by the voters of a councilor, or senatorial district, or of a county or city; and of 25 where the officer is to be elected by the voters of a town or ward of a city. All ballots used in biennial elections and in all other elections for national and State officers shall be prepared by the Secretary of State at State expense; and all ballots used in annual elections in cities and towns shall be prepared by the city or town clerk at municipal expense. Every ballot shall contain the names, residences, and party politics of all candidates whose nominations have been duly made, the names being arranged alphabetically, according to surnames, under the designation of the office. Blank spaces are to be left at the end of the list of candidates for each office for those who wish to write in names not printed on the ballot. The voter shall designate his choice by a cross in a square at the right of the name of each candidate. The ballots shall be of plain white paper, with 4 pages not more than 5 nor less than 4½ inches in width, and not less than 6 inches in length. The names of candidates shall be printed in black ink and in uniform type, and the ballots shall be folded in marked creases lengthwise. On the back and outside, when folded, shall be printed the words "official ballot for," followed by the designation of the polling place for which the ballots are prepared, the date of the election, and a *fac simile* of the signature of the officer who prepared the ballots, such *fac simile* being at no election a copy of that used at a former election, and being kept secret till the day of election. The selectmen in the different wards and towns shall prepare the polling places therein, and shall cause the same to be suitably provided with marking shelves or compartments, at which voters may conveniently mark their ballots.

The necessity of adopting some legislation to protect the people from endowment-order swindles was earnestly discussed at this session; and an act was passed, known as the Barber bill, which places these orders under the control of the insurance commissioner. Under the provisions of this law the commissioner early in the year refused licenses to a large number of endowment orders, practically making it impossible for such orders to do business in the State.

The levy of an annual State tax of \$500,000 was authorized for each of the years 1892 and 1893. In order to redeem such portions of the war-loan bonds at their maturity as the revenue of the State would not provide for, the Treasurer was authorized to issue and sell new State bonds not exceeding \$800,000 in amount, at a rate of interest not exceeding 4 per cent.

The sum of \$175,000 was appropriated for the purchase of land and the construction of a building for the State Library, such sum to be raised by the sale of State bonds to the amount of \$175,000, payable in twenty years, and bearing not over 4 per cent. interest.

For the purpose of securing an exhibit of the resources of the State at the World's Columbian Exposition, the sum of \$25,000 was appropriated to be expended under the direction of a State board of managers.

The State was redistricted for Senators and for members of the Governor's Council.

Other acts of the session were as follow :

Assenting to the act of Congress approved Aug. 30, 1890, appropriating money in aid of colleges of agriculture and the mechanic arts in the several States.

Providing for the election by the alumni of Dartmouth College, of five additional trustees.

Accepting the provisions of the will of Benjamin Thompson, of Durham, which contemplate the establishment of an agricultural college in that town under the control of the State.

Making the day of each biennial election in the State a legal holiday.

To prevent the killing of moose, caribou, and deer.

Making the first Monday of September, known as Labor Day, a legal holiday.

Establishing a new apportionment for the assessment of public taxes.

To prevent the sale of adulterated foods, drugs, and other articles.

Establishing a State board of cattle commissioners.

Establishing a State board of registration of dentistry.

Providing for the removal of the New Hampshire College of Agriculture and the Mechanic Arts from Hanover to the farm of the late Benjamin Thompson in Durham.

Providing that if any State shall by law deny any insurance company or citizen of this State any rights or privileges which are granted to insurance companies or citizens of that State, then this State shall in like manner deny to insurance companies and citizens of that State all such rights and privileges.

Establishing a State board of library commissioners, which shall promote the establishment and efficiency of free public libraries.

Accepting the refund by Congress of the direct tax of 1861.

Establishing the city of Rochester.

Charities.—The State Insane Asylum at Concord, which has accommodations for 350 patients, was filled throughout the year. The receipts of the institution for the year were \$108,478, and the expenditures \$108,344. There is a perma-

nent fund for the use of the asylum amounting to \$275,932.

Prisons.—At the Concord State Prison there were 107 convicts on Dec. 30, 1890. During the year following 61 convicts were received and 42 discharged, leaving 126 remaining on Nov. 30, 1891, of whom 122 were men and 4 women. At the State Industrial School there were about 120 inmates during the year.

Savings Banks.—The aggregate of deposits in the 73 savings banks of the State on Sept. 30 was \$69,531,024.62, an increase of \$3,804,005.58 in one year. Their guarantee fund on that date amounted to \$4,139,476.62, their surplus to \$2,396,367.98, and their miscellaneous debts to \$24,650.75, making their total liabilities \$76,091,519.97. The total number of depositors was 166,264, an increase of 6,482 in one year, and the average for each depositor was \$418, against \$411 in 1890. There are certain trust companies of the State which are authorized to receive savings deposits, and the amount held by such on Sept. 30 was \$1,527,075.83.

Insurance.—During the past two years the foreign insurance companies, which left the State a few years ago after the passage of the valued-policy law, have been gradually resuming business. The following table shows the business done by all companies in the State during 1890 and 1891.

ITEMS.	1890.	1891.
NEW HAMPSHIRE STOCK COMPANIES.		
Risks written	\$45,906,693 87	\$46,229,761 55

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787; area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; and 1,444,933 in 1890. Capital, Trenton.

Government.—The following were the State officers during the year: Governor, Leon Abbett, Democrat; Secretary of State, Henry C. Kelsey; Treasurer, John J. Toffey, succeeded by George R. Gray; Comptroller, Edward J. Anderson, succeeded by William C. Heppenheimer; Attorney-General, John P. Stockton; Superintendent of Public Instruction, Edwin O. Chapman; Commissioner of Banking and Insurance (an office created by the Legislature this year, the first incumbent being appointed in March), George B. M. Harvey, who resigned early in June and was succeeded by George S. Duryee; Chief Justice of

the Supreme Court, Mercer Beasley; Associate Justices, Manning M. Knapp, Alfred Reed, Edward W. Scudder, Bennet Van Syckel, David A. Depue, Jonathan Dixon, William J. Magie, and Charles G. Garrison; Chancellor, Alexander T. McGill, Jr.; Vice-Chancellors, Abraham V. Van Fleet, John T. Bird, Henry C. Pitney, and Robert S. Green.

Finances.—The balance in the State revenue fund on Oct. 31, 1890, was \$433,760.87; the receipts for the year ensuing were \$2,130,423.96; the disbursements were \$2,162,015.87; and there remained a balance of \$402,168.96 on Oct. 31, 1891. The receipts included the following items: Tax on railroad corporations, \$1,046,035.10; tax on miscellaneous corporations, \$405,058.98; fees paid for certificates of new corporations, \$91,479.26; tax on foreign insurance companies, \$6,616.96; State Prison receipts, \$79,869.31; official fees, \$23,904.67; judicial fees, \$24,952.64; riparian lands, \$49,560.22; interest and dividends, \$18,870; direct war tax refunded, \$382,614.83. The disbursements may be classified as follow: Ordinary State expenses, \$1,272,612.34; special appropriations paid, \$136,751.53; expenses incurred in the previous year, \$36,393.30; temporary loans paid with interest, \$410,230.16; paid on war debt and loan sinking fund, \$131,357; miscellaneous expenses, \$174,671.54; total, \$2,162,015.87.

In the State school fund, which is distinct from the State revenue fund, the balance on Oct. 31, 1890, was \$662,025.64; the receipts for the year ensuing were \$256,184.10; the disbursements were \$437,374.96; and there remained a balance on Oct. 31, 1891, of \$480,834.78. At the latter date the permanent investments held by this fund amounted to \$3,315,567.60, to which should be added the cash balance of \$480,834.78, making the total value of the fund \$3,796,402.38. The income only is used for school purposes.

The sinking-fund receipts for the year, including the annual State appropriation of \$90,000 and \$41,357 loaned to this fund by the revenue fund, amounted to \$194,029.37. The disbursements, including \$162,331 for payment of principal and interest on the State debt, were \$164,704.55. On Oct. 31 the total value of this fund was \$538,636.93, a decrease of \$14,470.13 during the fiscal year. The permanent State debt now amounts to \$1,006,300. The Governor says in his last annual message:

During the past fiscal year the entire floating debt of \$400,000, which existed at the commencement of my administration, was fully paid off and discharged, and over \$10,000 paid for interest thereon. Over \$64,000 has been expended for obtaining title to the camp ground at Sea Girt, which was taken under condemnation proceedings instituted under acts of 1888 and 1889. Payments have been made for the Home for Disabled Soldiers, the State Lunatic Asylum, the Agricultural Experiment Station, and other purposes amounting to over \$75,000. Over \$92,000 was spent to enlarge and rebuild the Assembly Chamber; \$90,000 of the public debt has been paid; over \$41,000 has been loaned to the sinking fund; and alterations and additions have been made to the State House, upon which nearly \$26,000 have been expended.

The sum of \$382,614.83 was collected from the United States, without the payment of any commission or charge therefor.

Valuations.—The total assessed valuation of property in the State subject to taxation is as

follow: Value of railroad property in 1891, \$210,044,945; other classes of property in 1891, as they appear by the return of rates in the Comptroller's office \$701,320,029; total value, \$911,364,974. Upon the railroad valuation a tax of \$1,050,224 for State purposes was assessed in 1891. The same tax on this property for 1890 was \$1,010,305, the valuation for that year being \$202,106,027.

Legislative Session.—The one hundred and fifteenth Legislature met at Trenton on Jan. 13, and adjourned on March 20. One of its duties was the selection of a State Comptroller and a State Treasurer for the term beginning in 1891. The successful candidate for the former office was William C. Heppenheimer, and for the latter George R. Gray—both Democrats. The secret-ballot law of 1890 was amended in many of its details. It does not now apply to municipalities having fewer than 4,000 inhabitants; but in a modified form it is extended to town meetings and township elections. At such meetings or elections the booths and official envelopes for secret voting shall be provided by the town or township officials, but there shall be no official ballots.

The trustees of the State Institution for the Deaf and Dumb were legislated out of office, and the control of the school was placed in the hands of the State Board of Education. Instead of a board of managers for each of the State lunatic asylums at Trenton and at Morristown, as heretofore, a single board of seven members was established.

For the sake of economy, the board of commissioners of the sinking fund was abolished, and its powers and duties were conferred upon the State Treasurer, without increasing his salary. An unsalaried commission was created to represent the State at the World's Columbian Exposition, and the sum of \$20,000 was appropriated to defray necessary expenses in securing a proper exhibit for the State.

The State was redistricted for members of Congress, on the basis of the census of 1890, as follows:

First District, counties of Camden, Cumberland, Cape May, Gloucester, and Salem.

Second District, counties of Atlantic, Mercer, Burlington, and Ocean.

Third District, counties of Somerset, Middlesex, and Monmouth.

Fourth District, counties of Sussex, Warren, Hunterdon, Morris, and the following townships in Essex County: Belville, Bloomfield, Caldwell, East Orange, Franklin, Montclair, and Livingston.

Fifth District, counties of Bergen and Passaic, and the following portion of Hudson County: townships of Guttenburg, North Bergen, Union, Weehawken, West Hoboken, and town of Union.

Sixth District, city of Newark in Essex County.

Seventh District, cities of Jersey City and Hoboken, and townships of Harrison and Kearney, all in Hudson County.

Eighth District, county of Union, city of Bayonne in Hudson County, and city of Orange and townships of Clinton, South Orange, West Orange, and Milburn in Essex County.

The State was also divided for members of the Assembly into sixty districts, each district having one Assemblyman.

Authority was given the Court of Pardons to license the release on parole of any convicts in the State penal institutions, on such conditions as it

should deem proper, such license being signed by the Governor and being revocable by the court, or by the Governor when the court is not in session.

It was made unlawful for any corporation to retain or keep back, without the voluntary consent of its workmen, any part of the wages due them under pretense of assisting or relieving them when sick or disabled; and corporations were forbidden to require their workmen to enter into any contract by which their wages may be retained as aforesaid.

Provision was made at this session for a State board of taxation, consisting of three members to be appointed by the Governor with the consent of the Senate, and holding office for five years. The duty of securing the equalization, revision, and enforcement of taxation in the State is intrusted to the board, which is given authority to compel the attendance of witnesses and administer oaths.

Any tax payer feeling aggrieved by the assessment of taxes, or by the action of any board of tax review or commissioners of appeal, and any taxing district or county feeling aggrieved by the action of any board or boards of equalization, may file a petition with this board and have his complaint heard, such board having authority to revise and correct the taxes. Other acts of the session were as follow :

Repealing the act of 1890 providing for the formation and government of boroughs.

Designating the Rutgers Scientific School as the beneficiary of the funds granted by Congress in aid of colleges of agriculture and the mechanic arts in the several States.

Establishing a department of banking and insurance under the control of a commissioner to be appointed by the Governor. The powers of the Secretary of State as Insurance Commissioner are vested in this department.

To provide for the formation and government of villages.

Providing for a commission to revise and consolidate the general statutes of the State relating to villages, towns, and townships.

Giving to husbands the right to take the personal estate of their wives without administration when the estate does not exceed \$200.

Providing that honorably discharged Union soldiers and sailors holding salaried appointive offices in any city or county shall not be removed for political reasons, but only for good cause shown after a hearing.

Providing for State policemen, and defining their powers and duties.

Providing for the establishment of libraries of professional books in the several counties, for the use of teachers in the public schools.

To abolish the office of chosen freeholders in certain towns, boroughs, and incorporated villages.

Providing a new system of police courts and police justices in cities of the first class.

Revoking the charters of all corporations that have heretofore failed to pay State taxes imposed upon them by law.

Authorizing courts of common pleas to license social clubs to sell liquor.

To create county boards of license commissioners.

Providing for municipal boards of street and water commissioners in cities of the first class.

Providing for the establishment of fish and shell-fish cultural and biological stations in the State.

To provide for the appointment of commissioners for the promotion of uniformity of legislation in the United States.

Giving to laborers employed on public works in any

city, and to persons furnishing materials for the same, a lien on the public moneys of the city due or to be due under the contract of said city with any person or persons by which such public works are being constructed.

Providing for the permanent improvement of public roads, the expense to be borne in part by the State and in part by the counties.

Appropriating \$5,000 for stocking the waters of the State with food fishes.

Appropriating \$5,000 to establish a manual training school, and \$7,000 to erect a chapel for religious purposes at the State Reform School for Juvenile Offenders.

Accepting and assenting to the act of Congress refunding to the States the proceeds derived from the direct-tax levy authorized in 1861.

Making every Saturday from 12 o'clock noon until 12 o'clock midnight a legal holiday.

Education.—The school census of 1891 shows 430,340 children in the State between the ages of five and eighteen years, an increase of 19,828 over 1890. There were enrolled in the public schools during the year 237,500 children, an increase of 3,428; the number attending private schools was 54,865, an increase of 7,586, and the number not attending any school was 137,975. The average daily attendance was 146,713. The number of male teachers employed was 760, with an average salary of \$76.38 per month; the number of female teachers was 3,857, with an average salary of \$44.40 per month. The total value of school property was \$9,098,576. During the school year a total of \$3,985,612.81 was expended in the State for public-school purposes, the following being the principal items of expenditure. For teachers' salaries, \$2,443,061.50; for fuel, \$98,064.29; for building and repairing school-houses, \$680,831.97; for janitors' salaries, books, stationery, taking census, etc., \$408,666.91. At the State Normal School the attendance in 1891 was 326 pupils, and at the Model School connected therewith 541. The revenue for the support of these institutions, in addition to the \$20,000 annually appropriated by the State, is derived from the tuition fees of the Model School, amounting to \$15,729.63, and from other sources \$3,421.26. This, with the balance of \$7,271.07 on hand at the date of the last school treasurer's report, made the total receipts \$46,421.96. The disbursements amounted to \$38,781.60.

Charities.—At the Morristown Insane Asylum there were under treatment on Oct. 31 893 patients, of whom 455 were males and 443 females. During the year preceding 219 patients were admitted and 207 discharged. The daily average was 899. All except 103 of the 898 patients remaining on Oct. 31 were supported at public expense. The receipts of the institution, including balance on hand at the beginning of the year, were \$227,973.26; the expenditures were \$221,528.64, leaving a balance on Oct. 31 of \$6,444.62. At the Trenton Insane Asylum the daily average of patients for the year ending Oct. 31 was 802. There were admitted during the year 202 new patients, 169 were discharged, and there remained 820 patients in the institution at the close of the year, of whom 412 were males and 408 females. All except 95 of these are supported at public expense. The receipts, including balance on hand at the beginning of the fiscal year, amounted to \$221,347.73, the disbursements amounted to \$180,-

439.18, leaving a balance on hand Oct. 31 of \$40,908.55.

At the Institution for Feeble-minded Women there were 46 patients at the close of the fiscal year, an increase of 17 over the previous year. The sum of \$8,960.21 was received from various sources, of which the State paid \$8,464.56. The institution expended \$8,589.68. The last Legislature amended the law so as to give this institution the care of feeble-minded girls of the age of twelve years and upward. Additional accommodation for 50 inmates has been provided. At the School for Deaf Mutes there were 139 pupils during the fiscal year, an increase of 20 over the previous year. The average attendance was 124. The State pays to maintain the institution \$76 per quarter for each pupil, making a total of \$37,924 for the last fiscal year.

Soldiers' Home.—On Oct. 31 there were 457 inmates in the Soldiers' Home at Kearney, a decrease of 6 from the preceding year. During the year 350 were admitted, 262 discharged, 19 expelled, 46 died, and 29 were dropped from the rolls. The average number per day was 472. Since the home was opened there have been 17,334 soldiers cared for by the institution. The total receipts for the year were \$83,188.12, and the disbursements were \$72,986.32, leaving a balance in the hands of the treasurer of the home of \$10,201.30.

Prisons.—The daily average of prisoners confined in the State Prison during the last fiscal year was 951, of whom 919 were males and 32 females. This is a decrease of 22 in the daily average. The number of prisoners at the close of the fiscal year was 989, an increase of 77 over the previous year. The expense of maintaining the institution was \$173,869.31, of which \$79,869.31 were paid from the receipts for labor.

At the State Reform School there were 346 boys at the opening of the fiscal year. During the year 202 were received and 219 discharged, leaving 329 remaining on Oct. 31. The receipts, including a balance of \$5,318.23, were \$60,211.11 and the expenses were \$55,980.81.

On Oct. 31, 1890, there were 63 girls in the State Industrial School for Girls and 16 out at service. On Oct. 31, 1891, there were 70 girls in the school and 20 under indenture. The total receipts from all sources during the year were \$13,516.47; the expenditures were \$12,301.71.

Militia.—The National Guard consists of 325 officers and 3,909 enlisted men. This force is organized into 57 companies of infantry and two Gatling-gun companies. The expenditures for National Guard purposes for the last fiscal year amounted to \$124,418.68.

The State now owns a tract of 119 acres at Sea Girt, which is expressly reserved for the encampment and other uses of the Guard.

Savings Banks, etc.—Twenty-five savings banks reporting to the Secretary of State show on Jan. 1, 1891, total deposits amounting to \$32,462,603.35 due to 125,073 depositors, and a surplus of \$2,950,303. On Jan. 1, 1890, the number of depositors was 117,999. Reports to the State Bureau of Statistics show that during 1891 24 new building and loan associations were incorporated, making a total of 270 associations now in active operation, with a net capital approximating \$23,500,000 represented by 410,000 shares

and 77,000 shareholders, of whom probably 18,000 are paying for homes with money borrowed from the respective associations. The increase of the net capital of these associations during 1891 was approximately \$1,000,000; in the number of shares, 30,000; in the number of shareholders, 5,000.

Abandoned Farms.—Statistics collected in 1890 show a total of 313 abandoned farms in the State covering 18,487 acres. In Atlantic County there are 55 abandoned farms, covering an acreage of 2,755; Cape May, 15, covering 2,000 acres; Monmouth, 5, 215 acres; Ocean, 16, 916 acres; Camden, 4, no acres given; Passaic, 10, 1,284; Bergen, 20, 836; Cumberland, 24, 570; Mercer, 10, 688; Middlesex, 12, 456; Morris, 5, 1,270; Burlington, 32, 993; Gloucester, 3, 150; Somerset, 60, 2,090; Hunterdon, 1, 73; Sussex, 33, 3,238; Warren, 8, 956. Considering that there are a total of 34,307 farms in the State with an area of 2,929,773 acres, the percentage of those abandoned is very small. Almost one third of the farms reported abandoned are located in the counties of Somerset, Sussex, and Warren.

Political.—One third of the Senators and all of the members of the Lower House of the Legislature were chosen at the November election of this year. Seven Democrats were elected to the Senate, and that body in 1892 will contain 16 Democrats and 5 Republicans. Eighteen Republicans and 42 Democrats were elected to the lower house.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; and 153,593 in 1890. Capital, Santa Fé.

Government.—The following were the Territorial officers during the year: Governor, L. Bradford Prince, Republican; Secretary, Benjamin M. Thomas; Auditor, Trinidad Alarid, succeeded by Demetrio Perez; Treasurer, Antonio Ortiz y Salazar, succeeded by Rufus J. Palen; Solicitor-General, Edward L. Bartlett; Superintendent of Public Instruction (an office created by the Legislature in February), Amado Chavez; Secretary of the Bureau of Immigration, Max Frost; Chief Justice of the Supreme Court, James O'Brien; Associate Justices, William D. Lee, Edward P. Seeds, John K. McFie, and Alfred A. Freeman.

Finances.—The total expenses of the Territory for the fiscal year ending March 3, 1891, were \$178,679.23. On that day the Territorial debt amounted to \$866,433.04, of which \$720,000 was a bonded debt, and \$146,433.03 a floating debt represented by outstanding warrants. The credit of the Territory has appreciably advanced since the funding act of 1889 has become operative, but taxation under it is burdensome. The tax rate levied for Territorial purposes in 1891 was 9 15-100 mills, in addition to which a 2 mill tax for schools is levied uniformly in each county.

The total assessed valuation of property in the Territory in 1889 was \$46,041,010, and in 1890 \$45,199,847.91. This decrease was caused by a reduction in the value of cattle made generally throughout the territory in 1890.

Legislative Session.—The twenty-ninth Territorial Legislature convened at Santa Fé, on

Dec. 29, 1890, and adjourned on Feb. 26 following. An important result of the session was the passage of acts for the better management and support of the public schools. A Territorial Superintendent of Public Instruction, who with the Governor and three others shall form a Territorial board of education, was for the first time placed at the head of the public-school system. In addition to the work of general supervision, he is required to hold teachers' institutes annually in each county and to collect statistics of all public and private schools. He is appointed for two years by the Governor, with the consent of the Legislative Council. Each county shall elect biennially at the general election a county superintendent of schools, who shall have charge of the schools within the county, while the local affairs of each school district shall be managed by a board of three directors elected annually. An annual tax not exceeding 3 mills on the dollar shall be levied on all taxable property in the Territory, the proceeds of which for each county shall be paid to the county treasurer, and distributed by him for the purpose of paying teachers' wages. In each school district the school directors are authorized to levy a tax of not over 5 mills on the dollar to raise additional money for schools therein, and each district may issue bonds for building and completing school-houses, providing for their payment at maturity by the levy of a special tax of not over 5 mills on the dollar. A poll tax of one dollar is also levied, and the proceeds devoted to school purposes. The payment of this tax is a prerequisite for voting. The proceeds of liquor licenses are also appropriated for schools. Children between five and sixteen years of age, are required to attend the public schools at least three months in each year, unless physically disabled or living more than two miles from a school. Books are to be furnished at public expense, if the parent or guardian is unable to buy them. In place of the district schools there shall be maintained in incorporated cities and towns a system of free public schools, at the expense of such cities or towns, which shall be open not less than three nor more than ten months each year.

A high-license law fixes the following annual fees for retail liquor selling: In places having not more than 500 inhabitants, \$100; in places having not less than 500 and not more than 1,000 inhabitants, \$200; and in places having over 1,000 inhabitants, \$400. Incorporated cities or towns may impose an additional license fee if permitted by their articles of incorporation or ordinances. The sale of liquor to a person who is in the habit of becoming intoxicated after notice from his relatives, or to a minor without consent of parent or guardian, is prohibited. Fines are imposed for drunkenness, and liquor shall not be sold on election days. The effect of this act was to close nearly two thirds of the saloons before the end of the year. An act was passed limiting express rates and taxing express companies on their receipts for transportation within the Territory.

The issue and sale of Territorial bonds to the amount of \$25,000 was authorized for the purpose of raising money to erect a building for the Insane Asylum at Las Vegas. For securing the

representation of New Mexico at the World's Columbian Exposition at Chicago the sum of \$25,000 was appropriated. The tax rate for Territorial purposes for the next two years was fixed at 6½ mills annually. Other acts of the session were as follow:

Repealing the provisions of law requiring members of the Territorial House of Representatives and probate judges to be twenty-four years of age, members of the Territorial Council to be thirty years of age, and the Delegate to Congress to be twenty-five years of age.

To provide for the printing of bills, reports, and other documents in the Spanish language.

Declaring trusts, pools, and combinations in restraint of trade to be illegal, and punishing persons connected therewith.

Authorizing the refunding of town and city bonds.

Increasing the bond required of the Territorial Treasurer from \$20,000 to \$400,000, and of the Auditor from \$5,000 to \$100,000.

Providing a general law for the incorporation of towns and villages.

Designating the second Friday in March as Arbor Day.

Requiring the publication of legal notices in both English and Spanish.

To punish persons unlawfully destroying or injuring private property and unlawfully fencing lands to which they have no title.

Repealing the provision of the compiled laws which adopts the laws concerning descents, distribution, and wills contained in the treatise of Pedro Murillo de Lorde upon these subjects.

Providing a method for establishing the rights of appropriation of water for ditches, canals, or feeders of reservoirs, and requiring registration of all such rights hereafter made, changed, or enlarged.

To punish the larceny of ores from mines.

Relating to the termination of oral leases of mines.

Assenting to the act of Congress, approved Aug. 30, 1890, providing for the endowment and support of agricultural colleges.

Authorizing and requiring counties and municipalities to compromise and refund their matured and maturing indebtedness.

Revising and moderating the laws for the punishment of murder and theft in their various forms.

Authorizing counties to issue bonds for the purpose of building court houses, jails, and bridges to an amount not exceeding, with all other bonded indebtedness, 4 per cent. of the assessed valuation.

Providing for the incorporation of the proprietors of community land grants.

Creating the county of Guadalupe out of a portion of the county of San Miguel.

The Legislature failed to pass a bill reapportioning, according to the census of 1890, the members of each House among the several counties. This duty, thereupon, fell by law upon the Governor, who published his order of reapportionment a few weeks after the adjournment.

Education.—The following statistics present approximately the condition of the public schools at the beginning of the year: Number of public schools, 533; number taught in English, 169; number taught in Spanish, 135; number taught in both languages, 228; number of school-houses, 132; male teachers, 373; female teachers, 179; pupils enrolled, 24,767; average daily attendance, 17,218; raised by taxation for schools, \$130,563. The most immediate results of the new school law of this year are seen in the larger towns. In East Las Vegas a beautiful stone school-house has been erected, and five other districts in San Miguel County have voted bonds

for a similar purpose. In Albuquerque the schools have opened with 12 teachers, under a city superintendent.

The Agricultural College is in full operation at Mesilla Park, having 125 pupils at the close of the year. The Territorial University building has been completed during the year, and will be used for the normal school at an early date. The laboratory building for the School of Mines is in process of erection. A school for the deaf and dumb has been conducted at Santa Fé during the year, having about 15 pupils.

Charities.—The Legislature of this year tardily acknowledged the claims of the pauper insane by passing an act appropriating \$25,000 for an asylum. At the close of the year the construction of the building had so far advanced that its completion in May, 1892, was assured. The Territory supports, by an annual appropriation of \$5,000, an orphan's home and industrial school at Santa Fé.

Penitentiary.—At the close of the year there were 113 convicts in the Territorial Penitentiary, of whom 5 were women. The greater number of convicts have been employed in brick-making.

Militia.—The Territorial militia consists of 1 regiment of cavalry of 6 companies, containing 280 men, and 1 regiment of infantry of 6 companies, containing 298 men.

Lumber.—The lumber industry of central and northern New Mexico is increasing. This region contains extensive forests of fine yellow pine. On the Tierra Amarilla grant 5 mills are running, turning out 1,000,000 feet a month; on the Petaca grant 2 mills are in operation, turning out about 400,000 feet a month; on the Pecos river the Cooper mill turns out about 100,000 feet a month. Other mills in the Santa Fé range, in the Sandia mountains, and in the Zuni mountains produce about 1,000,000 feet a month. The mills on the Maxwell grant turn out over 1,000,000 feet a month.

Irrigation.—In New Mexico crops were raised by irrigation in the census year ending June 30, 1890, on 91,745 acres, or 143.35 square miles—a little more than one tenth of 1 per cent. of the entire area of the Territory. The aggregate number of farms was 4,174 (not including those of the Pueblo Indians), and of these 3,085, or nearly three fourths, depended upon irrigation. The average size of irrigated farms, or rather of irrigated portions of farms, was 30 acres.

Stock-raising.—The number of cattle returned for taxation in 1890 was 1,129,088. Owing to considerable losses in some localities during the winter, it is probable that the number has not increased in the mean time. Their assessed valuation in 1890 was \$9,336,038.50. The number of sheep in 1890 was 1,172,249, valued at \$1,262,603; the number of horses, 52,465, valued at \$1,201,105; the number of mules, 2,713, valued at \$112,734; swine, 5,319, valued at \$15,399; goats, 55,775, valued at \$61,127; and burros, 3,091, valued at \$16,197.50.

Mining.—The mining industry throughout the Territory has increased in amount and profit during the past year. The beneficial effects of the tariff on lead are seen in all the camps where an argentiferous galena is the staple ore. Relieved of competition with the ill-paid labor of Mexico, every such mine is running to its full

capacity, and the smelters are not able to receive all the ore that is produced. This will probably result in the establishment of a large smelting plant at Cerrillos. From the borders of Colorado to the Mexican line general prosperity prevails in mining matters. The total mineral product for 1890 was almost exactly \$3,000,000.

Election Dispute.—The beginning of the year found two of the outgoing county commissioners of Santa Fé County, John H. Sloan and Teodoro Martinez, and the clerk of the board, Pedro Delgado, lying in the county jail for contempt of the orders of Justice Seeds of the Territorial District Court. The offense of the commissioners consisted in disobeying the injunction of the court by issuing certificates of election to the Democratic candidates for certain local and Territorial offices voted for at the election of November, 1890, and in refusing to canvass the vote of all the precincts of said county at the election, as the court had ordered. (For a statement of the events prior to Jan. 1, 1891, which ended in the imprisonment of these officials, see the "Annual Cyclopædia" for 1890, page 610.) The offense of Delgado arose from his refusal to recognize or record the doings of the Republican county commissioners, who had been recognized by Justice Seeds as the legal board. On Jan. 12 the imprisoned commissioners caused a writ of *habeas corpus* to be sued out of the Territorial Supreme Court, for the purpose of bringing the question of the legality of their imprisonment before that court. A hearing was had, and early in February that court (Chief-Justice O'Brien dissenting) decided that the district court had full jurisdiction to issue the orders that it had made respecting the duties of the commissioners, and that the petitioners were in contempt for disobedience thereof, and remanded them to jail until they should pay the fine of \$200 each and costs, imposed by the district court. From this decision an appeal was allowed to the United States Supreme Court, pending which the court released the prisoners on bail.

Meanwhile clerk Delgado in January had sued out a similar writ of *habeas corpus*, bringing his case also before the Territorial Supreme Court. A decision was rendered in this case in February, in which the court (Justice O'Brien again dissenting) found no excuse for the disobedience of the orders of Justice Seeds. An appeal to the United States Supreme Court was allowed, but in this case the court refused to release the prisoner on bail. The United States Supreme Court reached a decision late in May, sustaining the decree of the Territorial court. Nothing then remained for Delgado but to stay in prison indefinitely, or obey the court by recognizing the Republican board of commissioners and carrying out their orders as their clerk. The latter course he finally decided to take early in June, after he had been incarcerated nearly five months. The commissioners were also obliged to submit and pay their fine, thus ending a most remarkable attempt to defy a legal tribunal.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 miles. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921

in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; and 5,997,853 in 1890. Capital, Albany.

Government.—The following were the State officers during the year: Governor, David B. Hill, Democrat; Lieutenant-Governor, Edward F. Jones; Secretary of State, Frank Rice; Comptroller, Edward Wemple; Treasurer, Elliot Danforth; Attorney-General, Charles F. Tabor; State Engineer and Surveyor, John Bogart; Superintendent of Public Instruction, Andrew S. Draper; Superintendent of Prisons, Austin Lathrop; Superintendent of Insurance Department, Robert A. Maxwell; Superintendent of Bank Department, Charles M. Preston; Superintendent of Public Works, Edward Hannan; Commissioner of Statistics of Labor, Charles F. Peck; Railroad Commissioners, William E. Rogers, J. V. Baker, Jr., and Michael Rickard; Chief Judge of the Court of Appeals, William C. Ruger; Associate Judges, Robert Earl, Francis M. Finch, Charles Andrews, Rufus W. Peckham, John C. Gray, and Denis O'Brien.

Finances.—The State Treasurer is Elliot Danforth, salary \$5,000; and the Comptroller Edward Wemple, salary \$6,000.

The State debt has been reduced during the year by the payment of \$100,000 Niagara reservation bonds and \$1,936,650 canal debt. On Sept. 30, 1891, its amount was \$2,927,654.87, classified as follows:

General fund (Indian annuities), \$122,694.87; canal debt, \$2,404,960; Niagara reservation bonds, \$400,000; total, \$2,927,654.87; aggregate sinking fund, \$1,913,030.99. Total debt unprovided for, but not yet due, \$1,014,623.88, which is made up as follows: Canal, \$491,929.01; Niagara reservation, \$400,000; general fund (Indian annuities), \$122,694.87.

Part of the canal debt matures on Oct. 1, 1892, and the remainder on Oct. 1, 1893. The balance of \$491,929.01, now unprovided for, will not have to be paid by tax, as there is expected to be a surplus in the canal fund revenue to meet it. If that prediction be well founded, the State has levied its last tax for the payment of the canal debt.

The Niagara Park debt matures at the rate of \$100,000 each year, but its bonds are held by the State, and can be paid at any time from the surplus now in the treasury if the Legislature so direct. They draw interest at the rate of $2\frac{1}{2}$ per cent. a year.

The principal of the general fund debt for Indian annuities, \$122,694.87, is an imaginary indebtedness and does not actually exist, the interest on about that sum being annually appropriated by the Legislature as annuities to the Indians.

From the foregoing, therefore, it appears that the State debt is practically wiped out.

The report of the State Comptroller shows for the fiscal year ending Sept. 30, 1891, the receipts were \$21,243,639.35, and expenditures were \$19,886,041.65. The common-school fund, in securities and money in the treasury, amounted to \$4,193,140.77, the United States deposit fund was \$4,017,220.71, the literature fund was \$284,201.30, and the college land scrip fund was \$474,409.12, the total for these four trust funds being \$8,968,971.90. The Comptroller says:

In my report last year it was estimated that the actual surplus on Sept. 30, 1891, would be \$1,989,976.95; the actual surplus is \$5,022,773.98, exceeding the estimate by the sum of \$3,032,797.03. This difference is made up by receipts from the United States for direct tax refunded to the State amounting to \$2,213,330.86, from corporation taxes, collateral inheritance taxes, from the United States for the Soldiers and Sailors' Home, and from lapsed appropriations. The sum of \$2,213,330.86 was received from the United States Government and paid into the State treasury on March 18, 1891, on account of the Federal direct tax of Aug. 5, 1861, collected by the State from its citizens and paid into the Federal Treasury, and refunded in pursuance of an act of Congress approved March 2, 1891.

The entire residue of Niagara Park debt bonds is held in trust, amounting to \$400,000, maturing at the rate of \$100,000 per year and interest from July 1, 1891, at 24 per cent. a year.

The unpaid canal debt stock amounts to \$2,404,960, maturing in 1893 at 6 per cent. interest a year, which can readily be called in and canceled upon fair terms. It will be reduced to the extent of \$495,360 by taxes levied and appropriated for the purpose in 1890 and 1891, but which had not been collected and paid into the treasury at the end of the last fiscal year.

The moneys and securities in the sinking fund, amounting to \$1,913,030.99, can be applied toward the payment of the debt and interest due.

For 1891 the State tax was \$5,196,666.40, the rate being 14 mill and the valuation of property \$3,779,393,746, which is the lowest tax rate since 1855. The direct school tax produced \$3,830,999.19; \$4,466,517.83 was spent from the treasury for educational purposes; and total expenditure, State and local, for the schools was \$17,968,929.99.

The State debt at the end of the fiscal year was \$2,927,654.87, and the surplus, including as assets claims not yet collected, was \$5,022,773.98.

The total expended on the new Capitol is \$19,096,934.35; collections from corporation taxes were \$1,350,338.53; collections from taxation of foreign banking capital, \$36,184.02.

Legislative Session.—The Legislature of 1891 began its session on Jan. 6 and continued until April 30, making the shortest session since 1874. Owing to a political discussion in the Senate over a resolution introduced by the Republicans and opposed by the Democrats, to allow the Senate Committee on Canals to investigate the canals, practically no business was done in the last two weeks of the session. The number of chapters of new laws is 389, which is smaller than the average for many years. The deadlock caused much bitter feeling between the Senate and the Assembly. A bill was passed by the Assembly taking away the confirming power of the Senate and placing all power of appointments in the hands of the Governor. The Senate refused to consider this bill.

The Legislature of 1890 resolved that the popular vote on the prohibition amendment should take place in the spring of 1891. The Senate passed a bill making an appropriation for the expenses of the election. But this was delayed in the Assembly by amending so that the election should not take place until November, 1891. Owing to the political deadlock this bill was not passed, and the election can not take place until 1892.

Bills failed providing for a State census which should have been taken in 1885, and for reapportioning the State into congressional districts. A law was enacted to take the place of a special charter for the Young Women's Christian As-

sociation of Brooklyn, allowing any twenty or more women who are citizens of the State to form themselves into an association for the improvement of women.

A new law provides that no life-insurance company doing business within this State shall make any discrimination between white persons and colored persons, wholly or partially of African descent, as to the premiums or rates for policies upon the lives of persons. Another law incorporates several Methodist churches in the Genesee Conference, with Rochester as a center, owning property to the value of \$400,000 in all, and such other religious societies and pastors as shall wish to be associated with them, to carry on co-operative insurance against loss or damage by fire or lightning. Real property owned by any incorporated association of present or former volunteer firemen, actually and exclusively used and occupied by such corporation, and not exceeding \$15,000 in assessed value, is exempted from taxation. It is provided that the personal property, franchises, and business of all fire and marine companies incorporated in this State, or any other State or country, shall hereafter be exempt from taxation and assessment for State purposes; but they shall in all other respects be liable to assessment and taxation.

The new commission in lunacy having reported good progress in the work of transferring the insane poor from county institutions to the State hospitals, an appropriation of \$454,000 was passed for additions to present State hospitals for the accommodation of the increased number of patients. A special commission was appointed to decide upon the plans, and work is to begin at once upon the hospital buildings in Utica, Poughkeepsie, Middletown, and Binghamton, with additions later in Buffalo and Rochester. The State bought for \$100,000 the Monroe County asylum at Rochester. Every county in the State, with the exception of New York and Kings specially exempted, now comes under the State-care act. The Assembly Committee on Public Lands and Forestry was ordered to investigate the Forestry Commissioners. This was done, and the commissioners were found to have been negligent in their duties, ordered by the last Legislature, in appraising and buying lands for an Adirondack park. The minority report went no further than this, but the majority report found the commission guilty of criminal negligence, and introduced a bill legislating it out of office. The Assembly refused to adopt the majority report, but it did adopt the minority report, thus practically killing the bill removing the commission from office. The excitement attending the investigation made it impossible to pass any of the bills relating to the Adirondacks.

In the supply bill \$2,400 was appropriated as the contribution of the State of New York to the erection of the bronze tablet on the battle field of Gettysburg, at the spot known as the "high-water mark of the rebellion"; also \$10,000 for the bronze statue to be placed on the State monument on the same field, the terms of office of the commissioners being extended until May 30, 1892, in order that they may complete this work.

An important law provides that in the future only such canal bridges shall be built as shall be

absolutely necessary, that they shall be of the plainest construction, and that any increased expense for better bridges shall be borne by the respective localities benefited.

A charter was granted to the Whirlpool Bridge Company to construct a bridge north of the whirlpool in Niagara river, with a capital of \$500,000.

The law of 1890 relating to the repair and improvement of highways was repealed. The oleomargarine act was amended so as to make it a misdemeanor for persons to furnish their servants with oleomargarine or skim milk for eating or cooking. The State will pay 30 cents a day per head for tramps sentenced to county penitentiaries.

The electoral reform law of 1890 was amended so that the certificates of municipal nominations are to be filed with the city clerks, not the county clerks; that the number of signers for independent nominations is increased from 1,000 to 3,000 for State officers, 100 to 250 in the Assembly districts, and from 250 to 500 in the county or Senate districts; that the blank ballot is abolished; that the party names are printed on the ballot; that the number of ballots for each 50 voters is reduced from 200 to 100; that election districts shall contain not over 400 instead of 300 voters, and shall be divided before Aug. 1; that the ballot clerks shall not write initials on ballots; that voters need not stay three minutes in the booths; that when ballots seem to have been marked for identification they shall be preserved, so that their validity may be examined; and that no mark shall be put on pasted ballots. The registry laws were amended so as to reduce the number of inspectors in the rural districts from five to three, and the number of registry days outside of cities from three to two. A concurrent resolution was passed, which must pass another Legislature, transferring to the courts contested elections for the Legislature. A concurrent resolution was passed providing for additional judges to the Court of Appeals.

An appropriation of \$10,000 was made for university extension under the care of the regents.

New charters, making radical changes, were granted to Buffalo and Albany. The charters of Syracuse, Kingston, and Rochester were amended. Utica was allowed to extend its boundaries northerly. Albany was authorized to issue \$253,000 in bonds for the erection of public buildings.

Miscellaneous laws were passed as follow: Exempting household groceries from levy under executions; repealing the law of 1890 requiring statements to be filed at periods of twenty years showing the amounts due on real estate, bonds, and mortgages; providing that where a trust is or shall be expressed in the instrument creating the estate, every sale or other act of the trustees in the contravention of the trust shall be void; regulating the keeping of intelligence offices, employment bureaus, etc., in Brooklyn; providing that intelligence offices in New York must return fees to applicants for positions where the latter have not obtained positions, and to employers where servants have not remained more than a month.

Education.—This branch of the State government is under the charge of a State superintendent, whose salary is \$5,000. The present incumbent is Andrew S. Draper. In his annual report he shows that the number of children in the State of school age (i. e., between five and twenty-one years) in 1891 was 1,821,773. The number of children attending the common schools in the same year was 1,054,044. More than 767,000 children of school age were either not in school at all, or received instruction elsewhere than at the public schools. The cost of supplying this education to somewhat more than half the children of school age in the State was \$20,269,118.29, an average cost of \$19.22.

Tabulated statements are submitted showing that since 1861 there has been a steady increase in the number of children of school age in the cities, and a gradual decrease in the towns. The same condition applies to the number of children in actual attendance at the public schools. In 1861 there were 270,926 children attending the city schools, and in 1891 513,066. In the towns the figures were: 1861, 601,928; 1891, 540,978. A comparison of the tables for the years 1890 and 1891 shows that, although the reported number of children of school age in 1891 was 22,823 less than in 1890, yet the number of children in attendance on the public schools was greater by 11,884. With reference to the increase in the minimum length of the school year from twenty-eight to thirty-two weeks in the rural districts, he says that it is entirely practicable to maintain schools in the rural districts for thirty-eight or forty weeks in the year. The number of teachers employed in the public schools in 1891 was 31,933, of which 10,482 taught in cities and 21,500 in the towns. There were 5,359 male teachers and 26,623 females. The aggregate amount paid in wages to these teachers was \$11,012,986. There were 12,072 public school-houses in the State last year. Of those, 45 were log houses, 10,126 frame, 1,573 brick, and 328 stone. The cities had 595 school-houses, and the towns 11,477. The average value of the school-houses is \$51,246 in the cities, \$1,700 in the towns, and \$4,142 in the State at large. The cost of maintaining the public schools in 1891 was \$17,174,835. Between 1887 and 1890 special efforts were made to improve the school property of the State. The importance of the subject was frequently presented at educational conventions, teachers' institutes, and school meetings; designs for school-houses were published by the department; prizes were offered for the best-kept school grounds in the common-school districts, and legislation was secured which required the most essential improvements. The result of the agitation was that \$3,634,917.07 were expended in improvement of school property in 1890, against \$1,405,773.51 in 1886.

The cost *per capita* of total population in this State (census 1890) for the maintenance of public educational interests last year was \$2.90.

His report says that the observance of Arbor Day has called attention to the fact that many school grounds are too small to admit of ornamentation, and are, indeed, totally inadequate to the necessities of the schools. He thinks that every school site should contain at least half

an acre of land, and he renews his recommendation that provision be made for carrying out that idea, making it applicable at first to all school sites outside of cities and incorporated villages.

With reference to the public schools maintained on the six Indian reservations, he says that the educational facilities offered by the State for the Indian youth are inadequate. The tribal influences are against the day school. The Indian boys and girls need to be taken into an institution where all their habits can be regulated, and where they can be educated industrially. He therefore recommends that the Legislature take steps to induce the General Government to provide for the reception of our Indian children at the Indian school at Carlisle, Pa., and if such efforts do not avail, that the State appropriate \$150 per year necessary to maintain each pupil there.

He concludes his report with a reference to the steady decrease in the percentage of attendance at the public schools. He says: "The reports show that in 1851 the 'total attendance,' comprised 75.6 per cent. of the school population. This percentage has constantly fallen off with surprising regularity during the intervening forty years. In 1861 it was 65.6 per cent.; in 1871 it was 68.4 per cent.; in 1881 it was 61.4 per cent.; and in 1891 it was 57.8 per cent. This is a showing which must engage the attention of all thoughtful persons."

A State Flower.—In order to obtain an approximate decision as to the opinion of the children concerning their favorite flower, a vote was taken throughout the State on Arbor Day in 1890, when, out of a total vote of 318,079, the golden rod received 81,308 votes to 79,666 cast for the rose. But as the total vote for these two flowers did not equal half of the entire vote cast, the superintendent of public instruction decided on a second ballot, to be taken this year on the two favorites of 1890. Accordingly, on Arbor Day, May 8, 1891, a vote was taken, which resulted as follows:

PLACE OF VOTING.	Rose.	Golden rod.
In the 113 school-commissioner districts.	142,086	53,340
In the 32 cities	151,012	150,568
In the 7 normal schools	1,800	1,571
In the 2 Indian reservations	74	57
Miscellaneous	894	866
Total	294,816	206,402

The majority of the rose over the golden rod is therefore 88,414, thus establishing the rose as the State flower.

Charities.—The annual report of the State Board of Charities shows that the receipts were \$18,868,454; the expenditures, \$17,605,660; the number of public beneficiaries in the various classes of institutions on Oct. 1, 1891, was 74,773, an increase of 3,878 during the year. The principal ones were: Dependent children, 23,732; insane, 16,647; poor-house inmates, 10,637; aged and friendless, 7,464; hospital patients, 5,048.

Insurance.—This department is under the direction of a superintendent, who receives a salary of \$7,000, and a deputy, who receives a salary of \$4,500. The present superintendent is James F. Peirce; deputy, Michael Shannon. The annual

report for 1890 was issued in April, and the following is an abstract of the statements rendered by the life, fidelity and casualty, and co-operative companies.

Lunacy.—The commission appointed to the charge of this subject consists of three members, as follows: Charles F. McDonald, Goodwin Brown, and Henry A. Reeves. Their annual report for the year ending Oct. 1, 1891, shows that 827 insane patients were transferred from county houses to State hospitals, of whom 392 were men and 435 were women. There are 1,215 patients still remaining in county houses, of whom 547 are men and 668 women. The commission expects,

shortly, that the 1,215 patients will be under State-care, as the construction of nearly all of the State-care buildings is well under way and will be completed by Oct. 1, 1892. Some 998 patients have been taken from county houses under State care since the State-care act went into effect in May, 1890, which provides that when the final transfer is made the care of the insane shall be a State charge, and an annual appropriation, estimated by the commission in lunacy at not to exceed \$1,300,000 for the present number of patients, will be necessary to comply with the provisions of this act.

New York and Kings Counties are not subject to the provisions of the State-care act. Under county care in New York on Oct. 1, were 5,390 patients, of whom 2,459 were men and 2,931 were women. The total shows an increase of 343 patients last year over that of the preceding year. In Kings there were 1,997 patients under county care on Oct. 1, of whom 828 were men and 1,169 women. The number of insane under county care in Kings last year shows an increase of 112 over that of last year.

The investments in hospitals amount to \$9,590,488.97. There are 9 separate institutions belonging to the State. In addition, New York County has 4 asylums for the insane, Kings County has 2, and there are 17 licensed private asylums.

The whole number of insane in custody on Oct. 1, 1891, was 16,623, as follows: State hospitals, 7,200; licensed private asylums, 847; asylums of New York and Kings Counties, 7,363; county poor-houses awaiting removal, 1,213.

This is an increase of 613 in the number of insane over the previous year, although a decrease in the ratio to population.

Banking Department.—This department is under the management of a superintendent, who receives a salary of \$5,000 a year. The present incumbent is Charles M. Preston, whose report for the fiscal year ending Sept. 30, 1891, relative to incorporated banks, individual bankers, safe-deposit companies, and trust companies, shows that 20 banks have been organized, with a capitalization of \$2,370,000. The increase of total resources of State banks on Sept. 12, 1891, over the same date in 1890 was \$4,875,738. It appears from the receiver's report of the North River Bank of New York city that he has already paid 50 per cent., and it is probable he will pay additional dividends. The increase in banking capital for the year by the formation of new banks was \$2,370,000, and the total increase in the capital of the ten associations previously organized was \$1,095,000. There has been a decrease in the banking capital of 7 banks during the same period of \$1,294,125. The outstanding circulation of banks incorporated under State laws is \$83,434. No individual banking associations were organized during the year, and but 3 are now doing business in this State. There were organized 9 national banks in the year, with a capitalization of \$1,700,000, against 20 new banks organized under the State banking act, with a capitalization of \$2,370,000. At the close of the fiscal year there were 33 trust companies in active operation in the State, 20 of them being in New York city and 7 in Brooklyn. Three new trust companies were organized.

The increase of capital of trust companies was \$563,000.

At the close of the year 19 safe-deposit companies, with a total capital of \$3,296,000, were in operation—an increase of 2—12 of which are in New York city and 3 in Brooklyn.

The securities deposited with the superintendent by the different banks and trust companies amounted, on Oct. 1, 1891, to \$2,972,878.98, an increase of \$414,360. The total expenses of the department were \$47,108. His report concludes:

I have carefully examined the revision of the banking laws prepared by the revision commission, and am of the opinion that its enactment into law would materially increase the surety, efficiency, and importance of institutions organized under the State banking laws, and the State banking system would be greatly improved thereby. The increase in the number of financial institutions throughout the State seems to be accompanied by a corresponding increase in the variety of methods in keeping accounts, and while it is not the purpose to interfere with the general book-keeping of any corporation, I am convinced that the interest of the public would be better served and the efficiency of the department materially improved if a uniform method for the original entry of deposits in every bank and trust company were made compulsory.

Most of our institutions keep separate books for the entry of deposits only, so that on examination of such deposits for any period it can be easily ascertained if the proper amounts have been carried to the general ledger; but in some instances separate deposit books are entirely ignored, the receipts from all sources appearing mixed together in the same book, and in a few cases there is no book whatever between the deposit slips and the ledgers, and in order to prove the deposits with the general ledger for any period, examiners are obliged to depend entirely on the deposit slips, unless they examine each account in the individual ledgers. I would therefore recommend the enactment of a law making it the duty of the superintendent to prescribe a uniform method of original entry, and enabling him to enforce the observance of the same.

Railroads.—There are three railroad commissioners, whose salaries are \$8,000 each. The present incumbents are Michael Rickard, William E. Rogers, and J. V. Baker, Jr. The report of the railroad commissioners for the year ending June 30, 1891, says that the business on the railroads was largely increased; the same can be said of operating expenses. During the year the board considered and disposed of 16 references by the Governor, the Legislature and committees thereof, and numerous complaints preferred by cities, towns, associations, and individuals.

The record of accidents for the year ending Sept. 30, 1891, shows a deplorable increase as compared with previous years—720 persons were killed and 1,728 injured, as compared with 695 killed and 1,434 injured the previous year. Of these, 143 were from causes beyond their control, 1,123 by their own misconduct or incaution, 46 by intoxication, and 123 indeterminable.

The report says: Much advance has been made within the past few years in the method of lighting cars by using the Pintsch system. This method of lighting is by gas manufactured from crude petroleum stored in strong iron tanks under the cars. The physical condition of railroads continues to improve. The number of railroad truss bridges in the State is about 2,500, not including the New York elevated roads, the strains

upon which have also been calculated. Some 669 truss bridges have been criticised by the board, of which 535 have been repaired by the various companies and 134 entirely rebuilt.

Prisons.—These are under the direction of a Superintendent whose salary is \$6,000. The present incumbent is Austin Lathrop.

The highest number of convicts in the State prisons during the fiscal year was 3,913, an increase of 208. The 3 prisons have 3,737 cells, and it has been necessary in many instances to place 2 convicts in one cell.

The number of industries in operation in the 3 prisons during the year was 22, and the number of men employed 2,158.

The financial results in the prisons for the fiscal year show a deficiency of \$201,645.23, an increase of \$42,629.59. This increase is explained by the losses by fire at Auburn and Clinton prisons of \$37,697.60; the increased cost of maintenance, \$30,107.33; and the falling off of \$80,012.19 in manufacturing earnings at Sing Sing, owing to the reduction in the appraised value of the assets of the industries made when a change of wardens took place in April, 1891. The total earnings were \$19,461.52 greater than those of the previous year.

The earnings and expenditures for care and maintenance were divided among the 3 prisons as follow:

SING SING.	
Expenditures for care and maintenance.....	\$189,229 81
Miscellaneous earnings.....	\$8,806 83
Manufacturing earnings.....	64,316 40
	<hr/> 72,623 23
Deficiency.....	\$116,606 08
AUBURN.	
Expenditures for care and maintenance.....	\$189,116 83
Miscellaneous earnings.....	\$5,128 28
Manufacturing earnings.....	\$114,945 68
Less loss by fire.....	23,795 12
	<hr/> 91,150 51
	<hr/> 96,278 79
Deficiency.....	\$42,837 59
CLINTON.	
Expenditures for care and maintenance.....	\$180,815 29
Add loss by fire.....	5,718 82
	<hr/> \$186,029 11
Miscellaneous earnings.....	\$5,951 39
Manufacturing earnings.....	\$96,064 77
Less loss by fire.....	8,188 66
	<hr/> 87,876 11
	<hr/> 93,827 50
Deficiency.....	\$42,201 61
Total deficiency in the three State prisons..	\$201,645 23

During the year, in certain articles published in the public prints of the State, charges were made of the cruel and inhuman treatment of the prisoners confined in the State prison at Dannemora, and of improper conduct on the part of the prison official in the administration of the affairs of such prison and of its discipline; in consequence of which the Superintendent of State Prisons appointed a committee consisting of Oscar F. Craig, chairman of the State Board of Charities; W. M. F. Round, secretary of the Prison Association of the State of New York; and Lewis Balch, secretary of the State Board of Health, to investigate the matter. After careful examination a negative report was returned.

Factory Inspection (James Connolly, State Factory Inspector).—The sixth annual report of this department shows that in 10,112 factories visited during the year there were employed 422,070 persons, of whom 17,495 were children between fourteen and sixteen years of age. There were 106 children under sixteen reported as having been injured more or less seriously in factories during the year, and 23 children were fatally injured. The employment of young girls in the tobacco industry is condemned because of the injury to their health, and it is urged that they be prohibited from working at this trade.

The inspectors served notices of suit for violation of the weekly payment law upon the Chateaugay Ore and Iron Company, of Plattsburg; the Crown Point Iron Company, of Crown Point; the Shanley & Alfred Lumber Company, of Shanley; and the St. Regis Leather Company, of St. Regis Falls; and it is expected that suits will be brought promptly to trial.

The report shows that New York State has the best law so far as it applies to the employment of children in factories, but it is defective in not prohibiting children under fourteen from being employed in mercantile houses. Statistics are given showing that the employment of children is being rapidly diminished. In 1887 there was an average of 82 children between the ages of fourteen and sixteen years in every 1,000 persons employed in the factories which were inspected; in 1888 this was reduced to 66 in each 1,000; in 1889 there were 53; in 1890, 43; in 1891, 41. The report further says that the revision commission has been at work upon a codification of the factory acts.

State Forests.—The annual report of the State Forestry Commission shows that the practice of girdling and peeling the trees to obtain spruce bark for temporary shanties has almost entirely ceased. The reports of the trespasses committed during 1890 shows that over \$2,000 was collected by the commission in the settlement of actions for trespass. There has been a considerable decrease of the acreage of the forest preserve in the Adirondacks through the cancellation and redemption of the State's title through the State Comptroller's office, this decrease during 1888-'90 amounting to 30,000 acres.

The financial statement of the commission shows an unexpended balance of \$6,000 at the close of the fiscal year. The commission, having finished the work of examining lands for the proposed State park, were able to put their foresters at work upon the examination of lands offered for sale under the law of last year authorizing the purchase of lands suitable for a State park. This act appropriated \$25,000.

Over 2,000 acres in Essex and Warren Counties have already been selected, and which will be acquired upon being accepted by the commissioners of the land office. After the law first went into effect the lands offered the commission were either held at a higher price than that allowed by the law, or else were outside of the proposed lines for a State park. The report states that the lack of foresters to make examinations was an additional reason for not carrying out earlier the provisions of last year's law.

Arbitration and Mediation.—This board consists of three members, as follows: William

Purcell, Gilbert Robertson, Jr., and Florence F. Donovan. In their annual report for the year ending Nov. 1, 1890, they say that in the cigar-making industry upward of 100 strikes occurred, most of which were confined to the metropolitan district, and in every case the question of wages was the principal subject of dispute. Toward the end of June, 1890, the cigar-makers of Binghamton demanded an advance in the prices paid for rolling and bunch-making, and upon this demand being refused a strike ensued in 15 of the largest factories in that city.

On May 31, 1890, the workmen of the P. Cox Shoe Company, of Rochester, went on strike, after presenting certain demands in writing, to which the company made written reply, offering to adjust all differences except that in reference to the method of using certain machinery. In November the proprietors of 19 of the principal shoe factories of Rochester entered into an agreement to dismiss from their employ all members of the Boot and Shoe Workers' International Union until the strike against the P. Cox Shoe Company should be abandoned and the right should be conceded to all employers to operate machinery in such manner as they might elect. On Dec. 1 this lockout commenced, and in the following week the board made formal inquiry into the causes of the controversy. This investigation and subsequent attempts to settle the dispute developed the fact that the parties to the controversy could easily have adjusted the differences which led to the strike, and the only obstacle to a settlement was the question of the disposition to be made of the former workmen of the P. Cox Shoe Company and those who took their places.

The most important strike of the year was that upon the New York Central and Hudson River Railroad, investigation of which was made and special report sent to the Legislature soon after the commencement of the session.

Political.—The Republican State Convention met in Rochester on Sept. 9. The platform approved the legislation of the Fifty-first Congress, the administration of President Harrison, and the policy of the Secretary of the Navy. The McKinley tariff, including reciprocity, was mentioned at length with approval. It was resolved that "every dollar issued by the Government, whether paper or coin, should be as good as every other dollar." The Union veterans of the civil war were thanked; the speedy construction of the Nicaragua Canal was commended; the vigorous enforcement of the United States alien contract law was urged; the amendment of the ballot law by substituting the blanket ballot was approved; and the financial policy of the Republicans in the previous Legislature was declared sound. The following nominations were made: For Governor, J. Sloat Fassett; Lieutenant-Governor, John W. Vrooman; Secretary of State, Eugene F. O'Connor; Comptroller, Arthur C. Wade; Treasurer, Ira M. Hedges; Attorney-General, William A. Sutherland; Engineer and Surveyor, Verplanck Colvin.

The Democratic State Convention met in Saratoga on Sept. 16. The platform pledged fidelity to the national Democratic platforms of 1884 and 1888. It declared "against the coining of a silver dollar which is not of the intrinsic value

of any other dollar of the United States." The Sherman silver law was denounced. The McKinley tariff was termed a "humbug." Credit was claimed for reducing State taxation to a lower rate than it had reached in many years. It was declared that a State census should be taken; that a congressional apportionment should be made; and that a constitutional convention should be held. The Republican party was blamed for not passing these three measures. An extension of electoral reform was demanded, and a revision of the tax laws, so that personal property could be reached. The following were the nominations: For Governor, Roswell P. Flower; Lieutenant-Governor, William F. Sheehan; Secretary of State, Frank Rice; Comptroller, Frank Campbell; Attorney-General, Simon W. Rosendale; Treasurer, Elliot Danforth; State Engineer, Martin Schenck.

The Prohibitionists met in Albany, also in September, and nominated a full State ticket. John W. Bruce was the candidate for Governor.

The Socialist party nominated Daniel de Leon for the same office.

The election for Governor resulted: Flower (Democrat), 582,893; Fassett (Republican), 534,956; Bruce (Prohibitionist), 30,353; De Leon (Socialist), 14,651. Flower's majority over Fassett, 47,937. For Lieutenant-Governor, Sheehan (Democrat) had 34,419 over Vrooman (Republican). The five Democratic candidates for State offices had majorities averaging 43,000. The election of 1890 gave the Democrats a majority of 8 out of a total of 128 in the Assembly. In the Senate, which held over from the year before, the Republicans had a majority of six. The net Democratic majority of two on joint ballot was used by them in January, 1891, in electing David B. Hill as United States Senator to succeed William M. Evarts.

After the election of November, 1891, it was apparent that both Houses of the Legislature were very close. The official count for the Assembly gave the Democrats 67 and the Republicans 61. The Democrats, therefore, had one less in the Legislature of 1892 than they had in the Legislature of 1891, and the Republicans one more. In the Senate the results of the election of 1891 could not be determined without the aid of the courts. The outgoing Senate had 19 Republicans and 13 Democrats; the incoming Senate had 28 members whose election was certain. Four of the districts, with their chief centers of population at Troy, Syracuse, Hornellsville, and Poughkeepsie, respectively, were in doubt. On the face of the returns the Republicans had the advantage; but the returns were disputed by the Democrats. In the Troy district the claim was made that certain minor features of the ballot-reform law had not been complied with. In the Syracuse district the claim was made that in nine election districts ballots were voted which had the indorsement of other districts than those to which they belonged, and that 1,218 votes cast for the Republican candidate should be thrown out. In the Hornellsville district it was claimed that the Republican candidate was ineligible under the State Constitution, because he held an office in the city of Hornellsville, and that his majority of 1,762 votes in the district was void. The situation in the Pough-

keepsie district was more complicated. On the face of the returns the Republican candidate, who died before the matter was settled, had a small majority. But it was claimed by the Democrats that 32 ballots cast for him in one of the towns of Dutchess County came within the meaning of the law relating to marked ballots, because a printer's "quad" appeared upon them. The Democrats asserted that the quad-marked ballots were voted by design; and the Republicans that it was only an accident. The county board of canvassers threw out the ballots and elected the Democratic candidate. The Republican clerk of the county refused to certify the returns, and they were certified by a temporary clerk, named Mylod, elected by the board. The certificate thus signed was sent to the Secretary of State; and the county clerk was promptly removed by Gov. Hill. In the mean time there had been so many orders and counter-orders by Supreme Court justices, both in General Term and in Special Sessions, that the whole situation in regard to the four seats had become hopelessly tangled. Both sides, therefore, agreed to refer the four cases to the highest court in the State, the Court of Appeals, and to abide by the result. While the court was still considering the cases, one of the justices of the Supreme Court ordered that the quad-marked ballots in the Poughkeepsie district should be counted for the Republican, and a certificate to that effect be forwarded to the Secretary of State. The county clerk obeyed the instructions of the court; but after mailing the certificate he received an order from another justice countermanding the order of the first justice. He then followed the returns to Albany and took them out of the mail before they had reached the proper officials. This left the State board of canvassers with but one return before them—that certified to by the Dutchess County board (called the Mylod certificate), and electing the Democratic Senator from the Poughkeepsie district. On Dec. 29 the Court of Appeals decided that the Democrat had no case in the Troy district, and that the Republican should be seated. In the Syracuse district the decision was that the ballots with the wrong indorsements should be thrown out, thus electing the Democrat. This made the Senate stand 15 Republicans and 15 Democrats. In the Hornellsville district the court decided that the Republican candidate was ineligible, but it did not decide that the Democrat had been elected. The inference drawn by some was that a new election should be held; and yet the wording of the opinion by the court was so ambiguous as to leave a doubt in the mind of every one. In the case of the Poughkeepsie district the court declared that the form of the certificate signed by the temporary clerk of the Dutchess County board, and electing the Democrat, was legal; but the opinion was also worded so doubtfully as to make the Republicans think that, while the form of the certificate might be legal, yet the matter contained in it was not legal, and that the quad-marked ballots should not have been thrown out. On the other hand, the Democrats claimed that, as the State board had but one certificate before it, there could be no way but to count that certificate. The State board of

canvassers, composed of five Democrats, therefore met at once and canvassed the returns, counting this certificate from Dutchess County. The result was that when the Senate met, on Jan. 6, there were 16 Democrats and 15 Republicans, with the Hornellsville district vacant. The Democrats asserted their right, given by the Constitution, that the Senate should be the judge of the qualifications of its own members; and by a vote of 16, against the 15 Republicans, declared the Democrat from the Hornellsville district entitled to his seat. This gave the Democrats 17 votes in the Senate of 1892-'93, and the Republicans 15.

NEW YORK CITY. Government.—The city officials who held office during the year were: Mayor, Hugh J. Grant; President of the Board of Aldermen, John H. V. Arnold; Register, Frank T. Fitzgerald; Sheriff, John J. Gorman, all of whom are Tammany Democrats and entered on the duties of their special offices on Jan. 1, 1891.

Finances.—The condition of the city debt on Jan. 1, 1892, was as follows:

of January and continue each month thereafter, while the moneys to meet such obligations are not collectable until autumn, and the result is that the city is compelled to provide itself with funds for the maintenance of the city government and for the payment of its annual charges by borrowing large sums of money, which approached \$20,000,000 last year, on revenue bonds, which are redeemed when the taxes are collected.

The appropriation for current expenses for 1891 was \$35,992,891.22. Of this, \$33,764,304 was raised by taxation. The tax rate for the year was 1.90 per cent. This is a lower rate than the citizens have had before since 1860.

As the tax books were not opened for the collection of taxes for the year 1891 until Oct. 5, the current expenses of this city were necessarily paid from the proceeds of revenue bonds issued in anticipation of taxes. The amount of such bonds issued in 1891 was \$19,680,150, at a cost for interest of \$240,819.42. The condition of the money market has been such that the aver-

FUNDED DEBT.		Outstanding Dec. 31, 1890.	Issued during 1890.	Redeemed during 1890.	Outstanding Dec. 31, 1891.

Net funded debt, Dec. 31, 1891..... \$97,515,488 90
 Revenue bonds issued in anticipation of taxes of 1891..... (1891) 7,600 00
 (1892) 27,000 00

Debt, including revenue bonds..... \$97,550,083 90

Notwithstanding the fact that bonds to the extent of \$7,582,346.85 have been issued for permanent improvements during the year, the net debt of the city shows a decrease at the close of the year 1891 of \$514,379.30. The taxes payable in this city in the autumn of each year are for meeting the expenses of the city government for the year in which they are imposed. The obligations which the city is required to meet for its general expenditures begin with the month

age rate of interest paid on these bonds during the past year has been nearly $\frac{1}{2}$ per cent. higher than during the year 1890.

There is a rebate at the rate of 6 per cent. a year allowed on all taxes paid prior to Dec. 1. This rebate for the year 1891 was \$173,679.91.

The Receiver of Taxes collected \$30,698,245.88 and the Clerk of Arrears \$2,015,460.26; total, \$32,713,706.14. The discount on taxes paid prior to Nov. 1 was \$173,679.91, and the interest collected on delinquent taxes \$356,286.16.

Board of Estimate and Apportionment.—This body, consisting of the Mayor, the Comptroller, the President of the Board of Aldermen, and the President of the Department of Taxes and Assessments, allowed the following amounts for 1892:

Mayoralty, \$28,000; Common Council, \$76,800; Finance Department, \$300,200; State taxes, \$2,398,504.91; interest on city debt, \$5,151,770.94; redemption of principal of city debt,

\$1,190,428.36; rents, \$126,625; armories and drill rooms—rents, \$39,050; armories and drill rooms—wages, \$49,776; judgments, \$750,000; Law Department, \$213,500; Department of Public Works, \$3,148,770; Department of Public Parks, \$1,003,150; Department of Street Improvements, Twenty-third and Twenty-fourth Wards, \$310,200; Department of Public Charities and Correction, \$2,170,125; Health Department, \$435,138; Police Department, \$5,045,468.31; Department of Street Cleaning, \$1,978,540; Fire Department, \$2,301,282; Department of Taxes and Assessments, \$120,520; Board of Education, \$4,448,355.64; College of the City of New York, \$148,000; Normal College, \$125,000; printing, stationery, and blank books, \$256,200; Municipal Service examining boards, \$25,000; coroners, \$54,700; commissioners of accounts, \$32,500; sheriff, \$120,232; register, \$130,250; Bureau of Elections, \$411,300; preservation of public records, \$45,930; fund for street and park openings, \$306,915.20; jurors' fees, \$50,000; salaries—city courts, \$383,300; salaries—judiciary, \$1,098,810; miscellaneous, \$174,147.73; charitable institutions, \$1,232,716.10; total, \$35,881,205.19. Deduct general fund, \$3,000,000. Grand total, \$32,881,205.19.

This shows that the amount allowed for 1892 is \$35,881,205.19, which is reduced by deducting the general fund made up by receipts from various sources during the year, including the unexpended balances of previous years, amounting to \$3,000,000. The total amount to be raised by taxation is \$32,881,205.19, which, as compared with the allowance made for 1891, shows a nominal reduction of about \$300,000; but as a matter of fact, the actual expenses of the city government have been increased about \$1,000,000. Of this amount, the sum of \$400,000 must be allowed to the Department of Street Cleaning, and \$200,000 additional to the Board of Education.

Wealth of the City.—By law the first Monday in July is fixed for the Common Council to receive the tax rolls. It was found that the assessed value in 1891 of the city's real estate was \$1,464,247,820, an increase of \$65,957,813 over that of 1890. The total personal estate was estimated at \$321,609,518, an increase of \$22,921,135. The total of the real and personal estate of the city was found to be \$1,785,857,338, which shows an increase of \$88,878,948. In detail the rolls are as follow:

ASSESSED VALUE, 1890.

WARDS.	Real estate.	WARDS.	Real estate.
First.....	\$38,646,162	Fourteenth....	\$26,366,892

		Total personal estate	\$321,609,518

Department of Public Parks.—This bureau is under the direction of a board of four commissioners as follows: Albert Gallup, President, Waldo Hutchins, Nathan Straus, and Paul Dana. Headquarters of the board are at 51 Chambers Street.

During the year the department completed the improvement of Riverside Park from 72d to 79th Street, and partially widened and partially extended the bridle paths in Central Park. Work was also begun on the small parks on Park Avenue between 56th and 67th Streets, on the plaza at Fifth Avenue and 110th Street, and the park entrance at 106th Street and Eighth Avenue. Plans have also been prepared for the Macomb's Dam bridge. Two other events of the year were the Sunday opening of the Metropolitan Museum of Art, which proved a great success.

At the Metropolitan Museum 170,000 persons visited the collection from May till the close of the year, showing an average attendance of 6,000 each Sunday, while on week days the average was over 700 persons. On Oct. 1 the Washington Bridge passed into the control of the Park Board, which then appropriated \$6,000 to pay the salaries of those who have been holding over under the commission.

During the summer months free concerts were given in the parks in different portions of the city, there having been one every night in one park or another. A large number of settees have been added to Central Park and Riverside Drive, and the driveways and bridle paths in Central Park have been increased and improved.

An entrance to Central Park is being erected at 106th Street and Eighth Avenue. The department engineer has prepared plans for the bridge over the Harlem river, which is to replace McComb's Dam Bridge. The cost will be \$1,250,000.

At a meeting of the Park Board on Dec. 30 it was decided to grant the petition of the Naval Reserve and allow the battalion to use Castle Garden as an armory. This arrangement is not to be permanent, and it is expressly stipulated that it is to continue only until the permanent use of the building is decided upon.

Surrogate's Court (Rastus S. Ransom, Surrogate).—During the year the surrogate heard 2,873 motions and wrote 2,303 decisions. He listened to 220 will contests, admitted 1,446 wills to probate and rejected 11, and has but 13 contested will cases at present unfinished. In all, 1,600 wills were offered for probate during the year. Letters of administration to the number of 2,871 were granted, and 1,485 documents were filed. He signed 13,970 orders and decrees, and clerks in his office recorded 217,188 folios. He issued 570 orders on compulsory accountings. The sum of \$693,785 was certified to the Comptroller as being the amount of collateral inheritance tax upon estates as assessed and fixed.

Judiciary.—In the Supreme Court (Presiding Justice, Charles H. Van Brunt; Associate Justices, George P. Andrews, George C. Barrett, George L. Ingraham, Abraham R. Lawrence, Morgan J. O'Brien, and Edward Patterson) about 1,400 cases were tried by juries, and 1,202 at Special Term. There were 155 divorces granted. More cases are left on the calendar to

be disposed of this year than ever before in the history of this court. In the General Term of the Superior Court 207 cases were disposed of, and in the Special Term 297. In the latter there were 595 jury trials, 15,928 decisions, and 13,526 orders filed. There were naturalized 9,068 persons.

At the General Term of the Court of Common Pleas (Judges, Chief, John Sedgwick, P. Henry Dugro, Henry A. Gildersleeve, John J. Freedman, David McAdam, and Charles H. Truax) 370 appeals were disposed of and 150 opinions were written. At the Trial Terms 561 cases were disposed of. There were 177 schedules filed in assignment matters, showing liabilities of \$12,590,104.69, nominal assets of \$17,354,912.78, and actual assets of \$3,260,374.14.

In the City Court (Judges, Simon M. Ehrlick, James M. Fitzsimons, John H. McCarthy, Henry P. McGown, Joseph E. Newberger, and Robert A. Van Wyck) General Term, 207 cases were disposed of, and 1,875 cases were disposed of at the Trial Terms. There were 9,606 judgment rolls entered, amounting to \$6,000,000.

In the United States District Attorney's office (Edward Mitchell) and the United States Circuit Court (Judges, E. Henry Lacombe, William J. Wallace) more work was accomplished last year than in any previous year. There were brought before United States Commissioners John A. Shields and Samuel M. Hitchcock 535 cases of a criminal nature, and 11 before United States Commissioner Samuel H. Lyman. Some 74 indictments were found and 62 cases were tried and disposed of, and there were 1,470 customs cases litigated. In the United States Circuit Court 391 new cases were brought in common law, and 1,856 were tried and disposed of. In the Equity Department 139 were heard. There were 529 appeals from the Board of General Appraisers filed, and 1,402 motions were heard and passed upon by the various judges in the circuit.

District Attorney's Office (office, 32 Chambers Street. District Attorney, De Lancy Nicoll).—The annual report of the District Attorney of the county shows that in 1891 the volume of business was greater, and that more cases were disposed of, than ever before. The Grand Jury received and acted upon 4,204 cases, as compared with 3,942 in 1890.

An analysis of the cases received and disposed of shows that numerically the crime of larceny stands first, 1,401 complaints therefor having been received and 828 were convicted; 539 persons were charged with assault and 199 convicted; 517 with burglary, of which number 477 were convicted; 136 with robbery; 83 with forgery; 55 with homicide, out of which number 27 were convicted; 3 for murder in the first degree; 2 for murder in the second degree; and the remainder for manslaughter.

The Grand Jury dismissed 1,182 cases, and of the remainder 2,056 upon arraignment for trial pleaded guilty, or were convicted, 401 were acquitted, 533 indictments for various misdemeanors were discharged or sent to the Court of Special Sessions, thus making the total number actually disposed of and cleared from the dockets of the General Sessions amount to 4,172 cases. The following shows the number of cases dis-

posed of during the past year as compared with previous years: 1891, 4,172; 1890, 3,942; 1889, 3,928.

More money was turned into the city treasury from forfeited bail bonds than ever before, the aggregate being \$22,400.

Police.—This department is under the supervision of four commissioners, who are appointed for a term of six years each by the Mayor. They are Charles F. MacLean, President; James J. Martin, John McClave, and John R. Voorhis. The Superintendent is William Murray, and the headquarters are at 300 Mulberry Street.

The force on Jan. 1, 1892, consisted of a superintendent, a chief inspector, 3 inspectors, 15 surgeons, 34 captains, 155 sergeants, 40 detective sergeants, 164 roundsmen, 3,146 patrolmen, 75 doormen, and 13 on probation, a total of 3,654, an increase of 111 over 1890. During the year 44 members of the force died, 44 were retired, 29 were dismissed, and 21 resigned.

There were 89,920 arrests, as against 84,556 during 1890. Of this number, 70,911 were males and 19,019 were females. The principal crimes and misdemeanors for which the arrests were made are as follow: Intoxication, 26,069; disorderly conduct, 15,366; violation of corporation ordinances, 6,778; felonious assault, 5,263; suspicious persons, 4,094; violation of excise law, 3,428; petit larceny, 3,330; vagrancy, 1,923; and grand larceny, 1,806.

The police stations furnished lodgings for 157,275 homeless persons, of whom 68,923 were females. At the Bureau of Information over 6,000 persons called for assistance. There were 710 letters received, of which 489 were answered. The bureau received and cared for 3,128 lost children, of whom 1,071 were girls and included 36 colored waifs. Besides these, 105 female and 96 male foundlings were cared for and turned over to the Department of Charities and Correction.

There were 77 runaway children captured by the police and returned to their families or relatives. Of missing people, 142 were reported, all but 8 of whom were heard from. At the morgue 201 unknown dead, including 21 females, were reported, 92 of the bodies having been identified.

The property clerk received 2,088 different lots of stolen or unclaimed property, and delivered 772 lots, aggregating in value \$103,994.16. The different police stations during the year delivered \$959,794 worth of property which had fallen into the hands of the police, and was claimed before it could reach the property clerk. The superintendent issued 566 permits to carry pistols, 1,179 permits for parades, 268 ball permits, and 246 permits for funerals. The Telegraph Department required the services of two or three extra operators the year round. About 351,000 messages were sent and received during the year, of which over two hundred thousand were general alarms.

During the year there have been employed matrons in two station houses, at Oak and Elizabeth Streets. These appointments were made simply as an experiment, and the Police Board is watching the result of their work with the closest scrutiny. The station house on West 68th Street was completed during the year, and is ready for occupancy.

Public Works.—This department of the city government is under the charge of a commissioner appointed by the Mayor, independent of the Board of Aldermen, for a term of four years. The present incumbent is Thomas F. Gilroy, with headquarters at 31 Chambers Street. There are nine sub-bureaus, as follow: 1, for laying water pipes, constructing sewers, walls, and hydrants, paving streets, etc. (William H. Burke, water purveyor); 2, for the collection of revenue from the sale and use of water (Joseph Riley, water registrar); 3, for the care of all property connected with the supply of Croton water (chief engineer, George W. Birdsall); 4, for grading, flagging, curbing, and guttering the streets (William M. Dean, superintendent); 5, for lamps and gas (Stephen McCormick, superintendent); 6, for streets and roads (John B. Shea, superintendent); 7, for repairs of and supplies to, etc. (William G. Bergen, superintendent); 8, for the removal of incumbrances (Michael T. Cummings, superintendent); 9, for the care of sewers (Horace Loomis, engineer).

The annual report of this department shows that in extending and improving the means for the distribution of water 17 miles of mains, with 151 stopcocks and 163 fire hydrants, have been placed, making now a total of 684.71 miles of water mains, with 7,101 stopcocks and 8,739 fire hydrants. There have been placed 1,568 new water meters, making a total of 23,640 now in use. The revenue paid into the city treasury for water rents, penalties, and permits to tap water mains amounted to \$2,923,513.46.

The new aqueduct was transferred by the aqueduct commissioners to the care and custody of the department on June 30, and a statement issued by the aqueduct commissioners showed that the total cost of the aqueduct up to and including Dec. 31, 1891, was \$25,309,990.95. Of this sum, there were paid out on vouchers, pay rolls, etc., \$2,967,050.88; on contracts, agreements, etc., \$20,690,099.03; for land and land damages, \$57,869.82; expenses of commissioners of appraisal, \$2,098,362.70. The city began to receive water through the new aqueduct on July 15, 1890, beginning at the rate of about 35,000,000 gallons a day, which by Jan. 1, 1891, increased to 60,000,000 gallons a day. The supply through the old aqueduct, was reduced from the maximum capacity of 98,000,000 gallons a day to 75,000,000 gallons a day, making the daily total supply to the city, with the 10,000,000 gallons a day received through the Bronx river conduit, 145,000,000 gallons. During the year this was gradually increased to 164,000,000 gallons a day, of which 150,000,000 came through the two aqueducts and 14,000,000 gallons through the Bronx river conduit. It is evident that, with even the ordinary rainfall in quantity and in its distribution over an entire year, much larger storage capacity is required in the Croton watershed for a daily supply of 150,000,000 than for one of 98,000,000 gallons. The average annual rainfall in the Croton watershed, according to the records of more than forty years, is about 43 inches. During 1891 the rainfall was only 36.03 inches, or more than 18 per cent. below the average. The consequence was that 14,700,000,000 gallons of water had to be drawn from the storage reservoirs, lakes, and ponds, and from

Nov. 5 to 24, on account of the depletion of the stored water, the supply through the two aqueducts had to be reduced to 100,000,000 gallons a day, since which time the recent rainfalls have enabled the department to gradually increase it to 125,000,000 gallons a day.

By next summer the available storage capacity will be increased about 4,500,000,000 gallons by the completion of the double Sodom reservoir, and about two years thereafter the three other storage reservoirs now in course of construction will be completed, adding 22,000,000,000 gallons to the storage capacity, and making the entire storage capacity 39,200,000,000.

The quantities of work done in regulating, grading, curbing, and flagging streets during the year included: 170,912 cubic yards earth placed in embankments; 64,878 cubic yards rock excavated; 33,350 cubic yards earth excavated; 27,029 lineal feet new curbstones set; 8,354 lineal feet curb reset; 193,534 square feet new flagging laid; 31,640 square feet old flagging relaid; 9,767 lineal feet picket fence built.

During the year 1,118 new gas lamps and 103 electric lamps were placed and lighted on 15½ miles of new streets. There are now 27,080 gas lamps and 1,196 electric lamps in use, lighting 525 miles of streets, 2½ miles of piers and bridges, and 89 acres of public parks and places. There are 1,307 miles of gas mains in the streets of the city.

In the care and repair of macadam roadways 70,172 square yards of new macadam superstructure were laid on Seventh Avenue, from 110th to 145th Street; 103,662 square yards of roadways were resurfaced with gravel, and 3,273 truck loads of surface material were used in the work done by the Maintenance Department in addition to that done by contract. New pavements have been laid as follow:

GRANITE AND TRAP BLOCKS.		Sq. yds.
On new streets, payable by assessments.....		54,161
Repavements within land grants.....		70,711
Repavements under \$1,000,000 appropriation.....		160,765
Repavements under annual appropriation.....		80,010
Total.....		365,647

ASPHALT.		Sq. yds.
On new streets, payable by assessments.....		9,488
Repavements within land grants.....		8,801
Repavements under \$1,000,000 appropriation.....		188,083
Repavements under annual appropriation.....		4,285
Total.....		150,119

Grand total new pavements laid..... 515,769

The following is the present mileage of paved streets on Manhattan Island: Cobbles, 3.34 miles; specification stone block, 197.25; square stone blocks, 122.09; macadam, 24.24; asphalt, 24.89; total, 371.75.

There have been constructed and laid in the streets: Gas mains, 41.89 miles; electrical subways and conduits, 35.68; single horse-car tracks, 10.10; single-track cable rails on Third Avenue (completed), 7; single-track cable rails on Third Avenue (uncompleted), 4.50; single-track cable rails on Broadway (completed and paved), 9.80; steam and salt-water pipes, 0.81.

The contract for the Criminal Court building calls for its completion in five hundred working days, of which four hundred and thirty-one have been consumed. The average

height of the building on its four street fronts is to be 112 feet from the street level to the parapet; the Elm Street front is to be built within 49 feet of this height, the Franklin Street front to within 75 feet of the parapet, the White Street front to from 37 to 65 feet below the parapet and the Center Street front to within 75 feet of the parapet. There are 19 interior partition walls, all of which are within 46 feet of the roof. Two of the four stories of the marble interior arcade are built. The iron work, heating apparatus, and plumbing are advanced to the full extent possible with the progress on the mason work. With an adequate force of workmen the building can be put under roof in sixty-four days. The construction of the new Harlem court-house is progressing favorably. The fifteen free floating baths were thoroughly repaired and equipped in the spring and placed in their respective summer berths in June. The total attendance for the bathing season of 1891 was 2,350,362 males and 1,081,967 females. The operations of the Bureau of Encumbrances are summarized as follow: Complaints of obstructions received and attended to, 4,242; seizures and removals of obstructions made, 4,054; cartloads of refuse material removed from the streets, 597; dead and dangerous shade trees removed, 639; telegraph poles removed, 1,537; miles of telegraph wire removed, 2,232; permits issued to place building material on streets, 7,276; miscellaneous permits 1,026.

Sewerage was extended into new streets by the construction of 7.35 miles of new sewers, with 66 receiving basins, and 1.52 miles of new sewers were built in place of old and defective ones. The sewerage system on Manhattan Island now includes 445.24 miles of sewers, with 5,314 receiving basins. In the maintenance of this system, 162,305 miles of sewers and 4,387 receiving basins were cleaned.

A summary of contracts shows that during the year there were made:

	Estimated cost.
56 sewer contracts.....	\$311,468 16
77 regulating and grading.....	278,812 99
44 paving.....	1,861,870 06
74 miscellaneous.....	540,004 84

334 contracts. Total cost..... \$2,788,125 73

Dock Department.—There are three commissioners, as follow: President, Edwin A. Post; Treasurer, James Matthews; and J. Sergeant Cram. The office of this department is at Pier A, North river. During the year 9 new piers were built on the North river and 5 on the East river. Of those on the North river, 10 piers were extended to the new pier-head line. On the North river 600 feet of masonry sea-wall were built and 1,400 feet on the East river, and 1,200 feet of crib bulk-head were constructed in the upper part of the island. A total of new wharfage front was thus provided of more than two and a half miles, equaling over 10 per cent. of the entire dock frontage of the city of Liverpool. The receipts of the department were over \$1,650,000, the largest of any year in its history.

The city's water-front property is now substantially all improved, but private owners, with their limited holdings, are unwilling or unable to properly improve their dock property. It is recommended as a measure of economy in the use of the water-fronts, and for the advantage of

the commerce of this port, that the city should, under the powers conferred by law, acquire the whole North river water-front as far as 58th Street and that of the East river as far as Grand Street. Improvements on a comprehensive plan, with a continuous sea-wall and piers at proper intervals and of sufficient length, could then be made, thus meeting the requirements of commerce and carrying into effect the provisions of the act of 1871.

Street Cleaning.—This department is under the control of a commissioner with his office at 187 Stewart Building, (Thomas S. Brennan, Commissioner). The appropriation for 1891 was \$1,511,250, which was an increase over that of 1890 of \$239,724, although the population showed an increase of 6 per cent., or 100,827. The appropriation was used as follows: Administration, \$124,000; sweeping, \$377,000; carting, \$616,000; snow and ice, \$40,000; final disposition, \$292,000; new stock, \$50,000; rentals and contingencies, \$13,250.

The work accomplished by the department and the cost were as follow: Swept, 56,528.68 miles of streets, cost \$5.09 a mile; carted, 1,450,741 loads, cost 37 cents a load; and final disposition, 1,659,415 loads, at 15 cents a yard.

The refuse was disposed of by dumping 831,027 loads at sea, 736,756 loads behind bulkheads, and filling in lots with 119,844 loads.

Vital Statistics.—The Board of Health consists of the President of the Board of Police, the health officer of the port, and two commissioners, one of whom must have been for five years a practicing physician. The commissioner who is not a physician is the president of the board. The commissioners are as follow: President Charles G. Wilson, Dr. Joseph D. Bryant, Health-Officer William M. Smith, and President of the Board of Police Charles F. MacLean. The headquarters of the Board of Health is at 301 Mott Street. During 1891 the vital statistics were as follow:

ITEMS.	1891.	1890.
Deaths under one year.....	11,244	10,251
Deaths under five years.....	16,225	16,349
Total deaths.....	43,034	40,290
Total reported births.....	46,804	39,250
Total reported marriages.....	15,764	14,992
Total reported still-births.....	3,414	3,315
Death rate per 1,000 living.....	25.96	24.66

The principal causes of death were as follow: Phthisis, 5,160; pneumonia, 5,817; diarrhoeal diseases, 3,585; Bright's disease and nephritis, 2,503; heart disease, 2,287; bronchitis, 1,834; violence, 1,957; diphtheria, 1,363; scarlet fever, 1,221; influenza, 838; measles, 664; croup, 605; typhoid fever, 384; whooping cough, 353; cerebro-spinal meningitis, 189; malarial fever, 187; smallpox, 2; and typhus fever, 1.

The Bureau of Contagious Diseases (Cyrus Edson, chief) report that during the year 25,189 cases were attended by sanitary inspectors. This number included 9 typhus fever, 1,329 typhoid fever, 7,218 scarlet fever, 11,863 measles, 4,749 diphtheria, and 21 smallpox. There were 26,128 inspections made, and 8,520 general and special reports submitted.

There were 25,243 primary vaccinations and 83,790 revaccinations performed during the year,

and 910 sick children were visited. The disinfecting corps visited 29,568 houses in which contagious diseases were reported, fumigated 27,866, and disinfected 94,588 rooms; 1,049 patients suffering from contagious disease were removed to hospital, and 18 dead bodies were removed to the morgue; 34,950 pieces of infected goods were removed for disinfection, 8,116 pieces were destroyed, and the rest returned to owners after disinfection. The veterinarian of the department had charge of 538 cases of contagious diseases in animals, made 1,536 inspections, and examined 34,240 head of cattle. Sixty-six glandered horses were destroyed, and 126 post-mortems on cattle were made.

The total number of orders issued by the board for the abatement of nuisances was 25,232; attorneys' notices issued for non-compliance with orders, 15,054; civil actions begun, 2,435; arrests made, 95; judgments obtained in civil courts, 288; judgments obtained in criminal courts, 224; permits issued, 4,330; persons removed from overcrowded apartments, 3,308.

The inspections by officers of the Sanitary Bureau were 664,801 (171,058 more than in 1890), as follow: By sanitary inspectors, 58,494; sanitary police, 292,701; division of contagious diseases, 26,128; plumbing and ventilation inspectors, 55,117; milk inspectors, 94,670; fruit and food inspectors, 41,606; meat and fish inspectors, 66,391; offensive trades inspectors, 29,133; assistant chemists, 21.

Night inspections of tenements to report overcrowding numbered 53,570, and 3,308 persons removed from overcrowded apartments. The inspectors of plumbing and ventilation reported 2,748 houses begun during 1891, of which 2,629 were finished, and there are at present 2,474 in process of construction. There were examined 144,870 specimens of milk offered for sale, and 1,744 quarts of adulterated milk were destroyed. There were 184 persons arrested for offering adulterated milk for sale, of whom 166 were tried and 3 were discharged. The amount collected in fines was \$4,336. As a result of the inspections by the fruit and food inspectors, 1,341,244 pounds of stuff unfit for food were condemned and seized, an increase over 1890 of 285,168 pounds. There were 2 arrests for offering this stuff for sale, and the accused were fined \$10. The meat and fish inspectors condemned and seized 1,595,497 pounds of meat and fish unfit for food, an increase of 395,156 pounds over the preceding year. Three arrests were made in this connection, and \$100 was imposed as fines. Dead animals to the number of 48,914 were removed from the streets, an increase of 6,948 over the previous year.

Law.—The work in this division is divided among four offices: (1) Corporation Counsel's office (William H. Clark). The records of this office for 1891 show that it has tried, at Circuit and Special Terms of the different courts of record, 98 suits, and 102 appeals and 760 motions were argued. The Corporation Counsel examined and approved 935 contracts entered into between the city and various contractors, wrote 399 opinions on questions submitted to him by the heads of departments, and also collected and turned into the city treasury \$301,618.88. (2) The office of the Attorney for the Collection of

Arrears of Personal Taxes (John G. H. Meyers) paid into the city treasury about \$81,000. (3) The office of the Corporation Attorney (Louis Hanneman) collected over \$12,000. (4) The Public Administrator's office (Charles E. Lydecker) paid into the city treasury \$7,606.65, commissions on intestate estates.

The money sought to be recovered in "negligence cases" from the city aggregated \$224,000, of which only \$3,785 was obtained.

Fire.—This department is under the control of a board of three commissioners, as follow: Henry D. Purroy, President, S. Howland Robbins, and Anthony Eickhoff. The headquarters of the department is at 157 East 67th Street, and the chief is Hugh Bonner.

This department includes 1,035 officers and men, 57 engine companies (including 3 floating engines), 22 hook-and-ladder companies, 91 steam fire engines, 3 fire boats, 37 hook-and-ladder trucks, and 382 horses.

During the year there were 3,925 fires, of which 3,559 were confined to point of starting; 173 fires confined to building; 56 extended to other buildings; 2,711 fires extinguished without engine stream; 814 fires extinguished with one engine stream; 400 fires extinguished with more than one engine stream; 1,252 fires resulting in nominal damage only; 762 fires, building not damaged; 635 fires, building slightly damaged; 209 fires, building considerably damaged, and 16 fires, building destroyed; estimated loss, \$6,618,517; insurance, \$77,402,837; average loss by each fire, \$1,686.24; number of fire alarms, 4,185.

The Bureau of Combustibles received for licenses, permits, and penalties \$47,430.33.

In the Bureau of Inspection of Buildings there were 1,616 applications for new buildings; 2,802 proposed new buildings; estimated cost, \$56,001,681; 2,160 applications to alter, repair, etc.; 2,385 proposed to alter, etc.; estimated cost, \$7,445,231; violations of law reported and acted upon, 1,340; buildings reported for fire-escapes, 1,793; buildings reported unsafe, 1,214; and complaints investigated, 2,946.

Of fire-alarm telegraphs there are 272 alarm boxes, 47 fire-apparatus houses, 13 school-houses, and 6 hospitals which are connected by underground telegraph through the city subways and subsidiary conduits by means of 59½ miles of cable, having 577 miles of conductors. During 1891 915 telegraph poles and 67 miles of wire were taken down.

The Chief of the Bureau of Boiler Inspectors reports making 6,471 inspections; 6,381 tests of boilers, of which 40 were condemned. There were 6,651 engineers examined during the year, and 5,942 certificates were granted.

Education.—The board having control of this subject consists of 21 commissioners, who are appointed by the Mayor. The president is John L. N. Hunt and the city superintendent is John Jasper. The number of schools and departments is now upward of 306, including a nautical school, in which there were registered on Sept. 30 59,199 pupils in the grammar departments and 113,887 pupils in the primary departments. At that time 6 new schools were in course of construction, and would be opened during the coming year, affording accommodation for 8,000 pupils. There were refused 395 grammar pupils and 4,747 pri-

mary pupils owing to lack of room, but more than one third of these subsequently found accommodation.

It was proposed that the office of Counsel to the Board of Education be abolished, the Board of Estimate deciding that all legal matters upon which the Board of Education needed advice could be attended to by the Corporation Counsel, but this action failed to go into effect.

Rapid Transit.—A Board of Rapid Transit Railroad Commissioners for the City of New York, consisting of William Steinway, John H. Starin, Samuel Spencer, John H. Inman, and Eugene L. Bushe, appointed by the provisions of chapter iv of the Laws of 1891, to determine upon a general plan of construction of a rapid-transit railway to be established in this city, reported to the Common Council on Oct. 20, 1891, that a decision favoring an underground and viaduct railway was reached, and a route, as follow: The center line recommended to begin at a point under the westerly side of Whitehall Street, distant along the same 62.5 feet north from the northerly line of South Street produced; thence by diverging lines under Whitehall Street and Battery Park and State Street, respectively, forming a loop line, the tracks converging to parallelism at a point under Broadway between Bowling Green and Morris Street; thence under Broadway and Union Square to 59th Street; thence under the Boulevard to 121st Street; thence by viaduct to 134th Street; thence under the Boulevard to the south line of 156th Street; thence by viaduct to the north line of 159th Street; thence under the Boulevard to 169th Street; thence under Eleventh Avenue to a point 1,460 feet north of the center line of 190th Street; thence by a viaduct on the same straight line produced to a point 442 feet north from the intersection of said straight line with the center line of the King's Bridge Road; thence to the right on a curve with a radius of 1,910 feet and a tunnel a distance of 860.6 feet; thence by tangent 138 feet; thence by curve to the left with a radius of 1,910 feet, a distance of 350 feet in tunnel and a distance of 510.6 feet by viaduct, to a point on a line coincident with the center line of Audubon Avenue produced and distant 425 feet north from the center line of 217th Street; thence by viaduct and on a tangent coincident with the center line of Audubon Avenue produced across the Government ship canal, and thence by the same tangent and in depressed structure 670 feet; thence on the same tangent and by viaduct to and across Spuyten Duyvil Creek; and thence on the same tangent by viaduct, depressed structure, and tunnel, as the contour of the lands may require, to a point 100 feet north of the center line of Delafield Lane; thence to the left on a curve with a radius of 1,910 feet to a point 30 feet south from the center line of Delafield's old lane; thence by a tangent to a point 112.4 feet south from the south line of Rock Street; thence to the right by a curve with a radius of 500 feet for a distance of 220.8 feet to a point in the center line of Forest Street 112.4 feet north of the south line of Rock Street; thence by tangent coincident with the center line of Forest Street to the city limits. Also, a loop from Broadway, under Mail Street, City Hall Park, Park Row, and Chambers Street,

and again connecting with the Broadway line. Also, a route, the center line diverging from the Broadway line at or near 14th Street, running under Union Square to Fourth Avenue; thence under Fourth and Park Avenues to a point 112.15 feet north from the north line of 40th Street; thence to the left on a curve with a radius of 250 feet for a distance of 154.55 feet; thence by tangent a distance of 292.18 feet to a point 40.1 feet north from the south line of 42d Street and 215.7 feet west from the center line of Fourth Avenue; thence to the right on a curve with a radius of 250 feet a distance of 124.23 feet; thence by tangent 46.39 feet; thence to the left on a curve with a radius of 250 feet a distance of 182.37 feet to a point 4.4 feet north from the north line of 43d Street and 159.5 feet east from the center line of Madison Avenue; thence by tangent 39.58 feet; thence to the right on a curve with a radius of 400 feet a distance of 332.28 feet to a point in the center line of Madison Avenue 65.6 feet north from the north line of 44th Street; thence under Madison Avenue to the south line of 96th Street; thence to the right on a curve with a radius of 400 feet for a distance of 240.07 feet; thence by tangent a distance of 132.98 feet; thence to the left on a curve with a radius of 400 feet a distance of 240.07 feet to the south line of 98th Street at a point distant 175 feet east from the easterly line of Madison Avenue; running thence by viaduct parallel with Madison Avenue, the center line distant 175 feet east from the easterly line thereof, across streets and private property to a point 124.6 feet north from the line of north 134th Street and distant 175 feet east from the easterly line of Madison Avenue; thence to the right on a curve with a radius of 357.15 feet a distance of 408.6 feet to a point on the west line of River Street 54 feet 11 inches south from the south line of 136th Street; thence by tangent across the Harlem river a distance of 400 feet; thence to the left on a curve to the south line of 134th Street at its intersection with the center line of Walton Avenue; thence by viaduct, depressed structure, and tunnel, as the contour of the lands may require, along the line of Walton Avenue to Stebbins Place; thence to the intersection of the center lines of Sylvan Avenue and Belmont Place; thence along the line of Sylvan Avenue to its terminus at Orchard Street; thence in a straight line to the center line of Berrian Avenue at the southerly point thereof; thence along the center line of Berrian Avenue to 1st Street; thence in a straight line to the intersection of the center lines of Kirkside Avenue and Croton Avenue; thence along Kirkside Avenue to Travers Street, and thence by straight line to and under Jerome Avenue to the north line thereof.

The general plan of construction of the loop under Battery Park, State, and Whitehall Streets shall be double track; from the Morris Street junction to near Vesey Street shall be three parallel tracks on the same level, with suitable switches and connections between them; from Vesey Street to 190th Street on the west-side line shall be four parallel tracks on the same level; and thence across the Government ship canal and Spuyten Duyvil Creek to the city limits shall be two parallel tracks on the same

level. On the east-side line from 14th Street to the Harlem River shall be four parallel tracks on the same level, and thence to the city limits shall be two parallel tracks on the same level. The tunnels shall be not less than 11 feet 6 inches in height in the clear, and 11 feet in width for each track. Whenever necessary for the proper support of the surface of the street, the roof of the tunnel shall be of iron girders with solid plate-iron covering, supported by suitable iron columns between each of the tracks and supporting walls on the outside. The roof of the tunnel shall be as near the surface of the street as the pipes and underground structures now laid therein and the street grades will permit. Viaducts shall be of masonry or iron, or both combined. The Government ship canal and the Harlem river shall be crossed by double-track drawbridges not less than 50 feet in the clear above mean high-water mark, with clear spans of not less than 125 feet between the center piers and bulkhead line. North of the Harlem river the construction shall be by viaduct, depressed structure, and tunnel, as the grades of the land upon the proposed routes shall require. The junction of the tracks near 14th Street shall be effected by dividing them around Union Square, raising one pair and depressing the other, so that trains going in opposite directions shall not cross on the same level. All station approaches shall be as far as possible through private property to be acquired for that purpose. Except that on the Boulevard, station approaches may be in the center of the street. A footway shall be provided the whole length of the line between the center tracks, and refuge niches shall be built in the side walls at proper intervals for the convenience and protection of employes. The motive power shall be electricity, or some other power not requiring combustion within the tunnel; and the motor or motors shall be capable of a uniform speed for long distances of not less than 40 miles per hour, exclusive of stops.

The manner of construction from South Ferry to about 34th Street shall be by underground tunneling without disturbing the surface of the street. In case of necessity the excavations below Beaver Street and in the neighborhood of Canal Street, and at such other special points as this commission may during the progress of the work determine, may be made by excavation from the street surface, and all excavations in Fourth Avenue above 14th Street and in all other streets and avenues above 34th Street may be made in the same manner.

The loop at Battery Park is adopted as furnishing the best and most convenient method for the terminal handling of the trains, both way and express. The 3 tracks between Bowling Green Junction and Vesey Street provide amply for the volume of traffic below the City Hall, and avoid encroachment beyond the curb line in Broadway at its narrowest points. The introduction of a loop at City Hall Park by which trains may be stopped, turned, and dispatched up town continuously, and without switching, and without grade crossings, for trains in opposite directions, furnishes the best means of a second down-town terminus at the most important point, and the best means of connecting with Brooklyn Bridge.

At Union Square, a system of tracks has been devised by which all trains on the Broadway and Madison Avenue line are accommodated at a single station, and all grade crossings between trains in opposite directions are avoided. At 96th Street the contour of the ground necessitates the termination of the tunnel. It therefore became necessary to deflect the line from Madison Avenue and occupy private property, thence to the Harlem river, on account of the prohibition in the Rapid-transit act against the use of Madison Avenue for an elevated structure.

County Clerk's Office (County Clerk, Leonard Geigerich, who held office until Dec. 11, when he was succeeded by William J. McKenna).—The following is a report of the work done in the County Clerk's office during the year:

In the law department there were: Judgments filed, final, 4,970; introductory, 36; total, 5,006; fee received, \$2,485. Notes of issue received, new cases—Circuit Term, 2,148; Special, 1,266; total, 3,414; fee received, \$10,242.

In the equity department there were issued 1,560 judgments, 1,273 reports, 14,000 special proceedings, 1,715 complaints, 2,200 orders, 260 accounts and inventories, 160 oaths, and 240 notices of claims.

In the docket department notices of 216 general assignments, 20 sheriff's sales, and 3 insolvencies were posted.

There passed through the hands of the record department for indexing 2,860 bonds and 6,290 executions, 460 mandamus and *habeas corpus* 110 inventories and accounts, 215 remittances, 130 commissions, 300 cases and exceptions, and 160 street-opening maps.

Electrical Control.—This board consists of the Mayor, Jacob Hess, and Theodore Moss. The office of the bureau is at 1266 Broadway. During the year 5,224 poles and 7,152½ miles of wire were removed and 114 miles of subways constructed. The capacity of this subway work is as follows: 47 miles for electric-light, 721 miles for telephone and telegraph, and 121 miles for Edison-light.

There are now in use in the city 1,420 miles of subways, divided as follow: Electric-light subways, 578 miles; telephone and telegraph subways, 721 miles; and Edison subways, 121 miles. There are at present 59 alternating, and 84 arc circuits, making a total of 143 high-tension circuits in use in the subways, with 528 miles of electric-light conductors. There are 29,666 miles of telegraph and telephone wires and 383 miles of Edison conductors. The reports are conclusive that, from an electrical standpoint, the operation of the subways is a success.

The establishment of a municipal telegraph exchange, to connect the departments and other points between which communication is necessary and desirable, is recommended by the Mayor.

Immigration.—The care of immigrants arriving in the United States is a Federal charge, and is under the supervision of Superintendent John B. Weber. During the year the office was at the Barge Office, in Battery Park.

In 1891 430,884 immigrants were landed at the Barge Office. Of all the countries, Germany furnished the greatest number, 79,496, and Arabia the smallest, 1. The other nations sent the following number of people: Ireland, 35,951;

England, 22,820; Wales, 456; Scotland, 4,887; France, 4,189; Russia, 52,022; Poland, 27,400; Switzerland, 6,264; Sweden, 32,426; Norway, 10,500; Belgium, 2,773; Italy, 65,084; Spain, 124; Portugal, 1,985; Denmark, 9,024; Hungary, 25,409; Austria, 27,433; Bohemia, 8,074; Finland, 4,030; Armenia, 946; Australia, 15; Greece, 1,038; all other countries, 3,969.

Post-Office.—This department is a Federal office, under the jurisdiction of the Post-office Department in Washington. The postmaster is Cornelius Van Cott. The post-office building is at the junction of Broadway and Park Row, opposite Barclay Street. During the year the total number of pieces of mail matter of all kinds handled was 1,150,027,006, a daily average of 3,495,523, and an increase over the previous year of 125,828,285.

There were delivered through lock boxes and by carriers 374,724,612 pieces of ordinary mail matter, divided as follow: Letters through boxes, 63,155,774; by carriers, 187,130,572. Postal cards through boxes, 6,944,656; by carriers, 38,577,910. Other mail matter through boxes, 34,491,163; by carriers, 44,424,537. In the registered-letter department 1,520,317 pieces were delivered, and 1,393,323 of domestic and 550,703 of foreign origin were recorded and distributed to other offices. In the distribution department 771,838,051 pieces were handled, as follows: Letters of local origin, 266,715,732; received by mail, 36,535,506; foreign dispatched, 27,622,758. Postal cards of local origin, 41,033,190; received by mail, 9,133,876; foreign dispatched, 1,315,369. Other matter of local origin, 283,221,112; received by mail, 60,178,696; foreign dispatched, 46,081,812.

The ordinary mail matter handled was contained in 1,343,427 lock pouches, and 3,656,148 sacks (including foreign mail, of which 146,213 sacks were received and 179,168 dispatched), besides which there were handled 11,843 cases and 110,425 pouches of registered matter and 5,401 pouches and 45,743 sacks of supplies.

There passed through the New York Post-office in transit 260,402 pouches and 589,785 sacks of mail matter, making a total of 6,023,174 pouches, cases, and sacks handled at the office, a daily average of 18,307, exclusive of those which the 19 branch post-office stations exchanged with one another and with the general office.

The volume of money-order business was: At the general post-office 1,221,089 money orders were issued and paid, amounting to \$9,870,586.14, and 818,601 postal notes, amounting to \$1,247,183.50. At the 39 branch post-offices and sub-stations the number of orders issued and paid was 280,274, amounting to \$4,127,885.74, and the number of postal notes 138,312, amounting to \$266,744.30. The aggregate business of the money-order department for the year amounted to \$106,869,047.03, giving an increase over the previous year of \$5,534,868.75.

The total receipts of the office were \$6,505,952.08, and the total expenditures \$2,525,540.59 (including \$1,146,417.94 for free-delivery service), giving a net revenue of \$3,980,411.49.

There were sold during the year 232,132,368 postage stamps, 47,633,828 Government-stamped envelopes, and 54,945,625 postal cards.

The total weight of mails received and dispatched daily during 1891 was 335 tons.

Foreign mails dispatched averaged 35 a week. Foreign mails, both inward and outward, frequently include as many as 800 bags, and require from one to twelve two-horse trucks for their transportation.

Memorial Arch.—The committee for the erection of the Washington Arch met on Dec. 14. The treasurer reported the total subscriptions to date as \$106,672.82, of which \$105,075.82 had been paid. Of the \$1,597 remaining, about \$700 was collectible. Interest amounts to \$5,024.61, making a total of the fund \$110,100.43. On the construction of the arch there has been expended \$85,304.63, and for other expenses \$8,854.31, leaving a cash balance of \$13,941.49. The architect, Stanford White, said that the arch had been carried to a height of 63 feet 6 inches since the cornerstone was laid on Dec. 22, 1890. The frieze of the piers, the interior decorations of the arch, and the cornice have been carved, as well as nearly all of the frieze. The total cost of the arch will be \$123,000, and there will be needed \$21,003.88, \$4,000 of which the committee desired should be subscribed by Jan. 1, 1892, so that the interior work might be inclosed.

Political.—The election of 1891 was held on Nov. 3, when the following local candidates were voted for:

Tammany.—Judge of the Supreme Court, George L. Ingraham; Judge of the Superior Court, Henry A. Gildersleeve; Judge of the Court of Common Pleas, Roger A. Pryor; Judges of the City Court, Simon M. Ehrlich and John H. McCarthy; and Coroners, Ferdinand Levy, John B. Shea, and Louis W. Schultze; and 25 aldermen.

County Democracy.—This organization accepted the above-named candidates, except the following: Coroners, John Martin, William J. V. Hart, and Emil Schaerer; and 18 aldermen.

Republican.—Judge of the Supreme Court, Edward T. Bartlett; Judge of the Superior Court, Myer S. Isaacs; Judge of the Court of Common Pleas, J. Langdon Ward; Judges of the City Court, Henry Grasse and Charles G. Cronin; and Coroners, John R. Nugent, William Wainman, and George W. Kram; and 25 aldermen.

Socialist.—Judge of the Supreme Court, Rudolph Modest; Judge of the Superior Court, William Draemel; Judge of the Court of Common Pleas, Benjamin J. Gretsck; Judges of the City Courts, Henry Glyn and Henry Foth; Coroners, G. C. Striebeling, Waldorf Dorfman, and Ad. Jablinowski; and 16 aldermen.

Prohibition.—Judge of the Supreme Court, Charles E. Manierre; Judge of the Superior Court, James H. Laird; Judge of the Court of Common Pleas, Coleridge A. Hart; Judges of the City Courts, Thomas D. Stetson and Henry H. Hadley; and Coroners, J. H. Yarnall, H. D. Burnham, and W. H. Jennings. No aldermen were nominated by this party.

Of the foregoing, the Tammany candidates for judicial offices and coronership were elected by varying pluralities of upward of 30,000 votes. The Board of Aldermen chosen was as follows:

Tammany Hall, 20; Republican, 3; County Democracy, 2.

In the Tenth Congressional District an election was held to fill the vacancy caused by the death of Francis B. Spinola, and the following votes were cast: William Bourke Cockran, Democrat, 13,234; James B. Townsend, Republican, 7,160; John Hauser, Socialist, 343; Alfred L. Manierre, Prohibition, 199. Likewise in the Twelfth Congressional District an election was held to fill the vacancy caused by the resignation of Roswell P. Flower, at which the following votes were cast: Joseph J. Little, Democrat, 19,306; William McMichael, Republican, 11,465; Theodore L. De Vinne, County Democrat, 1,075; and John J. Flick, Socialist, 1,075.

Events.—On Jan. 2 the Fifth Avenue Theatre, at the corner of Broadway and 28th Street, was burned. On May 5 the music hall founded by Andrew Carnegie, at the corner of 57th Street and Seventh Avenue, was opened with appropriate exercises. On Oct. 27 the New York Court of Appeals decided the Tilden will case in favor of the natural heirs, thus ending a long controversy, and depriving New York city of the free public library originally proposed by Samuel J. Tilden. But a compromise with one of the heirs leaves \$2,000,000 in the hands of the trustees for the original purpose.

NICARAGUA, a republic in Central America. The members of both the Senate and the House of Representatives are elected by universal suffrage for four and six years respectively. Congress meets every two years. The executive power is exercised by the President with the aid of a Cabinet of five ministers. Dr. Roberto Sacasa was elected President for four years in November, 1890, and his election was confirmed by Congress on Jan. 14, 1891. His Cabinet is composed as follows: Rosendo Lopez, Minister of Foreign Relations; José del C. Bengoechea, Minister of Finance and Public Credit; Federico Marengo, Minister of the Interior; Augustin Duarte, Minister of War; Francisco J. Medina, Minister of Public Works. The regular army has 700 men and the militia 25,000. The revenue in 1888 was \$3,814,140, derived from monopolies of spirits, tobacco, and gunpowder and duties on imports and slaughtered cattle. The expenditure was \$4,024,602. There is an internal debt of \$1,592,000.

Area and Population.—Nicaragua is the largest in extent and the most sparsely populated of the five republics of Central America. With an area of 49,500 square miles, it has a population that was estimated in 1883 at only 350,000. The Cordillera, which occupies the central part of the country, rises in few places higher than 1,000 feet, and the large valley to the west of it, containing the large lakes of Nicaragua and Managua, has an average elevation of 125 feet above the plane of the ocean. Managua, the capital, has 18,000 inhabitants. There are no religious trammels, and education is fostered by the Government, which has brought in teachers from the United States and Europe. There were 251 schools, with 11,914 pupils, in 1887. The population consists of Indians, negroes, and mixed races, and a few people of European origin or descent, who have decreased in number.

Commerce and Production.—The principal occupation of the people is cattle-raising. There are about 400,000 head of cattle in the country. In recent years the cultivation of bananas for the American market has become a considerable industry. Coffee of excellent quality is also produced, and India-rubber is gathered. Cedar, Brazil wood, mahogany, and dye woods abound in the forests. Indian corn, sugar, potatoes, cacao, and indigo are cultivated. Various metals are mined to a small extent, and recently gold has been discovered. The imports consist of manufactured articles. They were valued in 1888 at \$2,146,000, of which \$766,000 represent imports from Germany; from the United States, \$395,000; from France, \$351,000; from Central America, \$268,000; from Great Britain, \$252,000; from Italy, \$42,000; from other countries, \$72,000. The exports were valued at \$1,522,000, of which \$665,000 went to Great Britain, \$334,000 to the United States, \$253,000 to Germany, and \$246,000 to France. The articles exported were coffee, rubber, woods, gums, sugar, indigo, and cacao. According to the United States revenue returns, the exports to Nicaragua from the United States amounted to \$900,813 in 1889 and \$1,270,073 in 1890, and the imports from Nicaragua into the United States were \$1,747,246 in 1889 and \$1,655,690 in 1890. The chief exports to the United States were coffee, bananas, hides, and wood, and the chief imports of American produce were iron and steel manufactures, wheat flour, furniture, and provisions.

Communications.—There is a railroad in operation between Corinto and Momotombo, 58 miles, and a separate section of the same line has been built from Managua to Granada, 32 miles. A projected railroad will connect the Pacific port of San Juan del Sur or Brito with San Jorge, on Lake Nicaragua, and another will connect Matagalpa with the eastern shore of Lake Managua. A concession has been obtained for a railroad from Matagalpa to the east coast, a distance of 90 miles.

The post-office in 1886 delivered 3,306,500 letters, papers, etc. There were 1,549 miles of telegraph in 1890, uniting the chief towns and joining the international cable at Greytown or San Juan del Norte.

The Nicaragua Canal.—A concession for a ship canal from San Juan del Norte to San Juan del Sur was granted in April, 1887, to the Nicaragua Canal Association of New York. The Maritime Canal Company was organized and incorporated by the United States Congress on Feb. 20, 1889. A construction company, of which Warner Miller is president, took the contract of building the canal. The Nicaragua Government granted one year in which to begin and ten years additional in which to complete the canal. The work of construction was begun, and in September, 1890, the Nicaragua Government formally acknowledged that the stipulated sum of \$2,000,000 had been expended within the year. The canal was expected to cost \$90,000,000, to be six years in building, and to yield a revenue of \$17,500,000 when completed, calculated on the rates of toll that are charged on the Suez Canal. (For a complete description of the work, see "Annual Cyclopædia for 1888," page 614.) An application was made to the United States Congress in Janu-

ary, 1891, to have \$100,000,000 of bonds guaranteed by the United States Government, and to have the work of construction supervised by officers of the Engineer Corps of the United States army. This arrangement was pronounced by some to be incompatible with the Clayton-Bulwer treaty with Great Britain, and other Senators voted against the bill because they were opposed to subsidies. It consequently failed to pass. The construction company had expended about \$4,000,000. There had been issued up to the close of the fiscal year stock of the par value of \$20,778,000. Cash subscriptions of \$1,041,000 had been paid in, and \$5,953,000 of bonds had been disposed of for franchises, labor, privileges, and property.

Political Disturbance.—President Sacasa is a representative of the Clerical party, which has its headquarters in his native city of Leon, the old capital, rather than of the Progressist party that has furnished all the Presidents in recent times. The rivalry between Leon, which in its decayed condition still has 25,000 inhabitants, and Granada, the center of the Progressist movement, was formerly so great that it became necessary to transfer the seat of government to a third and more unimportant town. Having served the unexpired term of President Carazos, he succeeded in getting himself elected for the next term. Since then there have been many rumors of a conspiracy to oust him by force. Acting on the information of his spies, he had ex-Presidents Joaquin Zavala and Chamorro, Gen. Enrique Guzman, Gen. J. D. Rodriguez, and Anselmo Rivas, editor of the "Diario" in Granada, the leading newspaper in Nicaragua, all suddenly arrested on Aug. 23, 1891. Their arrest caused intense excitement, and an attempt was made to rescue them. The prison was attacked, the soldiers were fired upon, and in the battle that ensued, 6 soldiers and the chief of police were killed on the Government side and more than 50 of the insurgents were shot. The prisoners were escorted over the frontier on the following day and forbidden to return on penalty of death. While they were taken to the railroad on Sept. 3, the people of Granada, on making a demonstration as though to release the prisoners, were fired on by the guards and returned the fire, killing the governor of the province, the lieutenant commanding the escort and 5 soldiers. On Oct. 12, a corporal of the palace guard named Carlos Perez made an attempt to murder President Sacasa.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 393,751 in 1790; 478,103 in 1800; 555,500 in 1810; 638,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,039 in 1850; 992,022 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; and 1,617,947 in 1890. Capital, Raleigh.

Government.—The following were the State officers during the year: Governor, Daniel G. Fowle, Democrat, who died on April 7, and was succeeded by the Lieutenant-Governor, Thomas M. Holt, Democrat; Secretary of State, William L. Saunders, who died on April 2, and was succeeded by Octavius Coke; Treasurer, Donald W. Bain; Auditor, George W. Sanderlin; Attorney-General, Theodore F. Davidson; Superin-

tendent of Public Instruction, Sidney M. Finger; Commissioner of Agriculture, John Robinson; Chief Justice of the Supreme Court, Augustus S. Merrimon; Associate Justices, Walter Clark, Joseph J. Davis, James E. Shepherd, and Alphonso C. Avery.

Population by Races.—The following table shows the white and colored population of the State in 1880 and 1890, as reported by the Federal census:

COUNTIES.	WHITE.		COLORED.	
	1890.	1880.	1890.	1880.
Alamance.....	12,670	9,997	5,601	4,618

The State	1,049,191	867,242	567,170	581,277

Legislative Session.—The regular biennial session of the General Assembly began on Jan. 8 and ended on March 9. On Jan. 20 United States Senator Zebulon B. Vance, Democrat, was re-elected for the term of six years from March 4, receiving 40 votes in the Senate to 7 for Jeter C. Pritchard, Republican, and 86 votes in the House to 13 for Pritchard and 1 for Oliver H. Dockery, Republican. An important result of the session was the passage of a law creating a railroad commission and regulating railroad charges and management. The commission consists of three members elected by the General Assembly, one member retiring every two years. It is required to make and enforce reasonable and just rates of freight and passenger tariffs, or it may cause rates to be furnished to it by any railroad company, such rates when approved by the commission being binding upon the company. It shall also make rules as to charges at all stations for the necessary handling and delivery of freight; shall make regulations to prevent unjust discrimination in the transportation of freight and passengers, and to prevent the giving, paying, or receiving of any rebate or bonus, directly or indirectly; shall establish just rates of charges for the use of railroad cars carrying all kinds of freight and passengers; and shall make, or cause to be furnished by the several roads, joint through rates for freight and passengers. The rates established by the commission shall be deemed to be *prima facie* reasonable, but an appeal from its decision will be allowed to the Superior Court, and thence to the Supreme Court of the State. The board shall investigate the business of railroads in the State, and for that purpose may visit the respective railroad offices, examine their books, and inquire generally into the management of the roads. The commissioners are given power, whenever they deem it expedient or practicable, to require any railroad to provide separate and equal accommodations for the white and colored races on passenger trains and at passenger stations and waiting-rooms. They are further required to make, or cause to be made, just and reasonable rates of charges for the transportation of packages by express companies, and for the transmission of messages by telegraph lines.

A new revenue act provides for the levy of a poll tax of 75 cents, and of an annual *ad valorem* tax of 25 cents on each \$100 for State revenue purposes. A tax of 1 per cent. is levied on all incomes and profits derived from property not taxed, and of one half of 1 per cent. on all incomes derived from salaries or fees. Various license taxes are imposed on different kinds of business, the tax on liquor dealers for selling in quantities of 5 gallons or less being \$100 per annum, and for selling in quantities of 5 gallons or more \$200 per annum. The following privilege taxes are established among others: On railroad, steamboat, and canal companies doing business in the State a tax equal to 1 per cent. of their gross receipts; on express, telegraph, and telephone companies, 2 per cent. of their gross receipts; and on sleeping and parlor-car companies \$50 for each car run in the State. Railroad and canal companies that pay a tax on their property shall be exempt from this tax, but those that are taxed on their capital stock and personal property, and not on their real estate, shall pay a tax of one half of 1 per cent. of their gross receipts. Coupled with this enactment is a new law revising and re-enacting the law for the assessment of property and the collection of taxes. By another act the State tax for school purposes is raised from 12½ to 15 cents on each \$100 of property and from 35 to 45 cents on polls.

A new oyster law imposes numerous restrictions and regulations upon the oyster industry. The Governor is given power to enforce the fish and oyster laws of the State, and to employ so much of the military or other power as may be necessary, the sum of \$1,500 being appropriated for his use. It is made unlawful for any person to take oysters from the public grounds or natural oyster beds of the State with any dredge, scoop, or other instrument, except such tongs as are worked by the hand and in ordinary use among oystermen.

For the purpose of suppressing the emigrant agents, who in recent years have induced large numbers of negroes to leave the State, an act was passed requiring each agent to obtain a license from the State Treasurer before engaging in his business. Such license shall continue for one year, and the fee therefor shall be \$1,000 for each county in which such agent does business. This is practically a prohibition of their business.

The State was redistricted for members of the State Senate and House of Representatives, and the following new congressional districts were formed:

1. Counties of Beaufort, Camden, Carteret, Chowan, Currituck, Dare, Gates, Hertford, Hyde, Martin, Pamlico, Pasquotank, Perquimans, Pitt, Tyrrell, and Washington.
2. Bertie, Edgecombe, Greene, Halifax, Lenoir, Vance, Northampton, Warren, Wilson, and Wayne.
3. Bladen, Cumberland, Duplin, Craven, Harnett, Jones, Moore, Onslow, and Sampson.
4. Chatham, Durham, Franklin, Johnston, Nash, Orange, and Wake.
5. Alamance, Caswell, Granville, Guilford, Person, Randolph, Rockingham, and Stokes.
6. Anson, Brunswick, Columbus, Mecklenburg, New Hanover, Pender, Richmond, Robeson, and Union.
7. Cabarrus, Davidson, Davie, Iredell, Montgomery, Rowan, Stanley, Yadkin, Lincoln, and Catawba.

8. Alleghany, Ashe, Burke, Caldwell, Cleveland, Gaston, Mitchell, Watauga, Wilkes, Alexander, Forsyth, and Surry.

9. Buncombe, Cherokee, Clay, Graham, Haywood, Henderson, Jackson, McDowell, Macon, Madison, Polk, Rutherford, Swain, Transylvania, and Yancey.

An agricultural and mechanical college for the colored race was established, and \$2,500 per annum appropriated for its support. It is to be at some place where the local authorities will give the necessary land and buildings. A normal and industrial school for white girls was established, its location to be determined by the same considerations. A school for white deaf and dumb children was located near Morganton, on land given to the institution, and \$20,000 appropriated for the erection of buildings.

The sum of \$10,000 per annum was appropriated to inaugurate and maintain a geological survey of the State, under the direction of a State geologist to be appointed by the Governor.

To insure a State exhibit at the World's Columbian Exposition the sum of \$25,000 was appropriated out of the moneys received from the United States as a refund of the direct tax of 1861. The earnings of the State Penitentiary and the unexpended balances of 1889 and 1890 were appropriated for its support.

An amendment to the Constitution providing that solicitors shall be elected in the same manner as judges of the Superior Court, was proposed for submission to a vote of the people in November, 1892. Other acts of the session were:

Changing the name of the Western North Carolina Insane Asylum to the State Hospital, and providing for the admission of a limited number of inebriates.

Making it unlawful for any person to play at any game of chance, at which money, property, or other thing of value is bet, whether the same be in stake or not, and declaring those who play and those who bet to be guilty of a misdemeanor.

Making it a misdemeanor to employ and carry beyond the limits of the State, or to entice out of the State, any minor without consent in writing of the parent or guardian.

Declaring the birthday of Robert E. Lee, Jan. 19, to be a public holiday.

To punish persons making false representations in obtaining certificates of registration of cattle and other animals, or misrepresenting in any way the lineage of animals used for breeding purposes.

Providing when leases of turpentine orchards shall expire, in the absence of a special contract.

To provide for the study of the nature of alcoholic drinks and narcotics, and of their effect upon the human system, in the public schools.

To prevent gambling at agricultural fairs.

Allowing maimed Confederate soldiers to peddle goods, wares, and merchandise without paying for a license therefor.

To prohibit the sale or gift of cigarettes to minors.

Authorizing the establishment of children's homes in the several counties, and providing for the maintenance thereof.

To encourage residents of the State to prospect for, discover, and utilize phosphate deposits in the navigable streams.

To protect private oyster grounds.

Removing the colored normal school from Franklinton to Warrenton, Warren County.

Providing that the duties of the Commissioner of Immigration shall hereafter be performed by the Commissioner of Agriculture, who shall be known as the Commissioner of Agriculture and Immigration.

Establishing a normal school for the colored race in the town of Elizabeth City.

Education.—At the Agricultural and Mechanical College for white pupils there were 104 pupils in attendance for the term beginning in the autumn of this year. Applications were on file from 75 others, who can not be accommodated till the completion of dormitories now in process of erection. The site for the new Normal and Industrial School for Girls, established by the General Assembly this year, was fixed in June at Greensborough, that place having offered a site and \$30,000 for a building.

Soldiers' Home.—By an act of the General Assembly this year a Soldiers' Home Association was incorporated for the purpose of providing and managing a home for needy Confederate soldiers. A tract of land near Raleigh, known as Camp Russell, owned by the State, was given to the association by the same act, and the sum of \$3,000 per annum was appropriated for the support of the institution.

Railroads.—The railroad commission established by the General Assembly this year, organized soon after the close of the session and began the work of establishing standard rates of railroad tariff for the State. A standard passenger rate of 3½ cents a mile for first-class passage and 2½ cents for second-class passage was adopted, while certain branch lines which are not yet on a good-paying basis were allowed to charge 3½ cents for first-class and 3 cents for second-class passage. No radical reductions were undertaken, and the railroads generally were not disposed to attack the work of the commission. An assessment of railroad property for taxation was made by the commission, the total assessed valuation of such property being fixed at \$19,800,185.47. In 1890 the total assessed value was about \$12,000,000.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles; population, according to the census of 1890, 182,719. Capital, Bismarck.

Government.—The following were the State officers during the year: Governor, Andrew H. Burke; Lieutenant-Governor, Roger Allin; Secretary of State, John Plittie; Treasurer, L. E. Booker; Auditor, John P. Bray; Attorney-General, C. A. M. Spencer; Commissioner of Agriculture and Labor, H. T. Helgesen; Commissioner of Insurance, A. L. Carey; Superintendent of Public Instruction, John Ogden; Railroad Commissioners, George W. Harmon, George H. Walsh, Andrew Slotten; Justices of the Supreme Court, Guy C. H. Corliss, Alfred Wallin, J. M. Bartholomew; Clerk, R. D. Hoskins. All these officers are Republicans.

The Senate consists of 21 Republicans, 5 Democrats, and 5 Farmers' Alliance men. The House has 40 Republicans, 16 Democrats, and 6 Farmers' Alliance men.

Finances.—The first annual report of the State Treasurer gives the following figures: Total receipts, including a balance of \$64,694.92 from the Territorial Treasurer, \$609,511.83; total disbursements, \$504,720.32; balance, \$104,791.51. Of this, \$29,133.50 was credited to the general fund, \$1,705.99 to the university-bond fund, \$2,589.29 to the stock indemnity fund, \$56,113.01 to the permanent school fund, and \$2,216.92 to the bond interest fund.

Legislative Session.—The Legislature met Jan. 6, 1891, and adjourned in March at the expiration of the sixty days allowed by the Constitution. The first part of the session was given to the election of a United States Senator in place of Gilbert A. Pierce, whose term of office expired. The choice fell upon Henry C. Hansbrough.

The most important, perhaps, of the measures passed was the Australian election law. The amount of appropriations made, though not much more than half the sums asked for, exceeded by a considerable amount the revenue in prospect.

An attempt to resubmit the question of prohibition was made in the House by a resolution repealing Article XX of the Constitution. This passed by a vote of 32 to 29, and was sent to the Senate and adopted by a vote of 16 to 15. But all record of this action in the Senate was expunged from the journal by a vote of 18 to 12.

Three bills that passed were vetoed by the Governor—one granting a school section to Wahpeton School of Science; one providing that a person could leave the State with the intention of remaining, and then return and be entitled to citizenship again in six months; and the third, giving persons the right to erect and maintain warehouses on railroad right of way for an indefinite period for the sum of \$1. In his objections to the last-named bill the Governor cited a similar act passed in Minnesota in 1885, and declared invalid by Chief-Justice Gilfillan in the case of the State *vs.* the Chicago, Milwaukee and St. Paul Company.

Following are the more important of the bills passed:

- To promote irrigation and providing for a State superintendent of irrigation and forestry.

- Appropriating \$25,000 for the State exhibit at the World's Columbian Exposition.

- For the protection of game.

- To prevent and punish cruelty to animals.

- Amending the law in regard to marriageable age, making it eighteen and sixteen, providing that males under twenty-one and females under eighteen shall not receive license without the consent of parents or guardians.

- For cancellation of illegal railroad taxes.

- For appointment of sheep inspectors.

- Amending the act authorizing counties to issue bonds to procure seed grain for needy farmers resident therein.

- Amending the school law.

- For the destruction of noxious weeds.

- Appropriating \$8,500 for compiling the State laws by a commission of three to be appointed by the Governor.

- Providing for bounty of not more than \$3 nor less than \$1 on wolf and coyote scalps.

- Providing bounty for the manufacture of potato starch.

- Providing for the burning of native (North Dakota) coal in the State institutions.

- Memorializing Congress for the retention of Fort Lincoln.

- Retransferring land granted for normal school to Elk Valley Farming Company.

- Constitutional amendment to increase the State debt limit.

- Designating Fargo Agricultural College as a recipient of congressional donations of land.

- Appending law authorizing counties to issue bonds for seed grain.

- Authorizing payment of portion of Territorial debt assumed by North Dakota.

- Directing the Scandinavian language to be taught in the university.

- Locating the blind asylum in Pembina County.

- Memorializing Congress for a law and appropriation for the establishment of a national scientific rain bureau and college at Washington.

- Appropriating \$53,000 for the support of the Penitentiary.

Education.—At the time of the admission of the State there were 35 graded and 1,366 ungraded, or a total of 1,401 common, graded, and high schools, besides the State University. The first superintendent's report after the admission gave the total number as 1,583. Sixty school-houses were built during the year, and the estimated value of school property was \$1,147,201.59. There were 2 sod, 40 log, 2 stone, 20 brick, and 1,392 frame school-houses, with a total seating capacity of 48,105. The number of children of school age was 37,472; the whole number enrolled 30,821, with an average daily attendance of 17,546. The average number of days taught was 103, the average cost per month for each pupil enrolled \$3.31. Fifty districts had no school. The total number of teachers employed was 1,894; the total amount of teachers' salaries, \$320,551.72; the average wages per month of male teachers, \$38.97; of female, \$34.42.

Besides these, there were in independent districts in the cities and towns 4,722 pupils enrolled, with an average cost of \$4.79 a month to each, and a total number of 88 teachers, with average monthly salary to male teachers, \$63.33; and to female teachers, \$49.28. The value of school property in these districts is \$368,400, and the amount of indebtedness \$217,357.70. A total of thirty-one weeks of institutes were held. The Legislature of 1891 appropriated \$300 for a library for the State Superintendent.

At the close of 1891 the number of schools in operation was estimated at 1,764, with a school population of 45,439.

The normal schools at Valley City and Mayville, which have been supported by voluntary gifts from citizens, received appropriations from the Legislature after considerable opposition.

The State University, at Grand Forks, completed its seventh year in June, 1891. It has 6 professors, including the president, and 4 instructors, including the United States military officer, and at the last annual report had 110 students. At the opening of the new term in January, 1892, a total of 175 students was reported. It has a three years' preparatory course, and a four years' normal course, besides four years' courses each in arts, science, and letters. The Legislature appropriated \$60,700 to this institution.

The Agricultural College, at Fargo, has been supported by the Government appropriations for agricultural experiment stations and colleges, but the Legislature of 1891 appropriated \$25,000 for its use.

Several denominational and private colleges and academies have been established and are in operation; among them are the Congregational College at Fargo, the Presbyterian College at Jamestown, Rolla University, and others. The last-named, which is non-sectarian, opened in January, 1889, with 30 students in the academic department, and 7 were matriculated into the

collegiate course. Its revenue is derived from tuition fees and voluntary subscriptions.

The Valley City Normal School will have a new building in the spring to cost \$20,000. Increased attendance is reported. The Mayville normal school also received an appropriation.

Charities.—One hundred and fifteen thousand and one hundred and fifty dollars was appropriated by the Legislature for the insane asylum; \$16,400 for maintenance of the deaf and dumb school, and \$10,000 for a building; \$10,000 to the Soldiers' Home, at Lisbon.

Militia.—The sum of \$11,000 a year for two years was appropriated for the State militia.

Agriculture.—Unusually large crops were raised this year. Following are the figures published by the State Commissioner of Agriculture and Labor:

CROPS.	Acres.	Bushels.
Wheat.....	2,865,502	64,718,328
Oats.....	420,124	17,711,523
Barley.....	143,848	5,270,685
Flax.....	106,618	1,241,018
Rye.....	11,893	310,067
Kye.....	18,093	565,573
Corn.....	19,566	3,495,211
Potatoes.....		

Ninety-seven thousand five hundred and eight acres of millet and Hungarian yielded 225,459 tons, and 16,702 acres of other tame grasses 27,972 tons. The average yield of wheat per acre was 22½ bushels. In 1887 it was 17.

Attention has been directed for the past two years to the production of sugar beets. During the year the State Department of Agriculture furnished seed to more than 200 localities, covering practically every variety of soil and climate within the State, and from all these localities beets were furnished for analysis. The average of crystallizable sugar from the crop of 1890 in the Red river valley was 13.80 per cent., and in 1891 12.83 per cent.; the difference is attributed to the greater rainfall of 1891. This compares very favorably with the average sugar content of the beets grown in Germany in 1890, which was 12.2 per cent. It is believed, however, that other parts of the State have a soil better adapted to the production of sugar beets than that of the Red river valley, the soils farther west being lighter and dryer.

Of the 45,000,000 acres of land in the State, about three fourths is susceptible of profitable tillage, while less than 4,000,000 acres are under cultivation.

Live Stock.—The assessors' returns show the total number of horses to be 134,538; cattle, 260,663; mules and asses, 7,410; sheep, 231,355; hogs, 39,783; total, 673,794. The sheep industry has increased 430 per cent. in the past two years. The prices paid for sheep by farmers average \$3.50 to \$4 a head. The people of Stark and Morton Counties, according to a local paper, are offering free fuel and building sites for woolen mills.

Labor.—It is expected that the demand for farm laborers in 1892 will be unprecedentedly large. The President of the State Farmers' Alliance has issued a circular giving the prices that have been paid for farm work: Farm hands, \$20 to \$25 a month; day hands, \$1 to \$2.25 a day; thrashing, \$2 to \$2.25 a day;

thrashing wheat in the shock, 10 to 12 cents per bushel, everything furnished by the machine; thrashing wheat in the stack, 6 to 7 cents per bushel; teams, two-horse, \$3 to \$4 per day; plowing, per acre, \$1.50 to \$2.

Sale of School Lands.—These lands aggregate about 2,500,000 acres, and are forbidden by the Constitution to be sold at less than ten dollars an acre. About 30,000 acres were sold in 1891, at an average of more than \$19.50, giving to the permanent school fund nearly \$600,000, of which \$115,000 was paid in cash, and the rest is to be paid in installments, and draws 6 per cent. interest. Seventy thousand acres will be offered for sale in March. They are in the Red river valley counties and contiguous to lands that yielded 25 bushels of wheat to the acre at the last harvest.

Land Titles.—A Supreme Court decision of great importance to some of the settlers of the northeastern part of the State was reported in a Washington dispatch of March 2, 1891:

The St. Vincent extension of the St. Paul, Minneapolis and Manitoba Railway, by the terms of its grant, laid claims to the lands on both sides of its constructed road between St. Cloud and St. Vincent. This extension, however, runs north from Fergus Falls, often at a distance of less than ten miles allowed by the grant, from the Red River of the North, the boundary line between Minnesota and North Dakota. Nevertheless, the company claimed the right to the full ten miles, notwithstanding the fact that it would include large tracts of land across the river and within North Dakota. This claim was disallowed by the Interior Department on the ground that, as the railroad was built wholly within the limits of Minnesota, it could not properly claim lands lying within a neighboring State. The Supreme Court, however, subsequently, in the case of this company against Phillips, wholly disregarded the boundary limits of the State, and thus recognized the right in the company to such lands within North Dakota as lie within the extended limits, free from claim, at the date of the definite location of the road—Dec. 19, 1871. The ruling in that case will govern in the present case. No grant, up to the time of the Phillips decision, has been recognized in North Dakota, the Government has disposed of and patented large tracts of these lands which, under this decision, must be held to have inured to the company. These lands include parts of Fargo and Grand Forks and other important towns and settlements. The court in the decision referred to, further held that it was no defense to the action that the lands involved would include thriving towns and villages, and that the company was not in lache in not bringing suit earlier. Application had been made by the railroad to secure adjustment limits of its grant within North Dakota, and, until such adjustment has been made, no reliable estimate of the amount of land involved can be made. In cases where patents have been issued, the matter is now beyond the jurisdiction of the Government, and the company must assert its claim through courts. The Senate resolution adopted Saturday directs the Secretary of the Interior to negotiate with the railroad company with a view of securing its consent to make selections of other public lands in lieu of those lands in North Dakota. The decision rendered to-day by the Supreme Court in the matter of overlapping the granted lands between this company and the Northern Pacific company, has practically rendered it impossible to satisfy the grant to the Manitoba company within its limits. If negotiation and settlement is possible, therefore, it will likely be in line of the Senate resolution, namely, by agreement with the company by which it would take lands outside its limits. It has been suggested that the company

might accept a settlement on cash basis. Persons conversant with cases of similar character express an opinion that the Government will hardly permit persons holding its patent to their homes to be enjoined after twenty years' residence until all measures for their relief have failed.

Tax Decision.—An important decision was lately rendered in the Supreme Court in reference to tax sales :

The Stutsman County tax case has been before the courts for several years, and involved the question as to whether a purchaser of a tax certificate from a county, at the Treasurer's annual sale, should be reimbursed by the county in case it should turn out that his certificate was void; whether he should receive from the county the money he put in for the invalid certificate and the additional usurious interest allowed in this class of cases by the laws of the Commonwealth. The case first came before the old Territorial Supreme Court, and that tribunal decided that if a person purchased a certificate from the county, the county was liable to the purchaser for the face of the document and 30 per cent. interest annually thereon. From this order Stutsman County appealed. Since stathood the State Supreme Court in the case of *Tyler vs. Cass County* has had the precise question before it, and in an elaborate and exhaustive opinion by Justice Bartholomew took the opposite position—that the rule of *caveat emptor* applied—that the legal maxim that "he who purchased must beware"—was in full force in tax-sale proceedings, and the State court accordingly ruled that the purchaser of a certificate that was afterward declared invalid lost his money invested. On the correctness of this decision many a lawyer and the bar of the State have differed. But a decision has been rendered by the last court known in the jurisprudence of the United States, and they have declared that the views taken in the opinion by Justice Bartholomew are the right ones; that where a person invests his money in an enterprise that under guise of law gives a rate of interest unknown to any legitimate business, and it is afterward declared wrongfully invested, he loses it. The case involved about \$85,000.

NOVA SCOTIA, with one exception, the smallest of the Canadian provinces; area, 20,907 square miles; population, by the census of 1891, 450,523, an average of 22 to the square mile, more dense than that of any other province except Prince Edward Island. It consists of the peninsula of Nova Scotia proper and the island of Cape Breton. Halifax, the capital, with its military garrison, is in population the fourth city of the Dominion. It is the principal naval station of the British North American and West Indian fleet; is the only garrison town in the Dominion of Canada of which Great Britain still retains actual military possession, and is one of the most effectively fortified posts in the world.

Mines and Minerals.—For its extent, Nova Scotia presents great diversities of geological formation as of mineral resources. If we draw a line upon the map of its peninsular portion, from the most southeastern point on the shore of Chedabucto Bay, nearly due west to about the head of St. Mary's Bay, in Digby County, the tract of country between this line and the Atlantic Ocean will be over sixty miles in width in the most western part of the province, while it narrows almost to a point as we proceed eastward to Canso. This comparatively large district is auriferous throughout. The northern and larger portion of Cumberland, a large part of southern Colchester, all northern Hants, northern Pictou,

southeastern Antigonish, western and southern Inverness, western Richmond, the whole eastern section of Cape Breton County, and southern Victoria belong to the carboniferous formation; and a large proportion of these extensive tracts consists of productive coal-measures. The trap rocks of the new red-sandstone district abound in native gems. Gold mining began in Nova Scotia about 1862, the auriferous area being supposed to be much smaller than it has eventually proved. Since then it has been shown by compilations from sworn official returns that, taken throughout, the Nova Scotian auriferous quartz has yielded more gold per ton than that of any other gold-producing country; that the average net yield of gold per day's labor was higher than that in any other country; and that the purity and unalloyed character of the gold was unsurpassed by any other gold-mining region, and only equaled by that of the Ural mountains, Russia. The Nova Scotian auriferous ores are therefore exceptionally easy of treatment. The twenty mining districts exploited are widely scattered over the auriferous district, and their average product is nearly the same. The total quantity of gold mined from 1862 to 1890, inclusive, was 506.675 ounces. This, at the average rate at which Nova Scotian gold has been selling in London, is in value about \$10,133,501. The gold product for 1890 was 24,358 ounces, being equivalent to \$487,254.04. Silver, native and in carbonates and sulphides, is most frequently found in the later metamorphic formations, but also in the limestones of the lower carboniferous age. Argentiferous ores of a promising character are found at Smithfield, in southern Colchester. Galena has been found about the head waters of the Gold and La Have rivers, Lunenburg County, which gave 100 ounces of silver to the ton. In Cape Breton, one quartz vein, fifteen inches thick, afforded 39½ ounces of silver to the ton. Galena is in Nova Scotia widely scattered and in rocks of every age. In Gay's River settlement, Halifax County, it is found in crystals disseminated through the limestone drift. In Pembroke, Colchester County, it is found in like formation, extending over several miles of country. It is also found at Musquodouoit, Caledonia, Victoria County, and near Sydney, Arichat, and Port Hood, and at various other points. These afford a percentage of from 70 to 150 per cent. per ton of lead.

Tin has been discovered in Shelburne County, associated with decomposed granite; also at Tangier, Halifax County, and Country Harbor, Guysborough County.

The iron deposits of Nova Scotia, considered with reference to their number, extent, and quality of ores, are immense. On the south of the Annapolis valley there is a belt of Devonian strata from three to five miles in width, and extending eastwardly and westwardly about sixty miles, being nearly equally divided by an intruded mass of granite. The western of these divisions contains what are known as the Clementsport iron deposits; the eastern, as those of Nietan. At Clementsport two beds have been opened, the uppermost of which varies from two to four feet in thickness, and consists of metamorphosed specular ore, yielding about 33

per cent. of metallic iron. The lower bed shows one thickness of three feet and another of three and a half feet. This ore is magnetite, and yields 48 per cent. of metallic iron. Indications of the continuation of these beds may be seen from ten to twelve miles in the direction of their strike. Upon the Nictan river several distinct and parallel beds are found of similar ore—magnetites and hematites—varying from four to twelve feet in width, and extending east and west for some twenty miles. These ores yield from 53 to 59 per cent of metallic iron. Bog ores of superior quality abound in the same vicinity. The best known of the Nova Scotian iron deposits is that of Londonderry or the Acadian mines in Colchester County. The deposit being worked consists of a vein stone of ankerite, varying in width from 30 feet to 150 feet, the ore proper being for the most part limonite, but also containing considerable quantities of micaceous hematite, the whole giving 57.85 per cent. of metallic iron. The iron produced by the Londonderry mines is said to be the very best for steel making. At the Acadian mines 40,486 tons of iron were produced in 1890. At Brookfield, near Truro, there is a deposit of limonite and hematite believed to be even more extensive than that of Londonderry. At Old Barns, near Truro, are rich beds of limonite and specular ore. The iron deposits of Pictou County are believed to be more extensive than those of any other district in the province. Analyses show the following returns from the several species of ore there found: Limonite, from 56 to 65; hematite, from 43 to 45; and specular ore, from 64 to 68 per cent. of metallic iron. Immense but as yet undeveloped deposits are also found in the island of Cape Breton, at Big Pond, near the great Bras d'Or, George's River, Whycomah, East Bay, and elsewhere, all on the verge of safe, navigable water and near to coal mines, the ores from which average some 60 per cent. of metallic iron.

Copper ores have been found widely disseminated throughout Nova Scotia, occurring in rocks of every geological age. Lumps and grains of virgin copper and streaks and pockets of different varieties of cupriferous ore have been found in considerable quantity through the trap of the new red-sandstone period, and small veins and nests of the sulphite and green carbonate of copper, yielding as high as 74 per cent. of metallic copper, occur at numerous points in the coal measures of Cumberland, Colchester, and Pictou, and elsewhere. At Polson's Lake, Guysborough, Cheticamp, Inverness, and Coxheath, Cape Breton, large and rich deposits of cupriferous ore are found.

The coal deposits of Nova Scotia, so far as known, are all bituminous. The most eastern of these fields covers the eastern part of Cape Breton County, with a corner of Victoria, and comprises about 200 square miles. Within this space mining operations have been carried on upon nine different coal beds, varying in thickness from three to twelve feet. The estimate of available coal of the beds opened for working is 212,000,000 tons. These coal beds dip beneath the sea, and the available coal product from the submarine beds alone has been cautiously estimated at 2,000,000,000 tons. Nearly the whole

gulf coast of Inverness County presents workable beds of coal. The Pictou coal field comprises a superficial area of about 35 square miles, but the thickness of coal within this comparatively small basin is great. The coal beds may be considered as divided into two groups—upper and lower. In the upper group, within a thickness of 2,450 feet of strata, there are seven available coal seams. The lower group consists of nine beds. The carboniferous area of southern Colchester and northern Hants remain, in a great measure, unexplored. Exclusive of these districts, the total area of the productive coal measures of Nova Scotia has been estimated at 685 square miles.

The total output of coal in the province for 1890 was 1,786,111 tons, and 31,296,172 tons in all have been produced from these mines since they were opened.

The royalty payable to the provincial revenue is, for gold, 2 per cent.; for coal, nine tenths and seven tenths of a cent per ton of 2,240 pounds; three cents for every ton (of 2,000 pounds) of iron ore; ten cents on every ton (2,000 pounds) of copper ore; and 5 per cent. on the value of silver, lead, and tin. All other minerals are without royalty, and belong to the owners of the soil where found. Rich deposits of antimony are found at Rawdon, Hants County; manganese of superior quality in the same county; barytes in great abundance in Brookfield and Five Islands, Colchester; molybdenite in quantity in Cape Breton; and the grindstones of the Jaggins shore, in Cumberland, have acquired a world-wide fame. Gypsum, limestone, molding sand, and building stone in the form of diversified granites, freestones, and marble abound.

Marine and Fisheries.—Taken as an individual nation, Canada ranks as the third of ship-owners, being only surpassed in this respect by Great Britain and the German Empire. An aggregate for the Dominion of Canada, on the registry books, on the 31st of December, 1890, gives a net tonnage of 1,024,974. To that aggregate Nova Scotia contributed no less than 464,194 tons, being considerably over one third of the whole Dominion tonnage. In the same year (1890) the number of new vessels built in Nova Scotia was 150, tonnage 33,907, as against 285 vessels of 52,378 tons for the whole Dominion. The total value of these new vessels, at \$45 per ton, would be \$2,357,010. The sea fisheries of Canada, on the coasts of Nova Scotia, New Brunswick, Prince Edward Island, Quebec, and British Columbia, are among the richest in the world; while the fresh-water fisheries of the great lakes and rivers of the country are nowhere to be surpassed. The total value of the fisheries of Canada for the year 1890 was \$17,714,902; and to this aggregate Nova Scotia alone contributed \$6,636,445, being considerably over one third of the total catch. The number of vessels and boats employed by the latter province in the fisheries of 1890 was 14,290; value, \$1,733,071; number of men, 27,684; nets, 3,130,394 fathoms, valued at \$763,160; other fishing material valued at \$747,080. Nova Scotia has been sometimes misrepresented as a sterile country. It is a real misrepresentation. It may be stated in general terms that the province does not grow all the wheat that it eats, but, never-

theless, it grows cereals equivalent to all the food of that class consumed by the people. It is noted as a grazing country, and it is celebrated for its hardy fruits—as apples, pears, plums, and cherries—having repeatedly won the highest prizes at fruit exhibitions, both in North Amer-

ica and in England. A member of the Dominion Parliament recently, playfully but truthfully, remarked in the House of Commons that in the blooming season he could, in the Annapolis valley, drive without interruption for over a hundred miles under the apple blossoms.

O

OAH SPE (pronounced ho-as'pe), a book that professes to have been produced through divine inspiration. Its writer was Dr. John B. Newbrough, who was born in Edinburgh, Scotland, about 1825, practiced dentistry for many years in New York city, and died there April 23, 1891. He was a believer in spiritualism, and in accordance with his interpretation of that belief he abstained for seven years from animal food, made frequent fasts, and spent much time in prayer and meditation. Finally he believed he was spiritually directed to obtain a type-writer, which he did, and for an hour at sunrise each day he seated himself before it and struck the keys as the supposed spirit inspired him. At the same time he was told not to read what he had written. After a time he was told to "read and publish," and he found he had produced this book. He had given away all his property, but in some mysterious manner \$10,000 came to him for the expenses of publication, and in 1882 the book was printed and issued. The full title is: "Oahspe; a New Bible in the Words of Jehovih, and his Angel Embassadors. A Sacred History of the Dominions of the Higher and Lower Heavens on the Earth for the Past Twenty-four Thousand Years; being from the Submersion of the Continent of Pan in the Pacific Ocean, commonly called the Flood, or Deluge, to the Kosmon Era. Also a Brief History of the Preceding Fifty-five Thousand Years, together with a Synopsis of the Cosmogony of the Universe; the Creation of Planets; the Creation of Man; the Unseen Worlds; the Labor and Glory of Gods and Goddesses in the Etherian Heavens; with the New Commandments of Jehovih to Man of the Present Day. With Revelations from the Second Resurrection, formed in Words in the Thirty-third Year of the Kosmon Era."

Oahspe teaches that there is one Supreme Being, whom it calls Jehovih. It condemns all war and the eating of animal food. It declares that there is a sunken continent in the Pacific Ocean, which proves the origin of the story of the flood, and predicts that all present religious systems will be superseded by the religion taught in Oahspe, whose followers shall be called Faithists. They will be anti-warriors, non-flesh-eaters, and instead of preaching religion will practice it, working for others and not themselves. The present systems of government and social order will be abrogated. Co-operation will take the place of competition, and wealth and poverty will be superseded by universal comfort and content. In the words of the preface, Oahspe is intended to mark "the beginning of the new or Kosmon Era and Kosmon Church, without any creeds or worshipful gods, lords, saviours, priests, or preachers, but in which all

people shall worship the Great I Am, Jehovih." Its length is about equal to that of the Old Testament. It is divided into thirty-six books, the titles of some of them being: "Book of Jehovih," "Book of Sethanes, Son of Jehovih," "The Lord's First Book," "Book of Fragapatti, Son of Jehovih," "Book of Cpenta-Armij, Daughter of Jehovih," "Book of the Arc of Bon," "Book of Jehovih's Kingdom on Earth," and "Book of Discipline." It contains many new and original words, some of which are: "Adu," death; "Beast," the animal man; "Che'ba," the desire that comes of inspiration; "C'Vorkum," the roadway of the solar phalanx; "Emun," choking atmosphere; "Es'enauers," heavenly musicians; "Hada," atmosphere; "Hii-dan," highest light; "Isaah," a Chinese prophet; "Scpe-oke," a spirit house; "Schood of Hein," a negative place; "Homa," refreshing perfumes. It is divided into verses, like the Bible.

The following passages will give a fair idea of the style and contents of the book:

Unto Thee will I acknowledge my iniquities; I can hide nothing from the eye of my Creator. Hear me, then, O Father!

I took up arms against my brother. With great armies I encompassed him about to despoil him.

His widows and orphans I multiplied by the stroke of my sword. To my captains and generals who showed great skill in killing I built monuments in stone and iron. Yea, I inscribed them from top to bottom with their bloody victories.

To my colonels and generals I gave badges of gold. I called to the damsels, saying: "Come, a great honor I give to you: ye shall dance with the officers of death." I covered the earth over with drunkards and widows and orphans; to beggary I reduced them, but I whetted their pride by saying, Behold what great standing armies we have. Such is the voice of man, O Jehovih! In all the nations of the earth this voice riseth up to thee. As thou spakest to Zarathustra, and to Abraham, and to Moses, leading them forth out of darkness, O speak thou, Jehovih! Man hath faith in thee only; thou alone wast sufficient in the olden time; to-day thou alone are sufficient unto thine own creation. Speak thou, O Jehovih.

Thou, O Jehovih! As thou hast declared thyself in the Book of Jehovih!

To thee I covenant myself, to be thine forever! And to thee only, O Jehovih.

And I abjure all gods but thee. And I abjure all lords but thee. And I abjure all saviours but thee. My corporeal body I dedicate and covenant unto thee, to be in thy service during all my life. My spirit I also dedicate and covenant unto thee, to be in thy service forever. My mind and soul I dedicate to thee, to be in thy service henceforth and forever. I will search to find the highest Light, and I will practice the same toward all men, women, and children. Unto them will I not only do as I would be done by, but more; I will do for them with all my wisdom and strength, all my life.

OBITUARIES, AMERICAN. **Abbott, Emma** (Mrs. WETHERELL), singer, born in Chicago, Ill., about 1860; died in Salt Lake City, Utah, Jan. 5, 1891. She developed a talent for music at an early age, and was taught to sing and play the guitar by her father, who had settled in Peoria, Ill., as a music teacher. While singing in a parlor entertainment in Toledo, Ohio, in 1870, she attracted the attention of Clara Louise Kellogg, who induced the father to allow her to bring Emma to New York and give her a musical training. Through Miss Kellogg's influence, the young singer obtained an engagement as principal soprano in the choir of the Rev. Dr. Chapin's church. There her ability, enthusiasm, and modesty led the congregation to make up a purse of \$10,000 to enable her to continue musical study in Europe. In 1872 she went abroad; studied singing and dramatic action in Paris and Milan; was befriended by the Baroness Solomon de Rothschild, when she became ill and lost her voice; and was married secretly to Eugene Wetherell, the custodian of her New York funds. Her first engagement was with Ernest Guy, in London, in "The Daughter of the Regiment." Her refusal to sing in "La Traviata" led to a famous operatic sensation and delighted her American benefactors. From her second season her financial success was unbroken, and she appeared before crowded houses in the principal cities of the United States and Europe up to the time of her fatal illness. Her most popular parts were in the operas "Paul and Virginia," "Norma," "Semiramide," "Fra Diavolo," "King for a Day," "The Mascotte," "The Mikado," "Romeo and Juliet," "Pinafore," "The Gondoliers," "Lucia di Lammermoor," and "The Three Cavaliers." She survived her husband two years, and left an estate valued at nearly \$500,000. Her will directed her executors to invest \$200,000 for the benefit of her father and mother; to pay about \$150,000 to specified relatives and friends; and \$5,000 each to eight specified churches, which she had attended at various times; and to distribute the residue of her estate between eight charitable institutions in various parts of the country and two lady friends.

Abbott, Josiah Gardner, jurist, born in Chelmsford, Mass., Nov. 1, 1815; died in Wellesley Hills, Mass., June 2, 1891. He was fitted for college by Ralph Waldo Emerson, was graduated at Harvard in 1832, and was admitted to the bar in 1835. The year of his majority he entered political life as a Representative in the State Legislature, and in 1841-'42 he was a member of the State Senate, where he served first as a member and in his second term as chairman of the committees on Railroads and on the Judiciary. In 1844 he was elected a delegate to the National Democratic Convention, and from that time till his death he attended every national convention of his party excepting two, and was almost invariably chosen chairman of the Massachusetts delegation. He served on Gov. Morton's staff, was a member of the State Constitutional Convention in 1853, and was judge of the Superior Court of Massachusetts for Suffolk County, with chambers in Boston, from the establishment of the court in 1855 till its abolition in 1859. In 1874 he was Democratic candidate for Congress in the 4th Massachusetts District. He received 6,429 votes, against 5,717 for Rufus S. Frost, Republican. The certificate of election was given to Mr. Frost, but Judge Abbott contested the seat, and the House of Representatives awarded it to him in July, 1876. He served on the committees on Public Buildings and Grounds, and on the Elections in South Carolina; was conspicuous in the legislation that resulted in the establishment of the Electoral Commission; and was appointed one of the three Democratic members of it on the part of the House in 1877. In 1875 and 1877 he was the unsuccessful Democratic candidate for United States Senator, and in 1878 for Governor.

Adler, Samuel, clergyman, born in Worms, Germany, Dec. 3, 1809; died in New York city, June 9, 1891. He was trained in Hebrew and the rabbinic literature

by his father, who was a rabbi. He studied at the Rabbinic High School in Frankfort, and from 1831 till 1836, he was a student of philosophy and Oriental languages at the universities of Bonn and Giessen. In the spring of 1836 he was appointed minister to the congregation in his native city. He remained there till 1842, when he became rabbi of the town and circuit of Alzey. Slowly at first, then with increased and growing decision, he identified himself with the principles of the reformatory movement in Judaism, and soon became a leader. As such he took part in the three great conventions of rabbis, held in Brunswick, Frankfort, and Breslau, in 1844-'46. In the autumn of 1856 he became rabbi of the Temple Emanu El, in New York city. He was installed in the following spring, and labored till August, 1874, when he retired from active service, and was made rabbi emeritus. During his active career he was recognized as one of the most learned, progressive, and liberal of modern Jews. He was opposed to human slavery in every form, vigorously supported the Federal Government throughout the civil war, enjoyed the friendship and confidence of President Lincoln, and welcomed Major Anderson to his synagogue after the fall of Fort Sumter by pronouncing over him the ancient priestly blessing of the Hebrews. Dr. Adler was the father of Prof. Felix Adler, founder of the Society of Ethical Culture.

Alcock, Thomas, manufacturer, born in Birmingham, England, in 1814; died in New York city, Dec. 27, 1891. In 1845 he came to New York city and opened a drug store under the Astor House, and in 1847 invented the porous plaster that bears his name. He applied himself closely to his drug and manufacturing business till the beginning of the civil war, when he entered the national army and was appointed assistant adjutant-general on the staff of Gen. Yates. While in charge of the Elm Street recruiting office, he aided in organizing the 4th New York Heavy Artillery, and went to the front with it as major. He took part in nineteen battles, was wounded at Ream's Station, and was promoted brigadier-general for gallantry in action. After the war he resumed his business in New York city.

Allen, William, jurist, born in Brunswick, Me., March 31, 1822; died in Northampton, Mass., June 4, 1891. He was a son of the Rev. William Allen, who was President of Dartmouth College in 1816 and of Bowdoin College in 1819. In 1839 he removed with his parents to Northampton, where he resided until his death. He was educated at Phillips Academy, Bowdoin College, and Amherst College, being graduated at the latter in 1842, and then studied law at Yale, where he was graduated in 1844. In the following year he was admitted to the bar. Early in life he was an active Free-soiler, but after beginning his professional career he applied himself to it wholly, and was never conspicuous in political life. He was appointed by Gov. Washburn a judge of the Superior Court of Massachusetts in 1872, and Gov. Long promoted him to be a justice of the Supreme Court in 1880. The latter office he held until his death. Judge Allen was one of the five judges who sat on the famous Andover heresy case.

Allen, William, philanthropist, born in Windham, Conn., May 23, 1810; died in Columbus, Ohio, Nov. 29, 1891. In early life he accompanied his parents to Rhode Island, where he received a limited education, learned the tailor's trade, and for a time was editor of "The Rhode Islander." In 1829 he removed to Columbus, Ohio, where for several years he was editor of "The Ohio State Journal," and passed from that paper to "The Cincinnati Gazette," with which he was also long connected. Subsequently he bought a farm in Sharon, and retired from journalism. More than fifty years ago he began agitating for the passage of a national law giving to every actual new settler in the West a homestead of 100 acres. He traveled all over the country, lecturing on the scheme, explaining it in newspapers, and urging on legislatures their support and co-operation. He defrayed all his expenses,

spending about \$60,000 in perfecting his plans and making them known, and in 1863 found his reward in the adoption by Congress of the present national homestead law. But his efforts impoverished him; he lost, piece by piece, all his property. He was too proud to avail himself of the great result of his persistent labors, was permitted to spend several years as a common beggar, and on Sept. 30, homeless, friendless, "Land-bill Allen" was sent to the Franklin County Infirmary, where he lived scarcely two months. From July 1, 1865, till June 30, 1890, the number of grants of public land under the homestead law aggregated 122,008,887 acres, and in the single year before his death 5,531,678 acres.

Angle, James Lansing, jurist, born in Henrietta, Monroe County, N. Y., Dec. 19, 1818; died in Greece, N. Y., May 4, 1891. He received an academical education, studied law, and was admitted to the bar in Rochester, N. Y., in 1845; was clerk of the Board of Supervisors of Monroe County in 1850-'51; member of the Assembly in 1854; city attorney in 1857; and chairman of the Board of Supervisors in 1863-'65. On Dec. 22, 1877, he was appointed by Gov. Robinson a justice of the Supreme Court of New York to fill a vacancy, and in 1883 he was elected for a full term, and served until his retirement, on account of having reached the constitutional limit of age, Jan. 1, 1889. He was a Democrat in politics, and was several times an unsuccessful candidate for Congress and for the bench of the Supreme Court of the State.

Appleton, John, jurist, born in New Ipswich, N. H., July 12, 1804; died in Bangor, Me., Feb. 7, 1891. He was graduated at Bowdoin College in 1822, studied law, and entered into partnership with Elisha Allen, afterward chief justice of Hawaii and minister resident of that kingdom at Washington. In 1852 he was appointed a justice of the Supreme Court of Maine, in 1862 was chosen chief justice, and in 1869 and 1876 was reappointed justice. He retired from the bench in 1883, and engaged in private practice till 1885, when the infirmities of age caused him to retire. He was one of the most eminent jurists in the State; as reporter of decisions he compiled two volumes of "Maine Reports" (Bangor, 1841); and he was the author of "Appleton on Evidence" (1860). Many important statutory changes in the laws of evidence and other branches of jurisprudence resulted from his efforts.

Artell, Samuel B., jurist, born in Franklin County, Ohio, Oct. 14, 1819; died in Morristown, N. J., Aug. 6, 1891. He was educated at Oberlin and Western Reserve Colleges, studied law, and removed to California in 1851. Three years afterward he became prosecuting attorney of Amador County. In 1867 and 1869 he was elected to Congress from the 1st California District as a Democrat, and served on the committees on Agriculture and on the Pacific Railroad. Under President Grant he became Governor of Utah Territory in 1874, and under President Hayes he was transferred to New Mexico. In 1882 he was appointed chief justice of the Supreme Court of New Mexico, and he held the office till 1885, when he resigned and engaged in practice in Santa Fé.

Balestier, Wolcott, author, born in Rochester, N. Y., Dec. 13, 1861; died in Dresden, Germany, Dec. 6, 1891. He was educated at Cornell University and the University of Virginia, was engaged in journalism in Rochester for a short time, and wrote his first story in 1884. After settling in New York city, he became connected with the Astor Library, editor of "Tid Bits," a humorous weekly publication, the name of which he changed to "Time," and, in 1888, the London agent for the Lovell publishing house. In 1889 he entered the publishing business on his own account as junior member of the firm of Heinemann & Balestier, of London and Leipzig, publishers of "The Review of Reviews" in London and of the "English Library," a rival of the Tauchnitz, on the Continent. He was a writer of much promise and popularity. His publications include "A Patent Philtre" (1884); "A Fair Device" (1884); a cam-

paign life of James G. Blaine (1884); "A Victorious Defeat" (1886); "A Common Story" (1891); and, in conjunction with Rudyard Kipling, a serial novel, "The Naulahka," published in the "Century" magazine (1891-'92). He had also completed a novel, "Benefits forgot," and a short story, "Reffey," both of which were announced for publication in the "Century" during 1892. Erasmus Peshine Smith, the writer on political economy and international law, was Mr. Balestier's maternal grandfather.

Barvard, John, painter, born in New York city, in November, 1814; died in Watertown, S. Dak., May 16, 1891. He showed a strong taste for drawing and painting at an early age, but was without means to take lessons. When he was about fifteen years old his father died, and he removed to Louisville, Ky., where he obtained employment in a drug store. All his leisure was applied to unaided art practice, and after a year's service in the drug store he ventured to open a studio. He worked with much care and energy, producing numerous pictures of varied character, but was not successful in selling them. He then determined to make a living by exhibiting his works, and fitted up a flatboat with which to make an art voyage down the Mississippi. In this fashion he visited many cities and towns along the river, exhibiting his paintings on his boat. While pursuing this course he conceived the idea of painting in panoramic form the entire Mississippi river. While preparing for this work he painted a panorama of Venice without having seen that city, and successfully exhibited it in the West till he lost it by the sinking of a steamboat. After losing what money he had saved in the museum business in St. Louis, he began, in 1840, his famous panorama, projected to be the largest painting in the world. He made the journey down the river in an open boat, and alone. His rifle supplied him with food a part of the time, and the proceeds of exhibitions of his work as it progressed supplied the remaining necessities. A year was spent in this way, and he then returned to Louisville to complete his work. When finished and ready for exhibition, it covered three miles of canvas. The rivermen, who had been his fast friends, advertised the wonderful feat far and wide, and the panorama was exhibited in the large cities of the United States and of Europe, and privately before Queen Victoria at Windsor Castle. While exhibiting he painted the striking scenery of the places visited, and after completing a tour of Europe he traveled extensively in Asia and Africa, and produced two other panoramas—"Pictures and Poetry of Palestine"—and a series of three paintings, "First Battle-field of History," "The Siege of Jerusalem and Destruction of the Temple," and "The Ruins of Edom." Subsequently he exhibited and lectured on his panoramas in Wood's Museum, New York city. "The Orison," one of his paintings, is said to have been the original of the first chromo made in the United States. Mr. Barvard was the author of many poems, wrote several dramas, of which "Amasis" was produced in Boston in 1864, and "Carrinia" in New York city in 1875, and published "A Description of the Mississippi River," "A Pilgrimage to the Holy Land," "The Private Life of a King," and "A Tradition of the Temple." He is also credited with having suggested to Gen. John C. Frémont the passage of Island No. 10, in the Mississippi river, during the civil war, and with preparing plans to show how it could be accomplished by means of a canal and certain bayous.

Barker, Fordyce, physician, born in Wilton, Me., May 2, 1818; died in New York city, May 30, 1891. He was graduated at Bowdoin College in 1837, and, after studying medicine with Prof. Henry I. Bowditch, in Boston, at the Bowdoin Medical School in 1841, and practiced in Norwich, Conn., till 1844. He spent the winter of 1844-'45 studying in Paris, and then resumed practice in Norwich, making a specialty of obstetrics and diseases of women. In 1846 he was elected Professor of Midwifery in Bowdoin Medical School, in 1848 was President of the Connecticut Medical Soci-

ety, and in 1850 he removed to New York city. He was one of the incorporators of the New York Medical College; was appointed Obstetrical Surgeon to Bellevue Hospital in 1852, and held the office till 1874; was a member of the medical board of that hospital for thirty-five years; and became Professor of Clinical Midwifery in the medical college of the hospital in 1860. At subsequent periods he was also consulting physician to Bellevue, St. Elizabeth's, the Maternity, the Cancer, the Women's, and the Children's Hospitals. He had a large private practice. Among his numerous publications, his works on "Puerperal Diseases" and "On Seasickness" have been most widely translated. He was Vice-President of the International Medical Congress, held in London in 1881, and the first American President of the Anglo-American Society of Paris, France, in 1889. He bequeathed to the New York Academy of Medicine the greater part of his medical library.

Barnum, Phineas Taylor, showman, born in Bethel, Conn., July 5, 1810; died in Bridgeport, Conn., April 7, 1891. He received a district-school education, and was early distinguished for his quickness and accuracy in mathematics. For several years after leaving school he was engaged in mercantile and agency work. In 1835 he began his career as a showman, as he always delighted to call himself. His first venture was the exhibition of the famous Joyce Heth, a colored woman who claimed to be one hundred and sixty-one years old, and to have been the nurse of George Washington in his infancy. He had been hitherto but indifferently successful as a money maker in his various undertakings, but fortune now began to favor him, and after a series of exhibition tours he bought out several collections of wonders and curiosities and opened the American Museum in New York city in 1841. Three years afterward he went abroad with the celebrated dwarf, "Tom Thumb," with whom he gave entertainments at the English and at most of the Continental courts. In 1850 he introduced Jenny Lind to the American public, agreeing to pay her \$1,000 each for a long series of concerts, besides many personal expenses. In addition to many charity concerts she sang in ninety-five regular concerts, the total receipts of which were \$712,161.34, of which her net receipts were \$176,675.09, and Mr. Barnum's gross receipts, after paying the singer, were \$535,486.25. The marriage of Tom Thumb to Lavinia Warren, another dwarf, in Trinity Church, and the introduction to the public of Commodore Nutt and Admiral Dutt, two other dwarfs, the woolly horse, the What is It, and other specialties, added largely to his popularity. For some time he conducted a museum in Philadelphia in conjunction with the one in New York. He published several books, which had a large circulation, and delivered lectures on temperance and popular subjects before crowded houses. In 1865 the American Museum was destroyed by fire. He then organized another one farther up town, and continued his popular exhibition and lecture-room attractions till burned out a second time, a few years afterward. In 1871 he opened to the public "The Greatest Show on Earth," a combination of circus and menagerie, and to this, with vast accretions, he applied the remainder of his life. His later triumphs were the exhibitions of "Jumbo," the great elephant of the London Zoological Garden, and the sacred white elephant of Siam, and the transportation and exhibition in England of his entire show. Prior to the civil war Mr. Barnum was a Democrat, but he then joined the Republican party, and in 1865-'69 was a member of the Connecticut Legislature. In 1875 he was elected Mayor of Bridgeport, and in public improvements and gifts did much for the city. He gave \$500,000 before his death to the Bridgeport Scientific and the Fairfield County Historical Societies for the erection of their new building, and he also bequeathed handsome legacies to personal friends and to numerous literary, charitable, and religious bodies.

Barrett, Lawrence, actor, born of Irish parents in Paterson, N. J., April 4, 1838; died in New York city, March 21, 1891. At a very early age he displayed evidences of great intelligence, and his mother, a hard working woman, often carried him to school in her arms when he was too feeble to walk. He began life for himself in a dry-goods store, where he showed a taste for mimicry, and was fond of entertaining his fellow-clerks with imitations of the favorite actors of the day. His first theatrical employment was as call-

boy in a Detroit theatre, at a salary of \$2.50 a week. He kept his eyes and his ears open, and studiously watched all that was going on about him, spending every spare moment over a book or a play. Sticking upon nails on the floor of his miserable garret the ends of candles he had begged from the property-man, he spent whole nights in reading. His favorite book was an old dictionary, which he knew almost by heart, and, naturally enough, a love for philological studies distinguished him through life. At last, this earnest little boy with a preternaturally big head and bright, intelligent blue eyes attracted the attention of the manager, and, much to his joy, in 1853 he was given his first speaking part, that of Murad in "The French Spy." The character was very insignificant, but he put as much thought into it as if it had been Hamlet, and from that time his career as an actor began. In 1854 he went to Pittsburgh as a member of the Grand Opera House stock company, then under the management of Joseph Foster. For two years he played in the support of many of the leading actors and actresses of the day. His first appearance in New York was in the old Chambers Street Theatre, which had been abandoned by William E. Burton about a year before. The opening piece was "The Hunchback," Jan. 19, 1857, and he was Sir Thomas Clifford. During that engagement Mr. Barrett played many leading roles, among them Fazio, the Stranger, Armand, Ingomar, Claude Melnotte, and Lord Townley; and he made so favorable an impression that he soon had many offers for a next season's engagement. He accepted that of Mr. Burton as promising the greatest advantages, and on March 2, 1857, he began his work at Burton's Theatre (the Metropolitan, afterward Winter Garden), making his first appearance there as Matthew Bates in Douglas Jerrold's "Time Tries All." During the season at Burton's he first met Edwin Booth, and there the two young men began a friendship which ended only with Mr. Barrett's death. Totally unlike in nature, they seemed to supplement each other, and the relationship between them was constant and cordial. While at Burton's Mr. Barrett played Florizel to Burton's Autolycus, and Fagan to Charlotte Cushman's Nancy Sikes, and he acted often with Edwin Booth. In the autumn of 1858 he became a leading actor in the Boston Museum, where he opened as Frederick Bramble in the comedy of "The Poor Gentleman," in which Mr. Warren was Dr. Ollapod and W. H. Smith Sir Robert. During his two years at the Museum he played many characters and became an established favorite. From there he went to the Howard Athenaeum, where he supported during one season Charlotte Cushman, Barry Sullivan, James H. Hackett, Edwin L. Davenport, and Charles W. Couldock. Mr. Barrett enlisted in 1861, and served for some time as captain of Company B, of the 28th Massachusetts Volunteers. Returning North,

he joined the stock company of the old Walnut Street Theatre, Philadelphia, remaining there three months, thence he went to Washington, and at the close of his season in the latter city he joined the Chestnut Street Theatre Company, Philadelphia, and supported Booth, Davenport, and other stars.

Edwin Forrest was not playing during that winter, but he frequently went to the theatre and watched Barrett with great interest, often sending for him after the play to approve of certain lines which he considered well rendered. Mr. Booth now made him an offer to support him at Winter Garden, and while he was in New York, Lewis Baker proposed to him to enter into partnership in the management of the Varieties Theatre at New Orleans. After some hesitation, Mr. Barrett accepted, thinking it would give him an opportunity to play in the standard tragic dramas; the arrangement was perfected, and Mr. Barrett began the active management of the house in conjunction with Dan Setchell, having a prosperous season of thirty weeks in 1863-'64. His starring career may be said to have begun here, for he first appeared as Richelieu, Hamlet, and Shylock. At that time Lester Wallack was playing "Rosedale" with great success in New York. Barrett bought from the author the American provincial rights to the comedy, and when the Varieties was destroyed by fire he decided to set out on a starring trip, appearing as Elliot Grey at Pike's Opera House, in Cincinnati, in the autumn of 1864. In 1866 he went to England, and again in 1867, when he presented Hamlet for one week in Liverpool. On Feb. 17, 1868, he opened at Maguire's Opera House, San Francisco, where he played eleven weeks. While there he met William C. Ralston and other capitalists who agreed to build a magnificent theatre if he would undertake its management jointly with John McCullough. Mr. Barrett accepted their offer, and in 1868 he again crossed to England, returning in December, when he went overland to California, a very severe trip, during which he nearly lost his life. The California Theatre was opened under the management of Barrett and McCullough Jan. 18, 1869. After an unusual success of twenty months, he sold his half-interest to Mr. McCullough, and began starring again in 1870, opening on the 15th of August at Niblo's Garden. In January, 1871, Mr. Booth engaged him to play opposite characters in the great productions given in Booth's Theatre corner of 23rd Street and Sixth Avenue, New York. After sixteen weeks Mr. Booth withdrew, and Mr. Barrett prolonged the season with a great revival of Shakespeare's "A Winter's Tale," in which he appeared as Leontes. This was followed, June 5, 1871, by the first production in this country of "The Man o' Airlie," a play with which he was always closely identified. The Varieties Theatre had been rebuilt, Mr. Barrett accepted its management, and it was brilliantly opened on Dec. 4. This venture succeeded so well that he felt willing to leave his business in the hands of his subordinates and accept Mr. Booth's offer to act in "Julius Cæsar," which was presented at Booth's Theatre, Dec. 25, 1871, and ran nearly three months, although Mr. Barrett retired on Feb. 17, 1872. The cast included Edwin Booth as Brutus, Lawrence Barrett as Cassius, Frank C. Bangs as Mark Antony, and Miss Pateman as Portia. Mr. Barrett reappeared in New Orleans as Hamlet March 4, 1872. Although he was meanwhile obliged to assume the whole financial responsibility of the Varieties, he continued his starring tour in the autumn of 1872, retaining a five years' lease of the New Orleans house. The season there was disastrous, and the losses were over \$57,000, which it took him many years to pay. In 1873 he reappeared at the California Theatre, and in 1873-'74 he continued his tours, playing in the different States. A revival of "Julius Cæsar" was given at Booth's Theatre on Dec. 27, 1875, and lasted till April 8, 1876, in which Mr. Barrett appeared as Cassius to the Brutus of Edwin L. Davenport. Next he played "King Lear" and "Daniel Druce," which latter he presented at Booth's

Dec. 25, 1876. On Oct. 11, 1877, he produced at Cincinnati a play by William D. Howell's called "A Counterfeit Presentiment." His next important production was "Yorick's Love," translated from the Spanish by Mr. Howells, and given at the Park Theatre, New York, Dec. 20, 1880. He presented "Pendragon" at Chicago, Dec. 5, 1881. On Sept. 14 of the same year he bought out "Francesca da Rimini" at the Chestnut Street Theatre, Philadelphia, and he also presented this play at the Star Theatre, New York, and acted the part of the Hunchback, Lanciotto. During the season of 1883-'84 he appeared in Boston and the large cities of the Union, and on April 14, 1884, he began an engagement of seven weeks at the Lyceum Theatre, London. During the following seasons he was actively engaged throughout the United States, when he restored to the stage Brownings "A Blot in the Scutcheon," and was seen as Benedick, Don Felix, Alfred Evelyn, Raphael, David Garrick, Cardinal Wolsey, and kindred characters. At Buffalo, on Sept. 12, 1887, he began his first joint engagement with Edwin Booth, one of the most successful theatrical enterprises, not only in a financial, but in an artistic way, in the history of the drama in this country. They first appeared together in New York at the Academy of Music, Dec. 20, 1887, in "Julius Cæsar." The next year they appeared at the Fifth Avenue Theatre, bringing out "The Merchant of Venice" and "Othello." The following season the two actors separated, although Mr. Booth was still under Barrett's management. During that time Mr. Barrett brought out "Ganelon" in Chicago and other cities, but was obliged to give up playing on account of very poor health. Mr. Barrett's last production of a new play was "Guido Ferranti," by Oscar Wilde, which ran from Jan. 26 to Feb. 14, 1890, at the Broadway Theatre, New York. Mr. Barrett's last appearance was on March 18, 1891, at the same house, in the character of Adrian du Mauprat to the Richelieu of Mr. Booth. He was compelled by illness to retire at the end of the third act, and he died two days later at the Windsor Hotel. He was buried at Cohasset, Mass. Lawrence Barrett was a man of intellect, not of genius; he was a good actor, not a great one. He loved his art and respected it, and he won for himself the respect and esteem of every member of his profession with whom he came in contact. He was an admirable and a generous manager—he spent great sums of money in the wise and correct mounting of the tragedies he presented; and no man in his generation, in any land, has done so much for the stage in the way of encouraging dramatic authorship. His greatest part, perhaps, was that of Cassius; the most touching and tender, that of the Man o' Airlie. His Hamlet was vigorous, intelligent, and consistent. His Lanciotto, his Yorick, his Shylock, his Richelieu, his Grangoire, were the results of the closest study, and they were always effective and impressive. As he himself said of Edwin Forrest, "The actor is a sculptor who carves his image in snow; he leaves nothing but the memory of his work behind him." No printed words can give any idea of what Mr. Barrett was as an artist, and his manly and independent character, his uniform devotion to duty, his high sense of honor, his enthusiasm for his profession, his courtesy, his dignity, and his personal charm will live no longer than his art in the memory of men. His only lasting monument perhaps, will be his scholarly "Life of Edwin Forrest" (Boston, 1881) and his other published but scattered writings.

Barton, William B., theatrical manager, born in Woodbridge, N. J., in 1831; died in New York city, June 13, 1891. He was a graduate of the College of New Jersey; entered the national army in July, 1861, as lieutenant-colonel of the 48th New York Volunteers, which was recruited in Brooklyn; succeeded the Rev. James H. Perry as colonel on the death of the latter; distinguished himself especially in the battles around Richmond, in one of which he was shot through both lungs; and was mustered out of the service in Decem-

ber, 1864, with the rank of brigadier-general. After the close of the war he engaged in business in Pittsburgh, building the first street railroad and laying the first block pavement, till the failure of a bank forced him into bankruptcy. He then went to San Francisco, and in 1879 became manager of the California Theatre. While there he was the first manager in the country to produce "Fatiniza." After his first season, he managed a dramatic tour for Joseph K. Emmet and a lecture tour for Col. Robert G. Ingersoll, and then, returning to New York, was employed editorially on the "Mail and Express." Subsequently, in conjunction with L. E. Miles, he built the Bijou Theatre, where Henry E. Dixey had his long run with "Adonis," and managed the successful play "Lost in New York."

Battershall, Jesse Park, chemist, born in Troy, N. Y., May 26, 1851; died in Poughkeepsie, N. Y., Jan. 12, 1891. He pursued the study of chemistry in the School of Mines, Columbia College, and in Germany. In 1873 he received the degree of Doctor of Natural Sciences from the University of Tübingen, and afterward took a course of lectures with Prof. Marignac at Geneva. On returning to the United States he was employed for some time as an analytic and consulting chemist in New York city, and in 1879 he was appointed chemist at the United States Laboratory in New York, which office he held until his death. He translated Naquet's "Legal Chemistry" (New York, 1876), and was author of "Adulteration of Food and Drink" (New York, 1886) and of numerous contributions to scientific publications.

Beardsley, Eben Edward, clergyman, born in Stepney, Conn., in 1807; died in New Haven, Conn., Dec. 22, 1891. He was graduated at Washington (now Trinity) College, Hartford, in 1832; was ordained deacon in the Protestant Episcopal Church, Aug. 11, 1835, and priest, Oct. 24, 1836; was rector of St. Peter's Church, in Cheshire, in 1836-48; and was rector of St. Thomas's Church, New Haven, from 1848 until his death. Dr. Beardsley had been a deputy to the General Convention of his Church from Connecticut since 1869, a member of the standing committee in his own diocese since 1850, and President of the House of Clerical and Lay Deputies in the General Conventions of 1880 and 1883. His publications include "The History of the Episcopal Church in Connecticut from the Settlement of the Colony to the Death of Bishop Brownell in 1865" (2 vols., 1865-68); "The Life and Correspondence of Samuel Johnson, D. D., Missionary of the Church of England in Connecticut, and First President of Kings (now Columbia) College" (1874); "The Life and Times of William Samuel Johnson, First Senator in Congress from Connecticut and President of Columbia College" (1876); and "The Life and Correspondence of the Right Rev. Samuel Seabury, First Bishop of Connecticut and of the Episcopal Church in the United States" (1881). At the time of his death he was putting through the press a volume of his discourses.

Belcher, Nathan, manufacturer, born in Griswold, Conn., June 23, 1813; died in New London, Conn., June 3, 1891. He was graduated at Amherst College in 1832 and at the Cambridge Law School in 1835, was admitted to the bar in 1836, and practiced in Clinton, Conn., till 1846. He then relinquished his profession, removed to New London, and engaged in manufacturing. The same year he was elected to the State Legislature; in 1847 was re-elected; and in 1850 was elected to the State Senate. He was Democratic presidential elector-at-large in 1852, and member of Congress from the 3d Connecticut District in 1853-55.

Bennett, Charles Wesley, educator, born in East Bethany, N. Y., July 18, 1828; died in Evanston, Ill., April 17, 1891. He was graduated at Wesleyan University in 1852, studied archaeology and ecclesiastical history in Berlin University, was ordained a minister of the Methodist Episcopal Church in 1862, was principal of the Genesee Wesleyan Seminary in Lima, N. Y., in 1864-66, and made a tour of Europe and the East in 1866-69. In 1871 he became Professor of

History and Logic in Syracuse University; in 1872-73 he was art editor of "The Ladies' Repository," and subsequently of "The National Repository," and in 1885 he was elected Professor of Historical Theology in the Garrett Biblical Institute, where he remained until his death. Dr. Bennett was a prolific writer, and in 1887 made an extended tour in Europe, visiting many of the most important libraries and museums in the interest of his great literary life work, "Christian Art and Archaeology of the First Six Centuries." He edited the Methodist subjects in the revised edition of "The American Cyclopædia," and published a "Digest of the Laws and Resolutions of Congress relative to Pensions, Bounty-lands, Pay of the Army, etc." (1854); "History of the Philosophy of Pedagogies" (1877); and "National Education in Italy, France, Germany, England, and Wales" (1878).

Berry, James Romeyn, clergyman, born in Hackensack, N. J., in 1826; died in Asbury Park, N. J., June 5, 1891. He was a graduate of Rutgers College and of the New Brunswick Theological Seminary; and had held pastoral relations in Piermont and Fishkill, N. Y., in Jersey City and Montclair, N. J., and later in Rhinebeck, N. Y. For many years he was an earnest worker in the movement to bring about a union of the two branches of the Reformed Church in this country. At the time of his death he was attending the session of the Synod of the Reformed Church in America, and had just retired from the presidency of that body.

Bicknell, George Augustus, jurist, born in Philadelphia, Pa., Feb. 6, 1815; died in New Albany, Ind., April 11, 1891. He was graduated at the University of Pennsylvania, and in 1832 at the Yale Law School; was admitted to the bar in Albany, N. Y., in 1836; and, after practicing in New York city till 1846, removed to Scott County, Ind. In 1848 he was elected county prosecutor, in 1850 circuit prosecutor, and in 1862 judge of the 2d Judicial District. By re-elections he held the latter office till 1876, when he was elected member of Congress from the 3d Indiana District as a Democrat, and in 1878 he was re-elected. While in Congress he served as Chairman of the Committee on the Electoral Count, and as member of the Foreign Affairs and other committees. In 1881 he was appointed Commissioner of Appeals in the Supreme Court of Indiana, which office ceased with the completion of its work in 1885. Judge Bicknell was elected judge of the circuit court of Indiana in 1889, and held the office at the time of his death. During his vacations while on the bench he was Professor of Law in the State University from 1861 till 1870. He was the author of "Bicknell's Civil Practice" and "Bicknell's Criminal Practice."

Bigelow, Allen Gilman, journalist, born in Buffalo, N. Y., in 1854; died in Asheville, N. C., Aug. 8, 1891. When nineteen years old he began a promising literary career as a writer on the Buffalo "Bohemia," published by his brothers, from which he went to the Buffalo "Telegraph" as associate editor. Subsequently he was connected with the Buffalo "Express" and the Lockport "Journal." While engaged in journalism, he became a contributor to "Golden Days," "St. Nicholas," "The Atlantic Monthly," "The North American Review," and other periodicals, and wrote many poems. He was also a musician of much natural ability.

Bigelow, Robert B., manufacturer, born in North Haven, Conn., May 16, 1834; died in New Haven, Conn., Oct. 12, 1891. He received an academical education, removed to New Haven, and was apprenticed to the machinist's trade in 1851. Entering the machine shops of Ives and Smith, he was successively journeyman, foreman, and proprietor. In 1861 in association with Henry Bushnell, inventor of the compressed-air motor, he took a Government contract for supplying gun parts for 800,000 Springfield muskets, on which he was engaged three years, with a force of 200 men. In 1867 the increase of business caused a removal of his works to Grapevine Point. In politics he was always a Republican. He was appointed by the Com.

mon Council of New Haven a member of the Board of Supervisors in 1872, and by the Mayor, a member of the Board of Fire Commissioners in 1874. In 1875 he was elected to the State Legislature; in 1878 he became Mayor of the city; and in 1880 Governor of the State. For many years he was engaged almost exclusively in the manufacture of steam boilers.

Bocock, Thomas S., lawyer, born in Buckingham County, Va., in 1815; died in Appomattox County, Va., Aug. 5, 1891. He was graduated at Hampden-Sidney College, studied law, was attorney for Appomattox County in 1845-'46, and was a member of the Virginia House of Delegates for several years. In 1846 he was elected to Congress, where he sat by successive re-elections till Virginia adopted the ordinance of secession, when he resigned. In 1861 he was elected to the Confederate Congress, and on Feb. 18, 1862, he was chosen Speaker of the House. For many years prior to his death he lived in retirement, a victim of paralysis.

Botta, Anne Charlotte Lynch, author, born in Bennington, Vt., Nov. 11, 1815; died in New York city, March 23, 1891. She was educated in Albany, N. Y.; lived several years in Providence, R. I., where she began her literary career; removed to New York

city about 1842; and married Vincenzo Botta, then Professor of Italian Language and Literature in the University of the City of New York, in 1855. From the time of her marriage till her death her house was the center of a literary circle. During the Franco-German War, in 1870-'71, she prepared an album of autographs, photographs, and original sketches by famous artists in her possession as a contribu-

tion to the fund for the relief of the suffering women and children in Paris. This album sold for \$5,000, and, as the war closed before the fund was completed, the money was given to the French Academy as the basis of a fund to provide a prize for the best essay by a woman on "The Condition of Women," to be awarded every five years. In the award of 1888 the Academy voted the medal of honor to the Queen of Roumania, for her "*Pensées d'une Reine*," and voted \$500 each to Mme. Arvede Baride and Mme. Anas Segalas. Mrs. Botta's literary work comprised "The Rhode Island Book" (Providence, 1841); a collection of poems, illustrated by Brown, Darley, Durand, Huntington, and other artists (New York, 1848; revised ed., 1884); and "A Hand-book of Universal Literature" (New York, 1860). She also published "Leaves from the Diary of a Recluse" in "The Gift" (1845). Her poems "Paul at Athens," "Webster," "Books," and "Wasted Fountains" are among her best. She published many essays, reviews, and criticisms, was a sculptor of much merit, and promoted the establishment of Barnard College for women.

Brady, John Riker, jurist, born in New York city in 1822; died there, March 16, 1891. He was a son of Thomas S. Brady, a lawyer, but better known as an educator, and a brother of James T. Brady, for many years the leader of the bar of New York. He studied law, was admitted to the bar in 1844, and practiced first in his father's office and afterward in partnership with his brother. In 1856 he was elected a justice of the New York Court of Common Pleas; in 1869 he was promoted to the bench of the Supreme Court of the State; and in 1877, when his term was expiring, he was honored by a unanimous re-election, each political party nominating him. He had occupied the judicial bench for thirty-five years continuously. Judge Brady was a man of much eloquence

and wit, and for many years was the most popular after-dinner speaker in the State. At midnight of the day on which President Garfield was shot, and before the extent of his injuries was known, Judge Brady administered the oath of the presidential office to Vice-President Arthur in New York.

Bragg, Walter L., lawyer, born in Lowndes County, Ala., Feb. 25, 1838; died in Spring Lake, N. J., Aug. 21, 1891. He was graduated at Harvard in 1858, and settled in Camden, Ark., to practice law. He served in the Confederate army through the civil war, chiefly with the Army of Tennessee, and attained the rank of captain. After the close of the war he settled in Marion, Ala., and resumed the practice of law, removing in 1871 to Montgomery. In 1874-'77 he was chairman of the Democratic Executive Committee of Alabama; in 1876 he was a delegate to the National Democratic Convention at St. Louis, where he was appointed a member of the National Committee for his State; in 1880 he was the presidential elector-at-large of Alabama; in 1881 was elected President of the Alabama Railroad Commission by the Legislature; in 1887 was appointed a member of the new Interstate Commerce Commission; and in 1889 he was reappointed. He was also first President of the Alabama State Bar Association.

Breckinridge, Samuel Miller, jurist, born in Baltimore, Md., Nov. 3, 1828; died in Detroit, Mich., May 28, 1891. He was educated in the College of New Jersey and in Center College, Kentucky; was graduated in the Law School of Transylvania University, at Lexington, Ky.; and in 1850 made his permanent home in St. Louis, Mo. He was a member of the State Legislature in 1854 and 1855, was elected judge of the Circuit Court of Missouri in 1859, and was a strong Union man throughout the civil war and the particularly trying period of conflict within his State. After the war he was influential in the counsels of the Republican party, but would accept no political office. Judge Breckinridge was probably most widely known from his connection with the Presbyterian Church. He was chosen an elder in the Second Presbyterian Church in St. Louis in 1871; was appointed a member of the General Assembly's committee on internal relations to meet a similar committee of the Presbyterian Church in America, in 1873; was a member of the General Assembly that met in St. Louis in 1875; and was a member of the General Assembly's committee on the revision of the "Book of Discipline" from 1878 till the final report in 1882. He was also a member of the General Assemblies of 1881 at Buffalo, 1882 at Springfield, Ill., 1883 at Saratoga, and 1891 at Detroit. In the latter body he was conspicuous in his support of the report of President Patton's committee against the Rev. Charles A. Briggs, D. D. On May 28 he was urged by many delegates to make a formal announcement of his legal views on the controversy, as he was known to have studied the question closely. After a long and lucid speech, he began concluding with "I feel that I have discharged my duty faithfully, and I ask you to excuse me from further—" when he fell to the floor and expired.

Brentano, Lorenzo, lawyer, born in Mannheim, Baden, Germany, Nov. 4, 1813; died in Chicago, Ill., Sept. 18, 1891. After receiving a classical education, he studied jurisprudence at the universities of Heidelberg and Freiburg, and was graduated with the degree of LL. D. He settled in Berlin to practice, and one of his noted cases was the state trial of Herr von Struve for high treason, in which he was the leading counsel for the defense. On attaining the legal age he was elected to the Chamber of Deputies, where he allied himself with the Liberal or Opposition party. In 1848 he was elected to the Frankfurt Parliament, and in the following year, on the flight of the Grand Duke of Baden in consequence of the revolution, he was chosen President of the Provisional Republican Government. The defeat of the revolutionary army was followed by a sentence to imprisonment for life pronounced against Mr. Brentano and other leaders. But he had fled to the United States, where he settled

in Kalamazoo County, Mich., and engaged in farming. In 1859 he removed to Chicago and was admitted to the bar, but he soon relinquished that profession for journalism, becoming editor-in-chief and chief proprietor of the "Illinois Staats Zeitung." In 1862 he was elected to the State Legislature; for five years he was President of the Chicago Board of Education; and in 1868 he was a Republican presidential elector. He took advantage of the granting of an amnesty to all participants in the revolution by revisiting his native land in 1869 and remaining there two years. In 1872 he was appointed United States consul at Dresden, where he served till April, 1876, and on his return to Chicago was elected to Congress from the 3d Illinois District as a Republican the same year. After serving one term he devoted himself to historical and literary work till 1884, when paralysis incapacitated him for further labor.

Brooks, David, electrician, born in Brooksville, Conn., Jan. 26, 1820; died in Philadelphia, Pa., May 30, 1891. He received a collegiate education, and when twenty years old was appointed an instructor in mathematics in the United States Military Academy. While employed there he became interested in the experiments of Samuel F. B. Morse and others in magnetic telegraphy. After five years' service in the academy, he resigned to engage in the development of the new system of transmitting messages, and the same year (1845), in conjunction with James D. Reid, he built the first commercial line of telegraph in America, and received the first message sent over it. His line was constructed between Lancaster and Harrisburg, Pa. In the following year he built the line across the Alleghany mountains, connecting Philadelphia with Pittsburgh, and in 1847 he made the first repeater. Three years afterward, by appointment by the United States Court, he prepared an expert description of the rival Morse and Bains systems of telegraphy. In 1851 he went to Mexico and built the first telegraph line in that country, between Vera Cruz and the city of Mexico, in six months; in 1852 he was employed by the Pennsylvania Railroad Company to develop and operate its lines from Pittsburgh; and in 1854 became superintendent of the Atlantic and Ohio Telegraph Company. When this company was absorbed by the Western Union in 1862 he was appointed district superintendent in New York city, and he remained with the Western Union till 1867; he then resigned, and passed the remainder of his life in inventing improvements in the telegraph and telephone services. He invented and developed the system of underground conductors, the improved insulators, and the insulation of inductive coils and transformers; and discovered the insulating properties of mineral oils, paraffine, and resin oil.

Brown, Joseph Bullock, physician, born in New York, July 26, 1822; died in Albion, N. Y., Oct. 21, 1891. He was appointed an assistant surgeon in the United States army June 29, 1849; was promoted captain and assistant surgeon June 29, 1854, major and surgeon July 4, 1861, and lieutenant-colonel and surgeon June 30, 1862; was brevetted lieutenant-colonel and colonel March 13, 1865, for faithful and meritorious services during the war, and brigadier-general Sept. 28, 1866, for distinguished services at Fort Columbus, New York harbor, during the cholera epidemic; and was retired June 30, 1882. During the civil war he served chiefly with the Army of the Potomac and the Army of the Cumberland. He was appointed President of the United States Medical Examining Board in New York city in 1873, and held the office till his retirement.

Browne, Thomas M., lawyer, born in New Paris, Ohio, April 19, 1829; died in Martinsville, Ind., July 17, 1891. He received a common-school education, removed to Indiana in 1844, and was admitted to the bar in Winchester, Ind., in 1849. In 1855 he was elected prosecuting attorney of the 13th Judicial District, and was twice re-elected. In 1861 he became Secretary of the Indiana State Senate, and in 1863 a State Senator. Subsequently he organized the 7th

Indiana Volunteer Cavalry, entered the national army as its lieutenant-colonel, was promoted colonel and commissioned brevet brigadier-general and served till the close of the war. In April, 1862, he was appointed United States Attorney for the district of Indiana, and held the office till Aug. 1, 1872, when he resigned to enter on the canvass for Governor as a Republican. He was defeated by Thomas A. Hendricks. In 1876 he was elected to Congress from the 6th Indiana District, and served seven consecutive terms, declining a nomination for the eighth.

Buckland, Cyrus, inventor, born in Springfield, Mass., Aug. 10, 1799; died there Feb. 26, 1891. In 1828 he went to work at gun-making in the United States National Armory in Springfield, became master-mechanic, and retired in 1856 that he might reap some profit from his numerous patents. He perfected the lathe for turning out gun-stocks, carried out Thomas Warner's idea of interchangeable parts to a gun and machinery, and obtained, among others, patents for machines to manufacture the upper barrels of muskets, to finish the cone, to mill screws, to bore and turn gun barrels, and to rifle muskets.

Bundy, Jonas Mills, journalist, born in Columbia, Coos County, N. H., in 1835; died in Paris, France, Sept. 8, 1891. He removed with his parents to Beloit, Wis., when a child, was graduated at Beloit College in 1853, and, after studying law at Cambridge and Milwaukee, became a reporter on the "Milwaukee Wisconsin." At the beginning of the civil war he entered the national army, was appointed aide on the staff of Gen. John Pope with the rank of major, and served till the close of the war. He then settled in New York and became musical and literary critic on the "Evening Post." In 1868 he was one of the founders of the "Evening Mail," of which he became editor-in-chief, and on the consolidation of the "Evening Mail" and the "Evening Express" he retained the chair. In 1887 the "Mail and Express" was sold to Elliott F. Shepard, who continued Major Bundy at the head of the editorial department. Major Bundy went to Europe in July, 1891, for a vacation, and died suddenly in Paris. He was the author of a "Life of James A. Garfield."

Burchard, Samuel Dickinson, clergyman, born in Steuben, N. Y., Sept. 6, 1812; died in Saratoga, N. Y., Sept. 25, 1891. He was graduated at Center College, Danville, Ky., in 1836. After spending two years in studying theology and in lecturing on temperance, slavery, and religious topics, he was licensed to preach, and on May 1, 1839, he was installed pastor of the 13th Street Presbyterian Church in New York city. He remained in this charge till 1879, also serving a part of the time as Chancellor of Ingham Seminary, Le Roy, N. Y. The year after resigning he became pastor of the Murray Hill Presbyterian Church, and served it till 1885, when he retired. During the presidential canvass of 1884 Dr. Burchard gained wide notoriety by an expression made in a speech on Oct. 29, when, with a numerous company of clergymen, he made a formal call on James G. Blaine at the Fifth Avenue Hotel. In the course of his remarks extending a welcome to Mr. Blaine in behalf of the visitors, he said: "We are Republicans, and don't propose to leave our party and identify ourselves with the party whose antecedents have been rum, Romanism, and rebellion. We are loyal to our flag; we are loyal to you." The Democratic managers made the most of the expression in Roman Catholic circles, and it was believed that it had considerable influence in causing the defeat of Mr. Blaine.

Burgess, Edward, naval architect, born in West Sandwich, Mass., June 30, 1848; died in Boston, Mass., July 12, 1891. He was graduated at Harvard in 1871; appointed secretary of the Society of Natural History of Boston in 1872; made instructor in entomology in Harvard in 1879; and established himself in business as a naval architect and yacht broker in Boston in 1883. He had studied yacht-building during his foreign travels, and many of his suggestions had been adopted by the Eastern Yacht Club. Boss

ton. The first boat which he built as a professional designer was the cutter "Rondina," and the first to make him famous was the sloop "Puritan," which vanquished all competitors in this country and defeated the celebrated English cutter "Genesta" in the races for the "America's" cup in 1855. For another international contest in 1886 he built the "Mayflower," which defeated the English challenger "Galatea," and a year later he constructed the "Volunteer," which defeated the English "Thistle" for the cup. His services were now in great demand among wealthy yachtsmen, who were becoming divided in opinion as to the superiority of the small center-board yachts over the regulation cutters; and the fact that Mr. Burgess had declared his ability to construct a double-keel boat capable of defeating even the victorious "Volunteer" intensified the general regret at his death. The other Burgess boats included the racers "Sachem," "Titania," "Papoose," "Balloon," "Nymph," "Wraith," "Sprite," "Saracen," "Rosalinga," "Chiquita," "Marguerite," and "Vandal"; the steam yachts "Hanniel" and "Sheerwater"; many fishing schooners, as the "Fredonia"; and a large number of smaller boats, all noted for extraordinary speed. In 1887 he was appointed a member of the United States Naval Board, to award prizes for the designs of cruisers and battle-ships, and in 1888 permanent chairman of the Board of Life-saving Appliances in the United States Life-saving Service.

Burnham, Thomas Oliver Hazard Perry, bookseller, born in Essex, Mass., in 1813; died in Boston, Mass., Nov. 14, 1891. He began peddling books, papers, songs, and fruit along the wharves and streets when a small boy, subsequently went to Boston and became one of the best known dealers in old, curious, and rare literature in the country. To the surprise of all who knew him he left an estate valued at about \$1,000,000, and greater surprise was created by the discoveries following the filing of his will. He bequeathed \$40,000 to his native town; \$20,000 to the Massachusetts Institute of Technology; \$10,000 to Tufts College; \$5,000 to the Massachusetts Agricultural College; \$10,000 to the Home for Aged Men in Boston; \$5,000 each to the Children's Hospital, the Lying-in Hospital, the Massachusetts Asylum for the Blind, the State School for Idiotic and Feeble-minded Children, the Boston Asylum and Farm-school for Indigent Boys, the Washingtonian Home in Boston, Perkins Institute, and the Boston Provident Association; and smaller sums to institutions in and near Boston—the bequests aggregating nearly \$500,000.

Burwell, Theodorus, jurist, born in Oxford, Conn., in 1805; died in Spuyten Duyvil, N. Y., April 18, 1891. He was graduated at Union Hill College in 1830, taught in Capt. Partridge's military school in Buffalo for one year, and on the relinquishment of the school by the proprietor, he continued it as an academy. While thus employed he applied his spare time to reading law. He was admitted to the bar in 1835, and, besides attaining success in private practice, was trustee of a large tract of land on the north side of Buffalo harbor from 1838 till 1846. He remained in Buffalo till 1855, and during this period served two terms as counsel to the municipal corporation; was county judge of Erie County, and was defeated as Democratic candidate for State Senator. He founded the Buffalo "Courier." In 1855 he removed to New York city and entered into partnership with James W. Nye, afterward Governor and United States Senator in Nevada. He followed corporation and trust practice till he was nearly eighty years old, and then retired to his farm in East Yonkers, N. Y.

Butler, David, lawyer, born near Linton, Green County, Ind., Dec. 15, 1829; died near Pawnee City, Neb., May 25, 1891. He was the eldest of ten children, and the death of his father, before David had attained his majority, threw upon him the care of his mother, brothers, and sisters. He received a limited district-school education, successively engaged in farming, mercantile business, and cattle dealing, and acquired a considerable fortune, which he lost in the panic of

1857. In 1859 he removed to Pawnee City, Neb., and in ten years accumulated \$100,000 in mercantile business, cattle dealing, and the practice of law, he having been admitted to the bar in 1861. In 1858 he was a Republican nominee for the Indiana Senate, but withdrew from the canvass before the election; in 1861 he was elected a member of the Nebraska Territorial Legislature; in 1863 went to the Territorial Senate; in 1866 he was elected by a majority of 145 votes the first Governor of the State; and in 1868 he was re-elected by a much larger majority. While serving his second term, he was an unsuccessful candidate for the United States Senate, and in 1870 he was elected Governor for the third time. After ten years' retirement from active political life, he was elected to the State Senate as an Independent, and in 1888 he was the unsuccessful candidate of the Union Labor party for Governor. The removal of the State Capitol from Omaha to Lincoln, and the planning and beautifying of the Capitol, university, and asylum grounds were carried out during his administration.

Cameron, Charles S., lawyer, born in Port Stanley, Canada, May 29, 1825; died in Chicago, Ill., May 18, 1891. He studied law in his native town; went to Memphis, Tenn., in 1850, and practiced there a year; and in 1851 settled in Chicago. While following his profession he also entered political life, and became a warm supporter of John Wentworth. In 1861 he aided in organizing the 9th Illinois Cavalry, and accompanied it to the field as a captain. His service was mainly in the extreme South, but for some time he was stationed in Memphis. At the close of the war he was elected to Congress as a Republican. Before the close of his term in Congress he revisited Chicago, and decided to settle there again. After doing so he re-entered political life, but as a Democrat. Mayor Colvin appointed him assistant city attorney, and Mayor Carter Harrison gave him two terms as city prosecutor. He then resumed general practice, and recently was assistant to City Prosecutor Sugg. He was President of the Illinois Veterans' Association.

Camp, Frederick E., military officer, born in Middletown, Conn., in 1832; died there, Oct. 8, 1891. He became 2d lieutenant in the 24th Connecticut Volunteers Nov. 18, 1862; was promoted 1st lieutenant April 6, 1863; commissioned captain in the 29th Connecticut Volunteers Jan. 23, and major Nov. 24, 1864; and promoted lieutenant-colonel of his regiment Jan. 1, 1865. On the reorganization of the regular army he was appointed 2d lieutenant and promoted 1st lieutenant 14th United States Infantry, Feb. 23, 1866; was transferred to the 32d Infantry Sept. 21 following; promoted captain Dec. 12, 1869; assigned to the 2d Infantry June 1, 1871; and resigned in 1875. He was wounded at Port Hudson in June, 1863. After leaving the army he was pay-master-general of Connecticut under Gov. Bigelow, and adjutant-general under Gov. Lounsbury. For many years he was a member of the Republican State Executive Committee.

Campbell, Jabez Pitt, clergyman, born in Sussex County, Del., Feb. 5, 1815; died in Philadelphia, Pa., Aug. 9, 1891. Both of his grandfathers were engaged in the Revolutionary War, and his father became a Methodist preacher among the colored people. Though colored and brought up among slaves, Jabez was never a slave himself. When he was a small boy his father offered him as security for a mortgage on a boat with which to make his living at fishing in Delaware Bay. After a while business became dull, and the creditor began proceeding to foreclose the mortgage. Jabez, overhearing the plans, ran away and found people willing to befriend him in Philadelphia. He soon learned to read and write, then studied for the Methodist ministry, and in 1837 was licensed to preach. As a pastor he was successful in Philadelphia, Baltimore, and several Southern cities. In 1864 he was consecrated the eighth bishop of the African Methodist Episcopal Church by the General Conference in Philadelphia, and for many years his field of labor

was in the Southern and Southwestern States. In 1887 he was designated as Bishop of North Carolina, Virginia, and Maryland. Bishop Campbell had traveled in California, Mexico, Central America, England, Ireland, Scotland, Wales, and France, chiefly in the interest of his Church; was a fraternal delegate of the African Methodist Episcopal Church to the British Wesleyan Methodist Conference at Birmingham; presided over the Centennial Conference of the Methodist Episcopal Church in 1884; was a member of the Evangelical Alliance; and was president of the educational department of his Church.

Campbell, Tavis G., clergyman, born in Middlebrook, N. J., April 1, 1812; died in Allston, Mass., Dec. 4, 1891. He was educated by a white friend in Babylon, L. I., till he was eighteen years old; was then urged to go to Africa as a missionary; but, declining, began his career as an antislavery lecturer, and declared that he would never leave the United States till every slave was free. He united with the African Methodist Episcopal Church; removed to New Brunswick, N. J., in 1832, and formed an anti-colonization society; and was several times mobbed while preaching or lecturing. In 1841-45 he was active in establishing schools for colored children in New York, Brooklyn, Williamsburg, and Jersey City; and for several years was a "conductor" on the "underground railway," aiding many slaves who had escaped to the North. After the occupation of Charleston, S. C., he was appointed military governor of the sea islands of Georgia. There he established schools and a government, at the head of which he remained for two years, when he was removed by Gen. Tilson. Under the reconstruction act of Congress he was appointed a registrar for the 2d Senatorial District of Georgia, and subsequently he was elected to the State Constitutional Convention and to the State Senate. In 1874 he left Georgia with his family under pressure of political troubles, and lived in Washington, D. C., till about 1881, when he removed to Boston, where he engaged in missionary work.

Cannon, Anthony (better known as **TONY HART**), actor, born in Worcester, Mass., July 25, 1855; died there, Nov. 4, 1891. When a mere child he went on the minstrel and variety stage in song and dance parts, and with his fine voice and graceful manners soon became widely popular. In 1871 he formed a partnership with Edward Harrigan, and the two began traveling together, giving unique character sketches. Their first notable success was in "The Little Fraud," in which Cannon acted the part of a girl. In July, 1875, they began a tour as stars, with the play "The Doyle Brothers," and in the following year they took the Theatre Comique in New York city, and there played several seasons. At this house they began their memorable "Mulligan Guards" series, which was presented with great success. On Aug. 29, 1881, they opened a new theatre on Broadway with the play "The Major," which had been specially written for them. Here they also presented "Squatter Sovereignty," "McSorley's Inflation," "Cordelia's Aspirations," "Investigation," "McAllister's Legacy," and other new plays. Soon after the burning of this theatre, on Dec. 23, 1884, the partners separated, and Cannon, whose health had become impaired, was given a benefit at the Academy of Music, the proceeds of which were nearly \$8,000. For three years before his death he was afflicted with paresis.

Cantwell, Edward Payne Chrysostom, lawyer, born in Charleston, S. C., Dec. 22, 1825; died in St. Simon's Island, Ga., April 11, 1891. He was graduated at the Cambridge Law School in 1846; was appointed a 2d lieutenant in the 12th United States Infantry in 1847; served in the Mexican War, and was promoted 1st lieutenant; and on April 15, 1861, was appointed adjutant-general of North Carolina. Soon afterward he went to the front as lieutenant-colonel of the 2d North Carolina Volunteers. In 1862 he was promoted brigadier-general and appointed civil and military governor of Norfolk and Portsmouth, Va.; in 1863 became lieutenant-colonel of the 4th North Carolina

Cavalry; and in 1864 was appointed colonel of his regiment and presiding judge of the 3d Corps of the Confederate Army of Northern Virginia. After the war he was elected judge of the city court of Wilmington, N. C., appointed solicitor of the 4th Judicial District of North Carolina, and elected a State Senator. He retired from public life about 1878, spent most of his time thereafter in teaching, and had resided in Utica, N. Y., since 1888.

Carlin, John, painter, born in Philadelphia, Pa., June 15, 1813; died in New York city, April 23, 1891. He was deaf and dumb from birth; was graduated at the Pennsylvania Institute for the Deaf and Dumb in 1825; studied drawing and painting in New York city in 1833-34, and in London and Paris in 1838-40; and made his permanent residence in New York city in 1841. For several years he painted miniatures on ivory, subsequently turning to landscape and genre work. He was successful in each branch of the art, and contributed largely to the exhibitions of the National Academy and the Artists' Fund Society. Among his paintings were "The Flight into Egypt" and "The Village Gossips" (1880); "The Twin Grandchildren" (1881); "Old and Young" (1882); "Solid Comfort" (1884); "The Grandfather's Story" (1885); and "The Orphaned Grandchild" (1886). He was a pleasing writer, and one of his best sketches, in "Harper's Magazine," humorously describes his attempts to write poetry in the absence of any knowledge of rhythm and sound.

Carroll, John William Henry, archaeologist, born in Albany, N. Y., in 1827; died in New York city, Oct. 13, 1891. He was graduated at Union College in 1847, studied theology, and was ordained a Unitarian clergyman, and soon afterward gave up preaching. He spent several years traveling and collecting rare bronzes, manuscripts, and various curios in Europe and the far East, and after returning home was for some time Professor of Literature in the Vernon Seminary, New York. Subsequently he removed to New York city, wrote for newspapers and magazines, and founded the College of Archaeology and Æsthetics, of which he became dean.

Carter, Samuel Powhatan, naval officer, born in Elizabethtown, Carter County, Tenn., Aug. 6, 1819; died in Washington, D. C., May 26, 1891. He was educated at Washington College, Tennessee, and at Princeton, and entered the United States navy as a midshipman in February, 1840. He was attached to the naval school in Philadelphia in 1846; was promoted passed midshipman in July of that year; served on the coast of Mexico, and took part in the siege and capture of Vera Cruz. He was on duty at the United States Naval Observatory, in Washington, in 1847-48; in 1851-53 he was assistant instructor in infantry tactics at the United States Naval Academy; in 1854 was promoted master, in 1855 commissioned lieutenant; and in 1855-57, while attached to the "San Jacinto," took part in the capture of the Barrier forts, on Canton river, China. From 1858 till 1860 he was assistant instructor in seamanship at the Naval Academy, and on July 11, 1861, he was ordered to report to the Secretary of War for special service with the army. Under instructions from that officer he went to East Tennessee, where he organized the first full regiment for the national army south of Ohio river. He was appointed acting brigadier-general by Gen. George H. Thomas on Sept. 16 following, and was commissioned brigadier-general of United States Volunteers on May 1, 1862. During 1863-64 he was provost-marshal-general of East Tennessee; on March 13, 1865, he was brevetted major-general of United States Volunteers; and in January, 1866, was mustered out of the army. Gen. Carter's career was exceptionally brilliant. He was present at Wild Cat, Ky., at Zollicoffer's repulse, in October, 1861; at the battle of Mill Spring, in January, 1862; commanded during the preliminary operations and participated in the capture of Cumberland Gap, June 17, 1862; commanded the cavalry expedition into East Tennessee which tore up the track of the Tennessee and Vir-

ginia Railroad in December, 1862; defeated the Confederates at Holstein, Jonesville, Dutton's Hill, and Montville, in May and June, 1863; commanded the cavalry division of the 23d Army Corps, and led the advance when East Tennessee was permanently occupied in August, 1863; took part in the siege and battle of Knoxville in December following; commanded a division and the left wing of the army at the battle of Kinston, N. C., March 10, 1865; and drove the Confederates from Goldsboro. After leaving the army he returned to duty in the navy. He was commissioned commander June 25, 1865; was commandant of the United States Naval Academy in 1869-'72; promoted captain 1870; served as a member of the Light-house Board in 1867-'80; promoted commodore Nov. 13, 1878; retired Aug. 6, 1881; and promoted rear-admiral on the retired list May 16, 1882. He had since lived in Washington.

Castro, Manuel, military officer, born in Castroville, Cal., in 1801; died there, May 2, 1891. From early life he was one of the most conspicuous figures in the struggles between the Americans and the Mexicans for the possession of California, and remained till death in bitter enmity against Americans and American institutions. In 1844 he led the revolt against Micheltorena, and for his services was given a large tract of land and made prefect of Monterey, while a brother, Juan Castro, was appointed military commandant there. Later, when John C. Frémont, with his company of frontiersmen, was approaching Monterey, Gen. Castro ordered the explorer to leave the country, and sent his brother with an armed force against him. Juan entrenched himself in the Gabilan mountains, but fled on Frémont's advance. Castro then joined the Flores revolt at Los Angeles, fled into Mexico after Com. Stockton's victory over the Mexicans, held the office of Governor of Lower California for a short time, and then returned to his old home. He compiled his reminiscences for Hubert Howe Bancroft to use in his historical work, and made his last appearance in public in the parade on California "Admission Day," in September, 1890.

Chapman, Frederick Augustus, painter, born in Old Saybrook, Conn., April 18, 1818; died in Brooklyn, N. Y., Jan. 26, 1891. After vainly attempting to become interested in mercantile business in Boston, he removed to New York and studied painting with Prof. S. F. B. Morse. About 1850 he settled in Brooklyn, where he became a founder and the first President of the Brooklyn Art Association, and for a time was engaged in stained-glass decorating. His special works include the stained-glass windows in Holy Trinity Church, Brooklyn, and the oil-paintings of "The Perils of our Forefathers," which was engraved by John C. MacRae; "The Day we Celebrate"; "Raising the Liberty Pole," also engraved; "The Receding Race," "Discovery of the Hudson," both of which were chromo-lithographed by Colton; and "The Battle of Chancellorsville." He contributed many paintings to the exhibitions of the Brooklyn Art Association, and during the past fifteen years had applied himself chiefly to illustrating work.

Chapman, Henry, jurist, born in Newton, Pa., Feb. 4, 1804; died near Doylestown, Pa., April 11, 1891. He was elected a State Senator in 1843, and two years afterward was appointed by Gov. Shunk judge of the Chester-Delaware Judicial District, where he served four years. In 1856 he was elected to Congress, where he served one term, and was on the Committee on the Judiciary. In 1861 he was elected judge of the Bucks County Court, and in 1871 he retired.

Chickering, Charles Frank, manufacturer, born in Boston, Mass., Jan. 20, 1827; died in New York city, March 22, 1891. He was a son of Jonas Chickering, founder of the well-known piano manufacturing house, received a common-school education, and when fifteen years old entered his father's factory and began learning the details of the work. In 1844 he went to India for a period of recreation, taking with him one of his father's instruments, and thus introduced the modern piano into that country. In 1851

he superintended his father's exhibit in the World's Fair, London, and in 1853, on the death of his father, became associated with his brothers, Thomas E. and George H., in conducting the business. He assumed the management of the manufacturing department, made many improvements in the instrument, represented the firm at the Universal Exposition in Paris in 1867, and received the cross and ribbon of the Legion of Honor, became head of the firm on the death of his brother Thomas in 1871, and erected Chickering Hall in 1875. Mr. Chickering organized the first musical festival held in the United States, and was President of the Handel and Haydn Society of Boston. Many years before his death, which occurred in December, 1885, James Henry Paine, the miser, placed in Mr. Chickering's hands for safe keeping, and without a receipt or other acknowledgment, a brown-paper package. During the contest over Paine's estate Mr. Chickering recalled the incident, took the package from his safe, and, tightly rolled in a green bandana handkerchief, found \$400,000 of the miser's accumulations, which he at once turned into the estate.

Chilcote, George Miles, lawyer, born in Huntingdon County, Pa., Jan. 2, 1828; died in St. Louis, Mo., March 6, 1891. He accompanied his parents to Jefferson County, Iowa, in 1844; studied medicine and taught school till 1850; and entered political life by election to the office of sheriff in 1853. Three years afterward he removed to Burt County, Neb., and the same year was elected to the Territorial Legislature as a Republican. In 1859 he settled in Colorado; in 1861 and 1862 was elected to the Legislature; in 1863 was admitted to the bar and appointed register of the United States Land Office for Colorado; in 1865 was elected to Congress under a State organization, which was not recognized by the Federal Government; and in 1866 was elected delegate to Congress, and served one term. He became a member and President of the Territorial Council in 1872; was re-elected to the council in 1874, and elected to the Legislature in 1878; and was appointed United States Senator, to fill the vacancy caused by the appointment of Senator Henry M. Teller to be Secretary of the Interior, April 11, 1882. He served in this office one year.

Clapp, Asa W. H., merchant, born in Portland, Me., in 1805; died there, March 22, 1891. He was graduated at the Military Academy in Norwich, Vt., in 1823; was associated with his father in mercantile business till his father's death in 1848; and was afterward occupied with the care of large real-estate and other investments. He was a member of Congress from 1847 till 1849, and at the time of his death was the oldest ex-member of Congress, excepting Hannibal Hamlin (q. v. in this volume). He was a quiet but generous giver, and was for many years a director of the Maine General Hospital, the Portland Public Library, and of other institutions.

Clapp, William Warland, journalist, born in Boston, Mass., April 11, 1826; died there, Dec. 8, 1891. His father founded the Boston "Advertiser" in 1813 and purchased the "Saturday Evening Gazette" in 1822, and edited both papers for many years. William was brought up in the office of the "Gazette," and was its proprietor from 1847 till 1865. He then became managing editor and principal proprietor of the Boston "Journal," and retained control of it till June 30, 1891, when he retired from both the editorial and the business management. In 1859-'60 he was a member of the Common Council, and subsequently was on the staffs of Govs. Banks and Andrew. He was for many years President of the New England Associated Press. He published "A Record of the Boston Stage" and "The Drama in Boston."

Clark, Alexander, lawyer, born in Washington County, Pa., in February, 1826; died in Monrovia, Liberia, June 3, 1891. He was a free colored man, received a plain village education, learned the barber's trade in Cincinnati, and in 1843 made his permanent home in Muscatine, Iowa. He was elected delegate from Iowa to the first national colored convention held in the United States, which met at Rochester, N. Y., in 1853;

and on the organization of the Republican party promptly united with it, and became one of the most active exponents of its principles. For ten consecutive years he was elected a delegate to either State or county conventions, and he became known as the colored orator of the West. He was a delegate to the national convention of colored men held in Washington, D. C., in 1869; bought the "Chicago Conservator" in 1882, and conducted it for several years, first as a non-partisan and afterward as a Republican newspaper; and in 1883 was graduated at the Iowa State Law School and admitted to the bar, after which he lived in Chicago. In August, 1890, he was appointed United States minister to the republic of Liberia.

Clark, Charles B., manufacturer, born in Theresa, Jefferson County, N. Y., Aug. 24, 1844; died in Watertown, N. Y., Sept. 10, 1891. He received a common-school education, and in 1855 settled in Neenah, Wis., where he engaged in manufacturing. At the beginning of the civil war he enlisted in the 21st Wisconsin Infantry, with which he served to the close of the war. In 1885 he was elected to the State Assembly as a Republican, and in 1886 and 1888 was elected to Congress from the 6th Wisconsin District. While in Congress he was a member of the committees on Merchant Marine and Fisheries and on Rivers and Harbors.

Clark, Daniel, jurist, born in Stratham, N. H., Oct. 24, 1809; died in Manchester, N. H., Jan. 2, 1891. He was graduated at Dartmouth College in 1834, was admitted to the bar in 1837, and began practicing in Epping, N. H. In 1839 he made his permanent residence in Manchester, and soon became conspicuous in public life. He served as a Whig in the Legislature in 1842, 1843, 1846, 1854, and 1855; was elected United States Senator in 1857, and re-elected in 1861; was chairman of the Senate Committee on Claims; President *pro tem.*, of the Senate during the first session of the 38th Congress in 1863-'64; and resigned his seat in July, 1866, to accept the office of United States district judge. He held this office till his death. In 1876 he was President of the New Hampshire Constitutional Convention. While in the United States Senate he introduced, and supported till its adoption, the resolution providing for the expulsion from the Senate of the Southern members who had withdrawn on the secession of their States.

Clark, Silas Moorhead, jurist, born in Elderton, Armstrong County, Pa., in 1835; died in Indiana, Pa., Nov. 20, 1891. He was graduated at Jefferson College; studied law and was admitted to the bar; was director of public schools in his town for twelve years; and was a projector and founder of the State normal school there. In 1878 he was a member of the State Constitutional Convention, and from 1882 till his death was a judge of the Supreme Court of Pennsylvania.

Clark, Simon Tucker, physician, born in Canton, Mass., Oct. 10, 1836; died in Lockport, N. Y., Dec. 24, 1891. He was graduated at the Berkshire Medical College and at Genesee College, Lima, N. Y., settled in Lockport to practice in 1861, and became a member of the American Association for the Advancement of Science, the Jewell Scientific Society, the New York State Medical Society, the Medico-legal Society, and of the American Medical Association. For six years he had been Professor of Medical Jurisprudence in Niagara University, Buffalo. Dr. Clark was a well-known insanity expert, and originated the term "mania transitoria" in his testimony in the Pierce-Bullock murder case in Lockport in 1871.

Coe, Israel, manufacturer, born in Goshen, Conn., Dec. 14, 1794; died in Waterbury, Conn., Dec. 18, 1891. In 1829 he entered into partnership with Aaron Benedict, who for many years had been manufacturing bone and ivory buttons. About this time the fashion in men's coats changed to a snuff-colored garment with gilt buttons, and the new firm determined to attempt to make the new style of buttons. The basis of the buttons was sheet brass, which then had to be imported from England. The firm required

thinner sheets than those rolled in England, and being unable to obtain rollings of the desired thinness or to import the sheets in sufficient quantity, Mr. Coe collected all the worn-out brass kettles and sauce-pans in Waterbury and vicinity, cut them up, melted the pieces with alloys, ran the mass into rude molds, and with his own hands rolled the first sheet of brass ever produced in the United States in an old iron-rolling mill in Woodville, Conn. With these sheets the firm began manufacturing the new style of buttons, and also began the rolled-brass industry in this country. They were soon able to erect a rolling mill of their own and to supply sheet brass for the general trade. In 1834 Mr. Coe erected in Torrington, Conn., a mill for making brass kettles, and soon afterward received a gold medal from the Federal Government for making the first brass kettle in this country. In 1850, he organized the first company for mining copper on a large scale in Michigan. He represented Waterbury in the Legislature in 1824, and was honored by the Legislature with a special reception and an engraved memorial in 1885. He had lived in retirement since 1880.

Colburn, Jeremiah, antiquary, born in Boston, Mass., Jan. 12, 1815; died there, Dec. 30, 1891. He received a grammar-school education, entered mercantile life in 1830, and carried on the hat and fur business from 1840 till 1852. In the latter year he was appointed an appraiser in the Boston custom-house, where he remained through two administrations. He was afterward engaged in literary work. When fifteen years old he began collecting coins, and subsequently extended his quest to medals, minerals, shells, autographs, manuscripts, portraits, engravings, colonial and continental money, paper tokens, bank notes, counterfeit money, and bills of broken banks. His collections became very large and valuable, especially in Americana. He was an early member of the New England Historico-Genealogical Society; was a founder of the Prince Society, and supervised the publication of Wood's "New England's Prospect"; was a founder and President of the Boston Numismatic Society, and an editor of the "American Journal of Numismatics"; and was also a founder of the Boston Antiquarian Club, changed in 1882 to the Bostonian Society. He compiled a "Bibliography of the Local History of Massachusetts."

Coles, Abraham, physician, born in Scotch Plains, N. J., Dec. 26, 1813; died near Monterey, Cal., May 3, 1891. When seventeen years old he became tutor of Latin and mathematics in the Plainfield, N. J., Seminary; subsequently he studied law for six months, and in 1835 he was graduated at Jefferson Medical College in Philadelphia; and he began a practice of medicine and surgery in Newark that was continued there till within a few years of his death. In 1848, during a trip to Europe, he spent much time working and studying in the hospitals of Paris during the Revolution. He made a second visit to Europe in 1854. Besides numerous translations, he wrote largely on literary, medical, and scientific subjects; took a keen interest in promoting local and general education; and became proficient in Greek, Hebrew, Sanskrit, and the modern languages. In 1866 he was President of the New Jersey Medical Society, and his formal address was a physiological poem, "The Microcosm." His publications comprise a translation of the "Dies Ire" (1847); "Dies Irae,

in *Thirteen Original Versions* (1859); the first part of "The Evangel, or Life of our Lord in Verse, with Scripture Texts and Notes" (1847), and the second part, under the title "The Light of the World" (1884); "The Microcosm and other Poems," which includes his "Cosmos," lyrics, miscellaneous pieces, and translations of Latin hymns (1881); and "A New Rendering of the Hebrew Psalms into English Verse" (1888).

Conant, Thomas Jefferson, clergyman, born in Brandon, Vt., Dec. 13, 1802; died in Brooklyn, N. Y., April 30, 1891. He was graduated at Middlebury College, where he studied Hebrew and German in addition to the regular course in 1823; then took a post-graduate course in Hebrew and Greek for two years, and was appointed a tutor in Columbia College in 1825. From 1827 till 1833 he was Professor of Latin, Greek, and German in Waterville (Me.) College; in 1835-'51 of Languages and Biblical Literature in Hamilton (N. Y.) Literary and Theological Institution, and in 1851-'57 of the Hebrew Language and Biblical Exegesis in Rochester Theological Seminary. In 1857 he relinquished collegiate work to assume duties that made him most widely known. Under the auspices of the American Bible Union he undertook, in conjunction with the Rev. Asahel C. Kendrick, D. D., and the Rev. Horatio B. Hackett, D. D., a revision of the English version of the New Testament. This labor occupied him many years, his work comprising all the actual revision, excepting Galatians and Philemon, and the final revision of the whole Testament. He was also a member of the American Committee on the English revision of the Old Testament from the beginning. His versions of the Bible were most highly esteemed by the English revisers, who had his translations lying before them while at work, and who made no change in the common version without first consulting his versions. While engaged in these works of revision he found time to lecture and to contribute to religious publications frequently on Biblical criticism and interpretation, and to write on special topics, as the introductions to Clark's "Harmony of the Gospels" and "Commentary on the Gospel of Luke." His numerous publications include translations of the 11th and 17th editions of Gesenius's "Hebrew Grammar" (Boston, 1839; last edition, 1877); "Defense of the Hebrew Grammar of Gesenius against Prof. Stuart's Translation" (New York, 1847); "Job, Revised Version and Notes" (1856); "Matthew, Revised Version" (1860); "Baptizein, its Meaning and Use philologically and historically investigated" (1860); "Genesis, Revised Version and Notes" (1868, 1873); "The New Testament, Common Version revised" (1871); "Psalms, Common Version revised with Notes" (1871); "Proverbs, Revised Version and Notes" (1872); "Greek Text of the Apocalypse, as edited by Erasmus" (1873); "Prophecies of Isaiah, Chapters I-XIII, 22" (1874); and "Historical Books of the Old Testament, Joshua to II Kings" (Philadelphia, 1884).

Congdon, Charles Taber, journalist, born in New Bedford, Mass., April 7, 1821; died in New York city, Jan. 18, 1891. He received a public-school education studied at Brown University, and began his career in journalism in the office of the New Bedford "Register," of which his father was editor. While employed in this office he composed his first verses as he delivered the paper to its subscribers, "Ode to Commerce," "Elegy on the Death of Chatterton," and "The Seasons." From New Bedford he went to Providence and worked nearly a year on "The New Age," then returned to New Bedford and became successively editor of the "Bulletin" and associate editor of the "Mercury." In 1854 he went to Boston and edited "The Atlas," a Whig newspaper, nearly a year, and in 1857 he received a call from Horace Greeley to become an editorial writer on the "Tribune." He retained the latter connection till 1882, in the mean time contributing many articles, sketches, and essays to magazines. Subsequently he resumed magazine work, and in addition, corresponded with several newspapers under the pen-name "Paul Potter."

One of his last notable contributions was an article in the "Forum" on "The Experiment of Popular Government" (May, 1886). His publications included: "Tribune Essays" (New York, 1869); Centennial ode, "Carmen Seculare" (1876); poems, "The Last Welcome—Bayard Taylor," and "J. R. G. H.," a tribute to his associate on the "Tribune" (1879); "The Record of Fifty Years: Reminiscences of a Journalist" (1879-'80); "Recollections of a Reader" (1880-'81); and "Autobiographical Papers" (1881-'82).

Conkling, Frederick Augustus, financier, born in Canajoharie, N. Y., Aug. 22, 1816; died in New York city, Sept. 18, 1891. He was a son of Judge Alfred Conkling and a brother of Roscoe Conkling. He received a classical education, engaged in mercantile business in New York city, and in 1858 was elected as a Republican to the Legislature, in which he served two terms and was Chairman of the Committee on Ways and Means. In 1860 he was elected to Congress and placed on the Committee on Naval Affairs. At the outbreak of the civil war he organized the 84th New York Volunteers, of which he was elected colonel, and accompanied it to the field on the first call for three months' volunteers. He served through the Shenandoah campaign, and in 1863 his regiment was on provost-guard duty in Baltimore. In 1868 he was the unsuccessful candidate of the Republican party for Mayor of New York city. In the presidential election of 1872 he supported the Liberal Republican party, and in the succeeding ones he advocated the election of the Democratic candidates. Since the war he had been connected with various financial institutions. He was author of many pamphlets on political, commercial, and scientific subjects.

Connor, Patrick Edward, military officer, born in Ireland, March 17, 1820; died in Salt Lake City, Utah, Dec. 17, 1891. He came to the United States while a boy, was educated in New York city, entered the regular army in 1839 and served till 1844, taking part in the Seminole War in Florida, and after spending two years in mercantile business in New York city removed to Texas in 1846. At the outbreak of the Mexican War he was commissioned captain in the regiment commanded by Albert Sidney Johnston. He took part in the battles of Palo Alto, Resaca de la Palma, and Buena Vista, and in the latter was wounded. From the close of the war till 1861 he was engaged in business in California. He then raised a regiment of volunteers and was assigned to duty in Utah, with orders to prevent a revolt among the Mormons and to rid the overland routes of marauding Indians. On Jan. 24, 1863, with 200 men, he set out on the trail of a band of plundering Indians, and after marching 140 miles in four nights, through deep snow and intensely cold weather, he struck a fortified camp of 300 warriors on Bear river, Washington Territory, and after a desperate fight killed the whole band. He was promoted brigadier-general, March 30, 1863, and brevetted major-general at the close of the war. Soon after the war the Legislatures of Colorado and Nebraska petitioned the War Department to place him in command of the Military District of the Plains, and on the assignment being made he organized a cavalry expedition of 2,000 men against the Sioux and Arapahoe Indians, who had been committing depredations on the overland mail route, and in August, 1865, he severely punished them on Tongue river. On April 30, 1866, he was mustered out of the service. While at Camp Douglas, near Salt Lake City, in October, 1862, he established the "Union Vedette," the first daily newspaper published in the Territory. He also was influential in building up a Gentile community in Utah, located the first silver mine there, drafted the first mining law, introduced navigation on Great Salt lake, built the first silver-lead smelting works, and founded Stockton.

Conrad, Joseph Speed, military officer, born in Ithaca, N. Y., Aug. 23, 1833; died in Fort Randall, S. Dak., Dec. 4, 1891. He was graduated at the United States Military Academy and appointed 2d lieutenant 2d United States Infantry in 1857, and was

promoted 1st lieutenant May 14, and captain Nov. 1, 1861; major of the 17th Infantry, April 27, 1879; lieutenant-colonel of the 23d Infantry, June 27, 1884; and colonel of the 21st Infantry Feb. 24, 1891. In the volunteer service he held the rank of lieutenant-colonel and aide-de-camp from May 5, 1862, till Jan. 21, 1864. He was brevetted major for gallantry in the Wilderness, and lieutenant-colonel for the battle of North Anna river, both dating from Aug. 1, 1864, and colonel for the campaign under Gen. Hancock, March 13, 1865. In May and June, 1864, he was assistant adjutant-general of the 1st brigade, 1st division, 5th Army Corps; from June to August following was acting judge advocate of the 2d Army Corps; and from Feb. 2, 1871, till Oct. 12, 1874, was senior assistant instructor in infantry tactics at the United States Military Academy.

Cooke, John R., military officer, born in Jefferson Barracks, Mo., in 1833; died in Richmond, Va., April 9, 1891. He was a son of Gen. Philip St. George Cooke, U. S. A., and entered the army as 2d lieutenant in the 8th United States Infantry in 1855. On Jan. 28, 1861, he was promoted 1st lieutenant, and on May 30 resigned his commission to enter the Confederate army, though his father remained loyal to the Union and became a distinguished general. John R. Cooke soon attained the rank of brigadier in the Confederate army, and made himself conspicuous by a dash that approximated recklessness. At Spottsylvania Court-house he was severely wounded, but would allow no one to take command of his brigade.

Cooper, George Henry, naval officer, born in Fort Diamond, N. Y., July 27, 1821; died in Brooklyn, N. Y., Nov. 17, 1891. He was appointed a midshipman in the United States navy Aug. 4, 1837; was promoted past midshipman June 29, 1843; master, Oct. 11, 1850; lieutenant, May 8, 1851; commander, July 16, 1862; captain, Dec. 2, 1867; commodore, June 5, 1874; rear-admiral, Nov. 15, 1881; and was retired July 27, 1884. He was on sea service twenty-five years four months, on shore or other duty eighteen years three months, and was unemployed eleven years three months. He served in co-operation with the army in the Seminole Indian War in Florida; led an assault against Point Isabel, was captured at Monterey, and, after exchange, was present in the attacks on Tobasco, Alvarado, and Tuxpan in the Mexican War; in the civil war commanded several vessels, and for seven weeks was on the monitor "Sangamon" inside Charleston Roads, constantly shelling Fort Sumter and Sullivan's Island; and commanded the North Atlantic Squadron from May, 1882, till his retirement.

Corrado, Nestori, painter, born in Urbino, Italy, in 1810; died in New York city, April 19, 1891. He was educated for the operatic stage, and came to the United States with an Italian opera company in 1831. His fine voice, heard to the best advantage in *basso-profundo* parts, gave him and the company wide popularity. From the United States he traveled to South America, where, after a while, the company was disbanded. He remained in Chili some time, supporting himself by miniature painting. In 1848 he went to California and accumulated a considerable fortune in mining operations. Reaching New York city with the intention of returning to Italy, he became acquainted with the widow of Signor Berti, a noted singing master, and after a brief courtship married her and established himself as a miniature painter. The greater part of his miniature work was done for Tiffany & Co., but he frequently undertook special contracts, such as that under which he did all the miniature painting in the Union Square Theatre after the recent fire. He was one of the founders of the Italian Benevolent Society, the Italian Emigration Society, and La Societ  di Unios Efratellanza, and, although one of the most liberal Italians in the country, died in poverty.

Crawford, George Addison, pioneer, born in Pine Creek, Lycoming (now Clinton) County, Pa., July 27, 1827; died in Grand Junction, Col., Jan. 26, 1891.

He was graduated at Jefferson College in 1847; spent a year in teaching in Salem, Ky.; returned home and began studying law in 1848; and became editor and proprietor of a Democratic newspaper in 1850. In 1851 he was active in the support of William Bigler, Democratic candidate for Governor of Pennsylvania; in 1853-57 he was a clerk in the office of the postmaster-general in Washington; in 1854-55 he took the stump in opposition to the Know-nothing movement. In the spring of 1857 he made a trip to Kansas, where he became a founder of Fort Scott, and was president for nearly twenty years of the company that laid out the town. Politically he allied himself with the Free-State party, and during the stormy period of 1857-'60 he opposed the pro-slavery party with such vigor and effectiveness that his life was in daily peril. He was one of the party that exposed the celebrated candle-box election fraud. At the beginning of the civil war he promoted the organization of the 2d Kansas Volunteers for the national army, and later, by organizing the militia of the southern counties, saved that part of the State to the Union. In 1861 he was elected Governor, under a misconception as to the time for holding the first State election under the Constitution, and the Supreme Court declared the election illegal. In 1869 he established the "Daily Monitor" and a free reading-room and museum in Fort Scott; in 1871 he was appointed an alternate United States centennial commissioner, and, besides attending nearly every meeting of the commission during 1871-'76, was a member of several committees. In May, 1876, he removed to Mesa County, Col., where he located and named the town of Grand Junction, superintended its development, and established numerous industries.

Creswell, John Angell James, lawyer, born in Port Deposit, Md., Nov. 18, 1828; died in Elkton, Md., Dec. 28, 1891. He was graduated at Dickinson College, Carlisle, Pa., in 1848, and was admitted to the bar in 1850. After the dissolution of the Whig party he worked and voted with the Democrats till the beginning of the civil war, when he became a Republican. In 1861 he was elected to the Legislature, in 1862 was appointed adjutant-general of the State, in 1863 was elected to Congress, and in 1864 was elected United States Senator to fill the unexpired term of Thomas H. Hicks. On Feb. 22, 1866, by joint request of Congress, he delivered a eulogy on the life of Henry Winter Davis. He was a delegate to the Baltimore Convention in 1864, the Loyalists' Convention in Philadelphia in 1866, the Border States Convention in Baltimore in 1867, and to the National Republican Convention in 1868. He was postmaster-general from March 5, 1869, till July 3, 1874; counsel for the United States before the Court of Commissioners of Alabama Claims; and was one of the commissioners for winding up the affairs of the Freedmen's Saving and Trust Company.

Croasdale, William T., journalist, born in Mill Creek Hundred, Newcastle County, Del., March 27, 1844; died in Merriewold Park, Sullivan County, N. Y., Aug. 9, 1891. He was of Quaker parentage, and was educated at the Friends' Academy, Wilmington, Del. After leaving the academy he engaged in newspaper work in Wilmington. At the time of the second Maryland invasion, he enlisted in the 7th Delaware Volunteers, in which he served till the regiment was discharged. He then became editor of a Republican newspaper in Sussex County, in which he advocated the re-election of President Lincoln. Returning to Wilmington, he was appointed city editor of the "Commercial," and subsequently established "Every Evening," afterward consolidated with the "Commercial." In 1882 he established the "Day," in Baltimore; in 1886 became chief editorial writer on the New York "Star"; in 1887 on the establishment of the "Standard" by Henry George he became its managing editor. In 1890 he was an unsuccessful candidate of the county Democracy for Congress. His writings were mainly on political and economic subjects.

Crosby, Howard, clergyman, born in New York city, Feb. 27, 1826; died there, March 29, 1891. He was a grandson of Dr. Ebenezer Crosby, who served as a surgeon in the Revolutionary War, and a son of William B. Crosby, the philanthropist. Howard was graduated at the University of New York in 1844, and seven years later was made Professor of Greek in that institution. In 1859 he was called to the Greek

chair in Rutgers College, New Brunswick, N. J., and in 1861 he entered the ministry, but still retained his professorship. This, however, he gave up in 1863, on becoming pastor of the Fourth Avenue Presbyterian Church in New York. He held the pastorate till the end of his life, and, in addition, from 1870 till 1881 he was Chancellor of the University of New York. He was many times a delegate to the General Assembly of the Pres-

byterian Church, and in 1873 was its moderator. In 1877 he was a delegate to the first Presbyterian General Council, in Edinburgh, Scotland. In the same year he was one of the founders of the Society for the Prevention of Crime, and was chosen its president, which office he held as long as he lived. He received the degree of D. D. from Harvard College in 1859, and that of LL. D. from Columbia in 1871. Dr. Crosby was for several years more active, perhaps, than any other citizen of New York in efforts for the prevention of intemperance and the suppression of crime. He was an advocate of temperance, but not of total abstinence. His work was not done alone through the societies with which he was connected; many entertaining stories are told of his personal adventures and unflinching courage in behalf of the poor and the wronged. In one instance, seeing a malicious hack-driver purposely run into and break a swill cart to which a large dog was attached, while the child owner was in a neighboring area, Dr. Crosby made a note of the hack's number, and then told the child to take it to the nearest wagon shop and have it repaired and send the bill to him. When this was done, he presented the bill to the livery company that owned the hack, and demanded payment. Being met with a refusal, the doctor said, "If you don't send the money to my house before six o'clock I shall put the case into the hands of a lawyer," and the money was sent in an hour. This is a fair sample of the sort of thing that he was doing at every opportunity. He was one of the revisers of the New Testament, was one of the best Greek scholars in the United States, was an agreeable speaker, a forcible writer, and in every respect a model American citizen. He published "Lands of the Moslem" (New York, 1851); "Scholia on the New Testament" (1861); "Social Hints" (1866); "Life of Jesus" (1870); "Bible Companion" (1870); "A Healthy Christian" (1871); "Thoughts on the Pentateuch" (1873); "Notes on Joshua" (1875); "Commentary on Nehemiah" (1876); "The Christian Preacher" (1879); "The Humanity of Christ" (1880); and a "Commentary on the New Testament" (1885).

Curtis, Benjamin Robbins, jurist, born in Boston, Mass., in 1855; died there, Jan. 25, 1891. He was a son of Judge Benjamin R. Curtis, was graduated at Harvard in 1875, studied in the Cambridge Law School, and was admitted to the bar in 1879. In 1881 he was appointed a lecturer in Harvard University; in 1886 was appointed judge of the Municipal Court of Boston, which office he held until death. Judge Curtis edited "The Life and Writings of Benjamin R. Curtis" (1879); "The Jurisdiction, Prac-

tice, and Peculiar Jurisprudence of the Courts of the United States" (1880); and the second volume of Myer's "Federal Decisions in Courts" (1885).

Curtis, William Baker, military officer, born in Sharpsburg, Md., April 18, 1821; died in West Liberty, Ohio County, W. Va., Aug. 25, 1891. The family removed to West Liberty in 1832, where, after learning the cabinetmaker's trade, he established himself in business in 1837. From 1848 till 1862 he kept a country store and was also a justice of the peace. In 1861 he was a member of the Wheeling convention to organize a State Government for West Virginia. Early in 1862 he raised a company, which was incorporated in the 12th West Virginia Infantry, and was chosen captain. In June, 1863, he was promoted major; in January, 1864, colonel; and in October following was placed in command of a brigade. This was reorganized in December, and in the same month he was transferred to the Army of the James, and placed at the head of the 2d Brigade, independent division, 24th Army Corps. As commander of this brigade he took part in the siege of Richmond, and on April 2, 1865, he captured Fort Gregg, near Petersburg. For his gallantry on that occasion he was promoted brigadier-general, and his old regiment was presented by Gen. John Gibbon, the corps commander, with a costly bronze eagle. After the war he served a term in the State Legislature, and was superintendent of the Penitentiary in 1870 and 1871.

Darling, Henry, educator, born in Reading, Pa., Dec. 27, 1823; died in Clinton, N. Y., April 20, 1891. He was graduated at Amherst College in 1842; studied theology at the Union Theological Seminary in 1842-'43, and at the Auburn Theological Seminary in 1843-'45; was ordained Dec. 30, 1847; and installed pastor of the Presbyterian Church in Hudson. In 1852 he went to the Clinton Street Church, Philadelphia, where he officiated till 1861, resigning on account of failing health. In 1863 he accepted a call to the Fourth Presbyterian Church in Albany, N. Y., and held this pastorate till 1881, when he was elected Moderator of the General Assembly and President of Hamilton College, Clinton, N. Y. He held the office of president of the college till his death. President Darling's publications comprised sermons, addresses on special occasions, contributions to religious periodicals, and "The Closer Walk" (1862); "Slavery and the War" (1863); "Conformity to the World" (1873); and "Not Doing, but Receiving" (1875).

Davenport, Fanny Elizabeth, actress, born in London, England, July 6, 1829; died in Canton, Pa., July 20, 1891. She was a daughter of Frederick Vining, the manager of the Haymarket Theatre, London. She made her first appearance on the stage when three years old, and her first appearance as an actress in 1847, in the part of Juliet in "Romeo and Juliet." For two years she played in the Haymarket and Drury Lane Theatres, supporting her father, G. V. Brookes, Charles Kean, William C. Macready, and other popular actors. On Jan. 8, 1849, she married Edward L. Davenport, the American actor, then playing a successful engagement throughout England, and temporarily retired from the stage. She accompanied him to the United States, and when he made his first appearance, after an absence of seven years, in the old Broadway Theatre, New York, on Sept. 11, 1854, as Othello, she supported him as Desdemona. On March 22, 1855, she appeared at a benefit tendered him as Margaret Elmore in "Love's Sacrifice," and from that time till his death, on Sept. 1, 1877, she supported her husband in all his important engagements. She was the mother of Fanny, Florence, Edgar, and Henry Davenport, and of Mrs. William Seymour.

Day, Hannibal, military officer, born in Montpelier, Vt., in 1804; died in Morristown, N. J., March 26, 1891. He was a son of Sylvester Day, M. D., assistant surgeon, United States army, and was graduated at the United States Military Academy and appointed second lieutenant in the Second United States Infantry in 1823. On April 4, 1832, he was promoted first lieutenant; July 7, 1838, captain; Feb. 23, 1852,

major; Feb. 25, 1861, lieutenant-colonel; and June 7, 1862, colonel of the Sixth United States Infantry. He was retired on Aug. 1, 1863, and was brevetted brigadier-general for long and faithful service on March 13, 1865. During his career in the army he was on garrison, engineering, recruiting, and frontier duty till the opening of the Indian war in Florida; served in the Seminole and Mexican wars; was on frontier duty in California from the close of the Mexican War till 1852; and was then on garrison and frontier service in the Northwest Territories till 1861. During the Gettysburg campaign in 1863 he distinguished himself in the defense of Little Round-top. He there commanded the first brigade of Ayres's division of the 5th Corps, and held the same command during the march to Warrenton, Va., the same month. After his retirement he was in command of Fort Hamilton, New York harbor, till June 8, 1864, and performed duty on military commissions and courts-martial till 1869, when he retired.

De Leon, Edwin, author, born in Columbia, S. C., in 1828; died in New York city, Dec. 1, 1891. He was graduated at the University of the South; practiced law in Columbia for several years; became editor of the "Telegraph," and with Edwin Fisher established the "Southern Press" in 1850; and soon afterward founded and became editor of the "National Democrat" in Washington, D. C. In 1854 he was appointed United States consul-general and diplomatic agent at Cairo, Egypt, and he held the office for eight years, resigning to enter the service of the Confederacy. Jefferson Davis appointed him special diplomatic agent in Europe, and during the war he made many ocean trips and ran the blockade seven times. He contributed his entire personal fortune to the cause of the Confederacy. After the war he remained abroad several years, supporting his family then and after returning to the United States by writing for various publications. In 1881 he revisited Egypt, and established a telephone system in its chief cities. His publications include "Thirty Years of my Life on Three Continents," "The Khédive's Egypt," a novel, "Askaros Kassis, the Captain," and "Under the Star and under the Crescent."

Dennett, Daniel, agriculturist, born in Saco, Me., in 1813; died in Brook Haven, Miss., Jan. 5, 1891. He received a common-school education; went West in 1833, and taught school eight years in various parts of Ohio and in Dubuque, Iowa; removed to St. Mary's Parish, La., in 1841, and taught there for six years; and in 1847 became proprietor and editor of the "Planters' Banner," in Franklin. He published this paper till the beginning of the civil war, and resumed editorial work immediately after its close. For a time he was editor-in-chief of the New Orleans "Picayune," and since about 1876 he had been agricultural editor of that paper. He had a large farm at Brook Haven, Miss., and was one of the few agriculturists who successfully conducted a Southern farm by Northern methods.

De Russy, Gustavus Adolphus, military officer, born in Brooklyn, N. Y., Nov. 3, 1818; died in Detroit, Mich., May 29, 1891. He was a student in the United States Military Academy in 1835-'38; was appointed a 2d lieutenant in the 4th United States Artillery on March 8, 1847, and, going directly into the Mexican War, was brevetted 1st lieutenant, Aug. 20, for Contreras and Churubusco, and captain, Sept. 13, for Chapultepec. From Jan. 12, 1849, till Aug. 9, 1857, he was quartermaster of the 4th United States Artillery. In the regular army he was promoted 1st lieutenant May 16, 1849; captain, Aug. 17, 1857; major of the 8d United States Artillery July 26, 1866; lieutenant-colonel, Aug. 25, 1879; and colonel of the 4th Artillery, June 30, 1882. He was transferred to the 8d Artillery July 17, 1882, and retired from the service on Nov. 3 following. In the volunteer army he was commissioned colonel of the 4th New York Artillery March 17, 1863, promoted brigadier-general May 29 following, and was mustered out of the service Jan. 15, 1866. In the civil war he was brevetted major June

25, 1862, for Fair Oaks; lieutenant-colonel, July 1, 1862, for Malvern Hill; and colonel and brigadier-general, March 13, 1865, for services during the war. From March 1, 1871, till May 1, 1874, he was superintendent of practical instruction and tactical recitations in the United States Artillery School. After his retirement he lived in Detroit.

Devens, Charles, jurist, born in Charlestown, Mass., April 4, 1829; died in Boston, Mass., Jan. 7, 1891. He was graduated at Harvard in 1838, took a full course in the Cambridge Law School, and was admitted to the bar in 1841. He practiced eight years in Franklin County, Mass., residing first at Northfield and afterward at Greenfield, and during that time he served two years in the State Senate. In 1849 he was appointed United States marshal for Massachusetts. Soon afterward Thomas Sims, a fugitive slave who had been captured in Massachusetts, was brought before him to be remanded to his master. The marshal felt obliged by his oath of office to execute the formal process, but his own antislavery convictions were so strong that he made several attempts to purchase the freedom of the fugitive. Subsequently, when Sims's master offered to give him his freedom for \$1,800, Lydia Maria Childs undertook to raise the sum. In response to a letter from her, Mr. Devens asked her to return all subscriptions and to permit him to pay the entire amount. Before negotiations with Sims's master were concluded the civil war broke out. Mr. Devens held the office of marshal till 1853, and in the following year resumed practice in Worcester. On April 10, 1861, he was commissioned major commanding the 3d Battalion of State Volunteer Rifles, and in July following was appointed colonel of the 15th Regiment of Massachusetts Volunteers. In his first battle, Ball's Bluff, he received a wound. He was promoted brigadier-general in 1862; commanded a brigade in the Peninsular campaign; received a second wound at Fair Oaks; was present at Antietam and Fredericksburg; and in 1863, while commanding a division in the 11th Corps, received a third wound at Chancellorsville. The last wound caused his retirement from the field till the spring of 1864, when he was appointed to the command of a division in the old 18th Corps, reorganized as the 3d division of the 24th Corps. On the evacuation of Richmond by the Confederates, his troops were the first to occupy the city. For his gallantry in this campaign he was promoted major-general of volunteers, and appointed commander of the military district of Charleston. He was mustered out of the service, at his own request, in June, 1866, and returned to his law practice in Worcester. In April, 1867, he was appointed a justice of the Superior Court of Massachusetts, and he served till 1873, when he was promoted to the bench of the State Supreme Court. In 1877 he was appointed Attorney-General of the United States, and soon after the close of his term in 1881 he was reappointed a justice of the Supreme Court of the State, which office he held until his death. Judge Devens delivered the oration at the centennial celebration of the battle of Bunker Hill on June 17, 1875, at the dedication of the soldiers' monuments at Boston and Worcester, and on the death of Gens. Meade and Grant.

Dillingham, Paul, lawyer, born in Shutesbury, Franklin County, Mass., Aug. 10, 1799; died in Waterbury, Vt., July 26, 1891. When six years old he removed with the family to Waterbury, where he studied law, was admitted to the bar in 1823, and formed a partnership with Judge Dan Carpenter. He was elected town clerk in 1829, and held the office fifteen years; in 1833 he was elected to the Legislature, where he served six consecutive terms, during two years of which he was also State's attorney; in 1836-'37 he was a member of the State Constitutional Convention; and in 1841 he was elected a State Senator. At the end of his term in the Senate he was elected to Congress, where he served two terms, was a member of the Committee on the Judiciary, and was the only Democrat in the Vermont delegation. In 1861 he

was re-elected to the State Senate, in 1862 was elected Lieutenant-Governor, and in 1865 was elected Governor as a Republican. One of his sons, William P. Dillingham, also became Governor of Vermont, and a daughter married the late United States Senator Matt. H. Carpenter, of Wisconsin.

Dodd, Edward, congressman, born in Salem, Washington County, N. Y., in 1805; died in Argyle, N. Y., March 1, 1891. He received a public-school education, and was brought up in mercantile life. He was elected clerk of Washington County in 1834 for three years, and was twice re-elected for a similar term. He was a member of the State Constitutional Convention in 1846; was elected to Congress in 1855 and 1857; was United States marshal for the Northern District of New York from April, 1863, till March, 1865, and again from July, 1868, till April, 1869; and was a Republican presidential elector in 1884.

Dodworth, Harvey B., musician, born in Sheffield, England, Nov. 16, 1822; died in West Hoboken, N. J., Jan. 24, 1891. He was a son of Thomas Dodworth, a well-known musician and bandmaster; received a musical education from his father; came to New York with his father and brothers Allan and Charles in 1826, and made his first appearance as an instrumentalist—playing the flute—in New York in the following year. He learned also the trombone, trumpet, and violin; and, besides playing in the brass band organized by his father soon after settling in New York, he was almost constantly engaged in the orchestras of theatres till 1839, when he became leader of his father's band. He continued at the head of this organization—the first formed in New York of white men exclusively—till October, 1890, more than fifty-one years. During this period his orchestra played in Niblo's Garden for fifteen years; he furnished music at Daly's, Wallack's, and the old Park theatres; organized a cornet band for the 7th Regiment; held engagements to furnish regimental music for the 12th, 13th, and 22d Regiments; was for many years bandmaster of the 71st Regiment, with which he served in the first and second battles of Bull Run; supplied the national armies with fifty bandmasters and 500 musicians; introduced free park concerts in New York; and was for twenty-four years leader of the band at Central Park. He also furnished the music at presidential inaugurations for nearly thirty years; was the first musician in the United States to arrange Wagner's music for military bands; was the first to introduce reed instruments in military bands; and invented improvements in brass instruments.

Draper, Lyman Copeland, historian, born in Hamburg (now Evans), Erie County, N. Y., Sept. 4, 1815; died in Madison, Wis., Aug. 26, 1891. He was brought up on a farm and received a village-school education in Lockport, N. Y.; was a clerk for three years; went to Mobile, Ala., in 1833, and began collecting material relating to Western history, biography, and geography; studied in Granville College, Ohio, in 1835-'36; and began a systematic collection of historical material from living pioneers in 1838. In 1840 he was appointed editor of a newspaper in Pontotoc, Miss.; in 1842 he received a clerkship in the Buffalo office of the Erie Canal; and in 1843-'53 he pursued historical studies in Philadelphia. In the latter year he was offered the office of corresponding Secretary of the Wisconsin Historical Society at Madison, and, excepting in 1858-'59, when he was State Superintendent of Public Instruction, he held the office till Jan. 6, 1887, when he was chosen honorary secretary for life. His publications include ten volumes of the "Collections" of the society, personally gathered (1853-'87); "Madison, the Capital of Wisconsin" (1857); "The Helping Hand," in conjunction with William A. Croftut (1869); "King's Mountain and its Heroes" (1881); and "Essay on the Autographic Collections of the Signers of the Declaration of Independence and of the Constitution" (1889). He also had nearly completed "The Mecklenburg Declaration of Independence" and "Border Forays and Adventures." Dr. Draper bequeathed all his property to the His-

torical Society, except a life interest in the homestead and \$1,000 per annum to his widow; and the exceedingly valuable books and manuscripts that he collected during his life will remain in the society's library, while the residue of his personal estate will doubtless be used, as he desired, for the erection of a fire-proof building for his treasures.

Drayton, Thomas Fenwick, military officer, born in South Carolina about 1807; died in Florence, S. C., Feb. 18, 1891. He was graduated at the United States Military Academy in 1828; was on garrison duty in Jefferson, Mo., and Newport, Ky., for four years, and on topographical duty for four years; and resigned from the army Aug. 15, 1836. After being employed as a civil engineer in Charleston, Louisville, and Cincinnati, he became a planter in St. Luke's Parish, S. C., in 1838. He was a State Senator in 1853-'56, and President of the Charleston and Savannah Railroad in 1853-'61. He entered the Confederate army at the beginning of the civil war, was commissioned brigadier-general, and was given command of the troops on Hilton Head Island to oppose the Federal naval expedition to Port Royal, in which his brother, Captain Percival Drayton, commanded a national vessel, in November, 1861. His mansion stood a few yards from the beach and not more than a mile from the Confederate Fort Walker. He had a force of 625 men with him in the fort, which he was compelled to evacuate, after a bombardment of four hours, on Nov. 7. After the war he engaged in agriculture in Georgia, subsequently removed to South Carolina, and in 1878 was appointed President of the State Immigrant Association.

Duell, Robert Holland, lawyer, born in Warren, Herkimer County, N. Y., Dec. 20, 1824; died in Cortland, N. Y., Feb. 11, 1891. He received an academic education, studied law, and was admitted to the bar in 1845; settled in Cortland to practice in 1848, and was district-attorney of the county in 1850-'55. In 1855-'59 he was county judge; in 1858, 1860, 1870, and 1872 he was elected to Congress as a Republican from the 24th New York District; in 1869-'71 he was assessor of internal revenue; and on the expiration of his last term in Congress he held the office of United States Commissioner of Patents for one year. While in Congress he was a member of the committees on Revision of the Laws of the United States, on Expenditures on Public Buildings, and on Foreign Affairs.

Eddy, Zachary, clergyman, born in Stockbridge, Vt., Dec. 19, 1815; died in Detroit, Mich., Nov. 15, 1891. He was educated by private tutors; was ordained in the Cumberland Presbyterian Church in 1835; acted as missionary in Pennsylvania and Ohio in 1835-'38; and held pastorates in Springville, N. Y., 1838-'43; Mineral Point, Wis., 1844-'50; Warsaw, N. Y., 1850-'56; Birmingham, Conn., 1856-'58; Northampton, Mass., 1858-'67; Brooklyn Heights (Reformed Dutch Church), N. Y., 1867-'71; Detroit (Congregational Church), Mich., 1873-'84; and Atlanta, Ga., 1884-'86. He received the degree of D. D. from Williams College in 1858. Dr. Eddy was author of "Immanuel, or the Life of Christ" (Springfield, 1868); and editor of "Hymns of the Church, compiled for the General Synod of the Reformed Church in America" (New York, 1869); of "Hymns and Songs of Praise," in conjunction with the Rev. Drs. Hitchcock and Schaff (1874); and of "Carmina Sanctorum," with the Rev. Dr. Hitchcock and Lewis Ward Mudge (1886).

Edwards, Henry, actor and entomologist, born in Ross, Herefordshire, England, Aug. 27, 1830; died in New York city, June 9, 1891. While a clerk in London he studied for the stage, and made frequent appearances in private theatres. In 1853 he went to Australia, where he remained for more than twelve years, managing theatres in Sydney and Melbourne, supporting Gustavus V. Brooke, Charles Poole, and George Fawcett Rowe, and taking up the study of entomology, which he pursued to the close of his life. From Australia he went to Peru, Panama, and San Francisco, where he spent twelve years as actor and manager. His first Eastern appearance was made in

Boston, in 1878, when he played Master Walter to Mary Anderson's Julia in "The Hunchback," Marc Antony in "Julius Caesar," Mercutio, Masdull, and Schlem in "The Exiles." He came to Wallack's Theatre, New York, in 1879, making his first appearance Dec. 8, as Josiah Clench, in Byron's comedy of "Our Girls." Subsequently he adopted old men's parts, playing second to John Gilbert in old comedies and the principal parts in new ones. Among his popular parts were Sir Oliver Surface in "The School for Scandal," Colonel Rocket in "Old Heads and Young Hearts," Sir Jealous Traffic in "The Busybody," Baron Stein in "Diplomacy," Adam in "As You Like It," the servant in "Harvest," Squire Weston in "Sophia," and Dominic Vanderver in "The Dominic's Daughter." He was considered one of the foremost entomologists in the country, and his collection of *Lepidoptera* has been pronounced unsurpassed.

Ekin, James Adams, military officer, born in Pittsburgh, Pa., Aug. 31, 1819; died in Louisville, Ky., March 27, 1891. He was a grandson of Col. Stephen Bayard, of the army of the Revolution, and for several years prior to the civil war he was engaged in steamboat building at Pittsburgh. He was appointed 1st lieutenant in the 12th Pennsylvania Infantry on April 25, 1861, and captain and assistant quartermaster on Aug. 7 following; was lieutenant-colonel and quartermaster from Feb. 15 till Aug. 1, 1864, and colonel from Aug. 2, 1864, till Jan. 1, 1867; and was brevetted brigadier-general of volunteers, March 8, 1865, for meritorious services in the quartermaster's department during the war. In the regular army he was appointed captain March 13, 1863; lieutenant-colonel and deputy quartermaster-general July 29, 1886, and colonel and assistant quartermaster-general Feb. 13, 1882; and was retired Aug. 31, 1888. On March 13, 1865, he was brevetted major, lieutenant-colonel, colonel, and brigadier-general in the regular army. His services were especially commended by President Lincoln, Secretary Stanton, Gov. Morton, and Gens. Meigs, Halleck, J. J. Reynolds, and McDowell. He was a member of the commission that tried the murderers of President Lincoln.

Elfvig, Nere A., military officer, born in Sweden, Feb. 8, 1832; died in Stockholm, Sweden, March 4, 1891. He was graduated at the Swedish Military Academy, and was employed by the Government in the construction and improvement of harbors till 1855, when he came to the United States. At the beginning of the civil war he enlisted in the 48th New York Volunteers, was soon commissioned 1st lieutenant, and was promoted captain Aug. 29, 1862. He was present during the assault on the defenses of Charleston in 1863, and was wounded at Fort Wagner. In the early part of 1864 he was on duty in Florida as brigade inspector, receiving his second wound at Olustee. Subsequently he took part in the battles at Drury's Bluff, Cold Harbor, and the first assault on Fort Fisher, and in the second assault of the latter he commanded the regiment after the colonel had been wounded; and after the fall of the fort he was placed in command of his brigade. On Feb. 20, 1865, he received his third wound, which caused the loss of a leg. For his services in the war he received the brevet of colonel of volunteers and of lieutenant-colonel in the regular army and was pensioned. He then returned to Sweden and became a professor in the military academy. In 1869 he was appointed United States vice-consul at Stockholm, and in 1871 promoted to be consul, and he held the latter office till his death.

Elliott, George William, journalist, born in New York city in 1848; died in Rochester, N. Y., March 18, 1891. He removed to Auburn in early youth, studied at Cazenovia Seminary, and Wesleyan University, and was graduated at Syracuse University in 1873. In the latter year he became editor of "The Northern Christian Advocate," and from 1874 till 1881 he was associate editor of "The Rochester Democrat and Chronicle." He then managed "The American Rural Home" till 1885, when he became editorial and

advertising manager of a medical establishment. He was a Republican in politics and an advocate of municipal reform, had been an alderman and an unsuccessful candidate for mayor, and was one of the founders of the park system of Rochester.

Emmet, Joseph Kline, actor, born in St. Louis, Mo., March 13, 1841; died in Cornwall, N. Y., June 15, 1891. In early life he was a sign-painter. He cultivated a natural taste for music, and began his career on the stage as a singer and dancer in a local variety theatre. His first regular engagement was with Morris and Wilson's minstrels, with whom he appeared in St. Louis, Cincinnati, Buffalo, and San Francisco. In 1868 he joined Bryant's Minstrel Troupe, and first appeared in New York city. In the following year Charles Gaylor wrote for him "Fritz, our Cousin German," which was first produced in Buffalo, Nov. 22, 1869, and had a remarkable midsummer run in Wallack's Theatre, New York, in 1870. The humor, drollery, good temper, and childish amiability of the actor in this piece won all hearts, and made the play a phenomenal success and the player a rich man. Mr. Emmet also appeared in two other plays written for him by Mr. Gaylor; in one, "Fritz in Ireland," by William Carleton; and in "Uncle Joe, or Fritz in a Madhouse," his last play; but in none was he so successful and popular as in the original "Fritz." His great failing was love of strong drink, and this caused him to break many engagements and to be confined several times in inebriate asylums.

Errett, Russell, journalist, born in New York city, Nov. 10, 1817; died in Pittsburgh, Pa., April 7, 1891. From the death of his father, in 1824, he had to depend on his own resources, and he acquired but a limited education. He removed to Pittsburgh in 1829, became a baker's apprentice in 1833, and worked as a journeyman in Alabama and Kentucky; returned to Pittsburg and began teaching, and in 1842 was appointed clerk to the mayor and editor of the "Sun" newspaper. In 1845 he took charge of the "Patriot," an antislavery paper in Washington, Pa., and in 1852 entered the editorial room of the Pittsburgh "Gazette," of which he became editor and part proprietor, retiring from it in 1865. From its organization, in 1856, he was an active member of the Republican party. He attended its first national convention in Pittsburg, and was an efficient official under it for thirty years. In 1860 he was elected Comptroller of Pittsburg; in 1860-'61, 1872-'76, and 1889-'90 he was chief clerk of the State Senate; in 1861-'65 he was a paymaster in the army; in 1867 was elected State Senator; in 1869-'73 was assessor of internal revenue; in 1876, 1878, and 1880 was elected to Congress; and in 1883-'87 was United States pension agent of Pittsburg.

Faunce, John, naval officer, born in Plymouth, Mass., March 25, 1807; died in Jersey City, N. J., June 5, 1891. He went to sea when thirteen years old, and was taught navigation by a sailor, to whom he gave his allowance of grog as compensation. Before he reached his majority he became commander of a ship by reason of the death of the captain at sea. In 1837 he entered the United States Revenue Marine Service as 3d lieutenant, and was ordered to duty on the "Campbell" at Baltimore, then under commission to co-operate with the army and navy in the campaign against the Seminole Indians in Florida. For nearly two years he was the only officer on board the vessel, and while protecting the coast he took part in many engagements with the Indians. He was promoted 2d lieutenant June 5, 1841; 1st lieutenant Oct. 28, 1845; and captain March 8, 1855. Early in 1855 he was placed in charge of the life-saving stations on the coasts of New Jersey and Long Island, and in 1857 was appointed assistant to the naval constructor assigned to the building of the celebrated revenue steamer "Harriet Lane." On the completion of the vessel he became her commander, and remained such till September, 1871, when the vessel was incorporated with the regular navy. With his vessel he accompanied the naval

expedition to Paraguay in 1858-'59, and he subsequently received the commendations of Flag-officer Shubrick and the Secretary of the Navy for "the skill and zeal with which he used the very efficient vessel under his command in extricating naval vessels from perilous situations," besides a silver pitcher from the officers of the fleet. The "Harriet Lane" was one of the vessels forming the small fleet that was hastened to the relief of Fort Sumter in April, 1861, and was present at the capture of the fortifications at Hatteras Inlet in the following August, being under the command of Capt. Faunce on both occasions. After the war he was one of the first officers appointed to locate stations of the life-saving service on our coasts, and thus had much to do with the organization of the first experimental service authorized by Congress and of the present model system. He remained in active service till May, 6, 1881.

Fay, Julius Augustus, lawyer, born in Baltimore, Md., in 1840; died in Elizabeth, N. J., Sept. 26, 1891. He was graduated at Williams College, entered the national army as a lieutenant in 1862, served in the 30th, 35th, and 40th New Jersey regiments, and was promoted colonel in 1865, and brevetted lieutenant-colonel in the regular army for gallantry before Petersburg. After the war he held the office of Inspector-General of Militia of New Jersey under Govs. Randolph and Parker. He studied law, was admitted to the bar in 1866, and soon became eminent as a criminal lawyer, and during the ten years he was prosecutor of Union County he was credited with 3,000 convictions out of 3,040 cases tried by him.

Feat herstone, Winfield Scott, lawyer, born in Tennessee, in 1818; died in Holly Springs, Miss., May 28, 1891. In early life he removed to Mississippi, where he studied law and was admitted to the bar. He was elected to Congress in 1846 and 1848, and declined a third term that he might confine himself to his law practice. At the beginning of the civil war he entered the Confederate army, served through the war in Virginia and in the Transmississippi Department, and attained the rank of brigadier-general. He was a member of the State Legislature in 1875, and chairman of the committee that prepared the articles and conducted the impeachment of Gov. Adelbert Ames and other State officers, and as chairman of the Judiciary Committee in 1879-'80 he aided largely in revising the State code.

Ferrel, William, meteorologist, born in Bedford (now Fulton) County, Pa., Jan. 29, 1817; died in Maywood,

Kansas, Sept. 18, 1891. His early education was acquired at winter schools in log cabins, and at four-

teen his schooling ended. In 1832, while working on his father's farm, he observed a sun eclipse, which so excited his interest that he procured mathematical text-books and studied them until he was able to predict eclipses. So accurate were his results that when the almanac was issued his calculations showed no greater error in time than nine minutes. Other text-books were procured and studied by the light of a dim candle or the blaze of light-wood until he attained the age of twenty-two, when, by the aid of money earned in teaching and promises of assistance from his father, he entered Marshall (now Marshall and Franklin) College. After two years he taught in Virginia until he had earned sufficient money to pay his expenses at Bethany College, where he was graduated in 1844. Resuming his vocation as a teacher, he settled in Liberty, Mo., and devoted much of his leisure to study, especially in the line of higher mathematics. Then he taught in Southern Kentucky for seven years, after which for four years he was professor in a commercial college in Nashville, Tenn. At this time he published "Winds and Currents of the Ocean" in the Nashville "Journal of Medicine and Surgery," and wrote for Dr. Benjamin A. Gould's "Astronomical Journal." These led to his acquaintance with scientific men, through whose influence he was appointed in 1857 assistant in the office of the "American Ephemeris and Nautical Almanac," then issued in Cambridge by Prof. Joseph Winlock. Ten years later he accepted an appointment under Benjamin Pierce in the service of the Coast Survey, with special charge of the consideration and discussion of tidal relations. This place he held until 1882, and subsequent to 1874 the annual reports of the Coast Survey contain his special contributions of "Tidal Researches." He invented a maxima and minima tidal-predicting machine, which was constructed at a cost of \$2,500, and which is described in Appendix No. 10 of the "Report of the Coast and Geodetic Survey" for 1883. By its use the labor of more than thirty men was saved. In 1882 he became Professor of Meteorology in the Signal Office in Washington, D. C., where he remained for four years, and then retired to devote himself exclusively to private researches. In Europe as well as in this country Prof. Ferrel was regarded as the leader in the methods of mathematical meteorology. The honorary degrees of A. M., and Ph. D. were conferred upon him, and in 1868 he was elected to the National Academy of Sciences. He was an associate fellow of the American Academy of Arts and Sciences, and an honorary member of the Austrian, London, and German Meteorological Societies. His professional papers numbered more than fifty, many of which are in the series of "Professional Papers of the United States Signal Service," and include "Motions of Fluids and Solids relative to the Earth's Surface," (1859); "Determination of the Moon's Mass from Tidal Observations" (1871); "Converging Series expressing the Ratio between the Diameter and the Circumference of a Circle" (1871); "Meteorological Researches," Part I, "On the Mechanics and the General Motions of the Atmosphere" (1877); Part II, "On Cyclones, Tornadoes, and Waterspouts" (1880); Part III, "On Barometric Hypsometry and the Reduction of the Barometer to Sea Level" (1882); and "Temperature of the Atmosphere and the Earth's Surface" (1884). His books were: "On the Recent Advances in Meteorology" (Washington, 1886), a text-book designed for use in the Signal-service School of Instruction, and also for a hand-book in the office of the chief signal officers, and "A Popular Treatise on the Winds" (New York, 1889).

Festetics, Count Charles Albert, civil engineer, born in Hungary, about 1840; died in Jersey City, N. J., June 25, 1891. He was a nobleman of ancient lineage, although the fact was not known to the public till after his death. His father was chamberlain of the court of Austria, and the son was graduated at the Austrian military academy, and attained the rank of colonel in the Austrian army. Charles set out for

the United States during the latter part of the civil war to enter the national army, but the struggle ended before his arrival. He then established himself in business as a mining and civil engineer, and was first engaged in constructing a part of the Texas and Pacific Railroad. In 1868-'69 he was first assistant to Gen. Charles P. Stone, then making surveys for the Florida Ship Canal, and personally surveyed the route; in 1872 he was engineer-in-chief in charge of the laying of the double track for the New York Central and Hudson River Railroad from Albany to Buffalo; and subsequently he was consulting expert and first assistant to Gen. Stone in building the pedestal for the Bartholdi statue, assistant to Gen. McClellan when the latter was chief engineer of the New York Dock Department, and at the time of his death was engineer-in-chief of the Alabama Coal and Iron Company.

Fisher, Charles, actor, born in Suffolk, England, in 1816; died in New York city, June 10, 1891. He made his first appearance on the stage at the Princess Theatre, in London, in 1844, and his first American appearance at Burton's Theatre, in New York, as Ferment, in "The School of Reform," on Aug. 30, 1852. During this interval he had played with success in the principal London theatres. His reception in the United States was so cordial that he decided to remain here, and, after making tours of the large cities, he joined the Wallack company in 1861. He there succeeded to the characters of the elder Walcott, playing acceptably as Joseph Surface, Triplet in "Masks and Faces," Graves in "Money," and in "Rosedale," and many other Wallack plays. He joined Augustin Daly's company in 1872, and was active in it till the autumn of 1890, when advancing age caused him to retire permanently from the stage. While with Mr. Daly he played the parts of the first old men, and had but one rival, John Gilbert. Some of his Shakespearean parts were memorable for thorough study and careful acting; in the old comedies he was strong. His Falstaff, Sir Peter Teazle, old Adam in "As You Like It," the Ghost in "Hamlet," Laroque in "The Romance of a Poor Young Man," and the Parson in "The Squire" will long be remembered.

Fitz, Benjamin Rutherford, painter, born in New York city in 1835; died in Peconic, L. I., Dec. 27, 1891. He studied painting in the National Academy of Design and in the Royal Academy of Painting, in Munich, where he took two medals for excellence. In 1885 he returned to New York city, and was at once chosen a professor in the Art Students' League, with which he was connected till his death. He was a member of the Society of American Artists, the American Water-color Society, the Architectural League, the Art Students' League, the National Academy of Design, and of the Salmagundi and Lotos Clubs. During his short art career Mr. Fitz painted portraits of many of the best known people of New York city, and showed particular strength and grace in female portraiture.

Flasch, Kilian, clergyman, born in Retzstadt, Bavaria, July 16, 1831; died in La Crosse, Wis., Sept. 3, 1891. He was brought up on a farm; came with his parents to the United States in 1847; was educated in the College of Notre Dame, Indiana, the Pro-seminary in Milwaukee, and the Seminary of St. Francis; and was ordained a Roman Catholic priest Dec. 16, 1859. He was master of discipline and a professor in the Seminary of St. Francis in 1860-'67; engaged in mission and orphan-asylum work till 1874; then became spiritual director of the seminary and Professor of Moral Theology at St. Francis, and was appointed rector of the college in 1879. On Aug. 24, 1881, he was appointed Bishop of La Crosse, where he remained till his death. He had over 55,000 persons under his care, and over 120 churches, and under his administration many charitable, religious, and educational institutions were established in his diocese.

Flint, Franklin Foster, military officer, born in New Hampshire, April 29, 1821; died in Chicago, Ill., Sept. 15, 1891. He was graduated at the United

States Military Academy, and appointed 2d lieutenant 6th United States Infantry in 1841; was promoted 1st lieutenant, Oct. 12, 1847; captain, Sept. 16, 1850; major 16th United States Infantry, May 14, 1852; lieutenant-colonel 7th Infantry, Oct. 20, 1856; and colonel 4th Infantry, July 8, 1868; and was retired at his own request, April 11, 1862. He served in the Seminole War in Florida, the Kansas disturbances in 1856, the Utah expedition in 1858, the Carson valley expedition in 1860, and in several Indian campaigns in the West. In the civil war he was in command at Louisville in 1862, and afterward of the depot at Alton and of the defenses of Cincinnati.

Florence, William James, an actor whose real name was Bernard Conlin, born in Albany, N. Y., July 26, 1831; died in Philadelphia, Pa., Nov. 20, 1891. He showed a love for acting and for the drama at an

early age. He found his way to New York when he was sixteen years old, where he learned a trade, but devoted all his leisure time to private theatricals and to the affairs of the Murdoch Dramatic Association. His first appearance on the professional stage was made at Richmond, Va., Dec. 4, 1849, as Peter in the "Stranger." In the spring of the following year he became a member of the company at Niblo's Garden, New York, under the management of Brougham and Chippendale, and his first part was Hallagon, in a drama by Brougham called "Home," produced May 13, 1850. When Brougham opened the Lyceum Theatre, New York, afterward Wallack's Theatre, and the Broadway Theatre, on the corner of Broadway and Broome Street, Dec. 23, 1850, Florence appeared in an after-piece called "The Light Guard, or Woman's Rights." He made his first decided hit at this house on April 22, 1851, when he appeared as a red-shirted fireman in a play of the period called "A Row at the Lyceum." During the following season he was at the Broadway Theatre, New York, between Anthony (since Worth) and Pearl Streets, opening on Aug. 30, 1852, as Lord Tinsel in "The Hunchback" to the Julia of Julia Dean and the Master Walter of F. B. Conway. Later he supported Forrest, Mr. and Mrs. Barney Williams, and Mrs. Mowatt. On Jan. 1, 1853, he married Miss Malvina Pray, with whom he was so pleasantly associated in a long and honorable dramatic career. They first played together at the National Theatre, Chatham Street, New York, on June 13, 1853, appearing as the Irish Boy and Yankee Girl, where they met with great success, which followed them on an extensive tour through the United States. In 1856 they first appeared in London, at Drury Lane Theatre, where Mrs. Florence, as a specimen of American help in the "Yankee Housekeeper," amused and

entertained London audiences for a season of fifty nights. Returning to New York, Mr. Florence made his first decided hit in a more serious part, as Bob Brierly in "The Ticket-of-leave Man," produced at Winter Garden, Nov. 30, 1863, Mrs. Florence playing Emily St. Evremonde. The drama ran for one hundred and twenty-five successive nights in New York, and was repeated all over the United States. On Aug. 5, 1867, at the house on Broadway and Broome Street, Mr. Florence produced Robertson's "Caste," an almost perfect play, perfectly played when he was George D'Alroy and Mrs. Florence Polly Eccles, the originals in America. "Caste" was followed at the same house on Sept. 26, 1868, by "No Thoroughfare," when Mr. Florence introduced Obenreizer to the American stage. In 1875 he created Bardwell Slope in B. E. Woolf's "The Mighty Dollar," one of his most enduring successes. Mrs. Florence was Mrs. General Gilflory. In September, 1883, Mr. Florence produced George H. Jessop's "Our Governor," under the title of "Facts," at the Walnut Street Theatre, Philadelphia. Its name was changed in the following season. His part in this piece was Pinto Perkins. His next production was a play by Mr. Woolf, entitled "Our German Professor." In the season of 1888-'89, Mrs. Florence having retired from the stage, her husband entered into an artistic partnership with Joseph Jefferson, which lasted until his death, and afforded rare pleasure to the American theatre-going public. He played Sir Lucius O'Trigger to Jefferson's Bob Acres in "The Rivals," and to the Dr. Pangloss of the same actor Mr. Florence made his final appearance on the stage in the character of Zekiel Homespun in "The Heir-at-law," at the Arch Street Theatre, Philadelphia, on the night of Nov. 14, 1891. Mr. Florence was an actor of unusually long and varied experience; and in the whole history of the drama in America few men have been so uniformly excellent in so wide a range of parts. He was associated with some of the most prominent figures on the English-speaking stage. He played Richmond and Laertes with the elder Booth, Lucullus and Titus with Edwin Forrest, the Second Grave-digger to the Hamlet of the younger Booth, Cap'n Cuttle to Henry Irving's Dombey, and he supported or was supported by Lawrence Barrett, McCullough, Forrest, John T. Raymond, John L. Toole, Burton, and Brougham. No dramatic contrasts can be greater than those between the son of an hundred earls in "Caste" and the ignorant, humble outlaw of the "Ticket-of-leave Man"; between the American politician in the "Mighty Dollar" and the Swiss adventurer in "No Thoroughfare"; between the bluff, simple, honest old sailor in the dramatization of "Dombey and Son" and the simple, honest, modest young country lad of the "Heir-at-Law"; between the frolicking, fearless fire-laddie of the "Row at the Lyceum" and the fire-eating coward of "The Rivals." In none of these parts was Mr. Florence ever excelled, and in few of them did he find an equal. William Winter, in the epitaph of Mr. Florence, says: "His copious and varied dramatic powers, together with the abundant graces of his person, combined with ample professional equipment and a temperament of peculiar sensibility and charm, made him one of the best and most successful actors of his time, alike in comedy and serious drama. In authorship, alike of plays, stories, music, and song, he was inventive, versatile, facile, and graceful. In art admirable, in life gentle; he was widely known, and he was known only to be loved."

Ford, Gordon Lester, collector, born in Lebanon, Conn., Dec. 16, 1823; died in Brooklyn, N. Y., Nov. 14, 1891. He removed to New York city and became a clerk when twelve years old; was a book-keeper in H. B. Claffin & Co.'s store for two years; studied law in his leisure, and was admitted to the bar in 1850, but never practiced. In 1852 he became President of the New London, Willimantic and Palmer Railroad; in 1856 resigned and settled in Brooklyn, where he ever afterward lived. In 1863, in association with Simeon

B. Chittenden, he founded the Brooklyn "Union," and in 1869-'72 he was collector of internal revenue for the 3d New York District. Mr. Ford became a Liberal Republican in 1872, and was a delegate to the national convention of that party in Cincinnati. In 1873 he became the publisher of the New York "Tribune," and he held the place till 1881. For a short time afterward he was President of the Brooklyn, Flatbush, and Coney Island Railroad, and he then retired from active business. He was either a founder, director, or member of many of Brooklyn's public and financial institutions, including the Art Association, the Academy of Music, the Brooklyn Library, the Long Island Historical Society, the Tree-planting and Fountain Society, the Hamilton Club, and the Lotos, Reform, and Lawyers' Clubs in New York city. Early in life he began collecting books, manuscripts, and autograph letters, and in later years he built a fire-proof room, 50 feet square, in the rear of his dwelling, where he housed his treasures. At the time of his death his library contained about 50,000 volumes, valued at \$500,000, and his autograph letters were valued at \$100,000.

Ford, Melbourne Haddock, stenographer, born in Saline, Mich., June 30, 1849; died in Grand Rapids, Mich., April 20, 1891. He was educated at the Michigan Agricultural College and at the United States Naval Academy; served in the navy in the latter part of the civil war, studied law and was admitted to the bar in 1878, but never practiced; and from 1874 was employed as official stenographer in various State courts. In 1885-'86 he was a member of the Legislature, in 1886 was elected to Congress as a Democrat from the 5th Michigan District, in 1888 was defeated for re-election, and in 1890 was re-elected on the free-trade issue. While in Congress he was a member of the committees on Military Affairs and on Territories, and chairman of the Committee on Importation of contract labor.

Forrest, Catherine Norton, actress, born in England, in 1818; died in New York city, June 16, 1891. She was the daughter of John Sinclair, a popular vocalist, and married Edwin Forrest, the American actor, in June, 1837. She accompanied him to his home in New York city, but their lives were soon embittered with quarrels and domestic unhappiness. No open rupture occurred, however, till 1849, when her husband found a questionable letter addressed to her by an actor of low repute, and brought suit for divorce, they having then lived apart for two years. Mrs. Forrest, who solemnly declared her entire innocence and maintained it throughout her life, at once entered a counter-suit. Mr. Forrest retained John Van Buren as his counsel, and his wife secured Charles O'Connor. The trial began before Chief Justice Oakley in the New York Supreme Court on Dec. 16, 1851, continued for fourteen years, and was the most remarkable of its kind that had ever taken place in this country. A judgment was obtained in favor of Mrs. Forrest, with an order for the payment of \$3,000 a year alimony. Forrest ordered his lawyer to "go on fighting as long as there was a court to which the case could be appealed." He refused to pay the alimony, and, keeping out of the State for several years, fought off all judgments till 1863, by which time the amount filed against him was immense, every point in every court taken by Mr. O'Connor being sustained. During the years occupied by the lawsuits Mrs. Forrest supported herself by going upon the stage, appearing first at the old Wallack Theatre, as Lady Teazle, in "The School for Scandal," and next in the same rôle at Chestnut Street Theatre, Philadelphia. She then went to England, and afterward to Australia and California, appearing again in England in September, 1857, where she played an engagement at Haymarket Theatre, London, as Beatrice. On her return to the United States she played in various cities, meeting with indifferent success. When the divorce case reached the last court to which it could be appealed, judgment was again rendered against Mr. Forrest, and \$1,000 was added to the amount of alimony. For-

rest yielded to the inevitable, and paid the alimony regularly till his death, Dec. 12, 1872. The full award, \$64,000, was paid to Mrs. Forrest at the close of legal proceedings, and all but \$5,000 was swept away in the payment of expenses. For nearly thirty years prior to her death Mrs. Forrest lived in seclusion. Burying herself in the protection of a busy city, she passed half of this period in absolute retirement from the world, wishing even that her identity should be undiscovered by her neighbors. On the death of Mr. Forrest she had made claim to her dower-right in his estate, and, in 1874, this was granted to her by the executors. She was therefore not without means of support, although she lived for many years in obscurity and died almost unknown.

Fowle, Daniel Gould, jurist, born in Washington, Beaufort County, N. C., March 3, 1831; died in Raleigh, N. C., April 8, 1891. He was graduated at Princeton in 1851, read law and was admitted to the bar in 1854, and settled in Raleigh. He enlisted in the Confederate army as a private in 1861, became a major in the commissary department, organized the 31st North Carolina Regiment, of which he was commissioned lieutenant-colonel, and was captured in the battle of Roanoke Island, Feb. 8, 1862. He was soon paroled, and in October following was elected to the Legislature. After the close of his term he was appointed adjutant-general of the State, served a second term in the Legislature, and in 1865 was appointed by Gov. Holden a judge of the Superior Court. In the Legislature of 1865-'66 he was elected to the same office for life, and he held it till 1876, when he resigned. He was chosen governor for four years in 1888, the term beginning Jan. 1, 1889.

Fox, Henry J., clergyman, born in Hull, England, in 1821; died in Fair Haven, Mass., Nov. 3, 1891. He became a clergyman in the Methodist Episcopal Church, and in early life held pastorates in Hartford, Brooklyn, and New York city. Afterward for three years he was proprietor and President of the Collegiate Institute, at Ashland, N. Y. In 1869 he removed to South Carolina, where for some time he was engaged in planting and in preaching and teaching among the negroes. Subsequently he was elected Professor of English Literature in the University of South Carolina, where he remained till 1874, then returning to New England. He was actively engaged in pastoral work till 1885, when illness compelled retirement. Dr. Fox was author of "The Quadrennial Register of the Methodist Episcopal Church," "The Land of Hope," "The History of our Mission in Cape Palmas," "The Sabbath Psalter," "The Student's Commonplace Book," "The Student's Shakespeare," and other works.

Frayne, Frank L., actor, born in Danville, Ky., March 29, 1839; died in Chicago, Ill., March 16, 1891. He made his first appearance on the stage about 1860, and, as he was an expert marksman, chose sensational plays in which his rifle-shooting produced thrilling spectacles. One of his most popular plays was "Si Sloeum," in which he shot an apple off the head of the heroine while his back was turned toward her. While playing it in Cincinnati, on Nov. 30, 1882, he shot and instantly killed the leading lady. The accident was due to a defect in the rifle. Among the accessories of his plays was a small menagerie, including two lions, over which he had remarkable control. He appeared in "Si Sloeum" in England in 1876, and was last seen on the stage in Cleveland, O., about three weeks before his death.

Fuller, John Wallace, military officer, born in Cambridge, England, in July, 1827; died in Toledo, Ohio, March 12, 1891. He was the son of a Baptist clergyman, who settled in Peterborough, N. Y., in 1833. In 1840 the son went to Utica, learned the book-selling and publishing business, and established the publishing house of John W. Fuller & Co. While in Utica he became active in politics and twice was elected city treasurer. In 1858 he removed to Toledo, and established a Western branch of his publishing house. At the outbreak of the civil war he was

appointed chief of staff to Gen. Charles W. Hunt, and went to the field in western Virginia, and on the organization of the 27th Ohio Volunteers he was made its colonel. In February, 1862, he was sent from Missouri to join Gen. John Pope in his New Madrid campaign, in September following he commanded a brigade at the battle of luka, and in October his "Ohio brigade" checked a charge of the Confederates and broke their line at Corinth. Gen. Rosecranz complimented commander and brigade for their service. Gen. Fuller defeated Forrest's cavalry at Parker's Cross Roads on Dec. 31, 1862; guarded Memphis from April till October, 1863; accompanied Gen. Sherman to Chattanooga; guarded the Nashville and Decatur Railroad in the winter of 1863-'64; captured and fortified Decatur in March, 1864; and as commander of the 1st brigade, 4th division, 16th Corps, took part in the Atlanta campaign. He marched with Sherman to the sea, and at the close of the war was brevetted major-general of volunteers.

Galleher, John Nicholas, clergyman, born in Washington, Mason County, Ky., Feb. 17, 1829; died in New Orleans, La., Dec. 7, 1891. He entered the University of Virginia in 1856, but removed to Louisiana at the end of two years and began the study of law. At the opening of the civil war he entered the Confederate army, and served in several capacities till the war closed. He then returned to his law studies and was admitted to the bar. He afterward went to the General Theological Seminary in New York city, and on June 7, 1868, he took deacon's orders, and priest's orders on May 30, 1869. While a deacon he was assistant minister at Christ Church, Louisville, Ky., and in the following year he became rector of Trinity Church, New Orleans. From 1871 to 1873 he was rector of the Memorial Church in Baltimore, and from 1873 to 1879 rector of Zion Church, New York city. In 1879 he was elected Bishop of Louisiana, and he was consecrated in Trinity Church, New Orleans, Feb. 5, 1880, by Bishops Green, Wilmer, Robertson, and Dudley.

Gamble, John Rankin, lawyer, born in Alabama, Genesee County, N. Y., Jan. 15, 1848; died in Yankton, S. Dak., Aug. 14, 1891. He was brought up on a farm and received a common-school education. In 1862 the family removed to Fox Lake, Wis. He was graduated at Lawrence University, Appleton, Wis., in 1872, studied law at Fox Lake, and was admitted to the bar in 1873; the same year he settled in Yankton to practice, becoming associated in 1875 with his brother, Robert J. Gamble. He was district-attorney for Yankton in 1876-'78; member of the Dakota Territorial House of Representatives in 1877-'79, and of the Legislative Council in 1881-'85; temporary United States Attorney for Dakota in 1878; and was elected to Congress as a Republican in 1890, but did not live to take his seat.

Gartrell, Lucius J., lawyer, born in Wilkes County, Ga., Jan. 7, 1821; died in Atlanta, Ga., April 7, 1891. He was educated at Randolph-Macon College, Virginia, and at Franklin College, Athens, Ga.; studied law with Robert Toombs; was admitted to the bar in 1842; and settled in Washington, Ga., to practice. From 1843 to 1847 he was Solicitor-General of the Northern Judicial Circuit of Georgia, and from 1847 till 1851 was in the Legislature. In 1854 he made his permanent home in Atlanta; in 1856 he was a presidential elector; and in 1857-'61 was a member of Congress, serving on the committees on Expenditures in the Treasury Department, and on Elections, and was a regent of the Smithsonian Institution. On the secession of Georgia he resigned his seat, raised the 7th Georgia Regiment, served in the field as its colonel till 1862, when he was elected to the Confederate Congress, and after one term returned to the army as a brigadier-general, and organized Gartrell's Brigade and commanded it till the close of the war.

Gilbert, John S., naval architect, born in East Haddam, Conn., in 1801; died in Fort Montgomery, near West Point, N. Y., Aug. 12, 1891. While at Yale he was sent to New York city, and appointed to the

ship-joiner's trade. The work proved congenial, and he soon became expert in it. Realizing the difficulties of repairing large vessels in the water, he began studying the problem how to get them on a dock. Night after night and year after year were spent in calculations and experiments, till at length he solved the problem by inventing the balance dry-dock, now used at all important sea ports in the world. He incorporated the New York Dry-dock Company; built the Erie Basin dry-dock, for many years the largest in the world, and soon had requests to build such docks in many countries. He built docks for the United States Government at Kittery, Me., and at Charleston, S. C., and superintended the construction of the one at Mare Island Navy Yard, San Francisco; spent several years as naval constructor in the service of the Austrian Government, chiefly on important works in the port of Pola; and when sixty years old declined tempting contracts tendered by the Russian Government, because he thought himself too old to assume the responsibility.

Gilmour, Richard, second Bishop of Cleveland, born in Glasgow, Scotland, Sept. 28, 1824; died at St. Augustine, Fla., April 13, 1891. He was a Scotch Covenanter till 1842, when he became a Catholic. He was educated for the ministry at Mount St. Mary's

Seminary, Emmettsburg, Md., and was ordained to the priesthood by Archbishop Purcell in Cincinnati, Ohio, Aug. 30, 1852. After a successful career as pastor in Portsmouth, Ironton, Cincinnati, and Dayton, Ohio, he was consecrated Bishop of Cleveland, April 14, 1872, succeeding Bishop Rappe. In this widened field of labor and responsibility his zeal,

his business tact, and his efforts in behalf of Catholic education had full sway. But he overtaxed his physical strength, and in consequence was obliged to cease work for two years, going to southern France to recuperate his health. On his return, in July, 1878, he resumed his heavy burden of office, and within a few years had the satisfaction of seeing his diocese ranked by common consent among the first in the country in point of order and healthy growth. Under his care the charitable, religious, and educational institutions founded by his predecessor were multiplied and strengthened. Everywhere throughout the diocese handsome and often cathedral-like churches supplanted the unpretentious buildings first erected, so that the diocese of Cleveland has more fine churches in proportion to its population and means than any other in the United States. He compiled a series of readers known as "The Catholic National Readers," which soon attained a large circulation. He also published a Bible history and a collection of school hymns, both largely in use. He had a facile pen, wrote in plain, terse language, and treated with keen logic any subject he discussed. The Catholic press found in him a staunch and liberal supporter. He founded in 1874, and maintained to the end of his episcopal career, the "Catholic Universe," a paper of wide influence. He was a valiant defender of the Catholic faith. In public questions he took a leading part, and he was often called upon to discuss them from the rostrum. Shortly after the assassination of President Garfield a meeting of the citizens of Cleveland was held to express sympathy with their chief magistrate. Bishop Gilmour was one of the speakers, and this was his first appearance before his fellow-citizens in his civil capacity. He also addressed the Congress of Churches, a non-Catholic organization, at its annual meeting held in Cleveland in 1886, his subject being "The Necessity of Religion in Education."

Shortly after his death a meeting in Music Hall, attended by over 5,000 people of all shades of belief, was addressed by many Protestants, lay and cleric, of Cleveland, each paying a tribute to his memory and expressing the loss sustained by the community, country, and religion in the death of the man and prelate in whose honor the meeting was called. His remains repose in the crypt beneath St. John's Cathedral, Cleveland.

Glover, John Montgomery, lawyer, born in Mercer County, Ky., Sept. 4, 1824; died in Newark, Mo., Nov. 12, 1891. He received a collegiate education, but was not graduated, and had practiced law but a short time when the civil war broke out. Early in 1861 he was appointed by President Lincoln a colonel of cavalry, and on Sept. 4 he was commissioned colonel of the 3d Missouri Volunteer Cavalry, with which he served till 1864, when he was forced to resign by failing health. He was collector of internal revenue for the 3d District of Missouri from November, 1866, till March 3, 1867. In 1872, 1874, and 1876 he was elected to Congress from the 12th Missouri District as a Democrat, and he served as chairman of the standing Committee on Expenditures in the Treasury Department and of the select Committee on the Real-Estate Pool and the Jay Cooke Indebtedness, and as a member of the committees on Agriculture and on Military Affairs. After his third term in Congress he retired from public life.

Godshalk, William, jurist, born in East Nottingham, Chester County, Pa., Oct. 25, 1817; died in Doylestown, Pa., Feb. 7, 1891. He received a common-school education; studied in Union Academy, Doylestown; was elected an associate judge of the Bucks County Court in 1871, and held the office five years. He was elected to Congress as a Republican in 1878 and 1880, and defeated for renomination in 1882. While in Congress he served on the committees on Agriculture and Manufactures.

Gooch, Daniel Wheelwright, lawyer, born in Wells, Me., Jan. 8, 1820; died in Melrose, Mass., Nov. 1, 1891. He was graduated at Dartmouth College in 1843, was admitted to the bar in 1846, and began practicing in Boston. In 1852 he was elected to the Legislature, in 1853 to the State Constitutional Convention, and in 1856 to Congress to fill a vacancy from the 7th Massachusetts District. He was re-elected to Congress in 1857, 1859, 1861, 1863, 1865, and 1873, and was one of the most active Republicans on the floor of the House and in committees. During the four years of the investigations of the joint congressional committee on the conduct of the war, he was chairman of the House members, and he personally conducted the inquiry into the Fort Pillow massacre. On Sept. 1, 1865, he resigned his seat in Congress to assume the duties of naval officer of the port of Boston, to which he had been appointed by President Johnson, who also removed him in less than a year. In 1876, he was appointed United States pension agent at Boston, and he held the office till 1886, when he resumed law practice.

Green, Caleb Smith, jurist, born in Mercer County, N. J., in 1819; died in Trenton, N. J., Feb. 20, 1891. He was graduated at the College of New Jersey in 1837, and admitted to the bar in 1843. He was for many years a judge of the New Jersey Court of Errors and Appeals; President of the Trenton Savings Fund Association from 1854; director of the Trenton Banking Company; a trustee of the College of New Jersey; and one of the executors of the estate of John C. Green, of New York, who gave large sums of money to that college.

Grier, David Perkins, grain merchant, born near Wilkesbarre, Pa., in 1837; died in St. Louis, Mo., April 21, 1891. He received a common-school education, and in 1852 removed to Peoria, Ill., where he established himself in the grain business. In association with a brother, he built the first grain elevator in Peoria, and three or four others elsewhere. In 1879 he removed to St. Louis, and had charge of the erection and management of the Union elevator. At the

beginning of the civil war, he recruited a company for the national army and was elected captain. The company became a part of the 8th Missouri Volunteers, and was mustered into service in June, 1861. He took part in the battles of Fort Henry, Fort Donelson, and Shiloh, and the siege and capture of Corinth. On Aug. 25, 1862, he was ordered to report to Gov. Yates at Springfield, Ill., and on arriving there he was commissioned colonel of the 77th Illinois Infantry, which he commanded till the surrender of Vicksburg, July 4, 1863. During the siege of Jackson, Miss., and thence till the return to Vicksburg he was in command of a brigade. He also commanded the 2d brigade, 4th division, 13th Army Corps, at Franklin and New Iberia, La., in November, 1863. In August, 1864, he was placed in command of all the land forces on Dauphin Island, Ala., and after the capture of Fort Gaines he commanded all the land forces, excepting two regiments, that took part in the siege and capture of Fort Morgan. On March 26, 1865, he was brevetted brigadier-general. In Gen. Canby's expedition against Mobile Gen. Grier commanded the 1st brigade, 3d division, 13th Army Corps, and took part in the assaults on Spanish Fort and Blakely, and in the march up the Tombigbee river after the capture of Mobile. On the return from that march he commanded the 3d division of his corps till mustered out on July 10, 1865. For his services in the field he was promoted to the full rank of brigadier-general. After the war he returned to the grain business, and became a vice-president and director of the St. Louis Merchants' Exchange.
